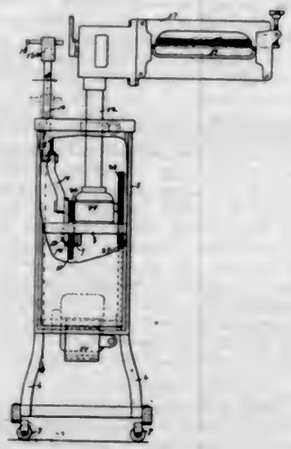
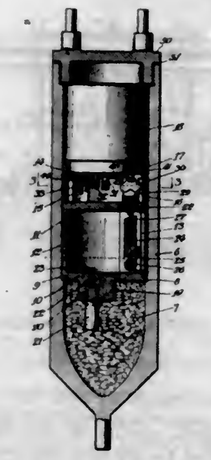
17. In an automatic sack packer, the combination of a vertically movable platform, mechanism including a clutch for raising the platform, an operating lever for the clutch, a brake mechanism for resisting downward movement of the platform, a control lever for the brake mechanism, a packing mechanism, control mechanism for starting the operation of the packing mechanism and simultaneously moving the brake control lever to apply the said brake mechanism and for stopping the packing mechanism and simultaneously moving the brake control lever to partly release the said brake mechanism, a pivoted cam serving when in one position to prevent movement of the brake control lever far enough to completely release the said brake when partly released by the said control mechanism, an operative connection between the operating lever for the clutch and the said cam whereby they are moved in unison, and manually operable means for moving the said operating lever and the cam to cause the platform to be raised and for causing the stop screw to be disengaged by the cam.

1,686,478. WOMAN'S STOCKING. JOSEPH C. J. STRAHAN, New York, N. Y. Filed July 13, 1928. Serial No. 292,336. 4 Claims. (Cl. 66—182.)



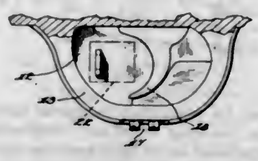
1. As an article of apparel, a full fashioned stocking having a conventional foot portion and a conventional toe portion, and a supplemental toe portion connected to the stocking along the same line along which the first mentioned toe portion is connected and otherwise wholly disconnected from the first mentioned toe portion, said two-toe portions being looped and seamed separately so as to provide two independent toe members, whereby one of the toe portions can be moved out of nested association with the other toe portion and then removed.

1,686,479. WHEEL. JOHN W. WHITE, Buffalo, N. Y. Filed Sept. 2, 1922. Serial No. 585,952. 5 Claims. (Cl. 301—22.)



5. A disc wheel, comprising a wheel disc, a rim having an inwardly projecting bead along its median line, and clamping means, said bead being between said disc and said clamping means and said disc and means bearing gainst the sides of said bead along single lines of contact at opposite sides of the median line to hold said rim upon said wheel.

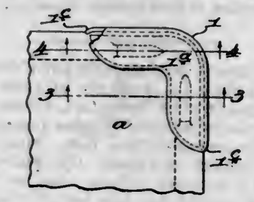
1,686,480. WASHING MACHINE. HERBERT E. WILLIAMSON, San Francisco, Calif. Filed Mar. 31, 1926. Serial No. 98,762. 1 Claim. (Cl. 74—7.)



In a washing machine of the character described, a portable casting, a motor resiliently supported in said casting, a gear mechanism supported within said casting and adapted to be driven by said motor, said gear mechanism comprising a shaft, a gear mounted on said shaft, a pivoted member supported below said gear, a second gear mounted on said pivoted member, means for raising said second mentioned gear into contact with said first mentioned gear, a crank secured to said second mentioned gear, a pitman secured to said crank, a reciprocating rod secured to said pitman and adapted to be actuated thereby, a bevel gear positioned on said shaft and having a second bevel gear in constant mesh therewith, said second mentioned bevel gear being adapted to drive a vertically disposed shaft for the purpose specified.

1,686,481. OIL-WELL TORPEDO. THOMAS M. WINDER and WILLIAM R. MURROW, Independence, Kans. Filed May 16, 1927. Serial No. 191,588. 5 Claims. (Cl. 102—4.)

1. A clockwork mechanism for the purpose described, having a timing and an alarm mechanism, including a winding key for each, and a latch movable into and out of engagement with the alarm key and engaged by the key of the timing mechanism to withdraw it from engagement with the alarm key.



1,686,482. TRIGGER LOCK FOR FIREARMS. RANDOLPH T. WINDLE, New York, N. Y. Filed May 25, 1927. Serial No. 194,155. 2 Claims. (Cl. 42—1.)

1. In combination with a fire arm having a trigger and trigger guard, a pair of separable sections enclosing said trigger and trigger guard, a stop within and carried by said trigger guard in the path of backward movement of said trigger, and lock means for holding said sections in locked position upon said fire arm.

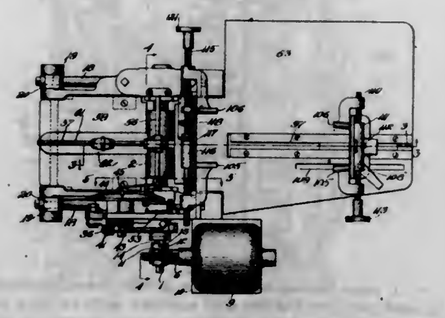
1,686,483. BINDING CORNER. WALTER B. BALLOU, HOWARD M. BALLOU, and LESTER S. WALL, North Attleboro, Mass., assignors to R. Blackinton & Co., North Attleboro, Mass., a Copartnership. Filed Feb. 27, 1926. Serial No. 91,271. 3 Claims. (Cl. 150—38.)

1. A corner binder for pliable fabric wallets and the like, comprising an inner concealed flat attaching member secured to the marginal corner portion of the wallet to lie within the edges thereof, a corner binder of angular contour conforming to the edge of the corner portion of the wallet and comprising two inwardly extending integral parallel flat members spaced apart sufficiently to receive between them a corner portion of the fabric, the interior edge portion of one of said flat members being turned

sharply inward to form a lip having interlocking engagement with the interior edge of the attaching member which it covers and conceals.

1,686,484. DRIER AND THE COMBINATION THEREOF WITH DRYING OILS. HYYM E. BUC, Roselle, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 16, 1927. Serial No. 220,060. 3 Claims. (Cl. 134—57.)

3. A drier for use with drying oils, comprising the lead salt of an oil soluble sulphonic acid derived from the treatment of petroleum oils with fuming sulphuric acid or sulphuric anhydride.

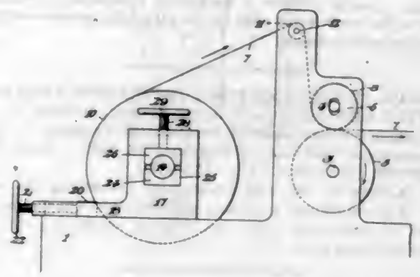


1,686,485. DRIER AND THE COMBINATION THEREOF WITH DRYING OILS. HYYM E. BUC, Roselle, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 26, 1927. Serial No. 222,215. 3 Claims. (Cl. 134—57.)

3. A drier for use with drying oils comprising the cobalt salt of an oil soluble sulphonic acid derived from the treatment of petroleum oils with fuming sulphuric acid or sulphuric anhydride.

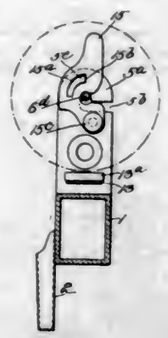
1,686,486. DRIER AND THE COMBINATION THEREOF WITH DRYING OILS. HYYM E. BUC, Roselle, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 26, 1927. Serial No. 222,216. 3 Claims. (Cl. 134—57.)

3. A drier for use with drying oils comprising the manganese salt of an oil soluble sulphonic acid derived from the treatment of petroleum oils with fuming sulphuric acid or sulphuric anhydride.



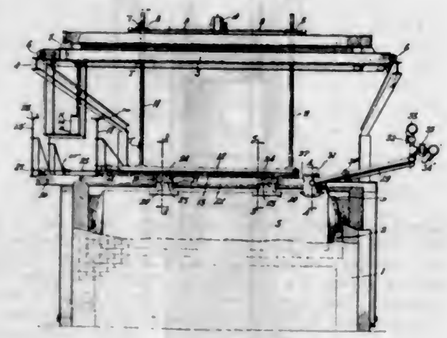
1,686,487. GRADING MACHINE. LEANDER A. COGSWELL, Manchester, N. H., assignor to Lacene Manufacturing Company, Manchester, N. H., a Corporation of Maine. Filed Mar. 18, 1927. Serial No. 176,415. 16 Claims. Cl. 33—147.)

1. A grading machine comprising detecting means, grading mechanism, means whereby the grading mechanism is responsive to the detecting means, feeding mechanism for



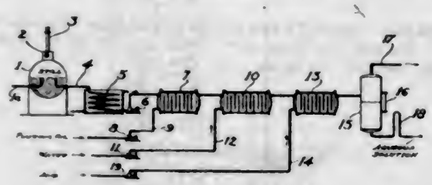
feeding blanks one at a time to the detecting means, and mechanism operated automatically when the operator removes a graded blank from the machine, to actuate the feeding mechanism to feed another blank into the machine.

1,686,488. DEVICE FOR ADJUSTABLY CONTROLLING THE LOCATION OF ROLLER SHAFTS IN PAPER-FEEDING MACHINES. ARTHUR L. FOSTER, Middletown, N. J., ass'gnor to Manifold Supplies Company, Brooklyn, N. Y., a Corporation of New York. Filed May 5, 1927. Serial No. 189,008. 5 Claims. (Cl. 242—58.)



1. A device adapted for angularly adjusting a shaft; comprising a slide journal box having a bight flange adapted to be loosely, removably looped over a stationary abutment; a journal screw extending in threaded engagement with the end of said bight flange, axially movable by rotation therein, and adapted to bear upon such abutment, whereby rotation of said screw is adapted to shift said journal box relatively to said abutment, in but one direction, and said screw may be rotated in the opposite direction without relative movement of said box and abutment.

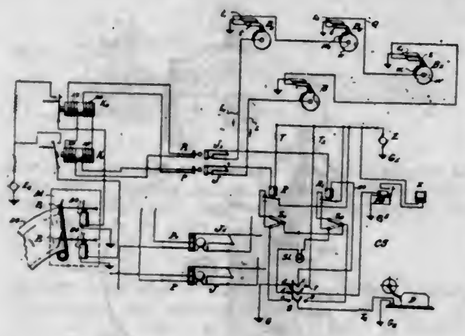
1,686,489. YARN-SPOOL BEARING. EDGAR F. HATHAWAY, Wellesley, and WALTER BIXBY, Boston, Mass., assignors to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1923. Serial No. 666,829. 5 Claims. (Cl. 308—24.)



4. A spool-bearing bracket for a tube frame embracing in combination a bearing arm provided with an open slot-bearing for rotatably supporting a spool journal, a latch pivotally mounted on said arm to interpose a journal-retaining portion between the closed end of the slot and the pivotal center of the latch.

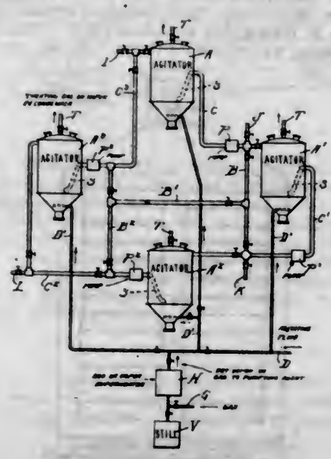
1,686,490. ART OF OBTAINING LIGHTER PRODUCTS FROM HYDROCARBONS. FRANK A. HOWARD, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Aug. 16, 1922. Serial No. 582,114. 6 Claims. (Cl. 196—70.)

1. A systematic method of heat treating hydrocarbon oil, comprising contacting a distillation vessel containing the oil with a molten material maintained at a high temperature, collecting the distillate and breaking said contact of distillation vessel with said molten material as soon as the distillation is substantially completed.



1,686,491. PREPARATION OF FUEL OIL. WAYNE S. HUGHES and JAMES HARROP, Baytown, Tex., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 19, 1927. Serial No. 162,021. 5 Claims. (Cl. 196—40.)

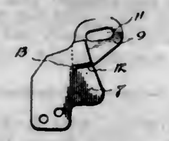
1. A process for separating inorganic matter from the liquid residue resulting from the distillation of hydrocarbon oil in presence of alkali comprising emulsifying said residue with water, breaking said emulsion by addition of an acid material thereto, and withdrawing the aqueous layer containing inorganic matter.



1,686,492. CALL-BOX TROUBLE DETECTOR. GEORGE W. JANSON, Nutley, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 26, 1925. Serial No. 58,912. 2 Claims. (Cl. 177—367.)

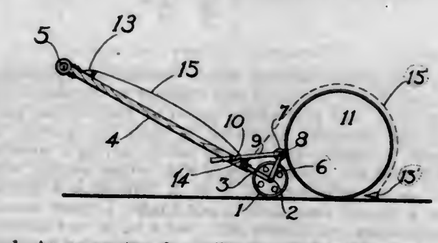
1. In combination with a messenger signaling system having signal call boxes, each being provided with two break wheels having their teeth arranged in staggered relation, one of which is connected through a contacting brush in the line and the other cooperating with a grounded brush, whereby upon the operation of a box the line is first momentarily opened and then momentarily grounded for each signal impulse of the code signal, of a testing equipment for determining whether the call boxes are in normal operative condition, comprising an electro-responsive device having two windings which magnetically assist each other, and an electro-responsive device having two windings which magnetically oppose and neutralize each other, one winding of each device being connected in the outgoing

lead of said system and the other windings of said devices being connected in the return lead of said system, and indicating elements controlled respectively by said devices.



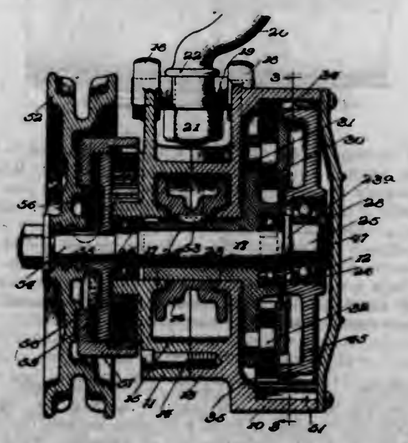
1,686,493. REFINING OILS, ETC. WARREN K. LEWIS, Newton, Mass., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Aug. 23, 1923. Serial No. 658,878. 4 Claims. (Cl. 196—147.)

4. In a process of purifying oils and the like continuously, the steps of agitating the oil with an adsorbent material in a succession of units, passing the oil successively from one unit to another, agitating the oil in each such unit with a charge of adsorbent material, removing the oil from the adsorbent material washing the adsorbent material with naphtha after removing the oil therefrom, drying said adsorbent material by blowing hot gaseous fluid therethrough in the unit where used, and supplying fresh adsorbent material to replace said spent washed and dried material.



1,686,494. ELECTRIC SWITCH. RAGNAR O. W. LUNDIN, North Attleboro, Mass., assignor to Barber Electric Manufacturing Company, North Attleboro, Mass. Filed Aug. 25, 1927. Serial No. 215,440. 2 Claims. (Cl. 200—15.)

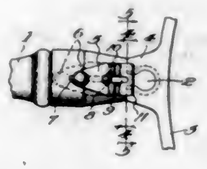
2. In an electric switch, a switch blade, an actuator for said switch blade, coupling means operatively connected to said actuator, said means comprising an intermediate insulating piece secured to said blade and an end connecting device composed of sheet metal bent to form a



U-shaped member; said member engaging a slot in said intermediate member, and said end member having a slot in which said actuator is engaged.

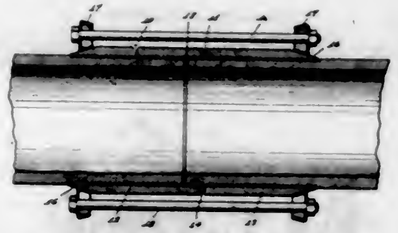
1,686,495. BARREL-ROLLING DEVICE. THOMAS E. MCDANIEL, Charleston, S. C., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 27, 1925. Serial No. 46,249. 2 Claims. (Cl. 294—4.)

1. An apparatus for rolling cylindrical bodies comprising a revolvable wheel, an axle therefor, a handle shaft, extensions therefrom, bearings for said axle in the ends of said extensions, pivotal supports from said axle bearing a second axle, a second revolvable wheel on said second axle, a pin in said handle shaft, a notched bar pivotally mounted on said second axle and extending to said pin, the position of said second wheel being adjustable by means of said notched bar extending from said second axle to said pin.



1,686,496. CHAIN HOIST. SAMUEL H. NORTON, Meadville, Pa. Filed Aug. 13, 1925. Serial No. 50,074. 2 Claims. (Cl. 74—34.)

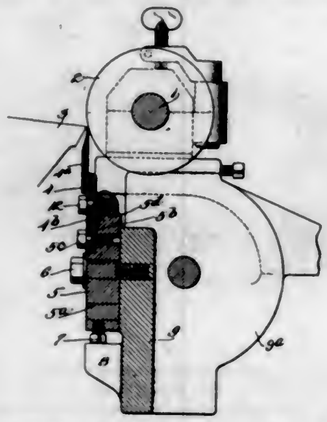
1. A hoist comprising a housing having a fixed internal ring gear, a shaft mounted axially of the housing and provided with an eccentric gear in mesh with the ring gear



and rotatable on the eccentric of the shaft, a sleeve on the shaft and provided with a diametrically disposed flange, a roller projecting laterally from each end of the flange, a floating disc provided with slots, a pair of the slots receiving the rollers, said disk being mounted eccentrically of the shaft, the rotatable gear having diametrically disposed rollers received by the remaining slots in the disk.

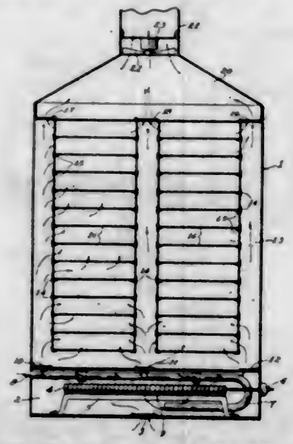
1,686,497. SECURING MEANS FOR DETACHABLE HANDLES. NORMAN D. OLSEN, Chicago, Ill., assignor to Acme Aluminum Foundry Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1927. Serial No. 178,297. 2 Claims. (Cl. 16—114.)

1. A detachable securing handle combination comprising a vessel, a pair of spaced lugs attached to the outside of said vessel, said lugs widely spaced at their bottom portion and gradually narrowing to their top portion, a handle, a rounded end on said handle having a narrow top portion and a comparatively wide bottom portion, said end portion being adapted to fit in between said spaced lugs, a slidable plate fixed to said handle, a thumb means for actuating said slidable plate, and a lip on said slidable plate adapted to slide over the top of said spaced lugs and end portion of the handle.



1,686,498. COUPLING FOR FIBER PIPES. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Oct. 16, 1922, Serial No. 594,797. Renewed Sept. 30, 1925. 5 Claims. (Cl. 285—138.)

I. A coupling for fiber pipe, and in combination, a fiber pipe having an externally threaded end, an integral internally threaded fiber sleeve screwed on said pipe and having a tapered end which is circumferentially continuous, a collar having its internal periphery tapered correspondingly to and arranged about the tapered end of said sleeve and adapted to compress the same against the pipe to form a tight joint therebetween, and bolts for drawing said collar longitudinally upon the tapered end of said sleeve whereby the latter is compressed.

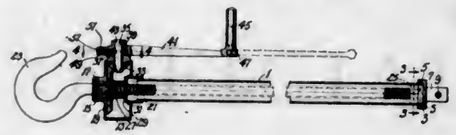


1,686,499. LEDGER-BLADE CONSTRUCTION FOR CLOTH SHEARS. CHARLES G. RICHARDSON, Springfield, Vt., assignor to Parks & Woolson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed Jan. 9, 1924. Serial No. 685,246. 11 Claims. (Cl. 26—15.)

2. In a cloth shearing machine, the combination with a rotary fly blade, of a cooperating ledger blade, a series of draft screws securing said ledger blade to a supporting head, a series of thrust screws mounted in said ledger blade and thrusting against said head thereby producing an outward thrust against adjacent portions of the ledger blade, and

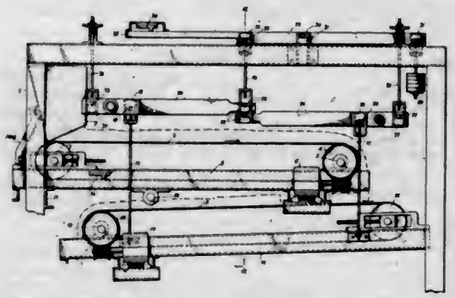
means for adjusting said supporting head to move the ledger blade into shearing position without disturbing the longitudinal alignment of the ledger blade, substantially as described.

1,686,500. DEHYDRATING DEVICE. FREDERICK E. WHORFF, Mill Valley, Calif., assignor of one-fourth to William R. Whorff, San Francisco, Calif. Filed Oct. 12, 1927. Serial No. 225,607. 1 Claim. (Cl. 34—39.)



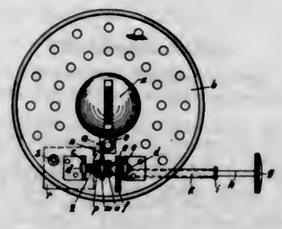
In a dehydrating device of the character described, a drying chamber, an air-heating chamber and an air-exhaust chamber in damper-controlled communication respectively with said drying chamber, a heating unit interior said air-heating chamber, damper-controlled means leading from said last mentioned chamber to atmosphere, an air preheater leading from atmosphere to and through said heating chamber in juxtaposed relation with said unit and discharging therebeneath, and means for the control of the air admitted to said air preheater.

1,686,501. SLACK PULLER AND JACK. IRA B. HART, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 18, 1924. Serial No. 744,330. 3 Claims. (Cl. 254—67.)



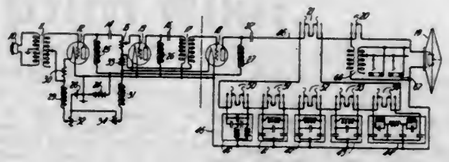
1. In a slack puller, the combination of a screw, a housing adapted to completely enclose a reducing gear train, a nut

in said housing driven to rotate by said train located in said housing, said nut engaging said screw, the screw having slidable movement through said housing, a polygonal tube attached at one end to said housing and at the



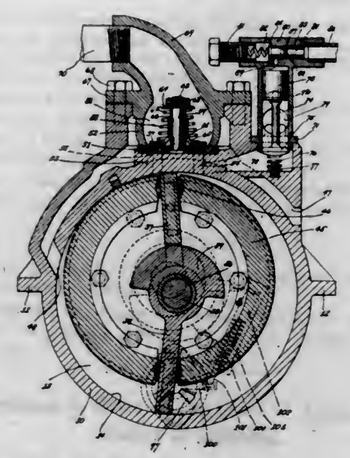
other to an enclosing fastener, the tube being adapted to receive and completely enclose the movable screw, and a polygonal block slidably cooperating with the inside of the tube fastened to the screw.

1,686,502. AUTOMATIC WEIGHING MACHINE. HENRY RICHARDSON and STANLEY G. MURRAY, Clifton, N. J. Filed Oct. 30, 1926. Serial No. 145,241. 24 Claims. (Cl. 249—22.)



1. An automatic weighing machine comprising a conveyer having means for operating it continuously, weighing means supporting a portion at least of said conveyer, and a feed conveyer arranged to feed material to be weighed to said continuously operating conveyer and having means for advancing it intermittently under the control of the weighing means, whereby separate weighed charges of material are formed successively on said continuously operating conveyer.

1,686,503. LAMP. FRIEDA SCHMIDTKE, Berlin, Germany. Filed Sept. 16, 1927, Serial No. 219,975, and in Great Britain Aug. 23, 1927. 1 Claim. (Cl 67—10.1.)



The combination in a lighting device for lamps especially lanterns, of a lamp burner and a secondary burner lighted by means of a pyrophoric sparking device consisting of a metallic container of spirit, a wick tube *a*, a cap to close the mouth of said tube fastened by means of an arm to a disc *m*, turning loosely on a shaft *d*, mounted in brackets *c*, a clutch member *p* slidably feathered on said shaft *d* and controlled by a spring *z*, an abrasive wheel *u*, a flint *v* pressed against said wheel and a pinion *e* fixed on shaft *d*, said pinion meshing with a gear wheel *f* mounted on the shaft *h*, a milled wheel *g* to turn said shafts, all substantially as described.

1,686,504. STETHOSCOPIC APPARATUS. HAROLD F. DODGE, New York, N. Y., and HALSEY A. FREDERICK, Mountain Lakes, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1924. Serial No. 716,624. 7 Claims. (Cl. 128—2.)

1. In stethoscopic apparatus, means adapted to be placed in contact with the body for detecting sound vibrations arising therein and translating said sound vibrations into corresponding electrical vibrations, electric filters and means for controlling said filters whereby any predetermined band of said electrical vibrations may be passed and all others suppressed, and means for translating said passed electrical vibrations into observable effects.

1,686,505. ROTARY COMPRESSOR. GOTTLIEB I. STASTNY, New York, N. Y. Filed Feb. 5, 1927. Serial No. 166,064. 5 Claims. (Cl. 230—138.)

1. In a compressor, a casing having a cylindrical chamber therein, an annular drum rotatable in said chamber eccentrically, said drum having opposing diametrical channels therein, counter balanced blades slidable in said channels and rotatable with the drum, a bell above said casing, curved channels connecting said bell and chamber, a check valve in said bell opening or closing communication to said curved channels; a valve normally closing said curved channels, and means for by-passing the air stream from the curved channels into the atmosphere.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 375—No. 2. TUESDAY, OCTOBER 9, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice.

U. S. Patent Office, *Washington, Sept. 13, 1928.*

Alice L. Lynch, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John L. Lombardo, 59–61 Broadway, Buffalo, N. Y., for registration of a trade-mark and trade-mark registered July 3, 1923, No. 169,843, to Alice L. Lynch, of 442 West Forty-Third Street, New York, N. Y., and a notice of such declaration sent by registered mail to the said Alice L. Lynch at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Alice L. Lynch, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

M. J. MOORE,
First Assistant Commissioner.

Adjudicated Patents.

(C. C. A. Ohio.) The Gullborg patent, No. 1,807,734, for supplying lubricant under pressure, claim 7 *Held* infringed. *Bassick Mfg. Co.* v. *Lyman Mfg. Co.*, 27 F. (2d) 491.

(C. C. A. Md.) The Gibbs patent, No. 1,540,691, for improvements in animal traps, claim 16 *Held* valid and infringed. *Montgomery Ward & Co.* v. *Gibbs*, 27 F. (2d) 466.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Design Pat. 70,506, J. L. McGarity, Hose, decided September 22, 1928.

Pat. 1,550,804, J. Harris, Electricity meter, decided August 31, 1928, claim 17.

Pat. 1,560,502, L. De Forest, Sound-reproducing device, decided July 14, 1928, claims 1 to 20, inclusive.

Final decision in interference has been rendered against the following trade-mark:

T. M. 209,470, Hosiery, Bonwit Teller & Co., New York, N. Y. Registered February 23, 1926. Decided August 31, 1928.

Amendment to Rules of the Court of Appeals of the District of Columbia.

Paragraph 2 of Rule VIII of the Court of Appeals of the District of Columbia, as amended October 2, 1926, reads as follows:

"2. Only one hour, and in ex parte and trade-mark cases from the Patent Office a half hour, on each side shall be allowed in the argument, unless by special leave the time is extended by the court before the argument is commenced; but counsel in order to avail themselves of the opportunity to apply for additional time must make request therefor to the court accompanied by a copy of their printed brief, at least five days before the case is liable to be called for argument. The time may be apportioned between counsel on the same side at their discretion. In all cases, however, a full and fair opening must be made."

Condition of Applications Under Examination at Close of Business September 28, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 113,072; Trade-Mark Division, 2,108. Oldest new case, Nov. 30, 1927; oldest amended, Nov. 29, 1927. The dates given are 1928 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting office action.	Oldest amended application awaiting office action.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE HAMMOND.

No. 1,977. Decided March 5, 1928.

1. PATENTABILITY—AUTOMOBILE BUMPERS.

Claims to an automobile bumper, including the limitation "said bumper offering substantially no obstruction at the rear of the vehicle inwardly beyond" its point of attachment to the frame of the vehicle, *Held* unpatentable in view of the prior art.

2. SAME—SAME—INVENTION.

In determining the patentability of claims to an automobile bumper which include the limitation "said bumper offering substantially no obstruction at the rear of the vehicle" beyond its point of attachment to the vehicle, the fact that, at the time of the issuance of the S. patent, fenders for the rear wheels of automobiles did not extend so low as at the time applicant filed his application and that there was at the former time no device known for carrying a spare tire at the rear of a vehicle *Held* immaterial, since the inventive idea was the same, whatever may be the length of the fenders, and there was no invention in perceiving the obvious fact that the bumpers of the S. patent would permit access to the rear of the automobile, where applicant mounts his spare-tire carrier.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. J. H. Milans and *Mr. C. T. Milans* for Hammond.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.:*

An appeal from a decision rejecting all of the 15 claims of appellant's application for a patent, except claim 5. Claims 10, 11, 12 and 15, however, have been withdrawn by appellant from this appeal.

The invention relates to improvements in spare-tire carriers and rear bumpers for automobiles. The bumpers of the invention do not extend entirely across the width of the automobile but are used in pairs each extending only from one side of the car across the width of the adjacent fender. This arrangement provides an independent impact-receiving structure at the rear and side of the automobile, and permits of the removal of the spare tire from its carrier at the back of the automobile without lifting the tire upwards as would be necessary if a single bumper were extended across the entire width of the automobile.

The present application was filed on February 9, 1921. It is a division of appellant's application filed April 23, 1917, which matured into a patent issued May 3, 1921. That patent was involved in interference and during its pendency appellant filed another application as a division thereof, and on December 16, 1924, a patent was issued to him thereon.

Claim 1 is copied as illustrative.

1. A bumper attachment adapted to be applied at the rear of an automobile having a rear wheel fender whereby to protect said fender, comprising an attaching portion extending lengthwise of the vehicle frame at that side thereof adjacent the fender and having means of connection directly to the frame, a laterally projecting portion connecting to the rear end of said attaching portion and projecting outward to a point adjacent the outer side of said fender and arranged at a point rearwardly of the fender, said bumper offering substantially no obstruction at the rear of the vehicle inwardly beyond its attaching portion, the lateral and lengthwise extending portions of the bumper being integral and formed of metal, and all parts of the bumper from its attachment point being flexible throughout.

By concurrent decisions of the Patent Office tribunals all of the present claims except No. 5, were rejected. It was held that claims 1, 2, 3 and 4 define no invention other than that held unpatentable in the interference proceeding; that claims 6, 7, 8 and 9 define no invention over the patent to Simms, March 6, 1906; that claim 10 is not patentably different from the original issue of the interference, or from the subject matter of applicant's later patent; that claims 11, 12, 13, 14 and 15 are unpatentable in view of Simms, supra; Van Gelder, January 14, 1913; Harnishfeger, May 20, 1913; Hoover, July 18, 1916; and appellant's patents issued respectively May 3, 1921, and July 17, 1924.

[1, 2] In our opinion the claims were rightly rejected. The patent of Simms, supra, provides "buffers" to be attached to the front, side or back of the frame of the motor vehicle, to prevent damage to lamps, wings, radiators, and other parts of the vehicle; the buffers are to be curve-shaped and fitted in pairs to the front or back of the vehicle frame. The diagrams shown by Simms, especially Fig. 12, anticipate appellant's claims as to the bumpers. It is argued for appellant that at the time when the Simms patent was issued the fenders of the rear wheels did not extend so low as in the modern automobile and that there was then no need to protect the lower ends of the fenders as at present. That fact however is not material, for the inventive idea remains the same whatever the length of the fenders may be. It is true that when the Simms patent was issued no device was known for carrying spare tires upon the rear end of an automobile. Nevertheless the Simms rear bumpers permit of access to the rear end of the car where appellant mounts his spare tire carrier. There was no invention in perceiving this obvious fact.

In view of the full and correct decisions of the tribunals of the Patent Office it is only necessary for us to say that upon the references aforesaid both as to bumpers and spare tire carriers the appealed claims were rightly rejected.

The decision of the Commissioner of Patents is affirmed.

Court of Appeals of the District of Columbia.

MACFARREN *v.* MORGAN.

No. 2,017. Decided March 5, 1928.

1. INTERFERENCE—INTERPRETATION OF COUNTS.

The counts of an interference should, if possible, be given an interpretation consistent with the specification in which they originated, and attempts to enlarge the scope of an application, once filed, should be frowned upon, especially when the result would be the appropriation of an intervening invention.

2. SAME—SAME—RIGHT TO MAKE THE CLAIMS.

Where the applications directly involved in interference disclose, in connection with a coal-mining machine, pressure-exerting devices designed to break down the coal after the kerf has been cut, *Held* that counts including the pressure-exerting device are not supported by an earlier application of Morgan in which pressure-exerting devices were provided for supporting blocks of coal which might fall from above the kerf in order to prevent them from binding the cutters, since these devices "being designed merely to prevent the falling of coal upon the cutter frame are not 'pressure-exerting' devices within the sense of the counts."

APPEAL from the Commissioner of Patents. Reversed.

Mr. Archworth Martin for Macfarren.

Mr. C. M. Nissen and *Mr. A. J. Crane* for Morgan.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

The invention involved in this interference relates to coal-mining machines. The parties are Macfarren and Morgan; Macfarren is the senior party, having filed his application on November 3, 1915; Morgan's application was filed on November 19, 1917. Neither party has taken testimony. Macfarren relies upon his filing date for constructive reduction to practice; while Morgan relies upon an earlier application filed by him on July 5, 1913, and now copending, as proof of his reduction to practice of the subject matter as of that date.

There are 8 counts in issue. Of these counts 7 and 8 have been awarded to Macfarren without dispute. As to the remaining counts, the Examiner of Interferences awarded priority to Macfarren as to counts 1, 2 and 3, and to Morgan as to counts 4, 5 and 6. Cross appeals were taken from this decision by the respective parties, whereupon the Examiners in Chief affirmed the Examiner's award to Macfarren as to counts 1, 2 and 3, but reversed the award to Morgan as to counts 4, 5 and 6. The Commissioner of Patents, upon appeal, affirmed the decision of the Examiners in Chief as to counts 1, 2 and 3, but reversed their decision as to counts 4, 5 and 6, and awarded priority to Morgan as to them. Macfarren has appealed to this court from the decision denying him priority as to counts 4, 5 and 6; Morgan has taken no appeal.

Macfarren as the senior party is entitled to prevail unless the invention defined by counts 4, 5 and 6 of the issue is disclosed in Morgan's application filed on July 5, 1913. Whether such a disclosure appears in the application is the controlling question in the case.

Counts 1, 4 and 6 are copied for illustration. The first of these is not directly involved in this appeal, but is illustrative of counts 1, 2 and 3 herein referred to.

1. In a mining machine, the combination of a frame, a cutting-chain carried thereby, and means lying within the boundary formed by the cutting-chain and positioned within the kerf cut by said chain, for breaking out the material being mined, said breaking means being operatable independently of the movement of the cutting-chain.

4. In a mining machine, the combination with a plane kerf-cutter, comprising a cutter-frame and an endless traveling chain-cutter mounted thereon, of a pressure-exerting device carried by said cutter-frame within the boundary of the chain-cutter and comprising relatively telescoping members with a spring inclosed thereby.

6. In a machine for breaking coal out of the solid, a frame, cutting means carried thereby for forming an opening in the coal to permit of its deflection for breakage and for also making an opening in the coal adapted to receive a pressure-exerting device, a support held by said frame and projecting directly inward therefrom to have its inner end part directly support the cutting means, and a vertically movable pressure-exerting device also carried by said support and normally stationary thereon and adapted to be vertically moved relatively thereto on vertical lines which are within the outlines of the path of the cutter and which pass through said support.

The applications involved in this interference plainly describe certain mechanical devices acting in combination with kerf and slot cutters for breaking down coal from the face of the seam after the cutting of two or more related kerfs or slots therein. The kerfs or slots are cut into the coal seam by means of cutter chains moving around a forward-extending frame which is brought into contact with the coal. Mounted within the plane of the cutter frame and within the boundaries of the cutter chain, are devices comprising a cylinder and plunger positioned transversely to the plane of the cutter frame, and to which fluid under pressure may be periodically admitted to expel the plunger and thereby exert pressure to break down the coal. This avoids the necessity of withdrawing the machine and the cutter bar for the purpose of employing other means such as explosives in order to break down the coal. The cylinders are always in operative position, and it is only necessary that fluid pressure be admitted to them through a control valve whenever a kerf or slot of sufficient depth has been cut.

It is clear that Morgan's application of July 5, 1913, did not disclose this invention. It made no claim to any device for breaking down the coal after the cutting of the kerfs or slots. It made claim to devices designed to support such blocks of coal as might fall from above the cut, in order to prevent them from settling upon and binding the cutters while in action, describing them as "yielding cushions to prevent the binding of the cutting mechanisms while the cut is being made." This claim however did not constitute a disclosure of the invention for breaking down the coal, herein involved. It was upon this conclusion that the Commmissioner based his decision against Morgan as to counts 1, 2 and 3. But the Commissioner held that the corresponding devices described in counts 4, 5 and 6, being described simply as "pressure-exerting" devices without specifying their functions, would read upon Morgan's earlier disclosure, and for this reason the Commissioner awarded priority to Morgan as to these counts.

[1, 2] We think this ruling erroneous. In *Hauss* v. *Merrell*, 48 App. D. C. 433, 261 O. G. 956, this court held that in an interference proceeding, the claims will, if possible, be given an interpretation consistent with the specification in which they originate; and also that attempts to enlarge the scope of an application once filed should be frowned upon, especially when the result would be the appropriation of an intervening invention. In our opinion the devices of Morgan's earlier application, being designed merely to prevent the falling of coal upon the cutter frame, are not "pressure-exerting" devices within the sense of the counts, and it appears from the record that it was not until seven years had elapsed after the filing of the earlier application, and after Macfarren had filed his present application, that Morgan made such a claim.

The decision of the Commissioner of Patents awarding priority to Morgan as to counts 4, 5 and 6, is reversed, and priority as to them is awarded to Macfarren.

Disclaimers.

1,674,745.—*Carl T. Schunk*, Lakewood, Ohio. METHOD OF FORMING DRY-BATTERY STRUCTURES. Patent dated June 26, 1928. Disclaimer filed September 24, 1928, by the patentee, assignee *The Peerless Paper Box Manufacturing Company*, concurring.

Hereby enters this disclaimer to all of the claims of said patent, to wit:

Claims 1 to 11, inclusive.

1,460,716.—*Butler P. Greer*, San Francisco, Calif. BOOK-FORM SAVINGS BANK. Patent dated July 3, 1923. Disclaimer filed September 11, 1928, by the patentee.

Hereby enters this disclaimer to that part of the claims in said specification only in so far as the claims may be construed to be of broader scope than claim 6, which is in the following words, to wit:

"1. A book-form savings bank comprising a case simulating the proportions of a book, and an envelope covering simulating the binding of the book detachably interlocked with said case.

"2. A savings bank comprising a case formed with slots in the sides thereof, and an envelope covering for said case having tongues disposed thereon to be engaged in said slots whereby the covering is retained on the case.

"3. A book-form savings bank comprising a case simulating the proportions of a book, an envelope covering on said case simulating the binding of a book and detachably interlocked with said case, and metallic plates disposed on the corners of said coverings.

"4. A book-form savings bank comprising a case simulating the proportions of a book, a covering on said case simulating the binding of a book, and metallic plates disposed on the covering at the ends of the back.

"5. A book-form savings bank comprising a case formed with slots in the sides thereof, a covering for the said case simulating the binding of a book, and stiffening boards for said cover formed with tongues for engaging said slots."

"7. A book-form savings bank comprising a case formed of hinged portions, one portion being formed with slots therein on the hinge line and the other portion being formed with two sets of tongues extending through said slots, one set of tongues being bent away from the bottom of one of the portions and the other set of tongues being bent toward said bottom, whereby the portions are pivotally connected on the hinge line."

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 9, 1928.

[VOL. 375. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 264,184. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Apr. 2, 1928.

For Coal:
Claims use since Mar. 20, 1909.

Ser. No. 268,843. BREWERTON COAL CO., Chicago, Ill. Filed June 29, 1928.

SOUTHERN GEM

For Coal.
Claims use since 1909.

Ser. No. 270,319. THE CLEVELAND-CLIFFS IRON COMPANY, Cleveland, Ohio. Filed July 30, 1928.

Winterking

For Coal.
Claims use since on or about Oct. 1, 1920.

Ser. No. 270,320. THE CLEVELAND-CLIFFS IRON COMPANY, Cleveland, Ohio. Filed July 30, 1928.

NORTHERN STAR

For Coal.
Claims use since on or about Apr. 1, 1928.

CLASS 2.

Receptacles.

Ser. No. 262,720. LE-MUL MFG. CO., St. Paul, Minn. Filed Mar. 7, 1928.

REJUVENATOR

For Containers Adapted to Store Pop Corn, Beans, Corn, Fruit and Other Edibles.
Claims use since October, 1926.

Ser. No. 270,305. SEALED CONTAINERS CORPORATION, New York, N. Y. Filed July 28, 1928.

SEALCONE

For Paper Bottles for Dispensing Milk, Cream, Ice Cream, and the Like.
Claims use since May, 1928.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 254,314. WARD MANUFACTURING CO., West Plains, Mo. Filed Sept. 2, 1927.

All wording is disclaimed apart from the mark shown.
For Traveling Bags, Bill Folds, and Kit Bags.
Claims use since Nov. 1, 1926.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 243,644. SAMUEL CUMMINS, New York, N. Y. Filed Feb. 1, 1927.

Exclusive use of the word "Soap" is disclaimed apart from the mark shown on the drawing.
For Soap.
Claims use since June 15, 1925.

Ser. No. 266,619. I. ROKEACH & SONS, INC., Brooklyn, N. Y. Filed May 18, 1928. Under section 5b of the act of 1905, as amended in 1920.

ROKEACH

For Aluminum Cleanser, Scouring Powder, Steel Wool, and Soap.
Claims use since 1891.

Ser. No. 267,718. PLOMAR PRODUCTS CORP., Pittsburgh, Pa. Filed June 8, 1928.

Queen Castle

For Olive-Oil Soap and Shaving Cream in the Nature of Soap to be Used Before Shaving.
Claims use since Apr. 1, 1928.

Ser. No. 268,477. AIX-OLEIN CO., INC., Brooklyn, N. Y. Filed June 22, 1928.

OLEOPHINE SOAP OIL

The words "Soap Oil" appearing on the drawing are disclaimed apart from the mark shown.
For Soaps, Soap Containing Detergents, and Soap Containing Grease-Solvent Compositions, All in Liquid Form, for General Cleansing and Scouring Purposes.
Claims use since about Aug. 1, 1921.

Ser. No. 269,289. SAMUEL HERMANN, doing business as Perfex Products Co., Philadelphia, Pa. Filed July 9, 1928.

PERFEX

For Quick-Cleaning Fluid.
Claims use since June 5, 1928.

Ser. No. 269,571. NEWTON E. BAKER, doing business as Hollywood Color Company, Los Angeles, Calif. Filed July 14, 1928.

Disclaimer is herewith expressly made to all wording on the drawing except the words "Hollywood Star" and the name of applicant "Hollywood Color Company."
For Shoe and Leather Dressing.
Claims use since June 28, 1928.

Ser. No. 269,998. TRUST OIL COMPANY, Perth Amboy, N. J. Filed July 21, 1928.

BELTOSAN D. R.

For Belt Dressing.
Claims use since Mar. 1, 1928.

Ser. No. 270,999. JAMES E. MCGUIRE, Camden, N. J. Filed Aug. 14, 1928.

The words "Auto Top Dressing" not being claimed apart from the other features of the mark.
For Automobile Top Dressing.
Claims use since Feb. 28, 1928.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 242,098. PAUL PETER MÜLHENS, doing business as Eau de Cologne- & Parfümerie-Fabrik "Glockengasse No. 4711" gegenüber der Pferdepost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Dec. 29, 1926.

For Hair-Combing Liquid.

Claims use since Nov. 20, 1922.

Ser. No. 266,786. H. TH. BÖHME A. G., Chemnitz, Germany. Filed May 22, 1928.

Oxycarnol

For Chemical Dye Aids—Namely, Moistening Preparations, Thread and Fibre Protecting Preparations, Thread and Fibre Penetrating Preparations, Smoothing Preparations, Tanning Preparations, and Preparations for Dissolving Dye Stuffs.

Claims use since Apr. 15, 1927.

Ser. No. 267,256. HOUBIGANT, INC., New York, N. Y. Filed May 31, 1928.

RUBA

For Manicure Preparations—Namely, Nail Polish, Nail Paste, and Nail Powder, Nail Polish in Tablet Form, Nail Enamel, and Solvent for Removing Enamel.

Claims use since Mar. 1, 1917.

Ser. No. 268,380. NAAMLOOZE VENNOOTSCHAP INTERNATIONAL PERFUMERY COMPANY, Amsterdam, Netherlands. Filed June 20, 1928.

FÉ

For Eau de Cologne, Bath Salts, Perfumery; Lotions for the Hair, Skin, and Mouth; Face, Toilet, and Talcum Powders; Skin and Beauty Creams, Brilliantine, Hair Paints, Preparations for Beautifying and Preserving the Human Hair, Dentifrices, Sachets, Smelling Salts, Toilet Water, Nail Bleach, and Liquid Cuticle Remover.

Claims use since May, 1926.

Ser. No. 268,426. COLLINS MEDICINE COMPANY, Collins, Miss. Filed June 21, 1928.

The portrait is a picture of Henry Redmond.

For Herb-Root Composition to be Used as a Preparation for Diseases of the Kidney and Bladder, Gravel, Backache, and Certain Rheumatic Affections.

Claims use since May 28, 1928.

Ser. No. 268,494. HABERLAND MANUFACTURING COMPANY, Allwood, N. J. Filed June 22, 1928.

SPEEDEE

For Chemical Preparation for Removing Wall Paper.

Claims use since about May 7, 1928.

Ser. No. 268,495. HABERLAND MANUFACTURING COMPANY, Allwood, N. J. Filed June 22, 1928.

The drawing as presented is lined to indicate a blue circle with the word "Hamaco" therein surrounded by a wide red border with the words "Speedee Wall Paper Remover" therein. No claim is made to the words "Wall Paper Remover" aside from the mark as shown.

For Chemical Preparation for Removing Wall Paper.

Claims use since about May 7, 1928.

Ser. No. 268,537. THE J. B. FORD COMPANY, Wyandotte, Mich. Filed June 23, 1928.

Wyandotte

For Solvent Clarifier for Use in the Cleaning Trade.

Claims use since Jan. 1, 1928.

Ser. No. 268,619. THE MARTIN DENNIS COMPANY, Newark, N. J. Filed June 25, 1928.

VITALENE

For Cod-Liver Oil for Mixing with Chicken and Cattle Feed.

Claims use since April 28, 1928.

Ser. No. 269,189. CHARLES ARTHUR HERRON, doing business as The Stomaid Laboratories, Wichita, Kans. Filed July 6, 1928.

STOMAID

For Stomaid, a Stomach Preparation.

Claims use since July 1, 1923.

Ser. No. 269,211. ROCCO TRILLO, doing business as Monaderb Company, North Merchantville, N. J. Filed July 6, 1928.

Monaderb TEA
TRADE MARK

The words "Trade-Mark" and "Tea" are disclaimed except as shown.

For Mixture of Dried and Coarsely-Ground Roots, Herbs, and Barks of Medicinal Value for Use in Making a Tonic and Laxative Tea.

Claims use since July 5, 1928.

Ser. No. 269,598. ALEXANDER NAZAROFF, doing business as Colit Laboratories, New York, N. Y. Filed July 14, 1928.

COLIT LABORATORIES
COLIT
COLIT

For Liniments for Relieving the Pains of Muscular Rheumatism, Lumbago, Gout, Sciatica, Neuritis, Stiff Neck, Sore Throat Caused by Congestion Due to Exposure, Fatigued Sore Muscles, Tired Aching Feet, Stiff Joints, Strained Ligiments, Sprains, and Bruises.
Claims use since July 10, 1928.

Ser. No. 269,696. LEO W. STALL, also doing business as H. E. B. Laboratory, Buffalo, N. Y. Filed July 16, 1928.

H·E·B.

For Cough Medicine.
Claims use since May 1, 1928.

Ser. No. 269,848. LANMAN & KEMP, INC., New York, N. Y. Filed July 19, 1928. Under 10-year proviso.

The portrait of the woman being fanciful.
For Liquid Tonic for Preserving and Beautifying the Hair.
Claims use since 1864.

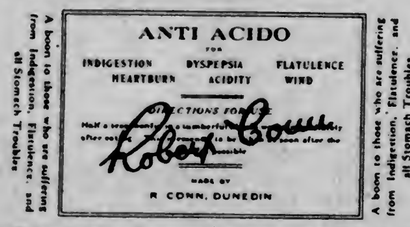
Ser. No. 269,977. The ODORONO COMPANY, Cincinnati, Ohio. Filed July 21, 1928.

The lining on the drawing is used for shading purposes only.
For Deodorant Powder.
Claims use since June 1, 1928.

Ser. No. 269,978. THE ODORONO COMPANY, Cincinnati, Ohio. Filed July 21, 1928.

The lining shown on the drawing is used for shading purposes only.
For Depilatory.
Claims use since June 1, 1928.

Ser. No. 270,142. ODOR-NOX CHEMICAL CO., Chicago, Ill. Filed July 25, 1928.



For Body Deodorant.
Claims use since July 1, 1928.

Ser. No. 270,521. MOE SPIEGEL, Middletown, N. Y. Filed Aug. 2, 1928.

CROPAID FARMER'S FRIEND A QUADRUPLE DUTY SPRAY CROPAID

No registration rights are claimed for the words "A Quadruple Duty Spray" apart from the mark as shown in the drawing.
For Insecticide and Fungicide.
Claims use since June 1, 1928.

Ser. No. 270,668. ROBERT CONN, Dunedin, New Zealand. Filed Aug. 6, 1928.

All wording in the drawing is disclaimed with the exception of the signature "Robert Conn" and the name "R. Conn."
For Medicine for Human Use for the Treatment of Indigestion, Dyspepsia, Flatulence, Heartburn, Acidity, Wind, and all Stomach Troubles.
Claims use since May 1, 1924.

Ser. No. 270,862. B. M. SCHULENBERG, doing business as Swiss-Snow Laboratories, Chicago, Ill. Filed Aug. 10, 1928.

Swiss-Snow

For Skin Cleanser and Tissue Builder in the Nature of a Cream, Lotion, and Ointment.
Claims use since Apr. 15, 1928.

Ser. No. 270,956. THE CUTTER LABORATORY, Berkeley, Calif. Filed Aug. 13, 1928.

Coliron

For Colloidal Iron Cacodylate.
Claims use since Apr. 15, 1928.

Ser. No. 270,960. THE DRACKETT CHEMICAL COMPANY, Cincinnati, Ohio. Filed Aug. 13, 1928.

D

For Epsom Salt.
Claims use since Aug. 3, 1928.

Ser. No. 271,081. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Aug. 15, 1928.

MURIATOGEN

For Preparation for the Treatment of Achylia Gastrica, Achlorhydia, and Hypoacidity.
Claims use since May 21, 1928.

Ser. No. 271,088. J. SCHANZENBACH & CO., INC., New York, N. Y. Filed Aug. 15, 1928.

PINODINE

For Hot-Oil Scalp Treatment.
Claims use since Aug. 7, 1928.

Ser. No. 271,141. NOKAL CO., Cleveland, Ohio. Filed Aug. 16, 1928.

NOKAL

The drawing is lined for red.
For Remedy for the Treatment of Corns and Callouses.
Claims use since Aug. 6, 1928.

Ser. No. 271,159. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Aug. 17, 1928.

No. 28
CASE HARDENING COMPOUND

The words "Case Hardening Compound" are disclaimed apart from the mark shown.
For Case-Hardening Materials.
Claims use since Aug. 1, 1928.

Ser. No. 271,160. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Aug. 17, 1928.

No. 510
CASE HARDENING COMPOUND

The words "Case Hardening Compound" are disclaimed apart from the mark as shown.
For Case-Hardening Materials.
Claims use since Aug. 1, 1928.

Ser. No. 271,162. MAURICE H. AUERBACH, also doing business as Auerbach Chemical Company, San Francisco, Calif. Filed Aug. 17, 1928.

STEROFECTANT

For Sterilizers, Deodorizers, Disinfectants, Germicides, and Fungicides.
Claims use since Mar. 2, 1925.

Ser. No. 271,168. COTY, INC., Wilmington, Del., and New York, N. Y. Filed Aug. 17, 1928.

POTONIQUE

For Liquid Preparation for the Improvement and Beautification of the Skin.
Claims use since Aug. 9, 1928.

Ser. No. 271,192. METAL & THERMIT CORPORATION, Carteret, N. J. Filed Aug. 17, 1928.

M and T

For Sodium Antimonate, Thermalin, and Tin Oxide.
Claims use since Jan. 1, 1928, on sodium antimonate and thermalin, and on tin oxide since Feb. 3, 1928.

Ser. No. 271,516. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Aug. 24, 1928.

Isolac

For Debuffering Milk Modifier.
Claims use since Jan. 18, 1928.

CLASS 9.

Explosives, Firearms, Equipments, and Projectiles.

Ser. No. 271,418. AMTORG TRADING CORPORATION, New York, N. Y. Filed Aug. 23, 1928.

EXTRA

For Matches.
Claims use since Aug. 17, 1928.

CLASS 12.

Construction Materials.

Ser. No. 235,276. JOHN ROE & FRED C. CAMPBELL, Seattle, Wash. Filed July 28, 1926.

ROE-CAM-ITE
ROE-CAM-ITE TRADE MARK

Applicant disclaims any right to the words "Trade-Mark" appearing on the specimens.
For Construction Materials for Floors and Walls Consisting of Plaste Compositions.
Claims use since May 18, 1926.

Ser. No. 269,706. AMERICAN EXPORT DOOR CORPORATION, Tacoma, Wash. Filed July 17, 1928.

AMDOREX

For Wooden Doors.
Claims use since Apr. 30, 1927.

Ser. No. 270,539. THE FLINTKOTE COMPANY, Boston, Mass. Filed Aug. 3, 1928.

DUOTONE BROWN

The word "Brown" is disclaimed apart from the mark shown.
For Asphaltic Composition Roofing Shingles.
Claims use since on or about Sept. 1, 1925.

Ser. No. 270,817. THE ARROW BRICK COMPANY, Knoxville, Tenn. Filed Aug. 10, 1928.

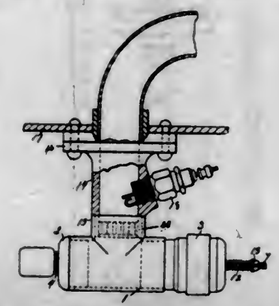
REISSUES

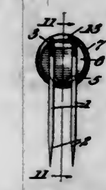


OCTOBER 9, 1928.

17,097. **ELEVATOR.** MILTON BARUCH, Beverly Hills, Calif., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1928. Serial No. 287,827. Original No. 1,580,363, dated Apr. 13, 1926, Serial No. 506,869, filed Oct. 10, 1921. 30 Claims. (Cl. 187—29.)

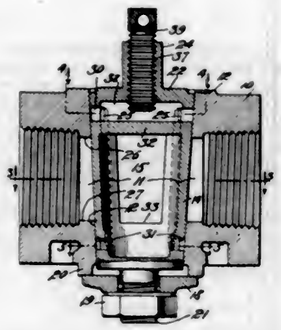
12. In an electric elevator, the combination of: a car; an electric motor for actuating said car; a controller connected to operate said motor in a forward or in a reverse direction; an operating handle carried in said car by which an operator can set said controller to operate said motor in either direction; a pair of fingers; a strip of flexible flat material attached to said car and passing in proximity to said fingers; a series of projections on said flexible strip each so constituted and placed as to actuate one of said fingers when the car stops a little above a predetermined point and to actuate the other finger when the car stops a little below a predetermined point; means for rendering said fingers inoperative at all times except when said operating handle is in the off position; and means independent of said operating handle by which the actuation of one of said fingers causes said controller to assume a position to move the car down and the actuation of the other finger causes said controller to assume a position to move said car up.

17,098. **GAS HEATER.** FREDERICK M. MINER, Jr., Madison, Wis. Filed Mar. 8, 1927. Serial No. 175,892. Original No. 1,568,610, dated Jan. 5, 1926, Serial No. 746,879, filed Oct. 30, 1924. 4 Claims. (Cl. 122—24.)



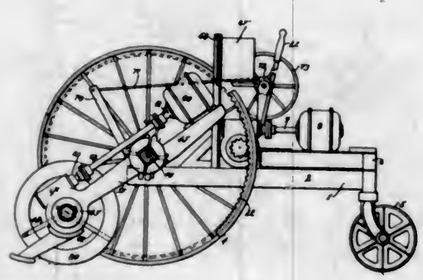
1. In a device of the kind described, a boiler, a coil of pipe disposed therein, a pipe fitting in the form of a T, a head at one end of the top of the T, a sleeve at the opposite end of said top, a valve stem slidably mounted centrally within the top of the T by means of perforated bridges in the head and sleeve, valves at both ends of the stem opening in the same direction, one end being adapted for connection with a source of combustible fluid, and the other end communicating with the atmosphere, a tubular member secured to the stem of the T, a perforated bridge adjacent one end of said member and means at the opposite end connecting it to said coil of pipe, an exhaust fan connected to the other end of the coil, a safety valve interposed between the coil and fan, and means for igniting a combustible mixture supplied through said T before it entera the coil.

17,099. **DOUBLE-POINTED PIN FASTENER.** GEORGE BODEN, GEORGE A. KING, and LYMAN BURTON CHAPMAN, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 23, 1927. Serial No. 193,752. Original No. 1,604,801, dated Oct. 26, 1926, Serial No. 117,841, filed June 22, 1926. 2 Claims. (Cl. 24—150.) (Division A.)



1. A double-pointed pin fastener, having a cap, and a double-pointed pin having its head formed by bending over and humping its looped end and engaging the cap, and an upwardly and outwardly extending prong projecting from the lower edge of the cap between the limbs of the pin.

17,100. **DOUBLE-POINTED PIN FASTENER.** GEORGE BODEN and GEORGE A. KING, Waterbury, Conn. Filed May 23, 1927. Serial No. 193,753. Original No. 1,604,801, dated Oct. 26, 1926, Serial No. 117,841, filed June 22, 1926. 4 Claims. (Cl. 24—150.) (Division B.)

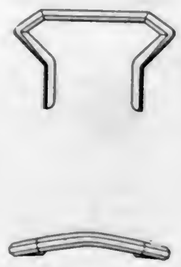


1. A double-pointed pin fastener, having a cap provided with a flanged rim, and a double-pointed pin having its head formed by bending over and humping its looped end and rigidly engaged by the flanged rim of the cap.

17,101. VALVE. SVEN JOHAN NORDSTROM, Oakland, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Aug. 7, 1928. Serial No. 298,074. Original No. 1,634,722, dated July 5, 1927, Serial No. 115,413, filed June 12, 1926. 7 Claims. (Cl. 251—93.)

1. A valve comprising, a casing having a longitudinal passageway therethrough and a tapered valve seat formed transversely of the passageway, a tapered plug seated in the valve seat and having a hole adapted to register with the passageway, means for holding the plug against its seat, the valve seat being provided with four longitudinal grooves spaced substantially 90° apart extending above and below, respectively, the planes passing through the upper and lower sides of the passageway through the valve seat, the bearing surface of the plug being provided at the larger end of the plug with two transverse grooves lying in the plane passing through the upper ends of the longitudinal grooves and at the smaller end of the plug with two transverse grooves lying in the plane passing through the lower ends of the longitudinal grooves, each pair of transverse grooves being substantially 90° in length and arranged parallel with the hole through the plug, the ends of each pair of transverse grooves being spaced substantially 90° apart, a reservoir in the plug for containing lubricant, connections between the reservoir and one pair of transverse grooves, and means for putting the lubricant in the reservoir under pressure to force it into the grooves.

17,102. SAND-MIXING APPARATUS. HOWARD L. WADSWORTH, Cleveland, Ohio, assignor, by mesne assignments, to R. H. Cleminshaw, Cleveland, Ohio. Filed Apr. 6, 1927. Serial No. 181,582. Original No. 1,566,133, dated Dec. 15, 1925, Serial No. 638,498, filed May 12, 1923. 12 Claims. (Cl. 259—144.)

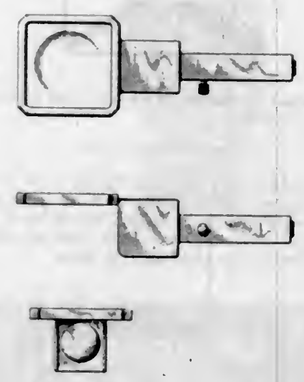


1. In a sand cutter, the combination of a frame, wheels supporting the same, a sand cutting cylinder rotatably mounted in said frame, said cylinder having two series of blades, each terminating closely adjacent to the center of said cylinder, and driving means including a shaft operatively connected to the center of said cylinder between said two series of blades.

DESIGNS

OCTOBER 9, 1928.

76,517. BRIDGE FOR AN OPHTHALMIC MOUNTING. FREDERICK R. BISHOP, North Attleboro, Mass., assignor to The Bishop Company, North Attleboro, Mass., a Corporation of Massachusetts. Filed May 24, 1928. Serial No. 26,839. Term of patent 14 years.



The ornamental design for a bridge for an ophthalmic mounting substantially as shown.

76,518. SMOKER'S STAND. JOHN H. BRADNACK, New Haven, Conn., assignor to The Tubular Products Company, Southington, Conn., a Corporation. Filed June 22, 1928. Serial No. 27,222. Term of patent 14 years.

The ornamental design for a smoker's stand, as shown.

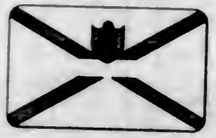
76,521. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silks Mills, a Corporation of New York. Filed July 21, 1928. Serial No. 27,552. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

76,522. COAT. KATHERINE E. BURNS, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 16, 1928. Serial No. 26,335. Term of patent 3½ years.

The ornamental design for a coat substantially as shown and described.

76,523. DOLL PURSE. JACOB COHEN, Middle Village, N. Y. Filed Dec. 21, 1927. Serial No. 24,716. Term of patent 3½ years.



The ornamental design for a doll purse as shown.

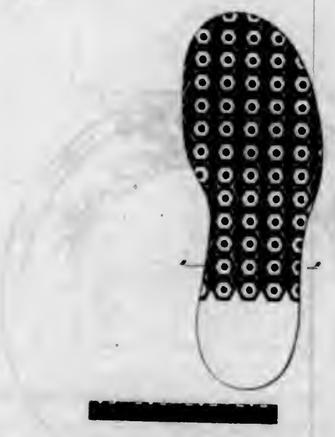
76,524. WATCHCASE. ARTHUR P. CONANT, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Dec. 5, 1927. Serial No. 24,389. Term of patent 14 years.

The ornamental design for a watchcase, substantially as shown.

76,525. CREDIT CARD. HENRY W. COOK, Syracuse, N. Y., assignor to A. E. Nettleton Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 10, 1927. Serial No. 20,667. Term of patent 14 years.

The ornamental design for a credit card substantially as shown and described.

76,526. PRINTED TEXTILE FABRIC OR THE LIKE. EMILE ERICSON, Pelhamwood, N. Y., assignor to National Fabric and Finishing Company, New York, N. Y., a Corporation of Massachusetts. Filed June 25, 1928. Serial No. 27,279. Term of patent 3½ years.

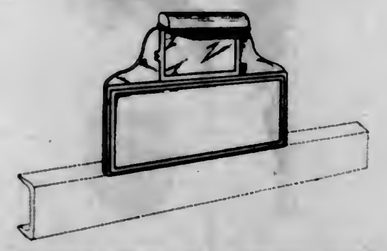


The ornamental design for a printed textile fabric or the like, as shown and described.

76,527. PRINTED TEXTILE FABRIC OR THE LIKE. EMILE ERICSON, Pelhamwood, N. Y., assignor to National Fabric and Finishing Company, New York, N. Y., a Corporation of Massachusetts. Filed June 25, 1928. Serial No. 27,280. Term of patent 3½ years.

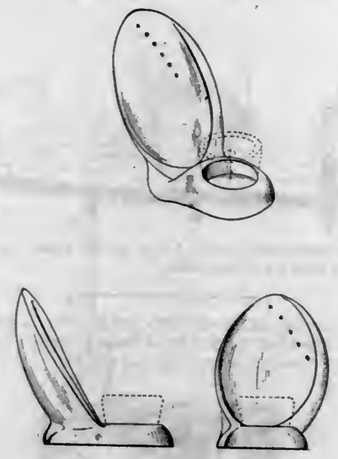
The ornamental design for a printed textile fabric or the like, as shown and described.

76,528. SOLE FOR BOOTS AND SHOES. CLARENCE W. FREY, Endicott, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed July 10, 1928. Serial No. 27,439. Term of patent 14 years.



The ornamental design for a sole for boots and shoes, substantially as shown.

76,529. SPECTACLE FRAME. JOSEPH GASPARI, New York, N. Y. Filed Apr. 26, 1928. Serial No. 26,463. Term of patent 7 years.

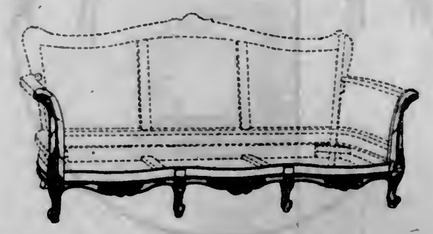


The ornamental design for a spectacle frame as shown.

76,530. COMBINED LICENSE AND NUMBER PLATE HOLDER. ELISHA A. GATES, San Diego, Calif., assignor of one-half to Frank G. Vila, San Diego, Calif. Filed Aug. 25, 1926. Serial No. 18,804. Term of patent 3½ years.

The ornamental design for a combined license and number plate holder, substantially as shown and described.

76,531. SUPPORT FOR INKSTANDS AND THE LIKE. WILLIAM H. GIBSON, Los Angeles, Calif. Filed Feb. 23, 1928. Serial No. 25,544. Term of patent 3½ years.



The ornamental design for a support for inkstands and the like as shown and described.

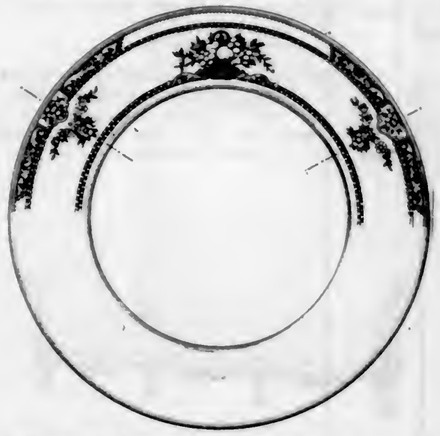
76,532. LEATHER OR SIMILAR ARTICLE. THOMAS A. GLENDON, Jr., New York, N. Y. Filed July 27, 1928. Serial No. 27,607. Term of patent 7 years.

The ornamental design for leather or similar article, as shown.

76,533. SETTEE FRAME OR SIMILAR ARTICLE. CHARLES T. GRAHAM, Grand Rapids, Mich., assignor to American Parlor Frame Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed May 28, 1928. Serial No. 26,881. Term of patent 8½ years.

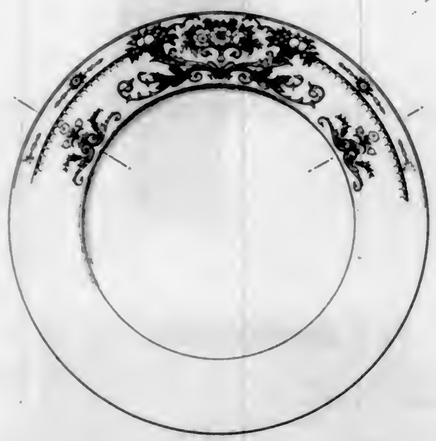
The ornamental design for a settee frame or similar article as shown and described.

76,534. SETTEE FRAME OR SIMILAR ARTICLE. CHARLES T. GRAHAM, Grand Rapids, Mich., assignor to American Parlor Frame Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed May 28, 1928. Serial No. 26,883. Term of patent 3½ years.



The ornamental design for a settee frame or similar article as shown and described.

76,535. VEGETABLE RECEPTACLE. WILLIAM B. FLANAGAN, Brooklyn, N. Y. Filed May 5, 1928. Serial No. 26,589. Term of patent 3½ years.

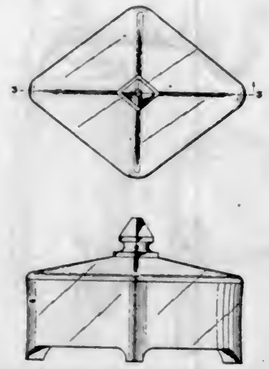


The ornamental design for a vegetable receptacle, as shown and described.

76,536. DISH OR SIMILAR ARTICLE. WILLIAM P. GRAHAM, New York, N. Y. Filed June 5, 1928. Serial No. 26,995. Term of patent 7 years.

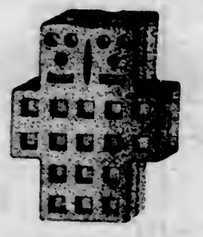
The ornamental design for a dish or similar article substantially as shown and described.

76,537. DISH OR SIMILAR ARTICLE. WILLIAM P. GRAHAM, New York, N. Y. Filed June 5, 1928. Serial No. 26,996. Term of patent 7 years.



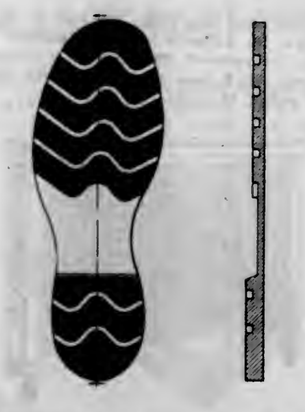
The ornamental design for a dish or similar article substantially as shown and described.

76,538. DOOR KNOCKER. LILLIAN PENDER HAGAN, Oakland, Calif. Filed Dec. 28, 1927. Serial No. 24,681. Term of patent 3½ years.



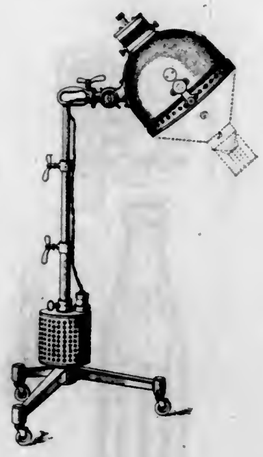
The ornamental design for a door knocker as shown.

76,539. CANDY BOX. FRED A. HARPFER, Wheeling, W. Va., assignor to Central Glass Works, Wheeling, W. Va., a Corporation of West Virginia. Filed May 31, 1928. Serial No. 26,939. Term of patent 3½ years.



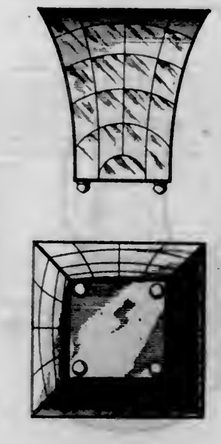
The ornamental design for a candy box, as shown.

76,540. CONFECTION. LOUIS HASBROUCK, Amherst, Mass. Filed Nov. 26, 1927. Serial No. 24,305. Term of patent 3½ years.



The ornamental design for a confection, as shown.

76,541. COMBINED SHOE SOLE AND HEEL. WILLIAM B. HOPWOOD, Beacon Falls, Conn., assignor to The Beacon Falls Rubber Shoe Company, Beacon Falls, Conn., a Corporation of Massachusetts. Filed Nov. 18, 1927. Serial No. 24,197. Term of patent 14 years.



The ornamental design for a combined shoe sole and heel as shown.

76,542. THERAPEUTIC LAMP. PAUL E. JOHNSON, Chicago, Ill., assignor to Paul E. Johnson, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 6, 1927. Serial No. 21,482. Term of patent 14 years.

The ornamental design for a therapeutic lamp substantially as shown.

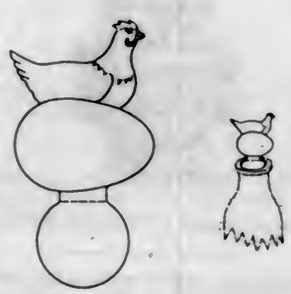
76,543. BOWL OR SIMILAR ARTICLE. ALEXANDER R. KANNÉ, Brooklyn, N. Y., assignor to Kanné and Bessant, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1928. Serial No. 25,209. Term of patent 7 years.

The ornamental design for a bowl or similar article, substantially as shown.

76,544. BOTTLE. JOHN KLEIS, Ann Arbor, Mich., assignor of one-half to The Kleis Beverage Company, Ann Arbor, Mich., and one-half to The C. E. Kleis Company, Dubuque, Iowa, a Copartnership composed of Harry A. Kleis, William Kleis, Herman Kleis, Lewis E. Kleis, Laura M. Kleis, and Ida M. Kleis. Filed Apr. 30, 1926. Serial No. 17,517. Term of patent 14 years.

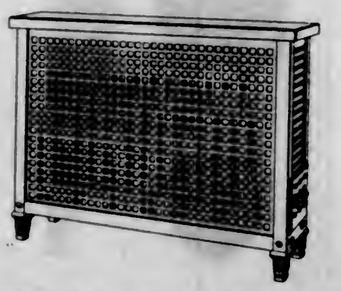
The ornamental design for a bottle, as shown.

76,545. GLASS JUG. SYLVESTER A. LANGENBAKER, San Francisco, Calif., assignor to Macbeth-Evans Glass Company, Charleroi, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1928. Serial No. 26,378. Term of patent 3½ years.



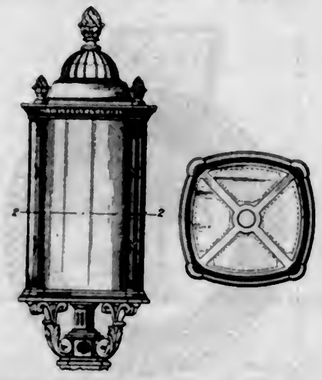
The ornamental design for a glass jug, as shown.

76,546. BRACKET FOR DRAPERY POLE OR ROD. GUNNAR MADVIG, Oakland, Calif. Filed June 13, 1928. Serial No. 27,108. Term of patent 3½ years.



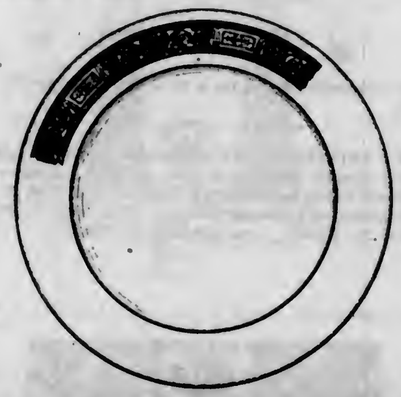
The ornamental design for a bracket for drapery pole or rod substantially as shown.

76,547. BOTTLE STOPPER. RANSDELL MATTHEWS, San Francisco, Calif. Filed Nov. 8, 1927. Serial No. 24,039. Term of patent 3½ years.



The ornamental design for a bottle stopper as shown.

76,548. ELECTRIC HEATER. FRANCIS H. MCCORMICK, Glen Ellyn, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed June 28, 1927. Serial No. 22,595. Term of patent 14 years.

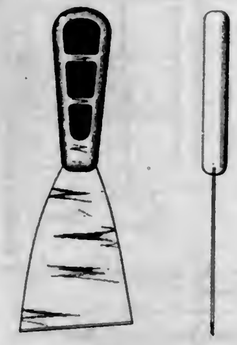


The ornamental design for an electric heater subetantially as shown.

76,549. LANTERN. OLIVER E. PAXSON, Chicago, Ill., assignor to Street Luminaire Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1928. Serial No. 26,076. Term of patent 14 years.

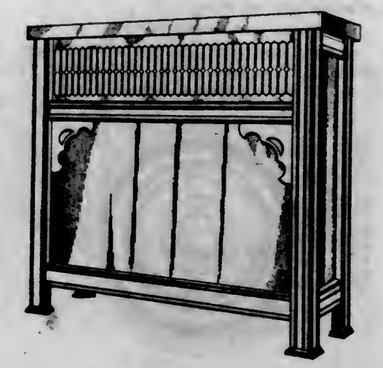
The ornamental design for a lantern, as shown.

76,550. PLATE OR SIMILAR ARTICLE. HEINRICH RAMPFEL, Lakewood, N. J., assignor to Nathan Straus & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 3, 1928. Serial No. 27,687. Term of patent 7 years.



The ornamental design for a plate or similar article substantially as shown and described.

76,551. HOLDER FOR ICE-CREAM BOXES AND THE LIKE. FRANK A. REARDON, Canton, Ohio. Filed June 14, 1928. Serial No. 27,183. Term of patent 7 years.

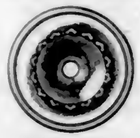


The ornamental design for a holder for ice-cream boxes and the like, as shown.

76,552. PUTTY KNIFE OR SIMILAR ARTICLE. JOHN REYNOLDS, Montclair, N. J., assignor to The Southington Hardware Co., Southington, Conn., a Corporation. Filed Dec. 12, 1927. Serial No. 24,447. Term of patent 7 years.

The ornamental design for a putty knife or similar article as shown and described.

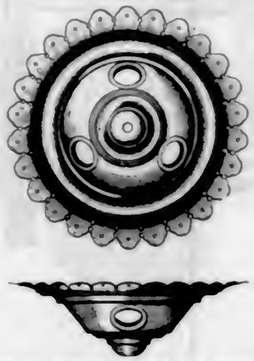
76,553. RADIATOR CABINET OR SIMILAR ARTICLE. PAUL E. SCHLEICHER and WALTER C. CALCOTT, Gary, Ind., assignors to Schleicher, Inc., Gary, Ind., a Corporation of Illinois. Filed July 5, 1928. Serial No. 27,394. Term of patent 3½ years.



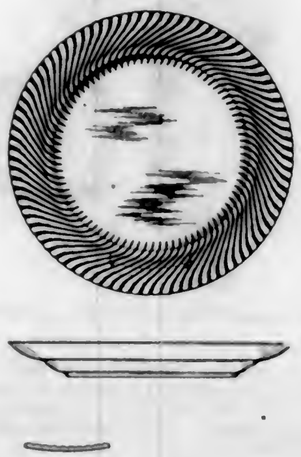
The ornamental design for a radiator cabinet or similar article, as shown.

76,554. RADIATOR CABINET OR SIMILAR ARTICLE. PAUL E. SCHLEICHER and WALTER C. CALCOTT, Gary, Ind., assignors to Schleicher, Inc., Gary, Ind., a Corporation of Illinois. Filed July 5, 1928. Serial No. 27,395. Term of patent 3½ years.

The ornamental design for a radiator cabinet or similar article, as shown.



76,555. GLOBE-HOLDING ELECTRIC FIXTURE. MORRIS SCHLEPP, New York, N. Y. Filed Mar. 14, 1928. Serial No. 25,844. Term of patent 7 years.



The ornamental design for a globe holding electric fixture substantially as shown.

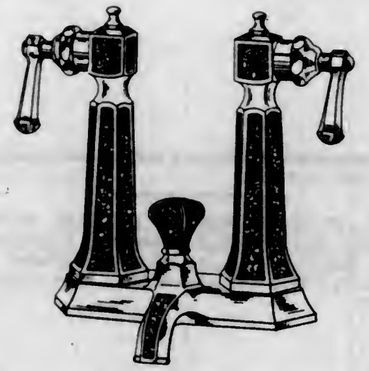
76,556. GLOBE-HOLDING CEILING FIXTURE. MORRIS SCHLEPP, New York, N. Y. Filed July 11, 1928. Serial No. 27,446. Term of patent 7 years.

The ornamental design for a globe holding ceiling fixture, as shown.

76,557. PLATE OR SIMILAR ARTICLE. FRANK A. SEBRING, Sebring, Ohio, assignor to The Limoges China Company, Sebring, Ohio, a Corporation of Ohio. Filed July 8, 1927. Serial No. 22,705. Term of patent 3½ years.

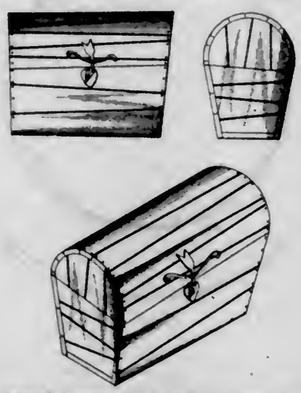
The ornamental design for a plate or similar article, as shown.

76,558. PRINTED TEXTILE FABRIC OR THE LIKE. LOUIS JOSEPH SIRACUSANO, Astoria, N. Y., assignor to National Fabric and Finishing Company, New York, N. Y., a Corporation of Massachusetts. Filed June 22, 1928. Serial No. 27,234. Term of patent 3½ years.



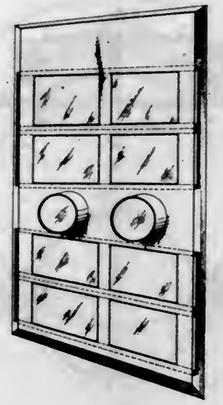
The ornamental design for a printed textile fabric or the like, as shown and described.

76,559. CHAIR OR SIMILAR ARTICLE. LATHROP FRANK SMITH, Columbiana, Ohio, assignor to Franklin Furniture Company, Columbiana, Ohio, a Corporation of Ohio. Filed Apr. 7, 1928. Serial No. 26,171. Term of patent 3½ years.



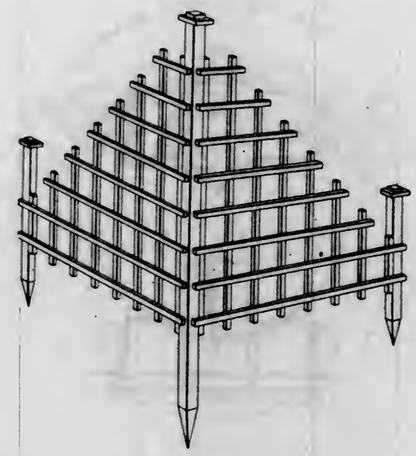
The ornamental design for a chair or similar article as shown.

76,560. FAUCET. SHERMAN SMITH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 3, 1928. Serial No. 25,148. Term of patent 14 years.



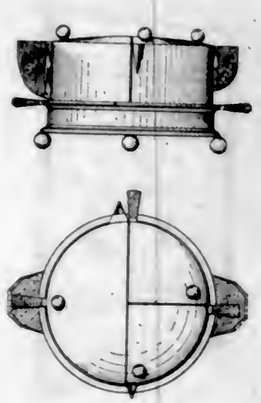
The ornamental design for a faucet, substantially as shown.

76,561. CHEST OR SIMILAR ARTICLE. CARROLL C. SNELL, New York, N. Y. Filed Feb. 13, 1928. Serial No. 25,434. Term of patent 3½ years.



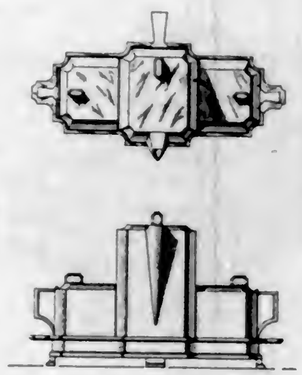
The ornamental design for a chest or similar article as shown.

76,562. COMBINED DISPLAY AND ADVERTISING SIGNBOARD. JENNINGS B. STOCKHAM and JOHN B. HICKMAN, Broken Bow, Nebr. Filed July 26, 1927. Serial No. 22,883. Term of patent 3½ years.



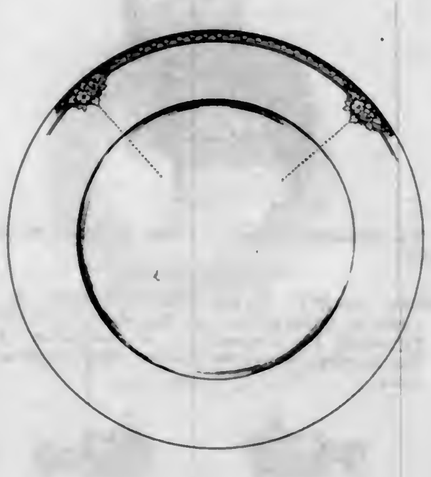
The ornamental design for a combined display and advertising signboard, as shown.

76,563. LAWN GUARD. DUDLEY V. SWEARINGEN, Chicago, Ill. Filed Jan. 12, 1927. Serial No. 20,337. Term of patent 7 years.



The ornamental design for a lawn guard, as shown.

76,564. TABLE SET. JEAN G. THEOBALD, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed July 17, 1928. Serial No. 27,511. Term of patent 7 years.

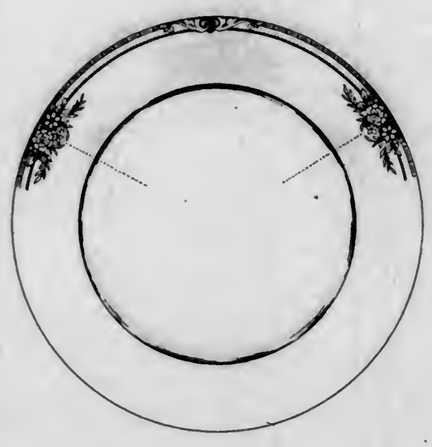


The ornamental design for a table set as shown.

76,565. TABLE SET. JEAN G. THEOBALD, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed July 17, 1928. Serial No. 27,512. Term of patent 7 years.

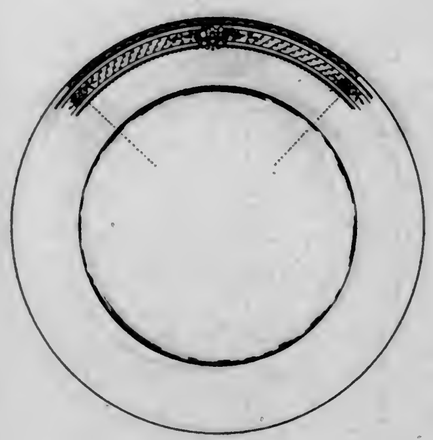
The ornamental design for a table set as shown.

76,566. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,366. Term of patent 7 years.



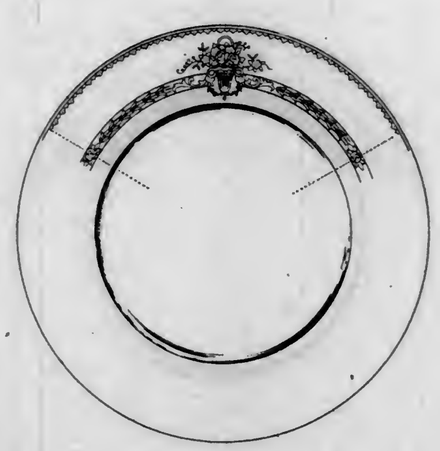
The ornamental design for a plate or similar article, as shown and described.

76,567. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,368. Term of patent 7 years.



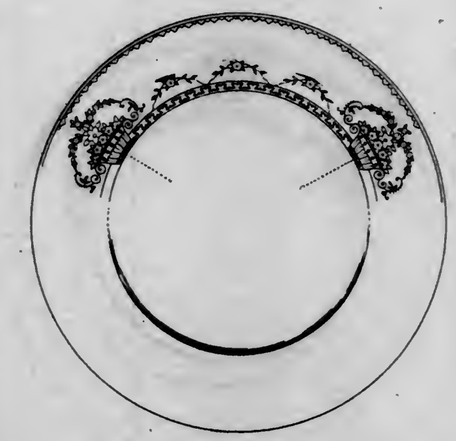
The ornamental design for a plate or similar article, as shown and described.

76,568. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,369. Term of patent 7 years.



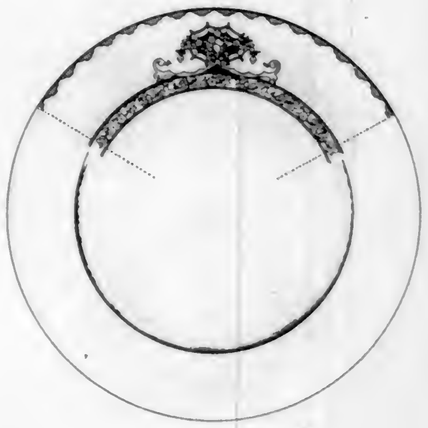
The ornamental design for a plate or similar article, as shown and described.

76,569. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,373. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

76,570. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,374. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

76,571. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,375. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

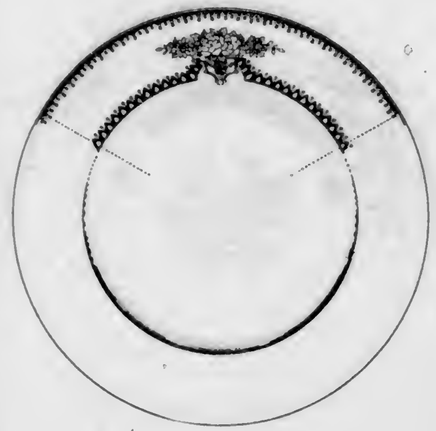
76,572. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,377. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

76,573. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,378. Term of patent 7 years.

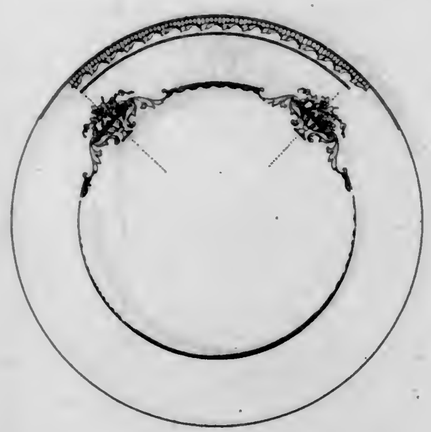
The ornamental design for a plate or similar article, as shown and described.

76,574. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,379. Term of patent 7 years.



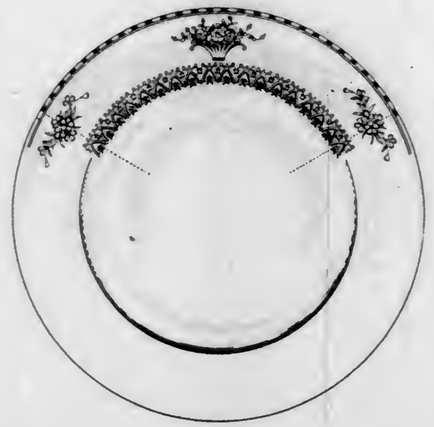
The ornamental design for a plate or similar article, as shown and described.

76,575. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,380. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

76,576. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,381. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

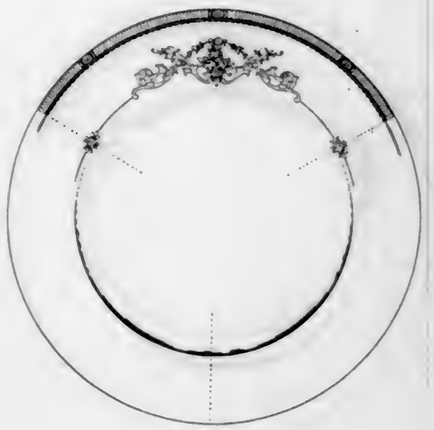
76,577. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,382. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

76,578. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,383. Term of patent 7 years.

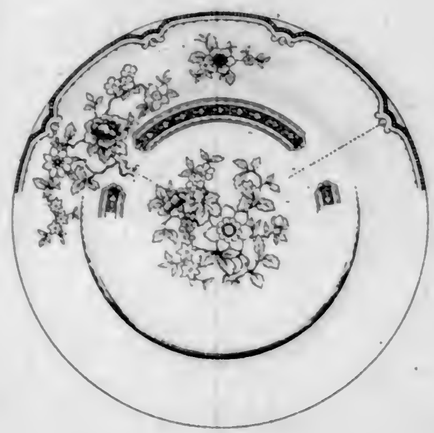
The ornamental design for a plate or similar article, as shown and described.

76,579. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,384. Term of patent 7 years.



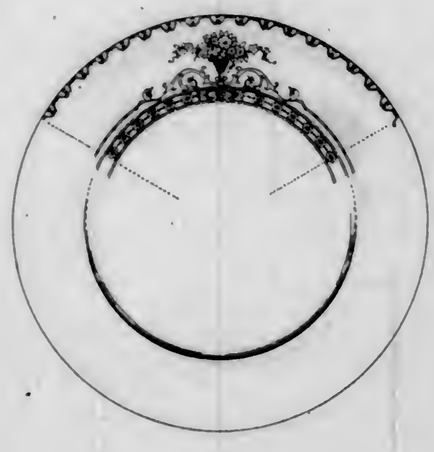
The ornamental design for a plate or similar article, as shown and described.

76,580. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,385. Term of patent 7 years.



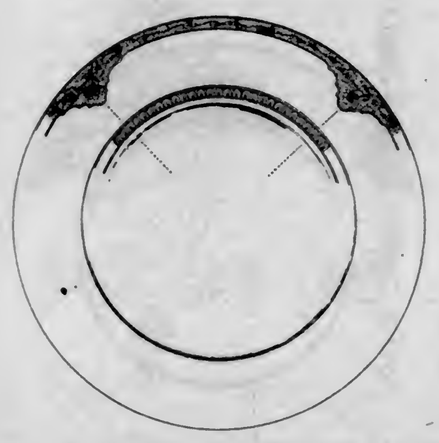
The ornamental design for a plate or similar article, as shown and described.

76,581. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,388. Term of patent 7 years.



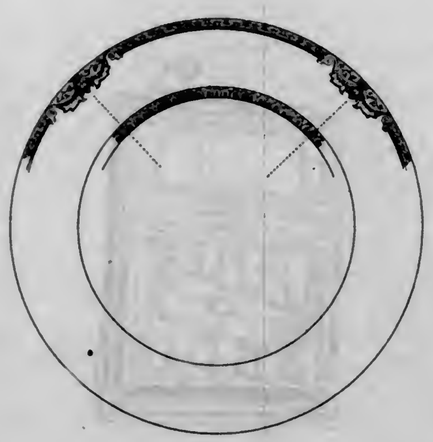
The ornamental design for a plate or similar article, as shown and described.

76,582. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,387. Term of patent 7 years.



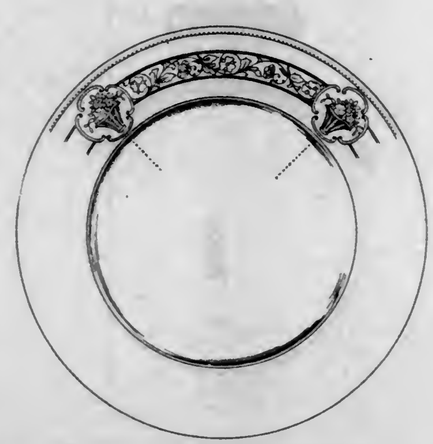
The ornamental design for a plate or similar article, as shown and described.

76,583. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,389. Term of patent 7 years.



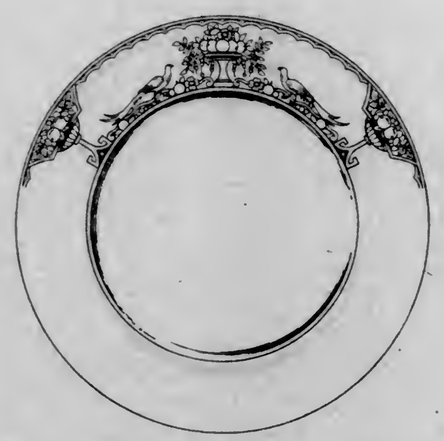
The ornamental design for a plate or similar article, as shown and described.

76,584. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,391. Term of patent 7 years.



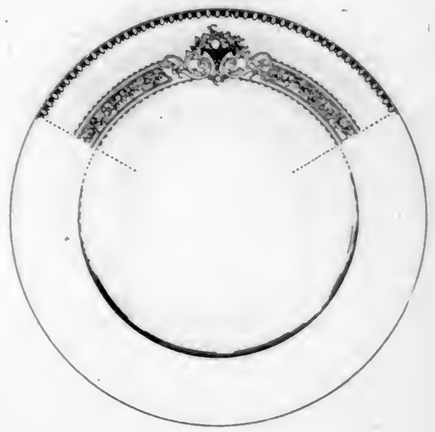
The ornamental design for a plate or similar article, as shown and described.

76,585. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,392. Term of patent 7 years.



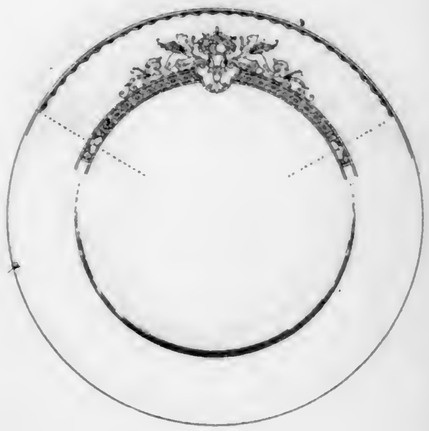
The ornamental design for a plate or similar article, as shown and described.

76,586. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,396. Term of patent 7 years.



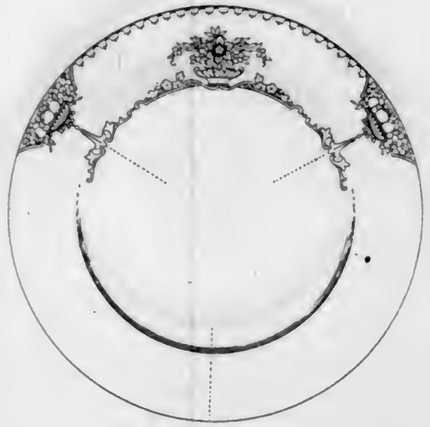
The ornamental design for a plate or similar article, as shown and described.

76,587. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,397. Term of patent 7 years.



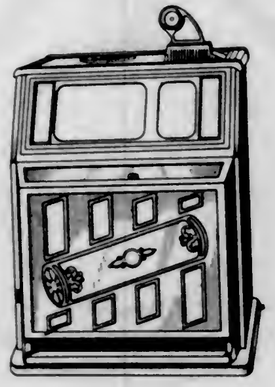
The ornamental design for a plate or similar article, as shown and described.

76,588. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,398. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

76,589. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,399. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

76,590. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,400. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

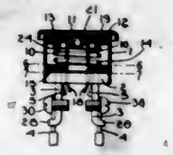
76,591. VENDING-MACHINE CABINET. THOMAS W. B. WATLING, Chicago, Ill. Filed June 22, 1928. Serial No. 27,228. Term of patent 3½ years.

The ornamental design for a vending machine cabinet substantially as shown.

76,592. BRACKET BACK FOR LIGHTING FIXTURES. LESTER R. WELLMAN, Chicago, Ill. Filed July 30, 1928. Serial No. 27,616. Term of patent 3½ years.

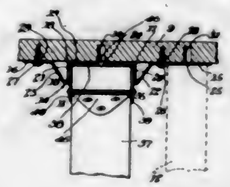
The ornamental design for a bracket back for lighting fixtures, as shown.

76,593. COMBINED BOTTLE DISPLAY AND STATUETTE. FRED CURTISS WHITE, Los Angeles, Calif., assignor to Dorado Club Beverage Co., Los Angeles, Calif., a Corporation of California. Filed June 25, 1928. Serial No. 27,272. Term of patent 14 years.



The ornamental design of a combined bottle display and statuette as shown.

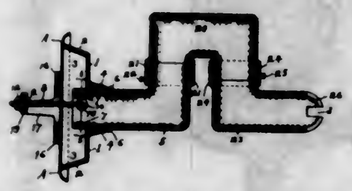
PATENTS



GRANTED OCTOBER 9, 1928.

1,686,506. PUSH BUTTON. STANLEY ANTHONY, Boston, Mass. Filed Jan. 3, 1922. Serial No. 526,641. 8 Claims. (Cl. 200—159.)

1. In a push button, the combination with a shell, of a base member of insulating material situated within and anchored to the shell, said base member having an opening, each end of which is formed with a widened portion, a button element movably mounted in the shell, a spring acting against the button element and tending to hold it in retracted position, two terminals, each having one end occupying and anchored in one of the widened portions of said opening, and each extending from the base member in a direction at substantially right angles thereto, a binding screw carried by each terminal adjacent its free end, each terminal having a contact portion struck up therefrom at a point between the base member and the binding screw, two resilient contacts connected to the button element and extending entirely through the base member when the button is in its retracted position, each contact having two stop shoulders, one co-operating with the bottom face of the base member to limit the spring-impelled movement of the button and the other co-operating with the top face of the base member to limit the depressing movement thereof.



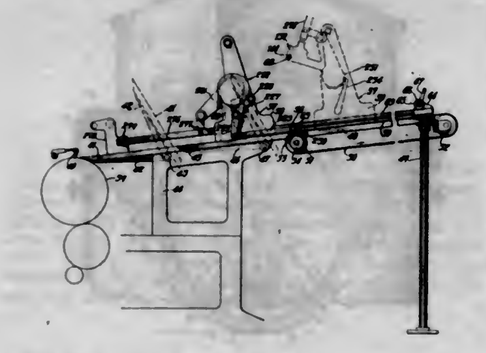
1,686,507. TENT. FRED R. BARBOUR, Los Angeles, Calif. Filed Apr. 15, 1926. Serial No. 102,257. 4 Claims. (Cl. 135—1.)

1. In a tent, in combination with the top frame of the tent, a saddle secured to the under side of said frame, a bridge element comprising a head, a pair of beams hinged together at their inner ends within said head and one of said beams being secured to said head, said head being adapted to fit in said saddle, a pair of poles located adjacent the side walls of the tent and within the tent, upon the upper ends of which poles the ends of said beams rest.

1,686,508. COAL-GAS AND OXYGEN BURNER. WILLIAM S. BARKER, Knightstown, Ind. Filed Feb. 16, 1928. Serial No. 254,847. 3 Claims. (Cl. 110—175.)

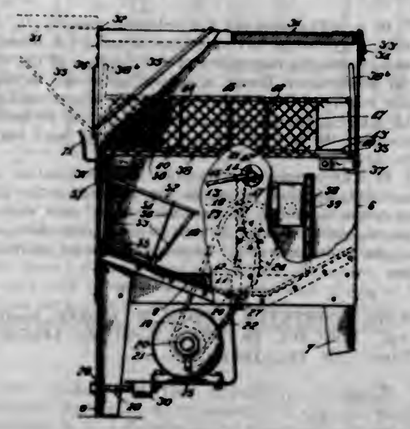
1. An attachment for the purpose set forth comprising, in combination with a partition having an aperture therethrough, an air chamber contacting with the inner face of said partition with said aperture opening thereinto, an L-shaped fitting having one end thereof located in said air chamber with its other end located inward therefrom, an L-shaped nozzle-fitting spaced from and in alinement

with said first fitting, a U-shaped fitting connecting the two L-shaped fittings and an air distributing nozzle formed on the discharge end of said nozzle-fitting, substantially as set forth.



1,686,509. SHEET-METAL WHEEL. WILLIAM BARBER, Brooklyn, N. Y. Filed Apr. 15, 1919. Serial No. 290,208. 8 Claims. (Cl. 301—63.)

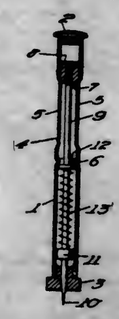
1. In a sheet metal wheel structure, a hub, stamped metal wheel members having inner flanged portions respectively meeting at the center to be received and supported upon the hub, said members also having portions disposed to contact flatwise against each other, and means to space said members apart at their hub portions, and means to secure said members upon the hub.



7. In a metal wheel, a hub sleeve provided with a securing flange at one end thereof, a pair of sheet metal disks provided with bores at the center thereof, drawn parts of said disks extending inwardly towards each other and telescoping over said hub sleeve, a spacer interposed between said disks and adapted to engage the drawn portions to cause a tight engagement of the latter with the hub sleeve, and means for uniting said hub sleeve, disks and spacer to each other.

1,686,510. SHEET FEEDER. ELMER W. BELLUCHE, Racine, Wis., assignor, by mesne assignments, to Dexter Folder Company, New York, N. Y., a Corporation of New York. Original application filed Mar. 12, 1925, Serial No. 14,991. Divided and this application filed Jan. 15, 1927. Serial No. 161,258. 17 Claims. (Cl. 271—56.)

1. In a sheet-feeder, a plural sheet callpering device and sheet-conveying devices controlled thereby to release the conveyed plural sheets.



1,686,511. DISHWASHING MACHINE. GEORGE S. BLAKESLEE, Oak Park, Ill.; George R. Blakeslee executor of the said George S. Blakeslee, deceased. Filed July 19, 1920. Serial No. 397,234. 2 Claims. (Cl. 220—32.)

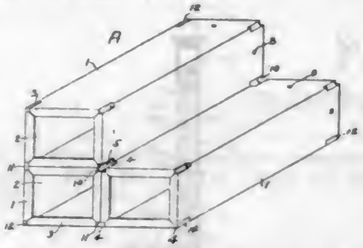
1. The combination of a tank open at the top, a cover adapted to tightly close said opening, a hinge connection between said cover and the tank arranged to permit the cover to swing either to its closed position or to a substantially horizontal open position, and a bail mounted on the tank and connected with the cover to swing therewith, for supporting the same when it occupies the latter position.

1,686,512. MARKING AND STAMPING TOOL. ANTON BURKENSTEIN, Chicago, Ill. Filed Sept. 27, 1926. Serial No. 138,096. 4 Claims. (Cl. 33—191.)

1. In a marking and stamping tool, a tubular body having a contracted portion, a stamp in one end of said body, a pin extending longitudinally of said body and stamp, a collar fast upon said pin, a collar loose upon

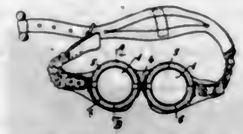
said pin for engagement with a contracted portion of said body, and a spring encircling said pin and connecting said collars.

1,686,513. ROOF PACKAGE AND BINDER THEREFOR. WALTER H. CADY, Brookline, Mass., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1922. Serial No. 550,162. 11 Claims. (Cl. 206—46.)



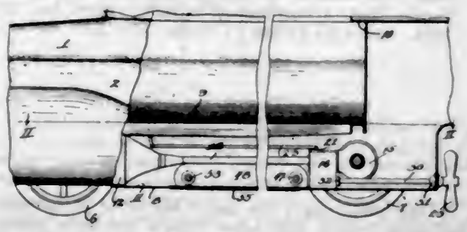
3. A package comprising asphaltic roofing material subject to shrinkage, binding members passed around said material, and means interposed between said material and members acting to maintain said members taut.

1,686,514. BOTTLE CAP. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 29, 1926. Serial No. 84,546. 1 Claim. (Cl. 215—43.)



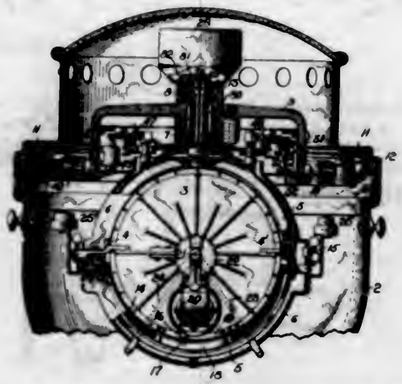
A cap comprising a top and a depending circumferential flange formed with screw threads extending lengthwise of the flange, and raised portions on the circumferential flange extending transversely of the threads and forming readily yieldable knobs arranged at intervals around the periphery of the flange, said knobs formed by stamping portions of the metal of the flange radially outward providing substantially flat gripping areas uniformly spaced from the adjacent surfaces of the container, said knobs being formed to yield readily under hand pressure and thereby decrease the area of contact between the screw threaded flange and the container.

1,686,515. SECTIONAL CABINET. EDWARD F. CHANDLER, Brooklyn, N, Y. Filed Aug. 23, 1923. Serial No. 658,864. 3 Claims. (Cl. 312—108.)



1. In combination, a plurality of sectional cabinet units, each comprising a rectangular shell having flush faces, said shells having complementary key-receiving openings in adjoining edges thereof letting into the interiors of the shells, and a freely slidable pronged key inserted in said openings with its prongs entering the respective cabinet sections and exposed interiorly thereof and embracing adjacent walls of the shells to lock them together.

1,686,516. SETTING FOR EYEGLASSES. ALFRED HEINRICH LORENZ CHRISTENSEN, Lubeck, Germany, assignor to Alexander Bernhard Dräger, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Dräger, deceased. Filed Jan. 12, 1927, Serial No. 160,786, and in Germany Jan. 13, 1926. 2 Claims. (Cl. 2—14.)

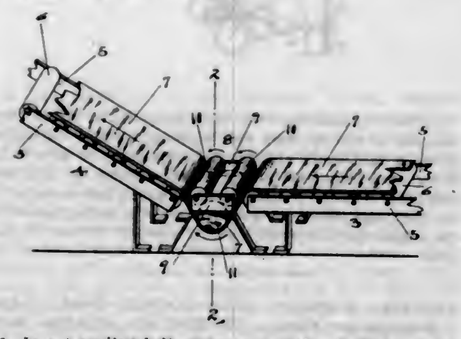


1. In a gas tight eye guard spectacle, the combination comprising a glass and a frame of elastic material therefor, said frame being provided with an annular groove to engage the rim of said glass, said groove being out of alignment with said rim so that the outer side face of said groove in contact with the glass is outwardly bent by said glass when the same is inserted into the groove, and a detachable frame ring covering both sides of said frame thereby holding both side faces of said groove in tight contact with said glass.

1,686,517. AUTO MARINE VEHICLE. ALBERT E. COOK, Evanston, Ill. Filed Jan. 22, 1927. Serial No. 162,758. 3 Claims. (Cl. 115—1.)

1. An auto marine vehicle comprising a body, driving wheels and steering wheels thereon, a power plant in the said body, a propeller mechanism for operating the vehicle in the water, an endless belt disposed within a housing in the body so that the bottom of the vehicle normally presents a smooth surface, tread members secured on a portion of the belt operable to project below the bottom of the body to secure traction for the vehicle when the said bottom is contiguous to unstable supporting material, and means to selectively drive the said endless belt.

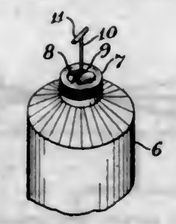
1,686,518. BATTLESHIP COMPASS. GEORGE B. CROUSE, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 14, 1920. Serial No. 430,597. 14 Claims. (Cl. 33—226.)



1. In gyro-ordnance apparatus, the combination with a gyroscopic compass, of a second gyroscopic instrument having a sensitive element rotatable in azimuth and a support for said element also rotatable in azimuth, a yielding connection between said support and element, and means controlled by said compass for turning said support.

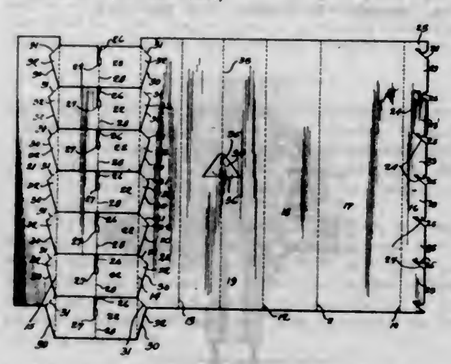
3. In gyroscopic apparatus, a pair of gyroscopic compasses having different periods of oscillation about the meridian, means connected to one compass for exerting a torque about the vertical axis thereof, and means responsive to the relative position of the other compass for controlling said means without reacting on said other compass.

12. In a gyro-apparatus for ordnance control, in combination, a gyroscope having a pendulous factor rendering the same primarily responsive to the rotation of the earth and to acceleration forces, a second gyroscope having a relative less pendulous factor and power means connected to the latter gyroscope and controlled by the former for maintaining the position of the latter fixed with respect to the earth.



13. In a gyro-compass or the like, the combination with the sensitive element, of means for suspending the same, power-driven rotatable means for turning said suspending means, guide bearings for said element, and other power means for maintaining said bearings in a state of relative motion.

1,686,519. CONVEYER. FRANK W. CUTLER, Portland, Oreg. Filed Oct. 19, 1926. Serial No. 142,736. 4 Claims. (Cl. 198—184.)

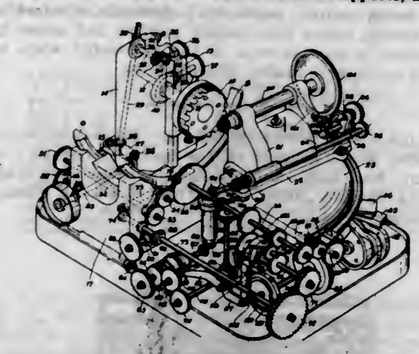


1. In a traveling belt conveyer: a pair of adjacent rollers; a floating roller beneath said adjacent rollers held in contact with each thereof by the traveling belt.

1,686,520. TUBE CLOSURE. RICHARD W. FOX, Birmingham, Ala. Filed Apr. 23, 1927. Serial No. 186,112. 2 Claims. (Cl. 221—60.)

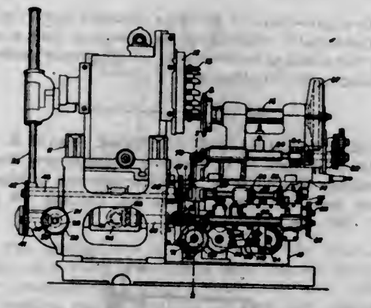
1. A closure for tubes of the character described, comprising a threaded nipple having a convex transversely grooved end, with a relatively small dispensing hole in the bottom of the groove, a pin adapted to be inserted into the tube through the dispensing hole and having a head adapted to be received in the groove, and a cap adapted to be screwed on the nipple and against its grooved end and the pin head mounted in the groove.

1,686,521. FOLDING EGG CARTON. LLOYD G. HARRISON, Chicago, Ill. Filed July 2, 1925. Serial No. 41,013. 9 Claims. (Cl. 229—29.)



1. The combination with a carton consisting of a bottom, sides and lid, of transverse partitions interposed between said sides and integrally connected therewith, a longitudinal partition interlocked with said transverse partitions, means whereby said bottom and transverse partitions may fold to collapse said carton, and means of cooperation between said bottom and said longitudinal partition for locking said carton in its distended position.

1,686,522. GEAR-CUTTING MACHINE. HERBERT G. HARTMAN, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,774. 16 Claims. (Cl. 90—4.)

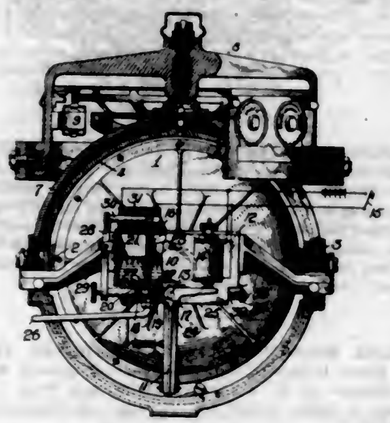


1. In a gear cutting machine of the periodically indexing type, a tool support, a blank support, a rotary cutter, having a plurality of equidistantly spaced cutting blades arranged on its periphery, rotatably mounted on said tool support, means for imparting a continuous rotary movement to the tool, means for periodically effecting a relative separation between the tool and blank to permit of indexing the blank, and gearing governing the operation of said last named means, said gearing being so selected as to permit of the tool making an integral number of revolutions during each cycle of operation of the machine whereby the same blade of the cutter commences to cut at the beginning of operation on each tooth of the blank.

12. In a machine for producing gears, a blank support, a blank spindle journaled therein, a tool support, a tool spindle journaled therein, a rotary tool, provided with a plurality of spaced cutting blades, mounted on the tool spindle, an oscillatory cradle upon which one of said supports is mounted, means for driving the tool spindle including a set of change gears governing the speed of rotation of the tool, a cam shaft, a cam mounted thereon having an operative connection with one of said supports for periodically effecting a relative separation between said supports, means

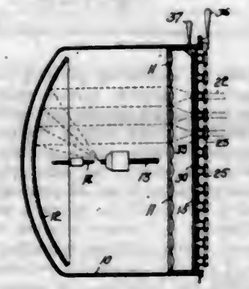
operated from said cam shaft for controlling the movement of the cradle, means for rotating the blank spindle in timed relation with the cradle during cutting, means for periodically indexing the blank, and means for driving said cam shaft including a set of change gears so proportioned to the change gears governing the speed of rotation of the tool that the tool makes an integral number of revolutions for each rotation of the cam shaft.

1,686,523. MACHINE FOR PRODUCING GEARS. ERNEST C. HEAD, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 3, 1926. Serial No. 113,532. 18 Claims. (Cl. 90—4.)



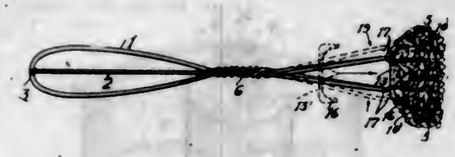
1. In a machine for generating gears, a blank support and a tool support, a movable carrier upon which one of said supports is mounted, means for imparting movement to said carrier, a blank spindle rotatably mounted on the blank support, a drive shaft, a train of gearing operatively and directly connecting said drive shaft and blank spindle and including a set of gears governing the number of teeth to be cut in the blank, a set of change gears, for maintaining the proper relation of blank and carrier movements during cutting, operatively connected with said train of gearing, means for rotating said drive shaft during cutting and indexing, and means for periodically imparting to said train of gearing an added algebraic rotation to index the blank.

15. In a machine for generating gears, a blank support and a tool support, a cradle upon which one of said supports is mounted, a blank spindle journaled in a blank support, a train of gearing connecting said cradle and blank spindle and including a set of differential gears, a



set of change gears governing the number of teeth to be cut in the blank incorporated in said train and interposed between said differential and the blank spindle, a set of change gears for maintaining the proper ratio of cradle and blank movements during cutting incorporated in said train and interposed between said differential and said cradle, reversible means for rotating said gear train, means for locking one element of said differential against rotation during cutting, means for periodically withdrawing said locking means from locking position and means for imparting to said element of the differential when released an integral number of revolutions.

1,686,524. GYROSCOPIC COMPASS. WILLIAM R. HIGHT, Hollis, N. Y., assignor to The Sperry Gyroscope Company, New York, N. Y., a Corporation of New York. Filed Nov. 7, 1925. Serial No. 67,625. 8 Claims. (Cl. 33—226.)



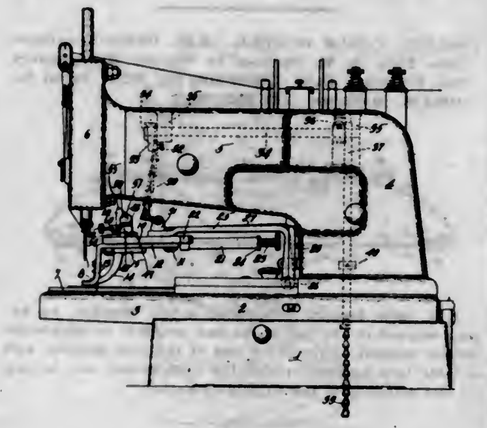
1. In a gyro-compass having a damping factor, of means for substantially eliminating the damping, and means for giving the compass substantially an 85 minute period while the damping is eliminated.

1,686,525. SEARCHLIGHT SHUTTER. FRANK R. HOUSE, Baldwin Harbor, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 3, 1924. Serial No. 735,539. 6 Claims. (Cl. 240—45.)

1. In a searchlight, a plurality of similar converging lenses having their foci in a single plane, a member positioned substantially in said plane and having a plurality of apertures through which said lenses may focus the light, and means for actuating said member to move said apertures beyond said foci and cut off the light.

1,686,526. HOLDER. WILLIAM A. LACY, Springfield, Mass. Filed July 20, 1926. Serial No. 123,678. 1 Claim. (Cl. 15—154.)

A device for the purpose described comprising a handle portion which is made up of a plurality of wires which are bent intermediate their ends, the wires being twisted together and the ends of the wires formed with inwardly extending bent portions sharpened at their free ends, an apertured cup-shaped slidable clamping member located on the free ends of the wires, said member having notches in toe aperture to separately receive single clamping wires and said wires each having an inwardly bent portion for retaining the slidable clamping member in place but permitting it to be moved rearwardly to a releasing position.



1,686,527. IGNITION APPARATUS. JOSEPH H. LEHMAN, Hasbrouck Heights, N. J. Filed Feb. 25, 1922. Serial No. 539,093. 27 Claims. (Cl. 200—21.)

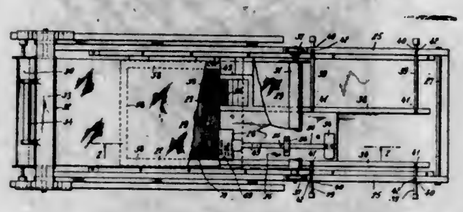
2. A circuit controller for ignition apparatus, including an interrupter head having a collector ring, a sheet metal casing enclosing said head and having a tubular metal guide secured to one side thereof, and presenting dissimilar bayonet slots, a brush holder detachably mounted within said guide and having means cooperating with said slots for retaining said holder in a angle position, and a brush slidably mounted within said holder and engaging with said collector ring.

1,686,528. BUTTON CLAMP FOR BUTTON-ATTACHING MACHINES. ROBERT L. LYONS, Waltham, Mass., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1923. Serial No. 668,060. 2 Claims. (Cl. 112—114.)

1. A machine of the class described having a frame, a button clamp comprising a plurality of button-engaging elements relatively movable toward and from each other and as a unit toward and from said frame, a member movable to effect such relative movement, a yoke arranged transversely of the direction of motion of said member, and a lever pivoted on said yoke and having one arm engageable with said member, said lever having another arm positioned to impinge on said frame on predetermined extent of motion of said button clamp theretoward, further

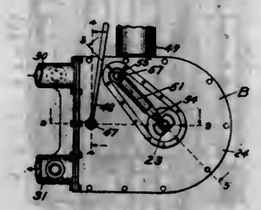
motion of said clamp in the same direction serving to rock said lever to cause said one arm to move said member in a direction to move said elements away from each other.

1,686,529. FROTH-FLOTATION CONCENTRATION OF ORES. RHETHERFORD B. MARTIN, Colonia, N. J., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Dec. 11, 1926. Serial No. 154,309. 11 Claims. (Cl. 209—167.)



1. The process of concentrating a sulphide ore which consists in agitating a pulp of the suitably ground material with a mineral-frothing agent and with an organic compound carrying nitrogen and copper and capable of assisting in the flotation of a mineral value of the ore so as to produce a mineral-bearing froth, and separating the froth carrying said value.

1,686,530. SIDE-REGISTERING MECHANISM FOR PRINTING-MACHINE ROLLS. EDWARD THOMAS MORRIS, and THOMAS JOSEPH MILLS, London, England, assignors to R. Hoe & Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1925, Serial No. 14,229, and in Great Britain Sept. 11, 1924. 4 Claims. (Cl. 242—58.)

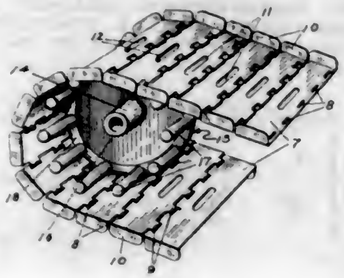


2. In side registering mechanism for supply rolls of printing machines, the combination of a train of gearing for moving each roll of a plurality of rolls in an axial direction, means operable from a distance for actuating said gearing and means for moving one wheel of each of said trains into and out of mesh, whereby any one of said rolls may be moved independently of the other rolls.

1,686,531. LETTER-PRINTING APPARATUS. ELMER BRADFORD PYLE, New York, N. Y. Filed May 19, 1923. Serial No. 640,085. 18 Claims. (Cl. 101—56.)

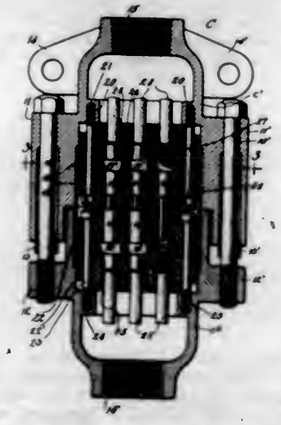
1. An apparatus of the character described comprising, a type bed, a body of type carried thereby for printing the body of a letter, an impression element movable over said type, an inking ribbon between the type and the impression element, and an address plate carriage provided with means for removably holding an address plate, said carriage being slidable in the plane of the type body to printing position beneath said ribbon to bring the address plate into proximity to said body of type and to a position beyond the ribbon to permit the removal of the address plate.

1,686,532. POWER TRANSMISSION. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn.; Jacob A. Ronning and Adolph Ronning executors of said Andrean G. Ronning, deceased. Filed Aug. 20, 1923. Serial No. 658,363. 2 Claims. (Cl. 103—120.)



1. The combination in a device of the character described, of a housing having a semi-circular inner end, a rotor permanently arranged concentric with respect to said housing end and having its periphery spaced therefrom, radially arranged pistons slidably mounted in the rotor, a spacing block slidably arranged within the housing and normally engaging the rotor, to divide the housing into two chambers communicating with the rotor at different points, means for adjusting the spacing block to and away from the rotor, and means operative by the movement of the spacing block to regulate and determine the radial sliding movement of the pistons in the rotor.

1,686,533. CONVEYER. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn.; Jacob A. Ronning and Adolph Ronning executors of said Andrean G. Ronning, deceased. Filed July 12, 1926. Serial No. 121,833. 6 Claims. (Cl. 198—195.)



1. A conveyer belt comprising a series of sections arranged substantially edge to edge and each having means at one edge for interlocking engagement with the adjacent

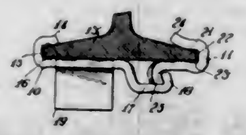
edge portion of the adjoining section, each section having integrally formed end extensions, and the ends of said extensions being offset from the ends of the adjacent extensions whereby the belt may be inwardly turned to permit the sections to be locked and unlocked.

4. A conveyer comprising a belt having an endless series of interlocked sections, a spool, for supporting one end of the belt, and having a plurality of spaced, peripherally arranged bars adapted to successively engage the belt sections at points intermediate the advancing and rear edges of the sections.

1,686,534. ELECTRIC COUPLING. FRED M. ROSENZWEIG, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1924. Serial No. 699,140. 1 Claim. (Cl. 173—328.)

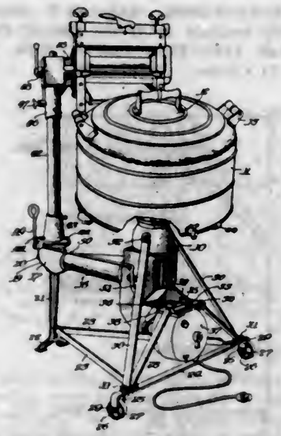
An electric coupling device comprising a casing consisting of upper and lower mating sections, means for removably securing the said sections together to form a coupling unit, the upper of said sections being provided with a plurality of apertured ears for suspendedly attaching the unit to a support, and being further provided with a protectively depending skirt overlapping the lower section, the opposite ends of the said sections being threaded for receiving connecting conduits, a pair of twin separable blocks of insulation material in each casing section, the blocks of a pair having aligned openings terminating in adjacent enlargements defining a cavity, means for detachably securing each pair of blocks together and to its casing section, a coupling member received by the alinged openings in each pair of blocks and having a part seated in said cavity whereby the coupling member is held in position against axial displacement by and between the blocks of the pair when the same is secured to the casing and is releasable from the blocks when the same are separated, the coupling member of one pair of blocks being arranged to mate with the coupling member in the other pair of blocks.

1,686,535. CABLE BUMPER. KARL OSTEN SCHAUMAN, New York, N. Y., assignor to William Henry Avery, San Francisco, Calif. Filed May 10, 1926. Serial No. 108,118. 9 Claims. (Cl. 293—55.)



1. A cable bumper comprising a bow member, an anchor secured to one end of the bow member, an adjustable anchor secured to the other end of the bow member, and a cable loop passing around the first anchor and having its end attached to the adjustable anchor.

1,686,536. BUMPER CONTROL. KARL OSTEN SCHAUMAN, Asbury Park, N. J., assignor to William H. Avery, San Francisco, Calif. Filed Nov. 25, 1927. Serial No. 235,475. 6 Claims. (Cl. 293—55.)



1. A control bumper comprising a bumper member, and a sliding contact arm resiliently pressed into contact with said bumper member.

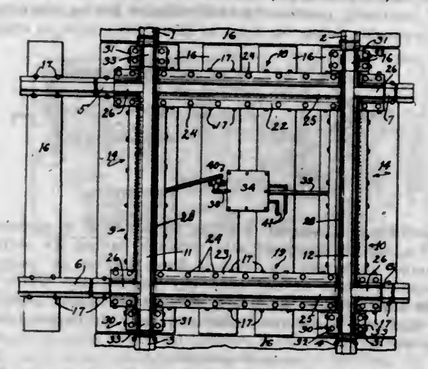
1,686,537. METHOD OF MANUFACTURING SHEET-METAL RAIL ANCHORS. LAURENCE A. SCHNEIDER, Canton, Ohio, assignor to Canton Forge & Axle Company, Canton, Ohio, a Corporation of Delaware. Original application filed Sept. 29, 1924, Serial No. 740,593. Divided and this application filed May 26, 1926. Serial No. 111,747. 3 Claims. (Cl. 29—169.)

3. The method of forming a two-piece rail anchor of sheet metal, comprising the shearing of two metal blanks along lines providing each blank with a diagonal edge at one end thereof, bending one of said blanks to provide portions offset laterally with relation to each other, bending said blank along a line parallel to said diagonal edge to provide a flange, pressing said flange inwardly to a hook shaped configuration, bending the other end of said blank to provide a jaw portion, forming the other blank with reversed bends, one of which is parallel to its diagonal edge to provide a flange to interlock with the said flange of the other member, then bending the other other end of the blank to a hook shaped configuration.

1,686,538. WASHING-MACHINE ASSEMBLY. JOHN TEDELL, Springfield, Ill., assignor to Montgomery Ward & Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1925. Serial No. 3,996. 9 Claims. (Cl. 68—18.)

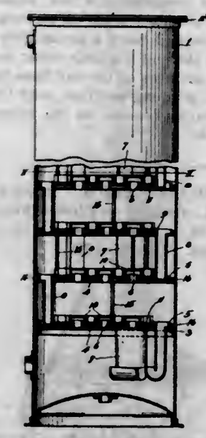
1. In a washing machine, the combination with a vertically-disposed tub-supporting frame member, of an arm extending laterally from said tub-supporting frame member, a supporting column for wringer mechanism extending upwardly from said arm, a supporting leg for sustaining the weight of said supporting column, an outwardly extending motor supporting plate carried by the tub-supporting frame member at the side thereof opposite to the laterally extending arm, and means for tying said supporting leg to said tub-supporting frame member.

1,686,539. AUTOMATIC LOCKING CLAMP. ERNEST G. UNGER, New York, N. Y., assignor to Keen Waving Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1925. Serial No. 8,636. 14 Claims. (Cl. 132—36.1.)



1. A clamp for crushing a paste board tube towards a closed position, including a pair of jaws pivotally connected and having their opposed inner faces concaved to engage and crush opposite sides of the tube, a pin carried by one of the jaws and a ratchet pivotally connected to the other jaw and having one of its edges defined by a rack of teeth adapted to be moved into engagement with the pin to secure the jaws in this tube crushing position.

1,686,540. MINERAL DYEING. CLARENCE B. WHITE, Montclair, N J., assignor to Vivatex Processes, Inc., Lodi, N. J., a Corporation of New Jersey. Filed Dec. 23, 1926. Serial No. 156,766. 12 Claims. (Cl. 8—5.)



1. In mineral dyeing of textile material, the steps comprising forming with the aid of a solvent stimulant a solution of a difficulty soluble metallic salt, and impregnating the textile material with the solution.

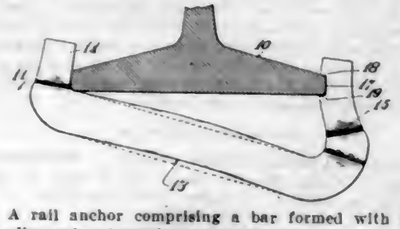
1,686,541. RAILWAY CROSSING. GEORGE W. WILSON, Los Angeles, Calif., assignor of one-half to James R. Townsend, Los Angeles, Calif. Filed Apr. 25, 1927. Serial No. 186,317. 5 Claims. (Cl. 246—378.)

1. A railway crossing comprising a substantially cylindrical element having a wheel bearing surface to form an uninterrupted continuation of alined running rails, a second wheel bearing surface, circumferentially spaced from the first mentioned wheel bearing surface to form an uninterrupted continuation of relatively alined running rails angularly disposed with relation to the first mentioned rails; and means for bodily rotating the element for selectively positioning the wheel bearing surfaces relative to the angularly disposed running rails.

1,686,542. BUBBLE TOWER. LOUIS E. WINKLER and FRED C. KOCH, Wichita, Kans. Filed June 28, 1926. Serial No. 118,911. 5 Claims. (Cl. 261—114.)

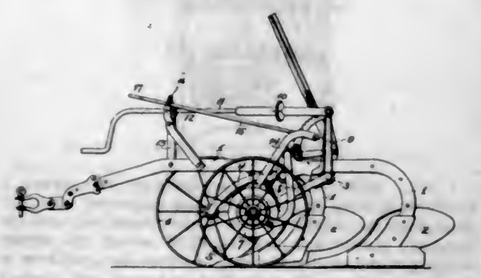
1. In a bubble tower, the combination of a tower, a bubble deck fitted in said tower and supported some distance from the bottom thereof, a rim formed adjacent the periphery of said deck, packing fitted against the outside of the rim and sealing the space between the periphery of the deck and the wall of the tank, a second deck received within said tank, and spacing rods between said first and second deck for the spacing and support of said second deck.

1,686,543. VEHICLE HEADLIGHT. WILLIAM H. WOOD, South Euclid, Ohio. Filed Feb. 2, 1927. Serial No. 165,253. 3 Claims. (Cl. 240—41.)



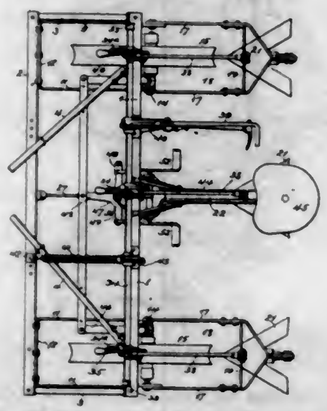
1. In a headlight, the combination with a light source, of a reflector having portions approximating a paraboloid whose focal point is located near said light source to pro-

duce a concentrated distance beam, and having one or more additional regions of comparatively small area whose normals intersect the vertical axial plane at a point above said light source to produce a narrow beam above the axis, the remaining portions of said reflector having their normals passing below the level of said light source so that a



spreading, downwardly deflected illumination is produced, and a lens in front of said reflector having its surface covered uniformly by vertical flutes having an angular spreading effect of not over ten degrees, the width of such narrow beam being such as not to be spread laterally by said lens more than four and one-half degrees from the center line.

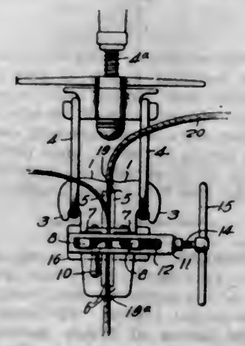
1,686,544. RAIL ANCHOR. CHARLES F. YARDLEY, Larchmont, N. Y. Filed Sept. 20, 1926. Serial No. 136,507. 14 Claims. (Cl. 238—330.)



1. A rail anchor comprising a bar formed with angularly disposed end portions adapted to hook over opposite edges of the rail base and exert a spring grip thereon transversely of the rail, the end portions being so disposed with relation to the top surfaces of the rail base that the anchor, when in its normal gripping position, may be removed from the rail by downward pressure on the extremity of either of said end portions.

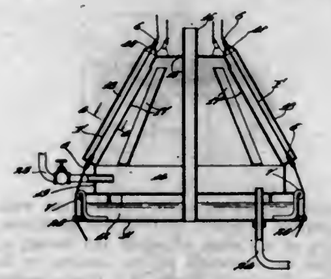
1,686,545. POWER-LIFT PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed June 8, 1923. Serial No. 644,177. 1 Claim. (Cl. 97—72.)

In a power lift plow, the combination of crank axles, ground wheels on the axles, a plow frame carrying earth-working means and provided with bearings for the axles, power lift means associated with one of the wheels and connected to the frame for raising the latter, a control lever cooperable directly with said power lift means and supported independently of said frame whereby the latter will be capable of vertical movement independently of said control lever, an operating rod connected with said control lever and extending forwardly above the frame, a guide for said rod, and means on the frame adjacent the front end thereof for supporting said guide whereby the operating rod will be maintained in position to be manipulated from a position in front of the plow.



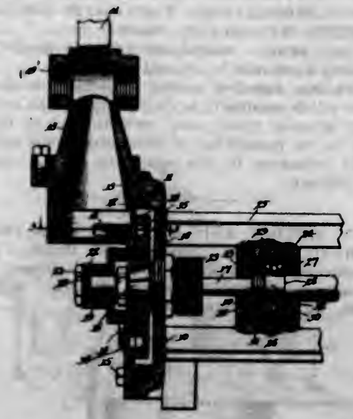
1,686,546. CULTIVATOR. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed June 8, 1926. Serial No. 114,461. 11 Claims. (Cl. 97—138.)

1. In an agricultural implement, the combination with a horizontal frame, of depending pairs of fixed supports, wheels disposed between the depending supports of the respective pairs of supports, axles for said wheels, each mounted on one of the supports to rock thereon about a vertical axis, beams connected with said depending supports, and soil-engaging means carried by said beams.



11. In an agricultural implement, the combination with a wheeled frame, a plurality of beams including side beams and an intermediate beam, and soil-engaging means carried by said beams, of a supporting yoke secured to an intermediate portion of the frame, a member connecting the arms of said yoke, a brace connected with said member, sleeves on said member between the brace and arms of the yoke, and arms between said sleeves and the arms of the yoke and adjustably secured to the intermediate beam, whereby the intermediate beam may be adjusted laterally with respect to the side beams.

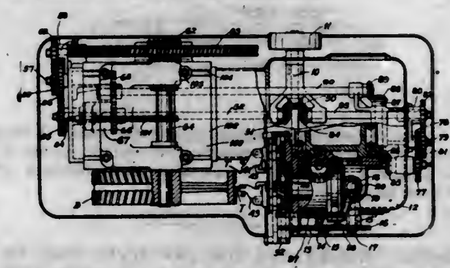
1,686,547. WIRE-LINE CLAMP. THOMAS W. BELL and THOMAS C. ROGERS, Parkersburg, W. Va. Filed Mar. 24, 1927. Serial No. 178,097. 6 Claims. (Cl. 24—135.)



1. A cable clamp comprising cooperating jaws, each jaw having a cable receiving groove therein, means to force a cable into said groove between the jaws, and means to secure the jaws on the cable, said means comprising a curved thumb carried by one jaw and extending in front of the cable receiving groove.

1,686,548. YARN-CONDITIONING MACHINE. ALFRED BLANCHARD, Ware, Mass., assignor to Otis Company, Ware, Mass., a Corporation of Massachusetts. Filed Apr. 24, 1926. Serial No. 104,328. 14 Claims. (Cl. 66—125.)

1. The conditioning device for a machine of the character described comprising a plurality of separate steam chambers one for each thread to be conditioned, a main steam chamber supplying steam to said separate chambers, and an oiling device supplying oil to the yarn as it emerges from said separate steam chambers.



1,686,549. PUMP. ARTHUR W. BURKS, Decatur, Ill. Filed Dec. 11, 1925. Serial No. 74,807. 25 Claims. (Cl. 103—96.)

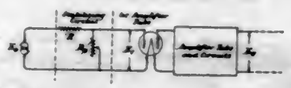
1. In a pump, a casing having a fluid inlet and a fluid outlet, a rotor in said casing having fluid impelling buckets thereon, and a chamber disposed adjacent the path of said buckets, said chamber being in communication with the rotor through an opening and being arranged to retain a body of liquid therein and to permit the same to receive from the buckets through said opening a movement in which it engages the buckets as the rotor is operated.

1,686,550. METHOD OF AND MACHINE FOR CUTTING CYLINDRICAL GEARS. ALLAN H. CANDEE and MAGNUS H. JOHANSON, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Nov. 2, 1926. Serial No. 145,903. 41 Claims. (Cl. 90—9.)

1. The method of producing gears, which consists in moving a tool at a variable velocity across the face of a cylindrical blank in a plane parallel to the axis of the blank, while rotating the blank continuously on its axis at a uniform velocity and simultaneously imparting an additional relative movement between the tool and blank at a variable velocity, which combined with the other motions will produce the longitudinal tooth form.

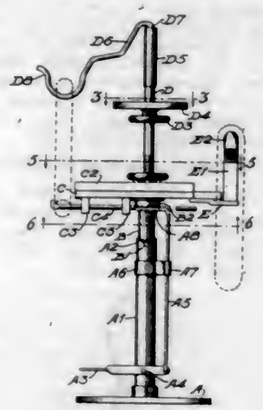
25. In a machine for producing cylindrical gears, a tool support, a tool mounted thereon, a blank support, a blank spindle journaled therein, a carrier upon which one of said supports is mounted, means for moving the tool at a variable velocity across the face of the blank in a plane parallel to the blank axis, means for imparting a continuous rotary movement to the blank spindle, means for imparting to said carrier a uniform velocity movement in a direction tangential to the pitch surface of the blank and means for simultaneously imparting to said carrier a variable velocity movement, also in a direction tangential to the pitch surface of the blank.

1,686,551. BASE FOR PORTABLE LAMPS. ANDREW J. CARMICHAEL, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 26, 1927. Serial No. 222,168. 8 Claims. (Cl. 240—53.)



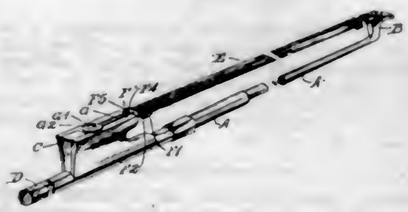
1. A lamp base comprising in combination a hollow member, a tubular standard passing therethrough, a rod reciprocally mounted within said standard and provided with a spring, a hollow nut threaded to the lower end of the standard and having an annular shoulder upon which one end of the spring is seated, and a clamp carried by the lower end of said rod.

1,686,552. STABILIZATION OF CIRCUIT OUTPUT. FRANK E. FAIRCHILD, Red Bank, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 1, 1927. Serial No. 223,345. 7 Claims. (Cl. 250—36.)



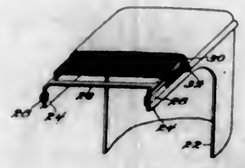
3. In an oscillation generator circuit, a vacuum tube oscillator, a stabilizing three-electrode vacuum tube having its plate-filament impedance bridged across the gen-

erator circuit, a common source of plate supply voltage for said vacuum tubes, a source of grid biasing voltage for said stabilizing tube, and a series resistance in the circuit,



the value of said series resistance and the value of said grid biasing voltage being such that the output voltage of the generator circuit is independent of fluctuations of the plate supply voltage.

1,686,553. WORKTABLE FOR PNEUMATIC-TIRE REPAIRING. ELMORE M. GODFREY, JR., Knoxville, Tenn. Filed Feb. 23, 1927. Serial No. 170,375. 16 Claims. (Cl. 154—9.)

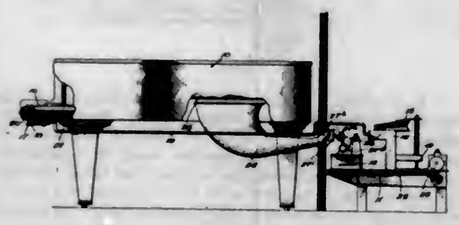


1. In a structure of the kind described, the combination of a tubular column, a stem telescoping and rotatable in said column and said stem and column being formed for inter-engagement in any of a plurality of positions into which the stem may be turned, operator-controlled means for lifting said stem, and a table top supported by said stem.

1,686,554. VIOLIN BOW. CHARLES B. GRAY, Philadelphia, Pa. Filed Aug. 4, 1922, Serial No. 579,696. Renewed Jan. 10, 1928. 18 Claims. (Cl. 84—282.)

1. In a violin bow, the combination with the bow stick and two abutments adjustable relative to each other, of a bunch of parallel hair having one end in operative relation with one of said abutments, a terminal structure secured to the other end of the bunch of hair and spaced from the adjacent abutment, and a twistable tension member joined to said terminal structure and the adjacent abutment, substantially as described.

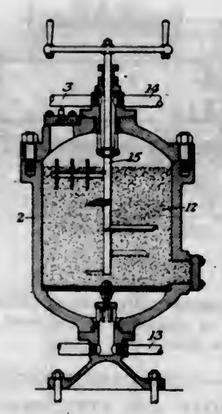
1,686,555. METHOD OF MAKING MOTOR-VEHICLE BODIES. HARRY J. COYNE, Watertown, Mass. Filed June 7, 1926. Serial No. 114,288. 2 Claims. (Cl. 296—137.)



1. A method of making motor vehicle tops which consists in producing a loosely matted web of fibrous material incapable of sustained handling and having a width at least equal to the width of the opening in the top, connecting the loose fibrous web to a fabric backing support by stitching, cutting the thus reinforced web into lengths commensurate with the length of the top opening to form individual pads, applying the pad to a skeleton top structure with the fabric support underneath and directly engaging with the structure, securing the pad to the structure, finally applying a finish cover over the pad, and securing the cover at opposite edges to maintain it in a taut condition bearing upon the yielding material of the pad.

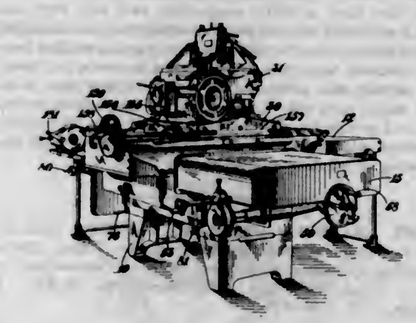
1,686,556. EMULSIFIED FOOD PRODUCT. GLENN G. GRISWOLD, Madison, Ohio. Filed Apr. 29, 1926. Serial No. 105,573. 8 Claims. (Cl. 99—8.)

2. A food product comprising a cream consisting of permanently emulsified honey and albumen.



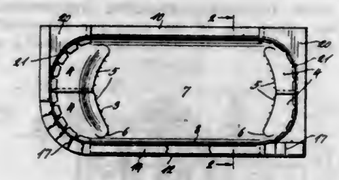
8. The herein described method emulsifying a syrup-like substance which consists in mixing the syrup-like substance with egg albumen under such conditions as to form an emulsion in the proportion of substantially one gallon of syrup-like substance to the equivalent of one ounce of dry egg albumen.

1,686,557. METHOD AND APPARATUS FOR PREPARING MUSIC ROLLS. JAMES CLARKE HAGEY, Chicago, Ill., assignor to The Cable Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1919. Serial No. 320,589. 22 Claims. (Cl. 84—463.)



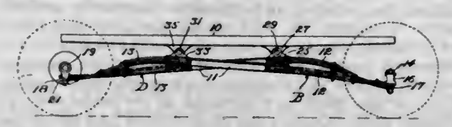
9. The method of preparing a music-roll by first producing upon a sheet expressions of pitch and time note-valuation, which expressions represent the notes of a musical selection, and thereafter providing said sheet with expressions of tonal volume; which method comprises the employment of a sound-record of the same musical selection as a guide for determining the proper arrangement of said expressions of tonal volume upon said sheet with respect to said expressions of pitch and time note-valuation thereon.

1,686,558. FILTRATION OF ALKALINE WATERS. RALPH E. HALL, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont Borough, Pa. Filed May 3, 1924. Serial No. 710,740. 4 Claims. (Cl. 210—9.)



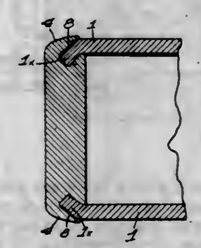
1. As a filtering medium for hot alkaline boiler waters, an iron silicate.

1,686,559. DUPLICATING OR PRINTING APPARATUS AND PARTICULARLY PHOTOGRAPHIC STEP-AND-REPEAT CONTACT-PRINTING APPARATUS. ROBERT HARRIS, London, England, assignor of one-half to Pictorial Machinery Limited, London, England, a British Company. Filed June 10, 1927, Serial No. 197,790, and in Great Britain Aug. 11, 1926. 8 Claims. (Cl. 95—73.)



1. In apparatus of the character described, the combination of a framework having two independent tracks lying transversely one of the other, a supporting device for a printing member mounted to reciprocate on one of said tracks, a unit-holding device for carrying a unit mounted to reciprocate on the other of said tracks, a fine-adjustment stop adjustable in the direction of length of one of said tracks, resilient driving mechanism arranged to drive the device on the latter track up to and hold it resiliently against said stop, locking means for locking the latter device temporarily in its position of adjustment against said stop, and a second driving mechanism distinct from said resilient driving mechanism and mounted independently thereof in association with the other track and arranged to drive the device on the latter.

1,686,560. PROTECTIVE COVER FOR BATHTUBS. JAMES M. HOWLETT, Gary, Ind. Filed May 1, 1928. Serial No. 274,205. 4 Claims. (Cl. 4—173.)

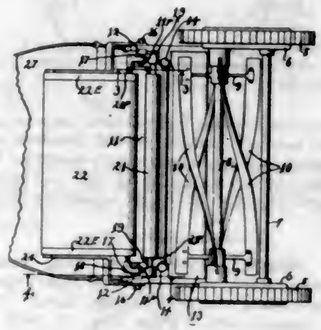


1. A protective covering for bath tubs comprising a flexible member having a bottom portion provided with oppositely curved ends and side portions extending from the sides of the bottom portion, said side portions having projecting portions adapted to form a covering for the ends of the tub.

1,686,561. SPRING SUSPENSION FOR VEHICLES. HENRY WEBB HYDE, North Cohasset, Mass., assignor to Hyde Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1923. Serial No. 659,095. 4 Claims. (Cl. 280—104.)

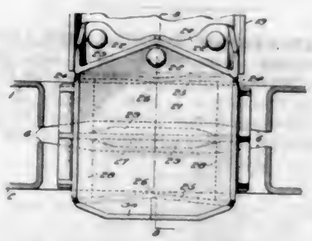
1. An improved spring suspension for motor vehicles comprising two pairs of spring reaches, each supported at its opposite ends from the axles of the vehicle and both pairs of reaches extending between the same two axles, and a pair of pivotal connections for each pair of reaches, said pairs of pivotal connections being separated from each other lengthwise of the body.

1,686,562. PROCESS OF FORMING PIPE CLOSURES. PERCY JACKSON, Chicago, Ill. Filed June 20, 1927. Serial No. 200,187. 3 Claims. (Cl. 29—148.2.)



1. The herein described process of forming closures for pipes, which consists in placing in one end of the pipe a closure plug having a circumferential groove and an outwardly extending flange having a curved portion, bending the end of the pipe into the groove, bending the flange over the bent pipe end, and welding the bent flange to the bent pipe end.

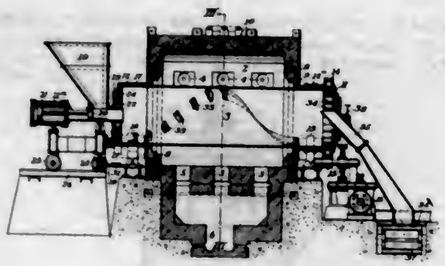
1,686,563. GRASS CONVEYER FOR LAWN MOWERS. JOHN CONRAD JOHNSON, St. Paul, Minn. Filed Sept. 7, 1927. Serial No. 217,997. 1 Claim. (Cl. 56—156.)



In a lawn mower having a pair of spaced traction wheels, a cutting reel operated by the movement of said wheels and a ground contacting roller rearward of said reel; a

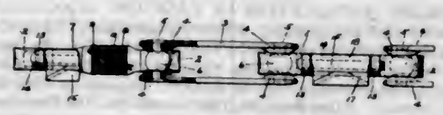
grass catcher and conveyer comprising an endless apron and arranged in an upward and rearwardly inclined plane from said ground roller, a roller engaging each of the opposite turns of said conveyer, one of said rollers with the said apron frictionally engaging the ground roller to move the upper run of the conveyer rearwardly, angular bracket members removably fixed pivotally at both

sides of the conveyer and extending rearwardly and upwardly to support the ends of the rear conveyer roller, and adjustable means for supporting said brackets at predetermined angles, said forward roller of the conveyer arranged to bear the conveyer down on the ground roller on top of the latter and rearward of its center, and an auxiliary roller engaging the ground roller forward of and above its center.



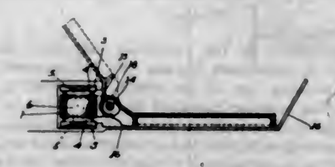
1,686,564. SPRING PLANK. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Oct. 25, 1923. Serial No. 670,656. 28 Claims. (Cl. 105—179.)

1. The combination with a car truck side frame having inner and outer walls each of which is provided with a bolster opening and an inwardly extending stiffening flange adjacent the bottom of said opening, of a spring plank saddle member having portions of its underface designed to engage said flanges and other portions of said underface spaced therefrom, and means provided on the underface of said member for reinforcing the same, said means serving to compensate for the relatively reduced thickness of said member at the portons spaced from said flanges.



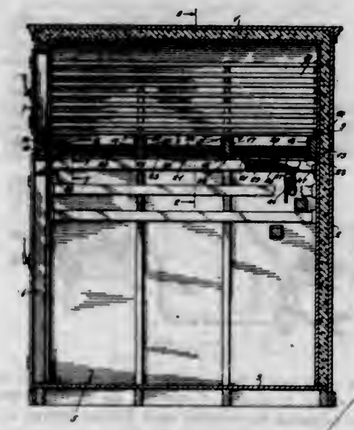
1,686,565. CALCINING FURNACE. JAMES H. KNAPP, Los Angeles, Calif., assignor to Tate Jones & Company, Incorporated, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 756,430. 8 Claims. (Cl. 263—34.)

1. A calcining furnace, including a rotatable calcining drum, means for heating the same, material handling means separate from the drum but adjacent one end of the drum and substantially co-axial therewith, a packing between the material handling means and the drum, and means for



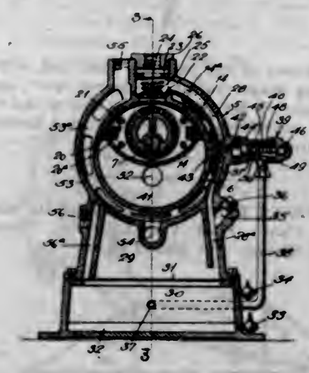
maintaining a substantially uniform pressure on the packing regardless of expansion or contraction of the drum, substantially as described.

1,686,566. CHAIN AND ATTACHMENT THEREFOR. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Co., Columbus, Ohio, a Corporation of Ohio. Filed June 23, 1924, Serial No. 721,871. Renewed July 3, 1928. 6 Claims. (Cl. 74—32.)



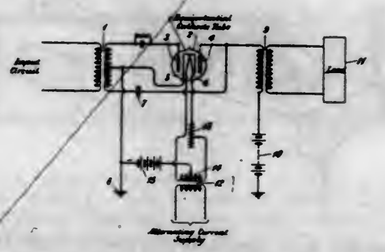
1. In a chain, a link comprising a pair of substantially parallel side bars, a pintle connecting said side bars and having a spherical bearing portion intermediate and spaced from the inner planes of said side bars, a second link having a thickness less than the distance between the inner planes of said side bars, and an elongated aperture at an end of which said spherical portion is adapted to be engaged, and means for guiding said second link into operative seated relation with said spherical portion upon the application of traction to one of said links.

1,686,567. MATERIAL-CARRYING FLIGHT. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 24, 1925. Serial No. 25,610. 6 Claims. (Cl. 198—171.)



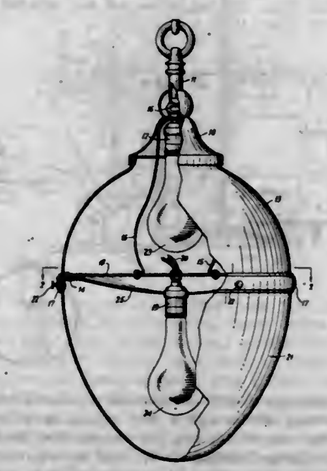
1. In a conveyer of the class described, the combination of a chain link, a pivot member carried by said link and extending longitudinally thereof, and a conveyor flight pivoted to said member, said flight having a plurality of bearing points and a housing intermediate said points extending over said pivot member.

1,686,568. REFRIGERATOR. CHARLES B. LONGSTRETH, Denver, Colo. Filed Feb. 24, 1927. Serial No. 170,520. 2 Claims. (Cl. 62—46.)



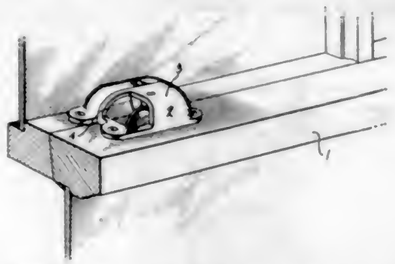
1. An ice box having an ice chamber near its top, and a refrigerating chamber beneath the ice chamber, a plurality of transversely extending parallel joists between said chambers, a bottom section located between each pair of joists, means for detachably securing said sections in place, said bottom sections filling the space between the joists and having their upper surfaces covered by a metal sheet whose opposite edges are bent upwardly so as to form upwardly extending flanges and protectors secured to the joists and provided with flanges that extend downwardly beyond the upper edges of and overlap the flanges on the bottom sections.

1,686,569. COMPRESSOR. JAMES O. MCMILLAN, Eldorado, Kans., assignor to Standard Pump & Supply Company, Wichita, Kans., a Corporation of Texas. Filed Nov. 19, 1925. Serial No. 70,097. 10 Claims. (Cl. 230—145.)



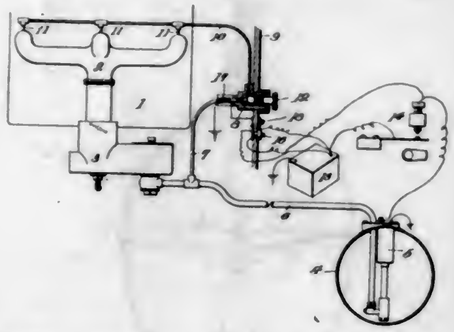
1. In a machine of the character described, a compression chamber, a piston arranged in said chamber and formed of a plurality of sections, each of substantially elliptical shape, means for rotating said piston, and means for forcing the sections apart to cause the sides of the piston to bear against the ends of the cylinder.

1,686,570. EQUIPOTENTIAL CATHODE VACUUM TUBE. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 18, 1924. Serial No. 750,642. 8 Claims. (Cl. 250—27.)



3. The combination with a vacuum tube having an evacuated vessel enclosing a cathode, a plate, a grid, and a heating element to render the said cathode active, means to energize the said heating element, a circuit having a source of potential connecting the said plate and said cathode, a second source of potential connected between the said heating element and the said cathode, so polarized as to substantially prevent the emission of electrons from the heating element to the cathode.

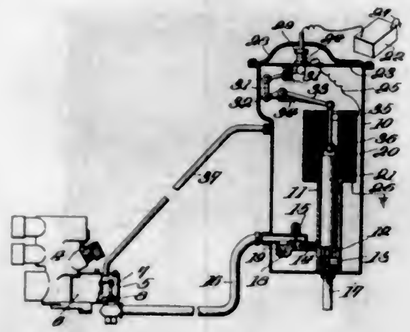
1,686,571. LIGHTING FIXTURE. HERMAN PLAUT, New York, N. Y., assignor to L. Plaut & Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 22, 1927. Serial No. 207,624. 1 Claim. (Cl. 240—78.)



In a lighting fixture, the combination, with a canopy, of an electric lamp socket depending therefrom, an electric lamp mounted therein, a diffusing glass shade detachably secured to said canopy and enclosing said lamp, a reflector closing the bottom of said shade, all of the rays from said lamp not passing directly through said shade being redirected by said reflector, whereby the ceiling and upper corners of the room are illuminated, there being a central opening in said reflector, an electric lamp socket depending therefrom, a lamp in said socket, a glass bowl enclosing said lamp and reflector detachably secured to the glass shade, the lower surface of said reflector reflecting to the working plane all the rays from said lamp not passing directly through the glass.

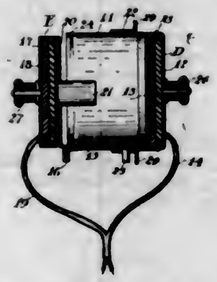
1,686,572. WINDOW FASTENER. CHARLES FRANCIS POLACK, York, Pa. Filed Apr. 30, 1927. Serial No. 187,905. 1 Claim. (Cl. 292—241.)

A window latch comprising a casing attached to one window sash, a pivoted spring pressed latch therein, a complementary shell adapted to be attached to the other window sash, a triangular stud projecting downwardly from beneath the shell and a similar shaped but reversely placed boss on the latch engageable with said stud, the meeting faces of the boss and stud making an angle with the meeting edges of the complementary shells the latch being normally pressed outwardly by its spring beyond the periphery of the first mentioned shell, said last mentioned shell having a cutaway portion to clear the projecting end of the latch, said shell having a portion of its surface adjacent the cut-away portion beveled to facilitate the passage of the latch end through the cut-away portion.



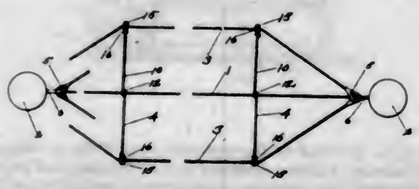
1,686,573. MEANS FOR SUPPLYING FUEL TO INTERNAL-COMBUSTION ENGINES. ALBERT G. REDMOND, Flint, Mich., assignor to Jacob Richard Francis, Flint, Mich. Filed Feb. 14, 1923. Serial No. 618,991. 13 Claims. (Cl. 123—187.5.)

7. The combination with an internal combustion engine, a charge forming device and a fuel supply tank for supplying fuel thereto, of a pump for forcing fuel from said tank to said charge forming device and maintaining said fuel under pressure and an electromagnet for operating said pump, means governed by the internal combustion engine for intermittently energizing said electromagnet, manually operated means for energizing said magnet and means under the control of the operator for by-passing a portion of said fuel around said carbureter and injecting the same directly to the internal combustion engine for priming said engine.



1,686,574. FUEL-FEEDING SYSTEM. ALBERT G. REDMOND, Indianapolis, Ind., assignor to Jacob Richard Francis, Flint, Mich. Filed Oct. 20, 1923. Serial No. 669,669. 7 Claims. (Cl. 158—36.4.)

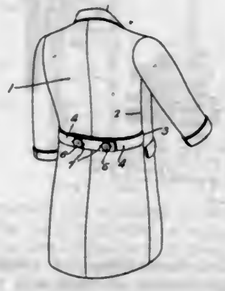
1. In a fuel feeding system for motor vehicles, the combination with a main fuel supp'y tank, of a carbureter located in a plane above said tank having a fuel bowl provided with a float controlled inlet, a pump for pumping fuel direct from the said main supply tank to the fuel bowl of said carbureter, said pump comprising a pump chamber and a piston movable therein for maintaing the fuel in the pipe



line from said main fuel supply tank to said carbureter under pressure, a source of current, an electric circuit including a solenoid for raising said piston, means actuated by said piston for making and breaking said circuit, and a receptacle in which said pump is located having an overflow pipe leading to the fuel bowl of the carbureter.

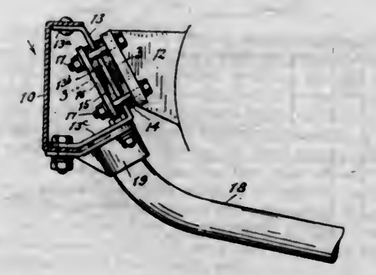
1,686,575. PERMANENT WAVER. THELMA M. REYNOLDS, St. Paul, Minn. Filed Mar. 12, 1927. Serial No. 174,766. 9 Claims. (Cl. 132—36.)

1. A hair curler of the character described, comprising a spool having flanges adjustably spaced apart, means to laterally compress a flat helical coil of hair wound thereon, and a casing associated with said spool and having heating means carried thereby.



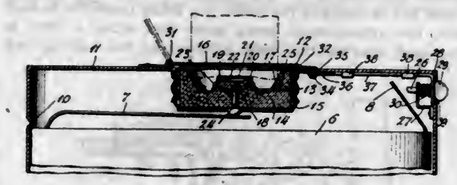
1,686,576. FENCE PROTECTOR. HENRY H. SCHUETTE, Napoleon, Ohio. Filed Feb. 15, 1928. Serial No. 254,373. 5 Claims. (Cl. 256—11.)

1. A plurality of members, means for connecting the members to parallel wires of a fence and a pair of wires connected to the outer ends of the members, whereby by the parallel wires connected to the ends of the members may be located in spaced relation to and parallel with the plane of the fence or may be located in planes juxtaposed to the plane of the fence upon rotation of the members.



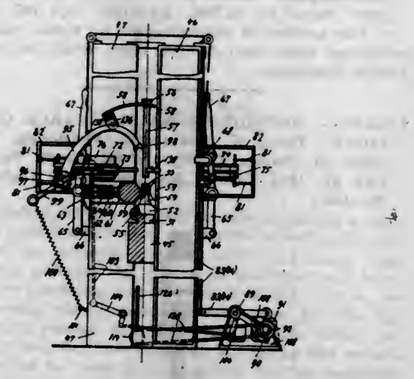
5. In combination with a wire fence, a plurality of members, each member formed of two wires, each wire having a central looped portion open to receive a wire of the fence, a pair of wires extending parallel to the fence and connected to the outer ends of the members.

1,686,577. COAT. ABRAHAM A. SIEGEL, New York, N. Y., assignor to David Siegel, New York, N. Y. Filed Apr. 20, 1927. Serial No. 185,196. 4 Claims. (Cl. 2—93.)



1. A convertible coat comprising a body part provided with slits or openings at opposite sides thereof under the sleeves; two belt members secured within the coat one of said membera being attached to the inner side of the coat and adjacent each slit, and adapted to be passed outwardly through the said adjacent slit and around the back of the coat; and means for fastening the free ends of the belt members together, whereby the belt members may be secured together at the back of the coat at the outer side thereof after they are passed outwardly through the slits, and may be secured together within the coat and at the back thereof when not passed outwardly through the slits.

1,686,578. MOTOR SUPPORT OR SUSPENSION. FREDERIC W. SLACK, Cleveland, Ohio, assignor to Peerless Motor Car Corporation, Celeveland, Ohio, a Corporation of Virginia. Filed July 6, 1926. Serial No. 120,615. 8 Claims. (Cl. 180—64.)

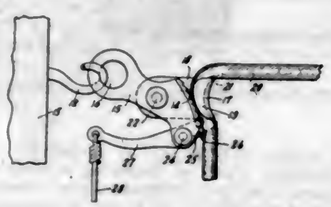


1. In combination with a chassis frame and motor, a suspension for the motor comprising diagonally disposed parallel abutments rigidly supported upon said frame and motor respectively, yieldable material interposed between said abutments, and hold-downs for said motor abutments.

1,686,579. CIGARETTE AND CIGAR LIGHTER. HENRY P. STAATS and HARRY S. NEWCOMER, New York, N. Y. Filed Feb. 4, 1927. Serial No. 165,850. 2 Claims. (Cl. 219—32.)

1. An ignition unit for use as a cigarette and cigar lighter including a body of insulating material having a central recess, a centrally disposed support extending from the bottom of said recess and having a depression in its outer end, conducting plates secured to the sides of said support, and heating wires secured to said plates and projecting across the outer end of said support and depression therein in spaced relation thereto whereby said wires will avoid contact with the support when pressure is applied to the wires by the end of the cigarette or cigar.

1,686,580. LOOM. MORITZ STEINLIN and WALTER HOLDEREGGER, St. Gallen, Switzerland. Filed Apr. 14, 1927, Serial No. 183,835, and in Switzerland Apr. 22, 1926. 8 Claims. (Cl. 139—18.)

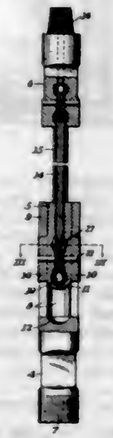


1. A loom for manufacturing cane and like fabrics having a sliding warp carrying beam above which are provided preferably tubular swing guides for the warps, pusher elements, sliding rails movable transversely of the guides and coacting with said pusher elements for swinging the said guides alternately in opposite directions, devices for supplying the weft-material, and mechanism located above the said beam and entering between the warp guides for the purpose of uniformly beating-up the weft-material supplied each time, all substantially as hereindescribed and illustrated.

1,686,581. ROPE CLAMP. WALTER H. STEWART, Quincy, Mass. Filed Apr. 4, 1928. Serial No. 267,411. 2 Claims. (Cl. 24—133.)

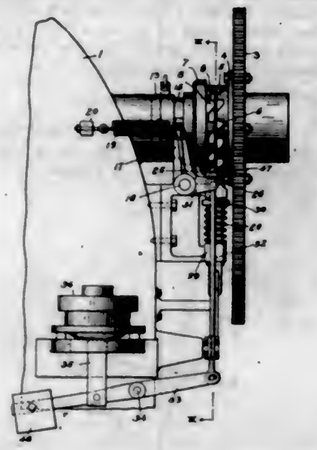
1. A rope clamp comprising an inner jaw having a curved gripping face and a shank from one end of which the jaw projects laterally, the opposite end of the shank being adapted to be engaged with a supporting member, an outer jaw having a curved face opposed to the gripping face of the inner jaw, a shank from which the outer jaw projects laterally, and an ear, cooperating with the shank in laterally confining a rope on the jaw, one end of the

outer jaw constituting a bearing across which a rope may be bent, and a pivot connecting an end portion of the outer jaw shank with a portion of the inner jaw shank, between the inner jaw and a support with which the shank of said jaw is engaged the inner jaw being eccentric to said pivot, the arrangement being such that when a rope is interposed between the jaws, bent across the bearing end



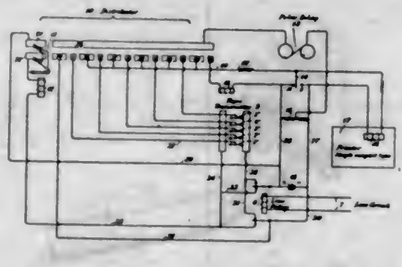
of the outer jaw, and tensioned, the opposed faces of the jaws form opposite sides of a tapering throat which is contractible by pressure of the tensioned rope on the bearing edge, to grip the interposed portion of the rope, the outer jaw being displaceable by a swinging movement of its shank on the pivot to widen said throat and release the rope, said jaws, shanks, and pivot being arranged to constitute a toggle.

1,686,582. PROCESS FOR DESTROYING CACTI. HUGO STOLTZENBERG, Hamburg, Germany. Filed Oct. 20, 1925. Serial No. 63,768. 2 Claims. (Cl. 167—45.)



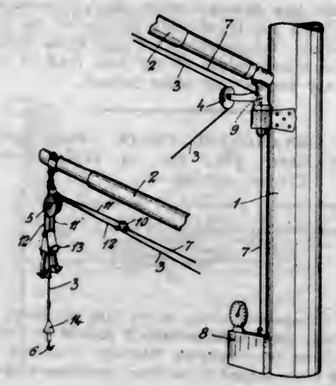
1. The process of destroying cacti, which consists in subjecting such cacti to the toxic action of aromatic arsenic compounds.

1,686,583. METHOD OF MAKING CABLE CONNECTIONS. DAVID K. TEMPLETON, Pittsburgh, Pa., assignor to Charles R. Bryson, Pittsburgh, Pa. Filed July 27, 1927. Serial No. 208,768. 1 Claim. (Cl. 29—148.)



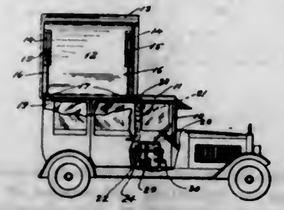
In the method of attaching a member to a cable, the steps consisting in inserting a spreader between the strands of a cable for spreading the cable, inserting the spread portion of the cable and the spreader into an opening in the member, passing a fastening device from the member into the spread portion of the cable for replacing the spreader, and then forcing the member into close engagement with the fastening device and spread portion of the cable.

1,686,584. CLUTCH. GEORGE P. THOMAS, Glenshaw, Pa. Filed May 8, 1925. Serial No. 28,797. 2 Claims. (Cl. 192—24.)



1. In a clutch mechanism, the combination with a rotatable driving member provided with a toothed clutch element, a driven member, a toothed clutch ring mounted on said driven member for rotation with it and for longitudinal movement on it to and from engagement with said clutch element and provided with a laterally extending lug; of means for yieldingly maintaining said ring in clutch-breaking position, positive means for moving said ring into clutch-making position against the resistance of said first-named means, a pawl yieldingly urged into the annular path of said lug for moving the clutch ring from engagement with said clutch element, connections between said pawl and said positive ring-moving means for moving the pawl from the longitudinal path of said lug before said ring is moved longitudinally into clutch-making position, and means for breaking said connection after said ring has been moved longitudinally into clutch-making position.

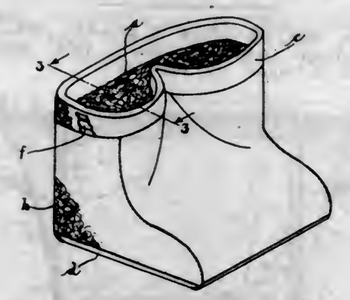
1,686,585. TELEGRAPH CIPHER SYSTEM. GILBERT S. VERNAM, River Edge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 31, 1925. Serial No. 66,114. 3 Claims. (Cl. 178—22.)



1. The method of deciphering and receiving a secret message, which consists in combining the electrical effect of the received impulses with the effect of the electrical conditions representing a deciphering character to produce electrical impulses representing the message character, and causing said message character impulses to individually and sequentially operate a single responsive device.

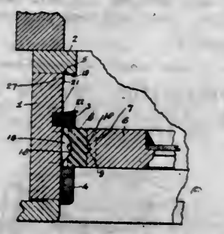
1,686,586. ARRANGEMENT FOR WEIGHING GOODS IN A HANGING POSITION. LARS GUNSTEIN WAHL, Oslo, Norway. Filed Feb. 18, 1926, Serial No. 89,153, and in Norway Feb. 19, 1925. 6 Claims. (Cl. 265—52.)

1. An arrangement for weighing goods in a hanging position including in combination, a supporting member embodying spring pressed grippers, a scale wire for suspending the grippers, a hoisting wire and a locking member in operable connection with the hoisting wire for cooperating with the spring pressed grippers in such manner that after a certain lifting movement by the hoisting wire the load is released so that the locking member will settle upon the grippers to effect weighing of the load and after the load is weighed the locking member is raised in order to be disengaged from the grippers while the latter automatically spring open to allow the hoisting wire to again take the load.



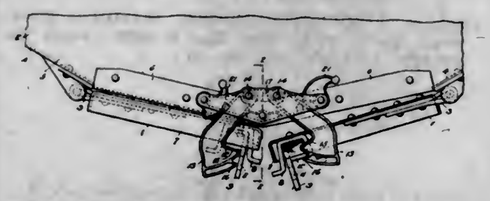
1,686,587. AUTOMOBILE ROOF. LEOPOLD WEISS, New York, N. Y. Filed Jan. 29, 1927. Serial No. 164,590. 1 Claim. (Cl. 296—137.)

In combination with a closed, motor driven vehicle, a hinged top portion extending from the rear of the vehicle to the driver's compartment, said top portion having peripheral overhanging edges adapted to prevent moisture from entering the interior of the vehicle, a shaft extending beneath the hinged edge of the top, a plurality of levers keyed to said shaft, a plurality of lever guides attached at the inner face of said top, the free ends of said levers provided with hinged slides adapted to register with said guides, the latter having means for preventing disengagement of said slides from said guides, a hand operable drive arrangement connected with said shaft and adapted to be operated from the driver's seat.



1,686,588. FOOT MUFF. ERNEST R. WENDEMUTH, Glen Ridge, N. J. Filed Sept. 16, 1927. Serial No. 219,948. 3 Claims. (Cl. 2—65.)

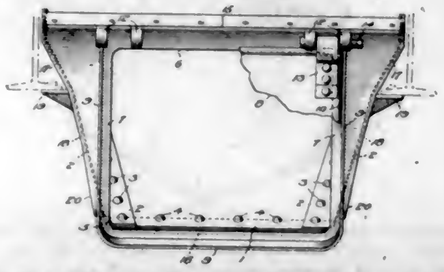
1. A foot muff embodying therein, the combination with a lining and an exterior decorative cover shaped to receive both feet of a wearer, of a resilient loop contracted medially of the sides thereof and supported adjacent the top of the muff, whereby said top will be held in a normally distended position at opposite sides of the medial contraction of said loop, and normally contracted adjacent said



medial contraction, and the open top of the muff will yield to permit the insertion of the feet through the top thereof, and thereafter automatically close about the legs of the wearer.

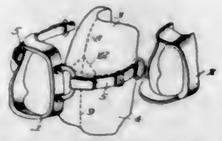
1,686,589. DOUBLE-SLIDING REVERSIBLE WINDOW. RALPH B. WILSON, Pittsburgh, Pa. Filed May 22, 1925. Serial No. 32,070. 2 Claims. (Cl. 20—49.)

1. In sliding windows, a pair of sliding sashes, a parting strip positioned between the sashes extending the full length of the window opening, outer and inner stops respectively adjacent the runway of the upper and lower sashes also extending the full length of the window, resilient means placed alongside each edge for the full length of the parting strip, and other metallic strips positioned against the inner faces of the inside and outside stops adapted to form bearing surface for the respective sashes.



1,686,590. DOOR MECHANISM FOR RAILWAY CARS. WILLIAM E. WINE, Toledo, Ohio. Filed Apr. 16, 1923. Serial No. 632,414. 7 Claims. (Cl. 105—308.)

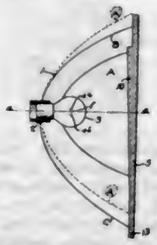
1. In a car door mechanism, the combination with a hinged door having an outstanding marginal flange, of a channel member secured to the under side thereof in inverted U position with the legs of the channel substantially normal to the door, an angle iron secured to said channel member within the channel thereof, said angle iron being bent intermediate its ends, one end thereof projecting beyond the adjacent edge of the door, the procumbent leg of the projecting portion of said angle iron being in a



plane substantially parallel to the plane of the door, and means mounted upon a stationary part of the car and operating in a plane normal to said procumbent leg for engaging the latter to support said door in closed position.

1,686,591. HOPPER-CAR-DOOR FRAME. WILLIAM E. WINE, Toledo, Ohio. Filed Nov. 6, 1926. Serial No. 146,716. 5 Claims. (Cl. 105—249.)

1. In a railway car, the combination with a hopper having side sheets and an inclined floor sheet, of an integral door frame rigidly secured to the hopper side sheets and floor sheet in a position forming an angle with the vertical, said frame having a cargo discharge opening and being formed with door seat portions bordering the sides and lower edge of said opening and with sealing flanges projecting outwardly from said seat portions in spaced relation to said opening.

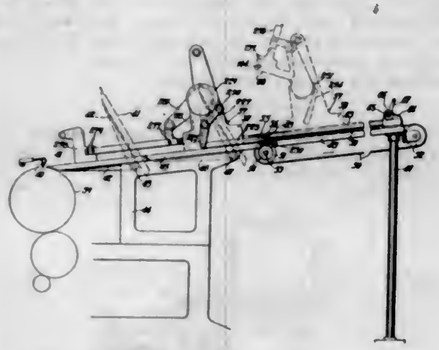


1,686,592. RESPIRATOR. WILLIAM H. WOOD, South Euclid, Ohio. Filed Feb. 18, 1925. Serial No. 10,140. 19 Claims. (Cl. 128—195.)

1. A medicating respirator comprising a space-enclosing member adapted to be applied over a respiratory passage, said member having one or more passages therethrough, and a composition of matter located in said space adapted to react with the products of exhalation to produce evolution of a germicidal gas.

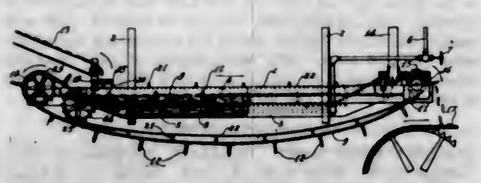
4. In a respirator, a hollow supporting member having a passage therethrough for inhalation and exhalation products, and a porous member in said passage having portions impregnated with the dried residue of a solution of bleaching powder.

1,686,593. VEHICLE HEADLIGHT. WILLIAM H. WOOD, South Euclid, Ohio. Filed May 8, 1926. Serial No. 107,582. 4 Claims. (Cl. 240—41.)



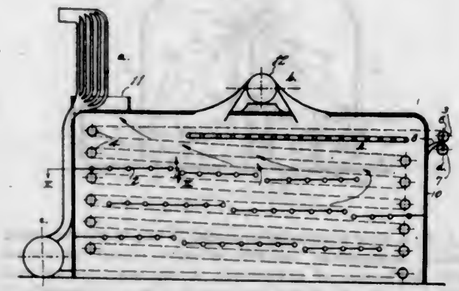
1. In a vehicle headlight, the combination of a reflector having at its two lateral portions a pair of opposed paraboloid segments whose axis is substantially horizontal, said reflector having its upper and lower median portions leaned downwardly as compared with the surface of the paraboloid defined by said lateral portions, a lamp bulb located in such axis and having two independently usable, vertically spaced filaments, and a lens in front of said deflector, said lens having vertical flutes terminating coextensively with the translucent portion of the lens at top and bottom, the curvature of said flutes being less adjacent the lateral edges of the lens than at regions nearer the top and bottom edges thereof.

1,686,594. ORNAMENTAL CHAIN. JOHN ANTHONY, Attleboro, Mass. Filed Apr. 18, 1927. Serial No. 184,600. 3 Claims. (Cl. 63—2.)



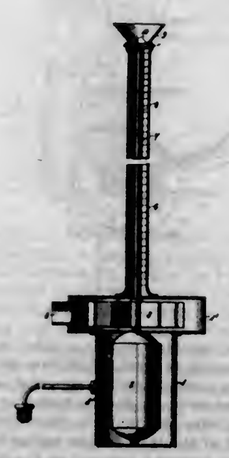
1. In an ornamental chain of the type set forth, a flexible wire mesh body substantially S shaped in cross section comprising interengaging laterally connected hollow spiral loops interengaged in torsional positions and closely adhering to each other.

1,686,595. SHEET FEEDER. ELMER W. BELLUCHE, Racine, Wis., assignor, by mesne assignments, to Dexter Folder Company, New York, N. Y., a Corporation of New York. Original application filed Mar. 12, 1925, Serial No. 14,891. Divided and this application filed Jan. 22, 1927. Serial No. 162,708. 26 Claims. (Cl. 271—28.)



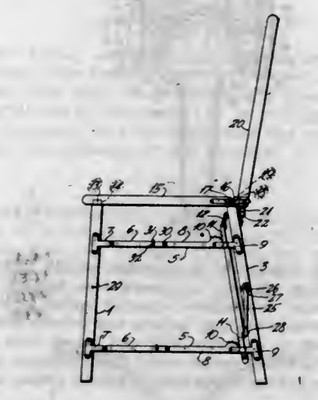
1. In a sheet-feeder, an oscillatable feed-member, coacting rock-gears for oscillating said member in both directions, and means controlled by the advanced sheet for disengaging said member from said gears during the forward movement of said member.

1,686,596. BAKERY MACHINERY. CHARLES F. BETZ, St. Louis, Mo. Filed Nov. 21, 1925. Serial No. 70,575. 10 Claims. (Cl. 53—7.)



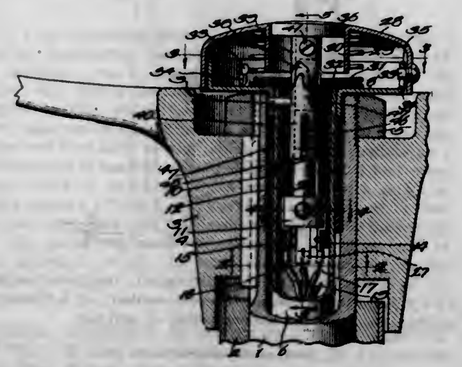
9. In the art of baking, the method comprising, forming the product to be baked, submerging the product by its own weight in a treating bath, to prepare same prior to subsequent baking, heating the submerged product in the bath while moving the same along the bath until it rises and floats therein, and removing the product from the bath for baking.

1,686,597. DIFFERENTIAL DRYING MACHINE. WILHELM BOCK, Lansdale, Pa. Filed Mar. 16, 1925. Serial No. 16,017. 4 Claims. (Cl. 34—48.)



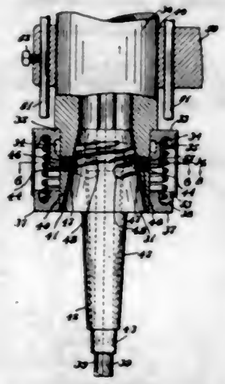
1. A web drying machine comprising a housing, a blower for conveying a continuous current of air through said drying machine, a plurality of partition plates, said plates arranged in an angular position to each other and with longitudinal spaces between the different plates, a plurality of steam heating coils connected with said partition plates permitting the drying air to be heated and passed partially through the machine in direction of the drying material and partially through said spaces between the partition plates in vertical direction to the drying material for getting sufficient rotation of the drying air and a complete contact with the material to be dried.

1,686,598. MASSAGE IMPLEMENT. CHARLES BROADBENT, Atlantic City, N. J., assignor of one-half to Harry Lincoln Parker, Germantown, Pa. Filed Aug. 23, 1924. Serial No. 733,786. 2 Claims. (Cl. 128—56.)



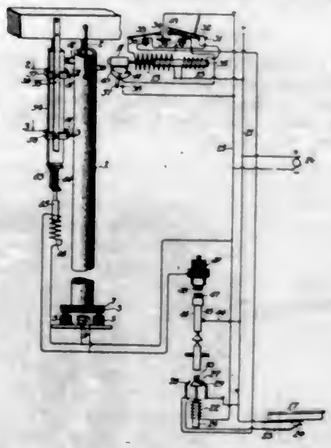
1. A massage implement, comprising a casing, an electric motor within the casing, a suction fan within the casing adapted to be driven by the motor, a hollow tube secured to the casing adjacent the fan, a rotary drive cable located within the tube having its inner end connected to the motor, and a massage cup at the outer end of the tube and cable, said cup having openings communicating with the interior of the tube and being rigidly connected to the cable to rotate therewith.

1,686,599. FOLDABLE CHAIR. FRANK CORSER and WASYL PEACH, Junkins, Alberta, Canada. Filed Oct. 14, 1927. Serial No. 226,066. 7 Claims. (Cl. 155—148.)



3. A foldable chair comprising a rear leg unit, a back hinged to said rear leg unit, and a seat mounted on said back, said seat including front and rear members foldably connected together, the foldable members of said seat being adapted normally to engage the upper end of the legs of said rear leg unit thereinbetween.

1,686,600. COMBINED LIGHTING AND SIGNALING MECHANISM FOR AUTOMOTIVE VEHICLES. GEORGE L. CRAGG, Chicago, Ill., assignor to Harry A. Douglas, Bronson, Mich. Filed May 6, 1927. Serial No. 189,301. 9 Claims. (Cl. 74—39.)

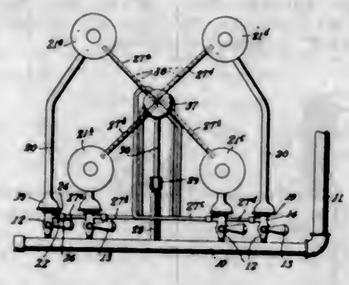


8. The combination with the steering shaft of an automotive vehicle; of a hand wheel coupled with said shaft for turning the shaft; a signaling circuit; a lighting circuit; switching means in controlling relation to the signaling circuit and inclusive of an operating push button disposed at the front side of said wheel; and switching means in controlling relation to the lighting circuit and inclusive of another button, the first aforesaid button surrounding the second.

1,686,601. CHUCK. ARTHUR L. CURRIER, New Ipswich, N. H. Filed Mar. 30, 1927. Serial No. 179,459. 5 Claims. (Cl. 279—74.)

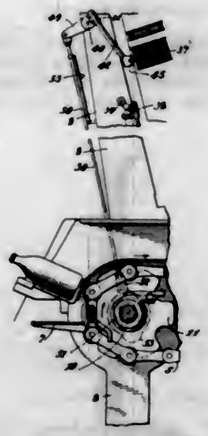
1. A chuck comprising a rotatable spindle having a tapered opening therein, a tapered tool holding spool adapted to enter said tapered opening, spiral grooves in said spool, arcuate holding, locking and driving members in said spindle, to cooperate with and engage said spiral grooves, and means to permit radial disengagement of said members from locking engagement to permit release of said spool.

1,686,602. SOUND-PRODUCING INSTRUMENT. JOHN C. DEAGAN, Chicago, Ill., assignor to J. C. Deagan, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1927. Serial No. 222,793. 11 Claims. (Cl. 84—405.)



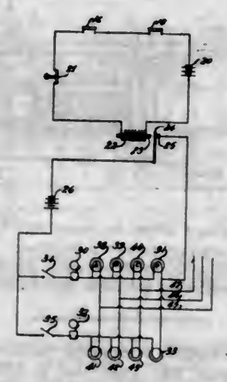
5. In a sound producing instrument, the combination with a bar that is oblong in cross section; of a hammer mounted to strike the narrower side of said bar.

1,686,603. METHOD OF WELDING HIGH-CARBON STEEL. JOHN H. DEPPELER, Weehawken, N. J., assignor to Metal & Thermit Corporation, Carteret, N. J., a Corporation of New Jersey. Filed Aug. 29, 1925. Serial No. 53,428. 6 Claims. (Cl. 22—204.)



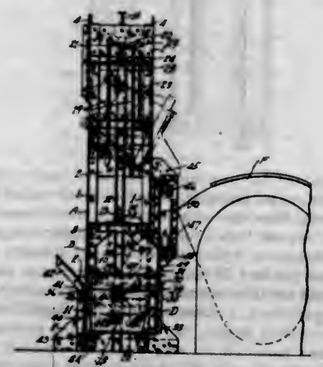
4. The method of welding high carbon steel bodies which comprises interposing a thin body of low carbon iron between the elements and butt welding the adjacent surfaces of said bodies by contact with molten aluminothermic metal.

1,686,604. SELECTIVE IGNITER FOR MULTIPLE GAS BURNERS. WILLIAM F. DESTER, Newark, N. J., assignor to U. S. Tool Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed Apr. 20, 1927. Serial No. 185,124. 2 Claims. (Cl. 158—115.)



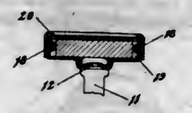
1. In a pilot burner for a plurality of gas burners each having independent controls, a pilot burner connected with the source of gas supply, a cup surrounding said pilot burner, a perforate cap over said cup, a plurality of pipes one for each main burner arranged over said cap and provided with perforations, said pipes having controllable connections with the gas supply source at one end and extending to the main burners at their opposite ends, and a cover over said pipes and pilot burner.

1,686,605. LABELING MACHINE. EDWARD EAMOLD, New York, N. Y. Original application filed Jan. 6, 1926, Serial No. 79,526. Divided and this application filed July 30, 1926. Serial No. 125,849. 4 Claims. (Cl. 216—2.)



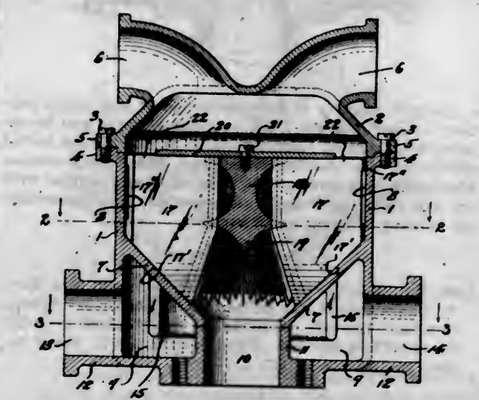
1. In a labeling machine having a label magazine and a label picker operable to singly withdraw the labels from said magazine, an arm pivotally supported at one of its ends above the magazine, a dating stamp carried by the other end of said arm and movable therewith across the path of movement of the label picker, means for positively moving said stamp carrying arm out of the path of movement of the label picker as the latter is moved to its label receiving position, and additional means for moving said arm in the opposite direction after the label picker is withdrawn from label receiving position to engage said dating stamp with the outermost label contained in the magazine.

1,686,606. ELEVATOR SIGNAL SYSTEM. MARTIN J. FINNEGAN, New York, N. Y., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed July 15, 1927. Serial No. 205,997. 7 Claims. (Cl. 177—336.)



1. In an elevator signal system, a signal, means adapted when set into action for operating said signal after the lapse of a predetermined time period, means for setting said means into action as an incident to the stopping of the elevator, including means for nullifying the action of the first mentioned means if the elevator is started before the expiration of said period.

1,686,607. BAKER'S MACHINERY. WALTER L. FREUND and FREDERIC B. MENNER, St. Louis, Mo. Filed Oct. 8, 1925. Serial No. 61,289. 2 Claims. (Cl. 214—122.)

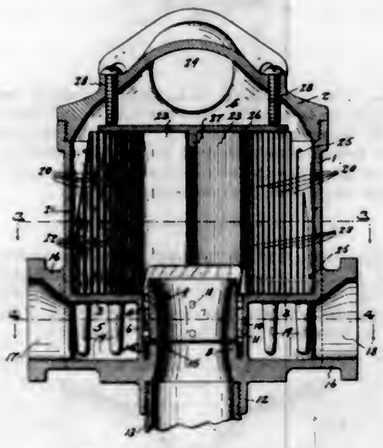


1. In a machine of the class described, in combination, a stationary frame-work, a carriage adapted for travel longitudinally of the frame-work, means for actuating the carriage longitudinally of the frame-work, trackways fixed on the carriage and disposed transversely to the frame-work, a trough-carrying and dumping member disposed within the carriage, rollers mounted upon the ends of said member and fitting in said trackways for supporting said member for movement both with the carriage longitudinally of the framework and swingably relatively to the carriage and frame-work, said rollers being adapted for movement on said trackways for shifting the point of connection between the carriage and said member during movement of the carriage and said member longitudinally of the frame-work, and means including interengageable members upon the frame-work and said member for effecting pivotal actuation of said member relatively to the carriage and frame-work during travel of the carriage longitudinally of the framework.

1,686,608. KEY-BUTTON ASSEMBLY. MAX GARBELL, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 13, 1926. Serial No. 148,246. 1 Claim. (Cl. 197—102.)

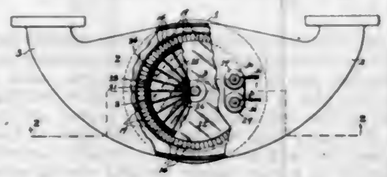
A key button assembly comprising a cuplike member positioned on the end of a key lever, positioning lugs struck inwardly from said cup member, and a character-bearing member having grooves formed in the side thereof to correctly co-operate with the positioning lugs in said cup to facilitate the assembly of said members.

1,686,609. VAPORIZER. ERNEST ROBERT GODWARD, New York, N. Y., assignor to The Eclipse Petrol Economiser System Company, Limited, Christchurch, New Zealand, a Corporation of New Zealand. Filed Oct. 22, 1926. Serial No. 143,382. 10 Claims. (Cl. 48—180.)



1. In a vaporizing device a vaporizing chamber having a central carburetted fuel mixture inlet extending upwardly thereinto and a vaporized fuel mixture outlet at its upper end, and a centrally sloping bottom heating-plate heated by the exhaust gases of the engine, said bottom plate converging upon said fuel mixture inlet to drain unvaporized fuel back to the latter, a member comprising a multiplicity of spaced radially disposed vertical plates the lower edges of which are fitted to contact with said centrally sloping bottom heating-plate to receive heat by conduction from the latter, and means engaging the inner ends of said plates and means intermediate the outer ends of said plates to retain the same in spaced apart passage forming relation.

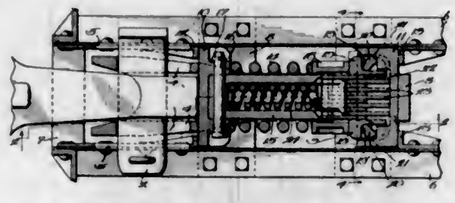
1,686,610. PROCESS OF PRODUCING DRY GASEOUS FUEL. ERNEST R. GODWARD, New York, N. Y., assignor to The Eclipse Petrol Economiser System Company, Limited, Christchurch, New Zealand, a Corporation of New Zealand. Filed Oct. 23, 1925. Serial No. 64,476. 9 Claims. (Cl. 48—180.)



1. A process of producing a substantially dry gaseous fuel and air mixture from an initial mechanical mixture of air and entrained particles of volatile liquid fuel, comprising initially retarding the velocity of the fuel mixture, and then dividing the stream of said initial mixture into a multiplicity of free unimpeded moving thin streams of relatively great surface area compared to the thickness

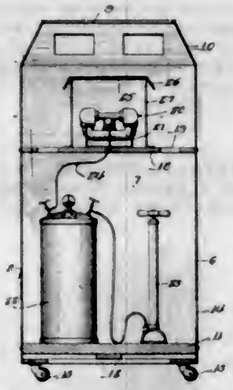
thereof to which a centrifugal radially directed movement is imparted, contiguous to relatively extended contact surfaces disposed in a substantially vertical plane whereby liquid fuel particles entrained in said divided streams may deposit themselves on said surfaces so as to gravitate thereon, and subjecting said deposited and gravitating liquid particles to heat transmitted along said contact surfaces in

a direction opposite to the gravitation of said liquid particles to evaporate the latter in the presence of and for reunion with later on coming portions of said divided initial mixture stream, and finally reuniting said divided streams when freed from entrained liquid particles and charged with the vaporized liquid fuel constituents returned thereinto for delivery to the place of use.



1,686,611. VAPORIZER. ERNEST R. GODWARD, New York, N. Y., assignor to The Eclipse Petrol Economiser System Company, Limited, Christchurch, New Zealand, a Corporation of New Zealand. Filed June 11, 1927. Serial No. 198,115. 3 Claims. (Cl. 219—38.)

1. In a vaporizer including a chamber containing a multiplicity of comparatively narrow fuel mixture passages bounded by thin metallic vertical walls adapted to receive and conduct heat transferred thereto, means for transferring heat to said walls for upward conduction therethrough during normal running conditions, a top-plate means in contact with said walls, and an electric heating means associated with said top-plate means to serve as a preheater under cold starting conditions, and means for connecting said heating means in an electric circuit.

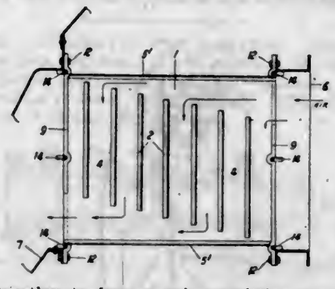


1,686,612. FRICTION DRAFT GEAR. SOREN HANSSON, Butler, Pa. Filed Dec. 17, 1925. Serial No. 76,081. 8 Claims. (Cl. 213—22.)

1. A friction draft gear including two members cooperating to produce friction, one subject to buffing action of the gear and the other to pulling action of the gear; two blocks between which said friction producing members are disposed, said blocks being movable toward each other to press each of said friction producing members against the other; two toggle levers, one individual to each block; fulcrum supports for said levers; an application spring, means whereby said spring is operable by draft strains to

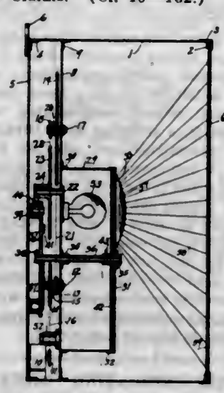
move said blocks and levers to cause said blocks to press said friction producing members together; and a release spring, also subject to draft strains, pressing upon one of the friction producing members in a releasing direction.

1,686,613. PORTABLE HEATING CABINET. OTTO E. HEISSER, Chicago, Ill. Filed Dec. 8, 1926. Serial No. 153,246. 1 Claim. (Cl. 126—93.)



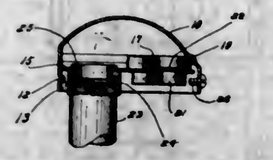
An air heater for heating the air in a room comprising, in combination, an upright cabinet, a solid transverse partition intermediate the ends of said cabinet completely dividing said cabinet into an upper and a lower compartment, said cabinet having a plurality of warm air outlet openings in the upper portion of the upper compartment and a plurality of cold air inlet openings in the lower portion of the lower compartment, a pressure-operated liquid-fuel burner system positioned within the cabinet, said system including a burner mounted on said partition centrally thereof and a liquid fuel supply and pressure tank connected thereto and enclosed within said lower compartment, a baffle-plate mounted in said upper compartment overlying said burner in a plane beneath said air outlet openings and having its edges spaced from the side walls of said upper compartment, and a pair of doors in one wall of the cabinet opening respectively into the upper and lower compartments to give access to said burner and tank equipment, said partition having a series of openings therethrough encircling said burner to effect the flow of air from the lower compartment upwardly around all sides of the burner and baffle-plate and thence through said outlet openings at the top of said cabinet.

1,686,614. AIR HEATER. JAMES HOWDEN HUME, Glasgow, Scotland. Filed Jan. 25, 1927, Serial No. 163,331, and in Great Britain Dec. 30, 1926. 1 Claim. (Cl. 257—245.)



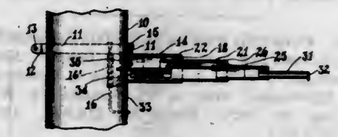
An air heater comprising a plurality of spaced plates having ribs serving to space the plates, the plates and ribs

forming the walls of cells to be traversed by hot gases and by air to be preheated, each plate forming the base of a row of cells on each side, and means for clamping said



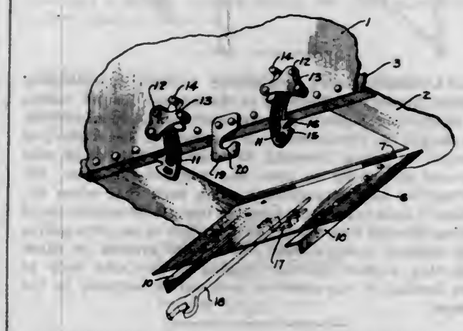
plates together to form a unit permitting removal of at least one of said plates without disturbing the remaining plates.

1,686,615. VARIEGATED AND CHANGEABLE COLOR SIGN. PETER BALNOJAN, Pancevo, Yugoslavia, assignor to John Yahraus, Karl Goettl, and John Goettl, trustees, Mansfield, Ohio. Filed May 2, 1927. Serial No. 188,314. 18 Claims. (Cl. 40—132.)



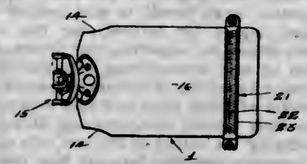
1. In a changeable and variegated color sign, a sign plate, means to change the color of the sign plate, a globe, a switch controlling the illumination of the globe, means to flash on and off the switch connected to the globe that illuminates the sign whereby different and variegated colors of the sign can be shown from fading out to an intense glow as and for the purpose described.

1,686,616. CONDUIT END FITTING. FREDERICK I. JOHNSON, Warren, R. I., assignor, by mesne assignments, to George W. Johnson, Boston, Mass. Filed Sept. 15, 1922. Serial No. 588,502. 3 Claims. (Cl. 247—6.)



1. A conduit end fitting comprising a plate having a hole therein located inwardly from the peripheral edge thereof, an insulating bushing having a reduced portion of substantially the size of said hole extending from the inner side of said plate outwardly through said hole, a cap over the plate and bushing and engaging said bushing to secure it in said hole against inward movement, and means for securing said fitting to a conduit end.

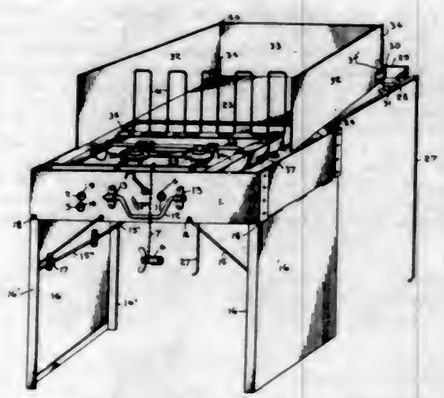
1,686,617. FUME GUARD FOR COOKING RANGES. JOSEPH JURALEWICZ, Meriden, Conn. Filed Aug. 23, 1927. Serial No. 214,802. 3 Claims. (Cl. 126—299.)



1. The combination with a flue pipe having an aperture in the side thereof, of a stationary rear canopy section rigidly mounted on said flue pipe above said aperture, extensible canopy sections mounted on said stationary canopy section, a door pivotally mounted on the side of said flue pipe adapted to close the aperture therein, and a link operatively connected at one end to said door and at the other end to one of said extensible canopy sections adapted to raise said door when said extensible sections are moved forwardly for uncovering the aperture in said flue pipe and to lower said door when said extensible canopy sections are moved rearwardly for closing said aperture.

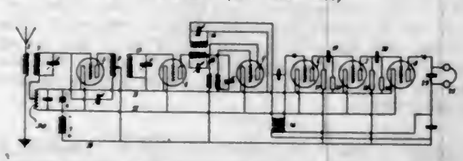
1,686,618. CAR-DOOR MECHANISM. BYERS W. KADEL, Baltimore, Md. Filed May 24, 1923. Serial No. 641,064. 9 Claims. (Cl. 105—308.)

1. A railway car having a lading discharge opening, a door for closing said opening movable to open position under the influence of gravity, means secured to the door for accommodating a removable door-closing member so that by application of an upward force to the said removable member the door may be raised to a partially closed position, and a member on the car body for thereafter cooperating with the said removable member so that by application of a downward force to the latter the door may be raised from the partially closed position to fully closed position.



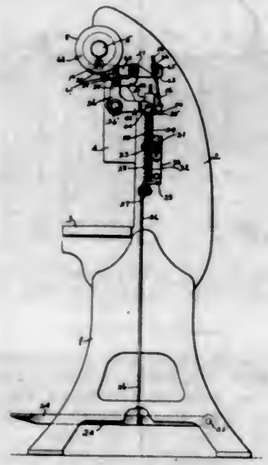
1,686,619. SHIRT-PRESSING MACHINE. CHARLES B. KILBY and MAURICE REINITZ, Brooklyn, and ALBERT B. CLISSON, Syracuse, N. Y., assignors to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 8, 1926. Serial No. 80,081. 1 Claim. (Cl. 68—9.)

A pressing machine for pressing coats, shirts and the like, comprising pressing elements, one having relative movement toward and from the other, one of said elements being a buck and the other a press head; and the



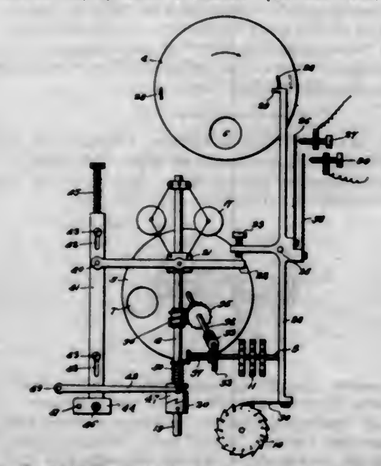
head and the buck being of oblong form, said buck having a tapered end portion provided with means for holding a neck band and having at the inner end of the tapered portion cut outs at the shoulder corners of the buck.

1,686,620. FOLDING PORTABLE-STOVE FRAME. WALTER C. LINDEMANN and ADOLPH W. BENSON, Milwaukee, Wis., assignors to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1927. Serial No. 214,804. 16 Claims. (Cl. 126—38.)



16. A folding stove comprising a rigid substantially rectangular body frame open at its top and bottom, means for supporting burners therein above said open bottom, legs hinged to the lower end portions of the body and arranged to swing inwardly to close the bottom of said body and outwardly to open and support the same, the construction and arrangement being such that when the legs are in open supporting position there is an unobstructed opening through which any fuel drippings or matters spilled from cooking utensils may fall to the ground or other supporting surface without lodging in the said body to cause fouling of the same or combustion exterior to the burners.

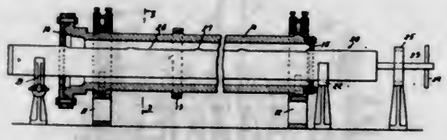
1,686,621. RADIO RECEIVING CIRCUIT. SIEGMUND LOEWE, Berlin, Friedenau, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 12, 1926, Serial No. 147,971, and in Germany Oct. 21, 1925. 1 Claim. (Cl. 250—20.)



In radio receiving apparatus, a tunable input circuit; a radio frequency amplifier comprising a vacuum tube having a control electrode, a cathode and an anode; a source of potential for energizing the cathode of said tube; a resistance across said source of potential; connections from said tunable input circuit to said control electrode and resistance; means for heterodyning the output of said amplifier; means for amplifying the intermediate frequency caused by said heterodyning, said last mentioned means comprising a plurality of resistance coupled amplifier tubes, a plurality of which have grid leak resistances connected across their control electrodes and filaments; and means for reflexing the output of the last tube of said intermediate frequency amplifier into the first tube of said intermediate frequency amplifier, said intermediate frequency amplifier being thereby utilized for amplifying and detecting intermediate frequency oscillations and for amplifying the resulting audio frequency oscillations.

1,686,622. TRIPPING MECHANISM FOR PUNCH PRESSES. JAMES E. LOSHBOUGH, Elkhart, Ind. Filed Dec. 4, 1925. Serial No. 73,268. 5 Claims. (Cl. 192—25.)

1. In a power press, the combination with a driven shaft, a driving wheel, a spring pressed locking bolt adapted for alternate engagement and disengagement with said driving wheel, and a tiltable locking lever adapted to alternately retract and release said locking bolt, of a cam on said driven shaft, a tripping lever tiltably mounted intermediate its extremities and adapted to be tilted by said shaft cam, a bell-crank lever, actuating linkage connecting said bell-crank lever with said locking lever, spring means normally urging said bell-crank lever for actuating said locking lever to retract said locking bolt, a spring pressed foot-pedal, a rod connected with said pedal, detent means carried by one arm of said bell-crank lever and engageable with said foot-pedal rod, and disengaging means operatively connecting said detent means with said tripping lever for disengaging said detent means from said rod when said tripping lever is tilted by said cam.

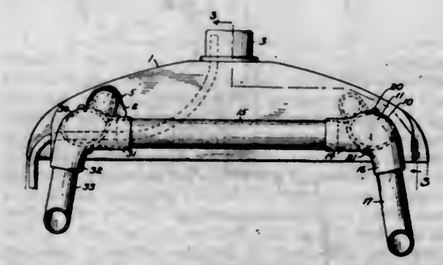


1,686,623. SPEED-INDICATING MECHANISM FOR VEHICLES. CARLOS DE MALHERBE, Buenos Aires, Argentina. Filed Feb. 24, 1925, Serial No. 11,321. Renewed July 2, 1928. 9 Claims. (Cl. 235—96.)

1. Speed-indicating mechanism, comprising a driving shaft; a governor thereon; a transmission shaft; gearing connecting the two shafts; a register; a register shaft;

a normally-open driving connection between the transmission shaft and the register shaft; a member under the direct control of the governor; and an element under the control of said member for closing said driving connection.

1,686,624. APPARATUS FOR CASTING. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper and Textile Machinery Company, Sandusky, Ohio, a Corporation of Ohio. Filed Sept. 26, 1922. Serial No. 590,602. 7 Claims. (Cl. 22—65.)



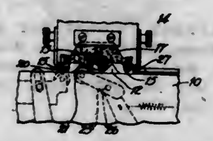
1. A filling device for casting machines which consists of a rotatively supported trough arranged to hold material in a fluid condition, said trough being constructed to form a plurality of spaced openings through which the material may be poured when the trough is turned on its axis of rotation.

1,686,625. ATTACHMENT FOR ARTIFICIAL TEETH UPON BRIDGE WORK. ALBERT D. MIZZY, New York, N. Y. Filed June 14, 1927. Serial No. 198,810. 2 Claims. (Cl. 32—9.)

1. The combination with an artificial tooth having a recessed groove, of a T-shaped anchor having means for fastening to a bridge and comprising a shank, and a head pivoted intermediate its ends to the shank to move about the pivot in the plane of the shank and the head and adapted to be received in the recessed groove in the tooth.

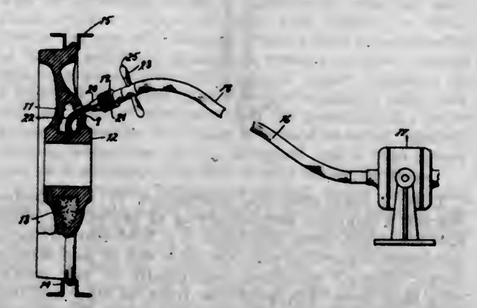
1,686,626. STIFFENING MEMBER FOR AUTOMOBILE RADIATORS. WELLINGTON W. MUIR, Lockport, N. Y., assignor to Harrison Radiator Corporation, Lockport, N. Y. Filed Oct. 13, 1926. Serial No. 141,318. 12 Claims. (Cl. 257—125.)

4. A pair of fittings for automobile radiators provided with a tank, each fitting constituting means to stiffen said tank at opposite sides thereof, as well as constituting means to supply cooling fluid to a plurality of locations in said radiator, and each fitting further constituting means to support an element cooperating with said radiator, both of said fittings adapted to be connected to the engine to constitute a brace for each side of said radiator.



1,686,627. TYPEWRITER. FRIEDRICH WILHELM MÜLLER, Dresden, Germany. Filed Jan. 22, 1925. Serial No. 3,938. 1 Claim. (Cl. 197—1.)

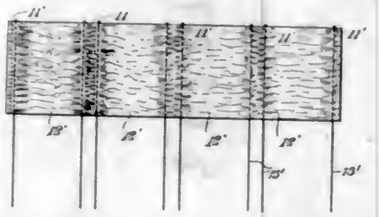
In a typewriter, a movable carriage, a plurality of types having characters thereon of a width greater than the distance that the carriage moves each time a type is printed, and mechanism for moving said carriage so that the form of a printed character is altered on either side



thereof by the printing of another character next thereto which has a portion printed within the space occupied by the first named character.

1,686,628. BANDING MACHINE. OTTO MULLER, Richmond Hill, N. Y., assignor, by direct and mesne assignments, to Kneber Muller Company, Inc., New York, N. Y., a Corporation of New York. Filed July 9, 1925. Serial No. 42,450. 5 Claims. (Cl. 131—61.)

1. In cigar banding apparatus, means for holding a band partly surrounding a cigar, said band having adhesive material at one end, means for bending one end of the band against the cigar, a roller for bending and pressing the other end against said first end, and means for heating said roller.

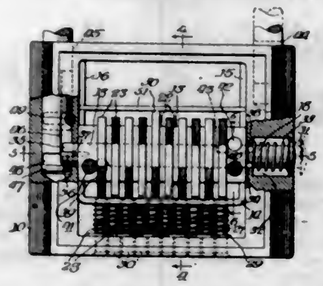


1,686,629. DEVICE FOR REMOVING SAND FROM METAL CASTINGS. DANIEL C. MULVIHILL, Hannibal, Mo. Filed Jan. 19, 1925. Serial No. 3,347. 1 Claim. (Cl. 15—198.)

A device for loosening sand cores in hollow metal castings, comprising a flexible shaft, means for operating said shaft, a long flexible tool formed from a single length of

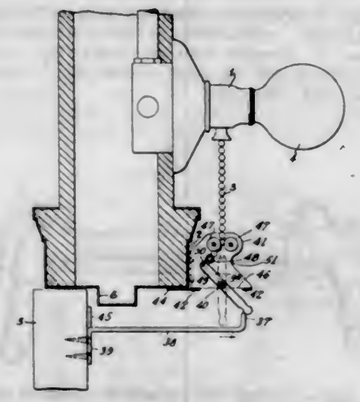
twisted wires, a head on the end of said shaft for securing the end of said tool thereto, whereby said tool may be inserted through a core hole in a casting with the head on the outside of said casting, for loosening said core and reducing the same to loose sand, and a handle member on said shaft adjacent to said head.

1,686,630. TEXTILE FABRIC AND METHOD OF PRODUCING THE SAME. EMILE M. LOVEMAN, Flushing, N. Y., assignor to Loveman Brothers, a Firm consisting of Emile M. Loveman and Richard V. Loveman, New York, N. Y. Filed Jan. 7, 1927. Serial No. 159,613. 6 Claims. (Cl. 139—384.)



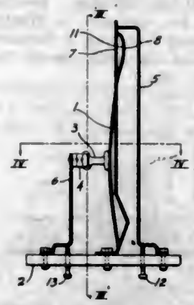
1. As an article of manufacture, a woven fabric comprising a plurality of bands of different textures and provided with a plurality of spaced, freely pullable warp threads, said threads being of a coarser texture than the threads making up the main portion of the fabric, and being substantially positioned at the bounding lines of said bands of different textures.

1,686,631. HEADREST. ADAM J. MAY, Rochester, N. Y., assignor, by mesne assignments, to Ritter Dental Mfg. Company, Inc., Rochester, N. Y., a Corporation of Delaware. Filed May 18, 1923. Serial No. 639,884. 13 Claims. (Cl. 155—177.)



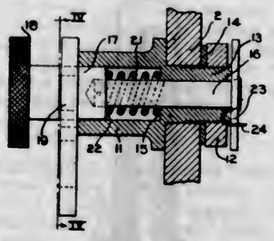
1. In a head rest, the combination of a supporting bracket, a columnar member having at one end an adjustable connection with said bracket, a head rest having an adjustable connection with the other end of said member, thrust elements extending longitudinally in said member with their inner ends spaced one from the other and their outer ends adjacent said adjustable connections, respectively nonrotatable, wedge means interposed between said inner ends for a transverse sliding movement between said elements to bring their outer ends into clamping cooperation with said adjustable connections, and manipulative means including a pivotal element adapted to slide said wedge means transversely between said thrust elements.

1,686,632. PERMUTATION PADLOCK. GEORGE F. MAYER, Chicago, Ill. Filed Feb. 14, 1927. Serial No. 167,885. 7 Claims. (Cl. 70—113.)



2. A permutation padlock comprising in combination, a casing, a bow, a locking member, said locking member having a longitudinal opening therein and a plurality of spaced ribs thereon, a locking bolt having a plurality of ribs thereon, and a plurality of tumblers mounted between the ribs on said locking member and adapted to engage the locking bolt when in locked position, and having downwardly extending portions alongside of said locking member but spaced therefrom, whereby the said locking tumblers are slidably positioned upon said locking member.

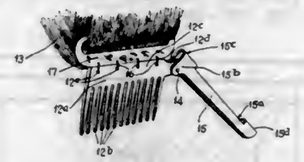
1,686,633. SWITCH-OPERATING MEANS. AUGUST M. MELAHN, Brooklyn, N. Y. Filed June 8, 1927. Serial No. 197,375. 9 Claims. (Cl. 200—54.)



1. In apparatus of the character disclosed, a switch operating lever member adapted for operative connection with a switch actuating pull, a casing in which said lever is pivoted and projecting lugs on said casing engageable over a predetermined portion of a door frame to thereby position the lever in definite predetermined relation for its proper operation and a bracket attachable to a door in predetermined position to actuate said lever, said bracket having positioning means by which the same is located on the door in proper position to actuate the switch operating lever member when the casing of that member is positioned by its lugs in its predetermined location on the door frame.

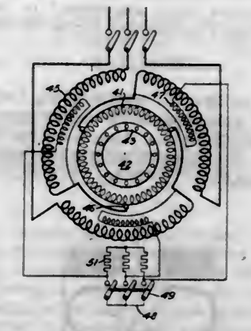
1,686,634. THERMOSTATIC REGULATOR. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 10, 1924. Serial No. 736,813. 14 Claims. (Cl. 297—15.)

1. In a thermostat, a thermo-responsive device comprising at least two integral portions having different thermo-responsive characteristics and thermo-responsive adjusting means for changing the critical operating point of both portions.



1,686,635. ELECTRICAL MEASURING INSTRUMENT. WALTER G. MYLIUS, Wilkinsburg, and BERT G. LA BAR, Turtle Creek, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,842. 7 Claims. (Cl. 116—129.)

1. A pointer-reset device for an electrical measuring instrument having a pointer and a cover, comprising, a tubular supporting member having an inner portion thereof provided with a shoulder and an outer portion thereof provided with a shoulder and a threaded bushing adapted to fit an opening in the cover, a nut adapted to engage the threaded bushing and secure the supporting member to the cover, a member for separating the nut from the cover, a rotatable member adapted to be slidingly supported within the tubular member, the said rotatable member having a knurled end portion, slotted side portions and a shoulder, a spring adapted to resiliently separate the shoulder of the rotatable member from the shoulder in the inner portion of the tubular member, a member having an inner portion adapted to slidingly engage the slotted side portions of the rotatable member and an inner portion adapted to slidingly engage the periphery of the rotatable member, and a member secured to an end of the rotatable member whereby engagement with the pointer may be effected.

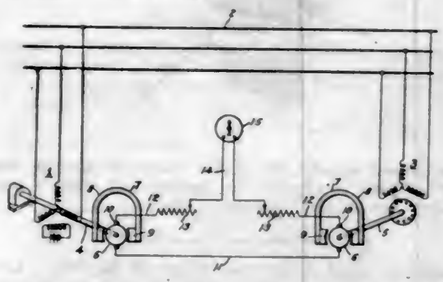


1,686,636. HAIR PIECE. JESSE OPPENHEIM, New York, N. Y. Filed Jan. 4, 1928. Serial No. 244,406. 12 Claims. (Cl. 132—53.)

1. A hair piece for covering short, natural hair regions of a coiffure, comprising an attachment means for engaging with the short hair of said region, and a tuft of hair carried by said means, said tuft having a fold portion extending from one side of said means and folded over

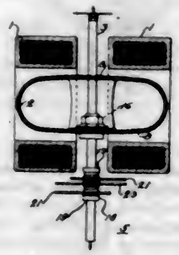
the top and opposite side of said means for retaining said tuft in form to simulate the natural hair, and to completely conceal said attachment means.

1,686,637. ALTERNATING-CURRENT MOTOR. LAURENCE M. PERKINS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 24, 1925. Serial No. 25,585. 14 Claims. (Cl. 172—280.)



1. An alternating-current, dynamo-electric machine comprising primary and secondary members, primary phase windings on said primary member, a commutator winding on said secondary member, a plurality of brushes co-operating with said commutator winding, said primary phase windings being connected in series with said brushes, means providing closed-circuited induced-winding connections on said secondary member, and switching means for establishing auxiliary winding connections on said primary member providing a shunt exciting circuit connected to said brushes.

2. In an alternating-current motor, the combination with an armature having a commutator winding, polyphase brushes cooperating with said winding, a stator member having polyphase windings, means for connecting at least a portion of said stator winding in series relation with said commutator winding, and supply terminals for a plurality of points of said stator windings, said windings and brushes being arranged for operation as a series motor, of means providing a closed-circuited induced-winding connection on said armature and a star connection on a plurality of points of said stator windings.

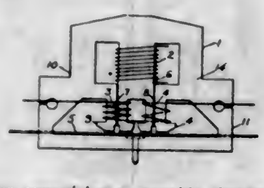


3. A polyphase alternating-current motor comprising primary and secondary members, a polyphase winding having supply terminals on said primary member, a winding having a commutator on said secondary member, a plurality of brushes cooperating with said commutator, means for connecting at least a portion of said primary winding and said brushes for operation as a series motor, a high reactance, low-resistance closed-circuited winding connection on said secondary member, and means for, at times, connecting a portion of said primary winding in shunt to said brushes.

1,686,638. SLIP INDICATOR. RAYMOND T. PIERCE, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 24, 1921. Serial No. 455,250. 2 Claims. (Cl. 172—245.)

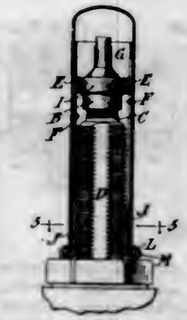
1. The combination with a plurality of movable members comprising an alternating current generator and an induction motor of means responsive to movement of each of said members for effecting an electromotive force in accordance with movement thereof, and a single circuit including an electro-responsive indicating device traversed by an electromotive force proportional to the difference between said first electromotive forces for actuating the indicating means.

1,686,639. ELECTRICAL MEASURING INSTRUMENT. RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1923. Serial No. 638,625. 11 Claims. (Cl. 171—95.)



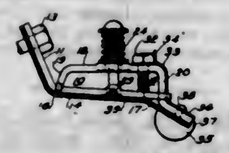
1. An electrical measuring instrument, comprising a coil, a single shaft extending substantially normal to the magnetic axis, and through opposite sides thereof, means constituting a laterally extending shoulder on the shaft against which only one side of the coil rests and means longitudinally movable on the shaft for clamping said side against said shoulder.

1,686,640. TIRE TOOL. WINSLOW S. PIERCE, Jr., Bayville, N. Y. Filed July 6, 1927. Serial No. 203,706. 6 Claims. (Cl. 81—5.1.)



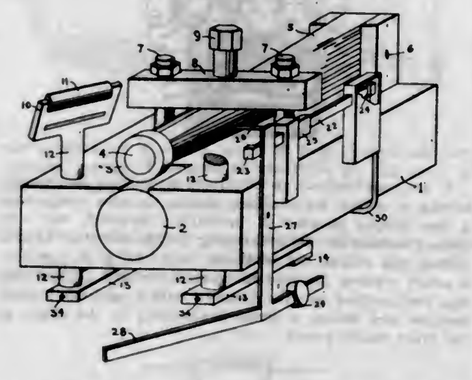
2. A tire tool comprising two members pivoted intermediate their ends, each of said members having a jaw, a knurled shoulder portion extending at right angles from said jaw, and a handle spaced from said jaw and extending from said shoulder portion, said shoulder portion having a lip projecting beyond said handle.

1,686,641. WATTHOUR METER. ARGYLE R. RUTTER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 16, 1925. Serial No. 62,751. 13 Claims. (Cl. 171—264.)



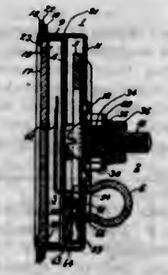
1. A meter comprising a movable element, a magnetizable core and windings on said core energized in accordance with different quantities of a circuit for actuating the element, one of said windings including two divisions having different numbers of turns in series circuit relation with the circuit.

1,686,642. COMBINED VALVE CAP AND DUST CAP. MAXIMILIAN CHARLES SCHWEINERT, New York, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed May 20, 1922. Serial No. 562,502. 14 Claims. (Cl. 152—12.)



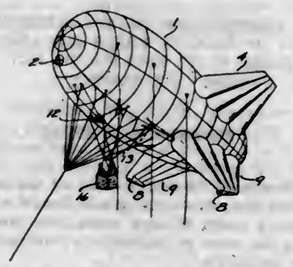
1. A combined valve cap and dust cap, comprising a dust cap having an interior sleeve provided with grooves and a valve cap having lugs sliding in said grooves.

1,686,643. CONTACT FINGER. OTTO P. SCHUSTER, North Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,731. 4 Claims. (Cl. 200—166.)



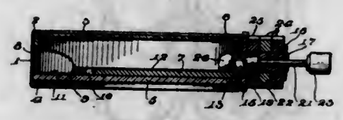
1. In a contact finger, in combination, a base member, a contact-carrying member pivotally mounted on the base member, resilient means for retaining the contact-carrying member in position on the base member, said contact-carrying member having an opening in its outer end, a contact member having a stud formed thereon, mounted on the contact-carrying member, the stud projecting through the opening and a shoulder formed on the contact member and disposed to engage the end of the contact-carrying member to retain the contact member in a predetermined position.

1,686,644. MACHINE FOR SEAMLESS CANS. ARTHUR W. SPAULDING, Oakland, Calif. Filed July 5, 1927. Serial No. 203,527. 4 Claims. (Cl. 80—13.)



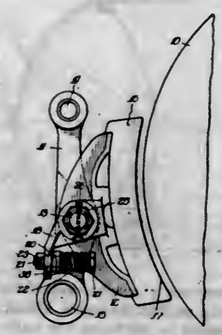
1. A machine for the manufacture of seamless cans comprising rollers suitably mounted in bearings, an adjusting screw for regulating the pressure between said rollers, guides governing the angle at which the tube for the seamless wall of the can is fed between the rollers, and means for reversing the angle of the guides so that the tube will be fed back out of the machine.

1,686,645. ELECTRICAL MEASURING INSTRUMENT. VICTOR H. TODD, Summit, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,052. 3 Claims. (Cl. 171—95.)



3. An electrical measuring instrument comprising a scale plate having portions shaped to provide an opening in which a pointer moves and an opening extending from said opening to the perimeter of the plate, a shaft having a portion disposed substantially normal to the plane of the plate behind said extending opening, a bearing for the shaft having a portion substantially fitting said extending opening flush with the front surface of the plate, and a pointer on the shaft having end portions on opposite sides of the plate and an intermediate portion extending through said first opening.

1,686,646. KITE BALLOON. RALPH H. UPSON, Detroit, Mich. Filed July 3, 1926. Serial No. 120,265. 14 Claims. (Cl. 244—4.)



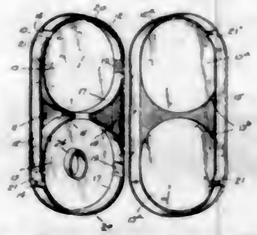
1. A kite balloon having a main elongated body portion inflated with buoyant gas, a ballonet and a main air scoop therefor, a plurality of inflatable fins maintained radially from the balloon surface in a wedge shape with their bases attached to the main body, and with walls held in shape by direct internal pressure extending wedge-shaped to the fin tip.

1,686,647. POCKET-GOLF GAME. MAURICE ALLAND, Atlantic City, N. J. Filed Jan. 10, 1928. Serial No. 245,673. 4 Claims. (Cl. 273—119.)

1. A game, comprising a casing having a bottom provided with a recess, and provided at one side with an aperture seat, a casing for a propelling member secured to said first casing in alignment with said aperture, a reciprocatory member movable in said second casing and adapted to strike and impel a ball positioned in said seat towards said recess, and a disc bearing indicia and rotatably carried by said second casing to indicate the number of times said propelling mechanism is actuated in placing the ball in said recess.

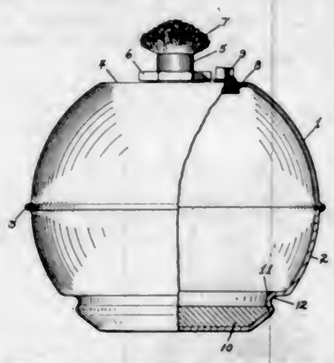
1,686,648. BALANCING DEVICE FOR BRAKE HEADS. WALTER H. BASELT, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 18, 1927. Serial No. 184,511. 6 Claims. (Cl. 188—212.)

1. The combination of a brake hanger, a brake head pivotally connected thereto, an arm mounted to turn with the brake head through a limited movement relative to the



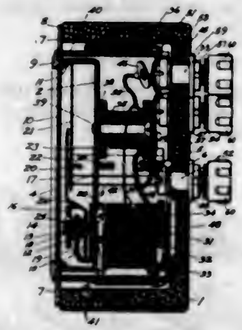
hanger, and a compression spring of limited compressibility between said hanger and arm, said spring being adapted to seat and form a non-compressible column between said hanger and arm.

1,686,649. REENFORCED TRANSPARENT SHEET AND PROCESS OF MAKING THE SAME. MITTIE TAYLOR BRUSH, Dublin, N. H. Filed Feb. 26, 1927. Serial No. 171,330. 6 Claims. (Cl. 91—68.)



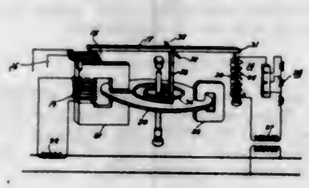
1. The process of making a sheet of the character described which comprises forming a meshwork of fine spring wires within a border of sized woven fibre threads and incorporating the wires so framed in a transparent sheet of a cellulose derivative.

1,686,650. FILM HOLDER. GASTON L. CHANIER, Jersey City, N. J., assignor to Pathe Exchange, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 21, 1926. Serial No. 143,084. 3 Claims. (Cl. 242—71.)



1. In a film holder, the combination with a closed container, of a detachable interior wall operating to form a curved passage for film from one section of the holder to another, said wall being detachable for permitting access to the curved passage for the purpose of cleaning the same.

1,686,651. CONSTRUCTION TORCH. LYMAN W. CLOSE, Toledo, Ohio, assignor to The Toledo Pressed Steel Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 24, 1926. Serial No. 150,404. 1 Claim. (Cl. 67—81.)

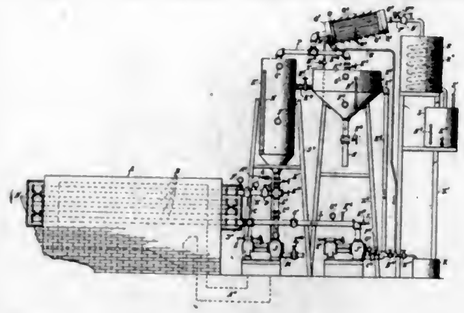


The method of securing a counter-weight in the bottom of a sheet metal body section having a closed end and an open end which consists in confining the outer side of the body and a portion of the innerside, and pressing the closed end toward the open end thereby to form a bead over the counter-weight for securing the latter against displacement.

1,686,652. ELECTRICAL MEASURING INSTRUMENT. JAMES H. CONE, Roseland, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 20, 1927. Serial No. 227,405. 3 Claims. (Cl. 171—95.)

1. In combination, an electrical measuring instrument having a casing, an auxiliary device therefor comprising a cup shaped member of insulating material, said cup shaped member having an opening for the reception of said casing and means for retaining said casing in position, a coiled resistor for said instrument secured to said casing, and another resistor disposed within said cup shaped member and having a shape conforming to the shape of the inner walls thereof.

1,686,653. ELECTRICAL PROTECTIVE RELAY. LESLIE N. CRICHTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 26, 1923. Serial No. 641,701. 9 Claims. (Cl. 175—294.)

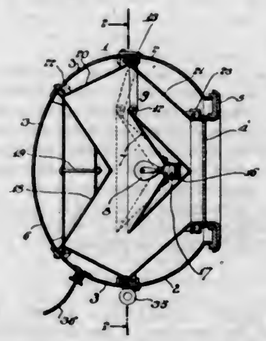


1. In an electrical system, a protective relay embodying two operating coils energized from the circuit and means for counterbalancing their effects comprising a pivoted lever contact, an induction disc subject to the influence of one coil for controlling the lever in one direction and a movable restraining member subject to the influence of the other coil for opposing the operation of the lever.

1,686,654. METHOD FOR TREATING HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Apr. 15, 1925, Serial No. 23,389, which in turn is a division of Serial No. 595,743, filed Oct. 20, 1922, the latter being a continuation of Serial No. 208,206, filed Dec. 21, 1917. Divided and this application filed Aug. 18, 1928. Serial No. 300,519. 5 Claims. (Cl. 196—47.)

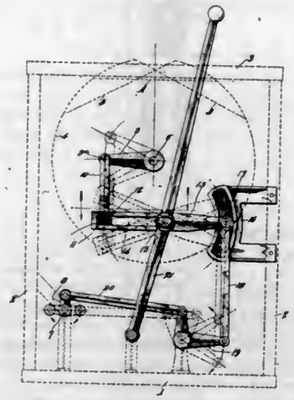
1. A process for the conversion of hydrocarbon oils, which consists in heating a mass of relatively heavy hydrocarbon oil to a cracking temperature above the boiling point of the complex chemical constituents of said heavy oil under sufficient pressure to prevent vaporization of said chemical constituents, introducing said heated oil into

a zone of lower pressure in such a manner as would permit vaporization of said chemical constituents and checking the dissociation of said heated oil by the regulated



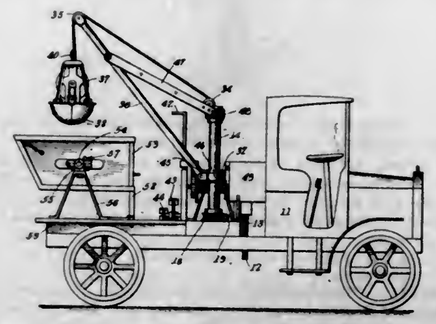
introduction of a cooler mass of hydrocarbon oil into physical contact therewith substantially at the point of vaporization.

1,686,655. HANGER. BEN BROWN ELLERBECK, Salt Lake City, Utah. Filed Feb. 28, 1927. Serial No. 171,526. 2 Claims. (Cl. 24—249.)



1. In an article of manufacture, the combination of a sheet metal clasp and a wire formed approximately in the shape of a plane isosceles triangle, the base of which is rotatably held in the sheet metal clasp, and the ends of the wire terminating some distance apart midway along one of the adjacent sides, as and for the purpose described.

1,686,656. HEADLIGHT. WILLIAM L. GEDDES, Montclair, N. J. Filed Feb. 17, 1927. Serial No. 168,875. 8 Claims. (Cl. 240—41.)



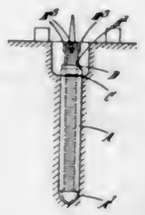
1. A light projector comprising a source of light, reflecting means having a concave reflecting surface and a convex reflecting surface, said reflecting means forming a shield preventing direct projection from said projector of light rays generated by said source, reflecting means having a convex reflecting surface to which light rays are projected from said source of light and said concave reflecting surface, and reflecting means by which rays from said second named convex reflecting surface are projected upon said first named convex reflecting surface, said first named convex reflecting surface projecting a beam from said projector.

1,686,657. WASHING MACHINE. BENJAMIN E. GETZ, Morton, Ill., assignor, by mesne assignments, of one-half to Getz Power Washer Co., Morton, Ill., a Corporation of Illinois, and one-half to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1923. Serial No. 631,971. 2 Claims. (Cl. 74—14.)

1. In a machine of the character described, in combination with a tub mounted for movement, an operating means, means connecting said operating means with said tub, including a slotted lever, guiding means for one end of said lever, an operator's lever, and means connecting said operator's lever with said slotted lever and slidable in said slot, whereby the fulcrum point of said slotted lever may be changed, and thereby place said slotted lever alternately in neutral and tub operative position.

1,686,658. CATCH-BASIN CLEANER. EDWARD P. HEALEY, New York, N. Y. Filed Sept. 13, 1922. Serial No. 587,929. 2 Claims. (Cl. 214—65.)

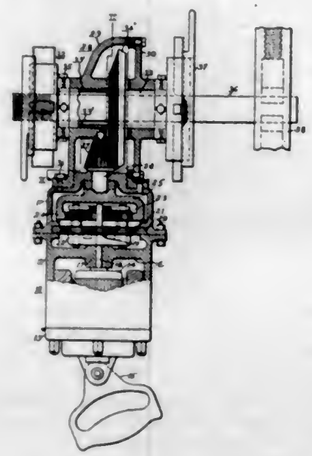
1. A catch basin cleaner comprising a truck, a hoisting device arranged thereon and comprising a hollow mast, a boom in fixed relation with said mast, a bucket supported



at the end of said boom, a plurality of cables for hoisting and lowering said bucket and operating said bucket, all extending through said hollow mast, a container removably mounted on said body, and power-driven means for rotating said mast for causing said bucket to pass over said container and to cause said boom to extend outward from said truck body.

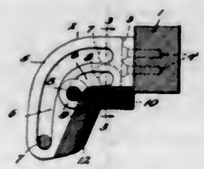
1,686,659. DEFLATING VALVE CAP. ROBERT H. HENEMIER, New York, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 10, 1922, Serial No. 580,943. Renewed Mar. 3, 1928. 8 Claims. (Cl. 152—12.)

3. In combination with a tire valve cap having a hollow projection with a slot cut in the side thereof, of a deflator comprising a disk having a hollow externally-threaded projection engageable with the internal threads of a tire valve and provided with an inturned lip on the end thereof to engage a valve stem of said tire valve to depress the same when said threads are engaged, the projection of the deflator engaging over the projection of the cap with the inturned lip extending through the slot, whereby the deflator and cap are held in assembled relation.



1,686,660. CONSTRUCTION OF CONCRETE PILES. ALFRED HILEY, Rickmansworth, England, assignor to The British Steel Piling Company, Limited, Westminster, England, a British Company. Filed Nov. 14, 1927, Serial No. 233,239½, and in Great Britain Oct. 29, 1926. 3 Claims. (Cl. 61—57.)

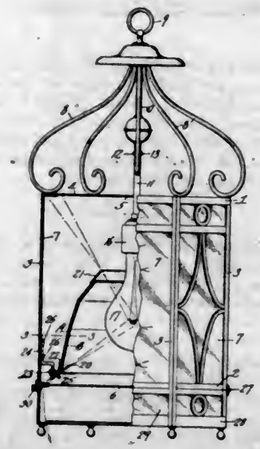
1. A method of constructing concrete piles which comprises depositing a mass of plastic concrete in a hole in the ground, allowing said concrete to set to form a pilot pile, driving said pilot pile into the ground until a sufficiently firm stratum is reached and then filling the hole formed by the pilot pile with plastic concrete and allowing it to set.



1,686,661. PIPE-THREADING MACHINE. WALTER H. HIMES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 8, 1926. Serial No. 107,814. 3 Claims. (Cl. 10—89.)

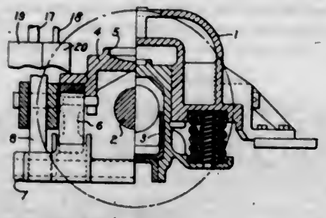
2. In a portable threading machine in combination, a main casing, a motor and motor driven train of gears carried by the casing, a bevelled pinion gear driven by the train of gears, said pinion extending beyond the casing, an auxiliary casing adapted to be removably mounted on the main casing, a sleeve rotatably mounted in the auxiliary casing, a set of stocks and dies and a pipe guide

mounted on opposite ends of the sleeve and a bevelled ring gear fixed to the sleeve between the guide and dies, said ring gear being disposed to engage the pinion when the auxiliary casing is mounted in position on the main casing.



1,686,662. SHUTTLE GUARD. ALBERT G. HOFAMMANN, Allentown, Pa. Filed Dec. 18, 1925. Serial No. 76,192. 3 Claims. (Cl. 139—193.)

2. A shuttle guard for a loom comprising a pair of spaced brackets designed for attachment to said loom, each bracket being provided with a plurality of separate slots, each slot including a smooth horizontal or shelf portion and a forwardly and downwardly curved portion, the downwardly curved portion of one slot terminating substantially above the end of the downwardly curved portion of the other slot, a pluralityof independently operable rods having ends of substantially circular cross section extending between said brackets with said ends arranged in said slots, said rods being free to move relative to each other and to said brackets in said slots so that each rod will automatically seek its operative position in the downwardly curved portion of the slot in which it is mounted when the loom is started.

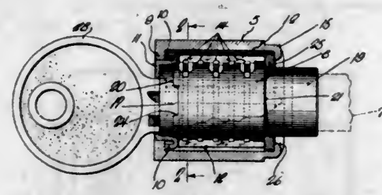


1,686,663. LAMP FIXTURE. JAMES T. HOLMES, Jamaica, N. Y., assignor to The Frink Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 30, 1926. Serial No. 157,982. 8 Claims. (Cl. 240—78.)

1. In a lamp-fixture, the combination with a lamp-housing provided with an annular translucent plate in its top wall, of a lamp arranged within said housing, a plurality of overhead supports connected together at their upper ends and at their lower ends to the outer edge of the top of said housing, a lamp-support depending from the upper connected ends of said overhead supports thru

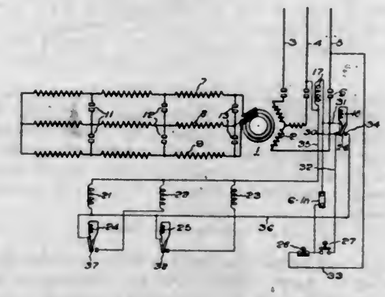
the central opening in said annular translucent plate, and a reflector for said lamp provided with an aperture presented downwardly away from said annular plate and with an opening around said lamp-support, said opening being arranged to permit the passage of direct light rays from said lamp to said annular plate.

1,686,664. GUIDE TRUCK. HAROLD A. HOUSTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 16, 1925. Serial No. 62,754. 9 Claims. (Cl. 105—189.)



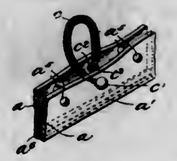
1. In a railway vehicle guide truck, the combination with a truck frame, of a swing bolster, a movable support associated therewith, tension links pivoted to said frame and support, compression links disposed between said bolster and said support, and means for locking said support to said frame.

1,686,665. LOCK. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 18, 1926. Serial No. 155,627. 9 Claims. (Cl. 70—46.)



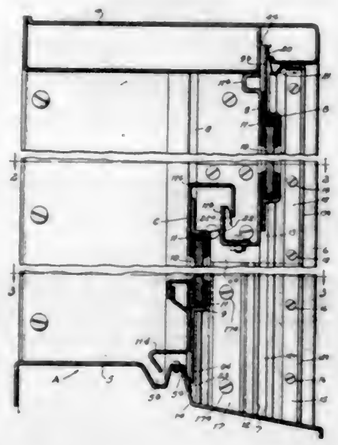
1. A device of the character described, comprising a shell having a longitudinal bore therein, a flange at the outer end portion of the shell extending into its bore, the inner wall of the shell having longitudinal grooves therein communicating with an annular counterbore adjacent the flange, a tumbler cylinder adapted to be inserted in the shell from the rear end thereof, lugs carried by the outer end portion of the cylinder and spaced apart to correspond with

the intervals between the shell grooves, the lugs passing through the grooves when the cylinder is placed in the shell and rotating in the annular counterbore, said lugs and



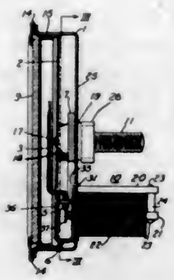
flange preventing outward movement of the cylinder in the shell, and means preventing rearward movement of the cylinder in the shell.

1,686,666. MOTOR-CONTROL SYSTEM. HENRY D. JAMES, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 25, 1925. Serial No. 52,290. 8 Claims. (Cl. 172—289.)



1. The combination with a motor and a starting resistor therefor, of a switch for controlling said motor comprising an operating electromagnet and temperature-controlled means comprising a winding inductively related to said electromagnet for controlling said resistor.

1,686,667. SKATE SCABBARD. HARRY H. KASKEY, Chicago, Ill. Filed Apr. 26, 1927. Serial No. 186,629. 1 Claim. (Cl. 208—183.)



In a scabbard for ice skates, said scabbard being formed with an open end and a closed end for co-operation with the toe of a skate, a series of apertures formed in the scabbard adjacent the open end thereof, a plurality of buttons having eyes adapted to extend through said apertures, a coil spring, means on the ends of the spring for co-operation with the eyes of the buttons, whereby the spring may be adjustably positioned at different points along the length of the scabbard, the tension of the spring and the closed end of the scabbard co-operating to removably hold the scabbard in position upon the skate.

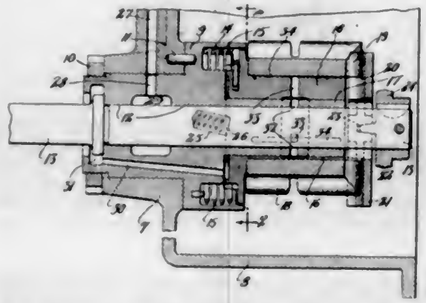
1,686,668. WEATHER-STRIPPED METAL WINDOW. ALFRED M. LANE, St. Louis, Mo., assignor to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 11, 1927. Serial No. 182,561. 16 Claims. (Cl. 189—65.)

1. The combination with a window comprising upper and lower sliding sashes and jamb members provided with guide slots in which said sashes slide, of weatherproofing means for the joints between the upper sash and the portions of the guide slots normally occupied thereby and for the normally unoccupied portions of said last mentioned guide slots.

1,686,669. ELECTRICAL MEASURING INSTRUMENT. JOSEPH W. LEGO, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1925. Serial No. 58,815. 13 Claims. (Cl. 171—95.)

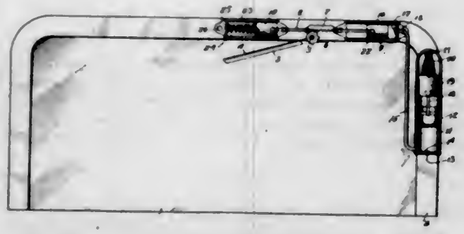
7. An electrical measuring instrument comprising a movable element, a field-magnet core member therefor and a bearing support for the element projecting from an end of the core member and having a portion fitting said end.

1,686,670. SOLID FLAVORING MATERIAL. HERBERT T. LEO, Corona, Calif. Filed Oct. 28, 1926. Serial No. 144,913. 7 Claims. (Cl. 99—11.)



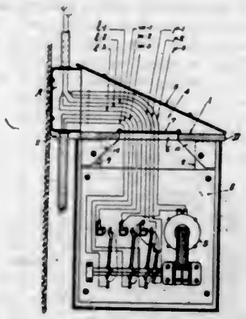
1. A non-hygroscopic substance comprising substantially pure crystalline dextrose having the natural flavor of a fruit.

1,686,671. PLASTER BOARD. ALEXANDER S. SPEER, Buffalo, N. Y., assignor, by mesne assignments, to United States Gypsum Company. Filed Nov. 29, 1920. Serial No. 427,044. 4 Claims. (Cl. 154—45.9.)



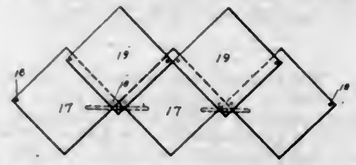
1. A fabricated board composed of a plastic material and facings of fibrous material, the edges of the board being reinforced with insets of fibrous material between the facings and secured thereto to close the space between the facings and to hold the plaster in place and to provide nailing edges, the insets being composed of laminated material and the lamina being secured together.

1,686,672. AUTOMATIC COMPENSATING SPROCKET. FRED C. THOMPSON, Detroit, Mich., assignor to Morse Chain Company, a Corporation of New York. Filed Mar. 10, 1924. Serial No. 698,018. 6 Claims. (Cl. 308—14.)



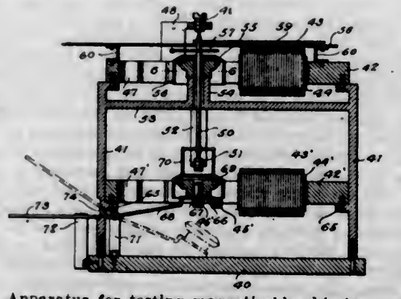
3. A tension adjuster for endless chains comprising in combination with a shaft to be driven, a frame, a sprocket wheel, a driving connection between said wheel and said shaft, a non-rotatable mounting detachably secured to said frame, and means for shifting the centre of the sprocket wheel, said means being rotatable on said mounting and removable with the mounting without disturbing the shaft.

1,686,673. WINDSHIELD WIPER. HARRY R. VAN DEVENTER, New York, N. Y. Filed June 10, 1924. Serial No. 719,141. 8 Claims. (Cl. 15—253.)



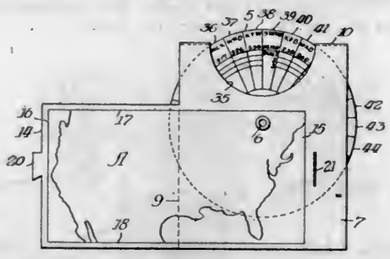
1. A windshield wiper mounted on a vehicle and comprising a bar carrying a wiping strip, a member to actuate said strip, a piston to move said member in one direction, a pumping cylinder to supply air under pressure to operate said piston, a yieldingly suspended weight to be actuated by irregularities of motion of said vehicle, said weight being associated with said pumping cylinder, a spring to be compressed by the piston and a valve permitting the spring to move the bar in the opposite direction.

1,686,674. SUPPORT FOR ELECTRICAL APPARATUS. LOUIS LARSEN, East Orange, N. J., assignor to Sundh Electric Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 26, 1924. Serial No. 758,138. 5 Claims. (Cl. 247—9.)



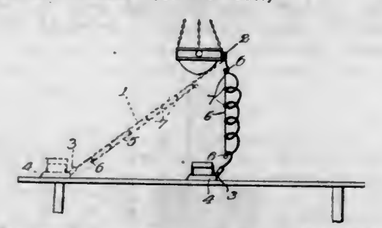
5. The combination of an electrical control device, a support and enclosure for the control device, a standard junction box, and means included in the said support and enclosure whereby it may be supported adjacent to and independent of the junction box to form also a closure for the box and for wires extending to and from the control device into the box.

1,686,675. SHINGLE FASTENER. CORTLANDT F. AMES, Jr., Mount Vernon, N. Y., assignor to The Barrett Company, a Corporation of New Jersey. Filed Jan. 31, 1924. Serial No. 689,702. 6 Claims. (Cl. 108—8.)



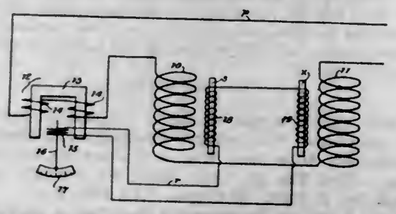
1. A shingle retaining member comprising a flat strip of substantially uniform width and a wider but shorter portion contiguous to and integral with said strip intermediate the ends thereof adapted to be formed into a shingle clamping hook.

1,686,676. METHOD OF AND APPARATUS FOR TESTING MAGNETIZABLE OBJECTS. MAX E. BERLOWITZ, Belleville, N. J., assignor, by mesne assignments, to Magnetic Analysis Corporation, Long Island City, N. Y., a Corporation of New York. Filed Apr. 25, 1924. Serial No. 708,885. 5 Claims. (Cl. 175—183.)



3. Apparatus for testing magnetizable objects, comprising means for producing a pair of similar rotating magnetic fields, means for supporting a standard specimen in one field and a non-standard specimen in the other field, movable detecting means in the respective fields sensitive to the magnetic torque developed between the fields and the respective specimens, the movement of one detecting means being in opposition to the movement of the other detecting means.

1,686,677. RADIOLOG. GLENN A. BISHOP, Evanston, Ill. Filed June 11, 1926. Serial No. 115,203. 1 Claim. (Cl. 40—70.)



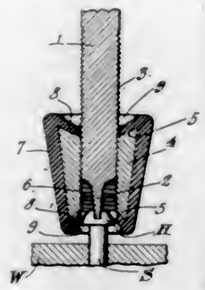
In a device of the character described, a mounting formed of a suitable material hinged to form front and rear upstanding sections which may be opened gable shaped, a revolvable circular disc mounted parallel to and on the rear of the front section, a segment cut out of the front section along the hinge, the disc mounted so its periphery extends above the hinge line so that a larger segment of the disc is displayed through the segment of the mounting than the segment area of the segment removed from the front section of the mounting.

1,686,678. FLEXIBLE-CABLE ADJUSTER. WALTER T. BURKE, Chicago, Ill. Filed Aug. 11, 1923. Serial No. 656,864. 4 Claims. (Cl. 173—367.)

1. In combination, an elastic cord, clips slidably carried therealong for frictional connection with an electric cord at spaced intervals, and enlargements at the ends of said elastic cord, each of said clips having a pair of legs forming an eye at their connected ends to freely, slidably receive the elastic cord and having the free ends shaped to frictionally grip the electric cord.

1,686,679. APPARATUS FOR TESTING MAGNETIZABLE OBJECTS. CHARLES W. BURROWS, New York, N. Y., assignor, by mesne assignments, to Magnetic Analysis Corporation, Long Island City, N. Y., a Corporation of New York. Filed Oct. 25, 1923. Serial No. 670,700. 1 Claim. (Cl. 175—183.)

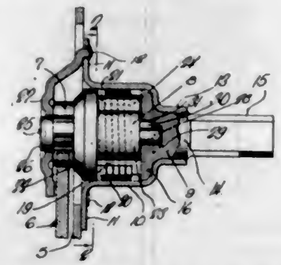
An apparatus for testing the physical properties of magnetizable objects comprising a pair of primary coils connected in series, a pair of bucked secondary coils, and a



dynamometer having the field coil thereof connected in series with said primary coils and the potential coil in series with the secondary coils.

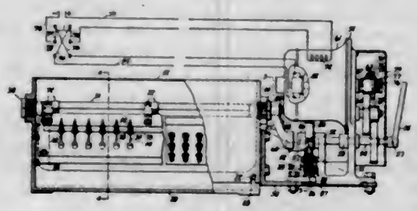
1,686,680. PROCESS AND APPARATUS FOR DRYING ORIENTAL RUGS. LYNN B. CASE, New Brunswick, N. J., assignor to John Waldron Corporation, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1926. Serial No. 158,148. 3 Claims. (Cl. 34—20.)

1. In a combination of apparatus for drying rugs, a casing substantially closed, means for controlling the relative air pressure within and without the casing, means for conveying rugs within the casing, said means being adapted to elevate a rug when one end is looped thereover, means for conveying the rugs through the casing at a predetermined rate to assure even spacing and thorough drying, means for delivering the rugs without the casing at a different rate, said last means extending through the casing to enable the rugs to be piled by pulling one edge in a direction substantially transverse to the line of travel of said means, the said means supporting the other edge until the first edge is in substantially desired piling position.



1,686,681. SCREW DRIVER. BENJAMIN F. CANODE, Aurora, Ill. Filed Oct. 19, 1926. Serial No. 142,668. 1 Claim. (Cl. 145—52.)

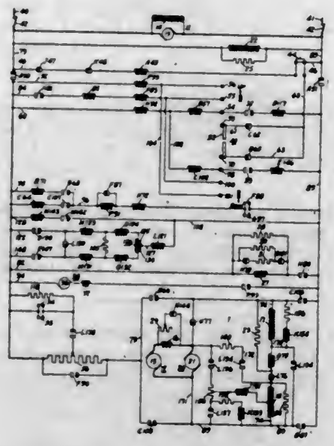
The combination with a screw driver including a screw threaded shank and a bit, of an interiorly screw threaded shell mounted on the threaded portion of the shank, said shell being reversible on the shank and having one end larger than the other, there being a concentric recess in the small end of the shell and a larger concentric recess in the large end of the shell, and a soft protecting jacket on the shell and fitting snugly thereto, said jacket having inturned end portions seated in the respective recesses and providing spaces for the reception of the head of a screw engaged by the bit.



1,686,682. CLUTCH MECHANISM. CHARLES L. COUGHLIN, Milwaukee, Wis., assignor to Briggs and Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed May 14, 1926, Serial No. 109,101. Renewed Feb. 8, 1928. 12 Claims. (Cl. 192—8.)

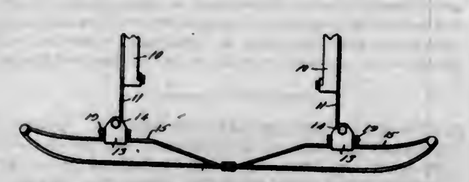
1. In a device of the character described, a normally stationary housing, a rotatable driving member formed in one piece and consisting of a shaft portion, a flange on the inner end thereof, a pair of spaced lugs projected from the flange and having their peripheries struck on an arc having the axis of the shaft portion as a center and a journal portion formed on the shaft juxta-posed the flange, a bearing member at the closed end of the stationary housing in which the journal portion of the shaft is journaled, the flange and lugs of the driving member being located within the housing, a rotatable driven member consisting of a part located within the housing between the lugs of the driving member and a driving key carried thereby and having an end located between adjacent ends

of the driving member lugs, and a spring coiled about the lugs of the driving member with its ends inturned between adjacent ends of the lugs and disposed at opposite sides of the driving key, the peripheral surface of the spring normally frictionally gripping the wall of the housing to resist rotation of the driving member therein, whereby rotational stress applied to the driving member draws the spring ends together to reduce the frictional contact between the spring and housing and rotational stress applied to the driven member tends to spread the inturned ends of the spring to increase its frictional contact with the housing.



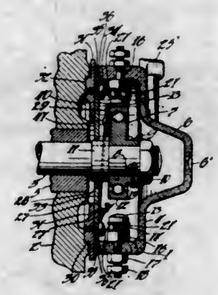
1,686,683. SWITCHING MECHANISM. WILFRID A. DALY, Yonkers, N. Y., and EDWARD L. DUNN, East Orange, N. J., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 27, 1925. Serial No. 12,054. 4 Claims. (Cl. 200—6.)

4. A double throw switch comprising; an operating shaft; means for turning said shaft; a stationary contact having its contact surface facing said shaft; a second stationary contact disposed on one side of the first stationary contact in a plane at right angles to the axis of said shaft through the first stationary contact; a third stationary contact disposed in said plane on the other side of said first stationary contact, the contact surfaces of the second and third stationary contacts being parallel to that of the first stationary contact; an arm mounted on said shaft and extending radially therefrom toward said stationary contacts, said arm having an aperture extending longitudinally thereof; a plunger slidably mounted in said aperture; a bridging contact pivotally mounted on said plunger to rock in said plane and having its contact surface facing the contact surfaces of said stationary contacts, the contact surface of said bridging contact being adapted to engage the contact surfaces of the first and second stationary contacts in one closed circuit position, to engage the contact surfaces of the first and third stationary contacts in the other closed circuit position,



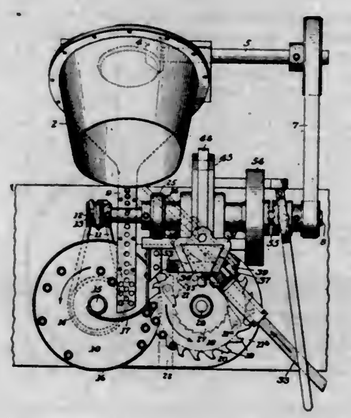
and to engage the contact surface of only the first stationary contact in off position; and resilient means acting through said plunger to maintain the contact surface of the bridging contact in engagement with the contact surface of the first stationary contact in off position, to rock said bridging contact about its pivot to cause sliding engagement of its contact surface with that of the second stationary contact, upon said shaft being turned in a direction to move said bridging contact into said one closed circuit position, and with that of the third stationary contact, upon said shaft being turned in a direction to move said bridging contact into said other closed circuit position, while maintaining a sliding engagement between the contact surfaces of the bridging contact and first stationary contact.

1,686,684. CONTROL SYSTEM FOR ELEVATORS. LEE I. DAVIS, New York, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 29, 1925. Serial No. 65,612. 12 Claims. (Cl. 172—152.)



1. In combination, an elevator car, a motor therefor, a generator for supplying current to said motor, said generator having a field winding, means for driving said generator, a source of current for the field winding, and means for causing said motor to bring the car to a level with a desired landing regardless of whether the car overruns or underruns said landing, said last included means comprising means for disconnecting a portion of said field winding from said source and connecting it to the armature of said generator.

1,686,685. AUTOMOBILE BUMPER. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Aug. 27, 1923. Serial No. 659,483. 14 Claims. (Cl. 293—55.)

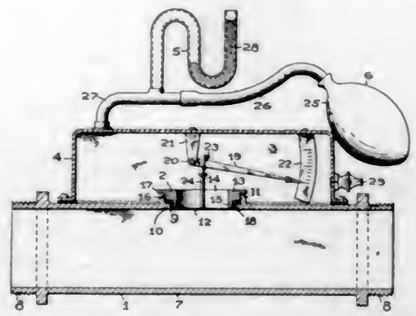


1. The combination, with a support terminating in an eye, of a stirrup connected thereto, a bumper bar arranged within the stirrup, and complementary wedge members arranged within the stirrup and adapted to engage the bumper bar and eye, together with means for moving said wedge members.

1,686,686. IGNITION TIMER. THOMAS A. EDISON, Jr., Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Oct. 19, 1922. Serial No. 595,525. 2 Claims. (Cl. 200—27.)

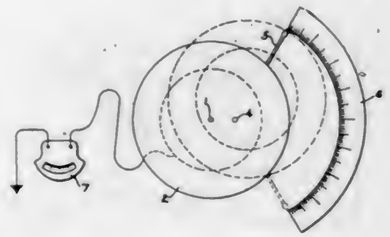
1. The combination with an internal combustion engine having a rotary element and a recess provided in the engine frame substantially concentric with the axis of said element, and a timer casing carrying a plurality of radially arranged, spaced contacts and adapted to be applied to said frame with said contacts in cooperative relation to said rotary element, of adapter means for insuring the concentric positioning of the timer casing and the contacts carried thereby with respect to the axis of the rotary element, said means comprising a pair of adjustably connected members one of which is adapted to take within and coact with said recess and the other of which is adapted to fit closely within the timer casing and over said rotary element.

1,686,687. APPARATUS AND METHOD FOR APPLYING CORK TO CAPS. ALONZO L. EDWARDS and JOHN A. MCGINNIS, Wheeling, W. Va., assignors to Wheeling Stamping Company, a Corporation of West Virginia. Filed June 10, 1921. Serial No. 476,470. 15 Claims. (Cl. 113—80.)



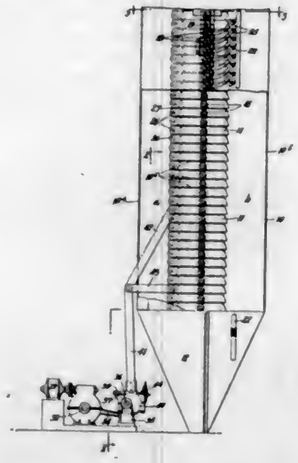
1. A cap-corking machine comprising means for feeding the caps to a certain point, means for feeding cork material over the caps at that point, a cutting device for

cutting pieces from the cork material and entering them in the caps, and means for drawing from the cutting device the surplus cork material from which pieces have been cut, substantially as described.



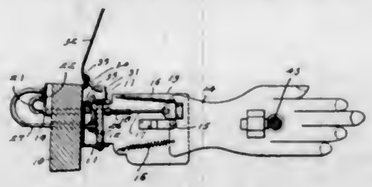
14. The method of manufacturing cork-lined caps, comprising feeding caps to a predetermined position, forming an elongated strip of cork material, feeding said strip over the caps at said position, holding the strip on opposite sides of said position, and cutting blanks from said strip while so held and delivering the blanks to said caps, substantially as described.

1,686,688. PRESSURE METER. CARL J. FECHHEIMER, Pittsburgh, Pa., assignor to Western Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1921. Serial No. 526,227. 11 Claims (Cl. 73—110.)



1. In a fluid-pressure instrument, the combination with a fluid-conducting tube having a portion of substantially uniform interior cross-sectional area and an opening through a side-wall of said portion, of an imperforate flexible diaphragm structure closing said opening and having its inner surface flush with adjacent inner surfaces of the tube and conforming to the uniform cross-sectional contour of the tube, and means for securing the diaphragm to the tube in fluid-tight relation thereto.

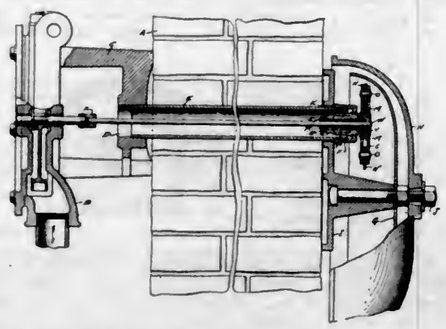
1,686,689. VOLTMETER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,439. 5 Claims. (Cl. 171—95.)



1. A voltmeter operable by means of corona discharge comprising normally concentric conductors having opposed cylindrical surfaces, one of said conductors being movable about an eccentric axis.

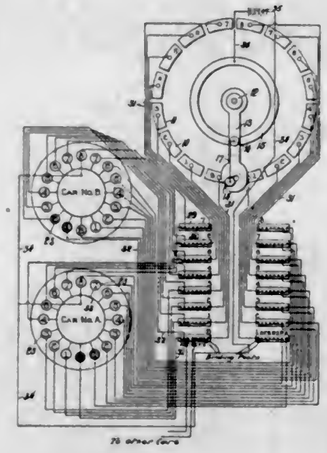
1,686,690. FUEL DRIER. MARTIN FRISCH, St. Louis, Mo., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1927. Serial No. 175,025. 4 Claims. (Cl. 34—38.)

1. In feeding and drying apparatus, the combination of movable heating elements arranged to provide a vertical conduit for the material to be dried, and means for imparting a step by step movement to said elements.



1,686,691. SIGNALING APPARATUS FOR VEHICLES. FRANK A. E. GOODROAD, Canton, S. Dak. Filed June 7, 1928. Serial No. 283,625. 7 Claims. (Cl. 116—44.)

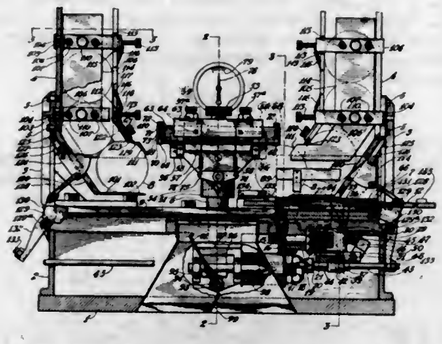
1. In a semaphore signal, a pivoted semaphore, a pivoted cover therefor, an arm upon the semaphore having a slot, a longitudinally movable operating member for the semaphore having a portion engaged in said slot, said member extending in the general direction of the slot when the signal is in non-signaling position, a connection between said member and said cover whereby the cover is shifted during movement of the member in the slot and is inoperative during pivotal movements of the semaphore arm, the semaphore arm being formed in two sections and means operative when the arm is in signaling position for oscillating one of said sections with respect to the other thereof.



1,686,692. ROTARY ALARM DEVICE. LESTER A. GRIMES, Montclair, N. J., assignor to Grimes Sprinkler Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed June 25, 1925. Serial No. 39,435. 5 Claims. (Cl. 116—151.)

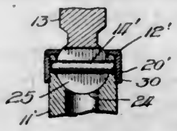
1. In a device of the character described, a water motor and a gong in combination with means for retaining the same in position, a knocker arm having therein a centrally apertured recess, a bearing carried by said retaining means, a shaft for said knocker arm arranged to rotate in said bearing, a driving shaft connected with said motor and

freely passing through said aperture, and a key secured to said shaft and loosely fitting within said recess and arranged to rotate said knocker arm.



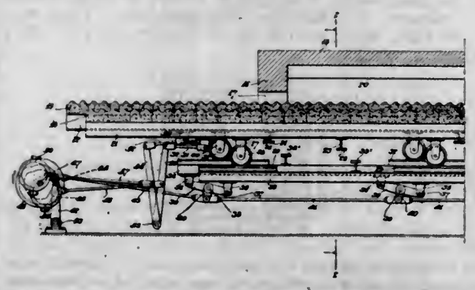
1,686,693. SIGNAL MEANS FOR ELEVATORS, ETC. WILLIAM H. GROVER, Maumee, and CLARENCE E. MERRITT and WILLIAM S. POOLEY, Toledo, Ohio. Filed Aug. 8, 1921. Serial No. 490,559. 5 Claims. (Cl. 177—336.)

1. In a signal apparatus, a commutator having a single row of segments, a switch arm therefor, a branch block having a plurality of connected contacts, the contacts in each block being connected to a different contact on the commutator, a plurality of elevator cars, a plurality of signals on each car distinctive to each floor, and means for connecting one signal in each car to a contact on the same branch block.



1,686,694. GAUGING MACHINE. ALOIS HAUSER and PHILIP WALLIN, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 28, 1927. Serial No. 178,909. 12 Claims. (Cl. 209—88.)

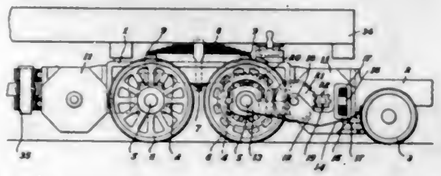
1. A gauging machine comprising gauging mechanism, a carriage, means for supporting the work thereon, means for reciprocating said carriage so that work thereon may be gauged, said gauging mechanism being adapted and arranged to gauge work in each direction of movement of



said carriage, and means actuated by said carriage for reversing the direction of travel of said carriage at each end of its path.

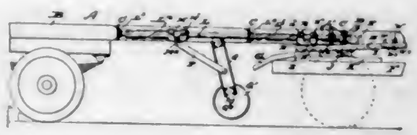
1,686,695. UNIVERSAL JOINT. HORACE C. HEON, Chicago, Ill., assignor to Automotive Maintenance Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed May 18, 1925. Serial No. 30,942. 1 Claim. (Cl. 64—91.)

In a universal joint, a socket member comprising a body portion having a ball-receiving recess in its bottom providing a spherical surface at the transverse diametrical plane and a cylindrical surface continuing beyond said plane; a ball member having a spherical head portion adapted to snugly engage said recess for movement therein, said head being slotted diametrically from its end to a point substantially beyond the transverse diametrical plane of the sphere; a cap fitting over said body and having an opening in its end wall, the edge of which is shaped to continue the curvature of the wall of said spherical recess; and a diametrical cross pin passing through the slot in said head and engaging the walls of both said body and cap to operatively interlock said foregoing parts.



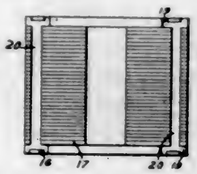
1,686,696. HEATING FURNACE. JOSEF HIRSCHMANN, Baltimore, Md., assignor to The Eastern Rolling Mill Company, a Corporation of Maryland. Filed Feb. 17, 1927. Serial No. 168,894. 6 Claims. (Cl. 198—219.)

6. In combination with a heating furnace, means for conveying material, such as sheet metal, therethrough,



comprising a plurality of longitudinally extending parallel supporting and conveying elements arranged alternately in different independently movable groups, supporting wheels connected to said elements, wheel-supporting rails also arranged in different independently movable groups, means for alternately raising and lowering the groups of rails and means for reciprocating the groups of conveying elements upon the rails.

1,686,697. ELECTRIC LOCOMOTIVE. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1924. Serial No. 684,492. 9 Claims. (Cl. 105—108.)

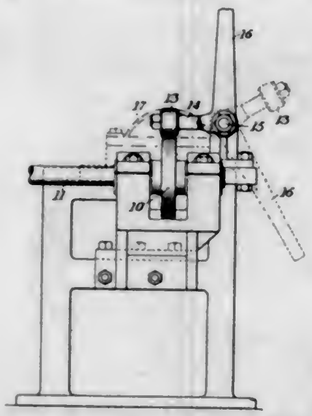


1. In a vehicle, the combination with a plurality of wheel axles and a frame journalled thereon, of a motor secured to said frame, side arms journalled at one of their ends on one of said axles and spring-borne at their other ends on the motor frame, idler shafts journalled for rotation in said arms, and co-operating gear-wheels mounted on the ends of one of the axles and on the idler and motor shafts.

1,686,698. TRACTOR TRAILER. CHARLES H. LAND, Detroit, Mich. Filed May 4, 1927. Serial No. 188,663. 9 Claims. (Cl. 280—33.1.)

1. In combination with a tractor-trailer, a rotatable shaft journalled in the frame of the trailer and extending longitudinally thereof; a supporting element for the trailer adapted to be moved into supporting or non-supporting position by the rotation of said shaft; and means carried by the tractor adapted to co-operate with the front end of the shaft to effect its rotation through a backward or forward movement of the tractor.

1,686,699. ROTOR FOR INDUCTION MOTORS. FRANK P. LAUFFER, Erwin, and SAMUEL C. HOEY, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1924. Serial No. 702,733. 4 Claims. (Cl. 172—120.)



1. A rotor having its end rings and conductor bars integral therewith, said end rings being of substantially channel-shape in cross-section and provided with re-inforcing ribs.

1,686,700. METHOD AND APPARATUS FOR MANUFACTURING TUBES. ALEXANDER LAUGHLIN, Jr., Edgeworth, Pa.; Margaret M. Laughlin and The Union Trust Co. of Pittsburgh, executors of said Alexander Laughlin, jr., deceased, assignors to Central Tube Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1923. Serial No. 674,845. 2 Claims. (Cl. 78—83.)

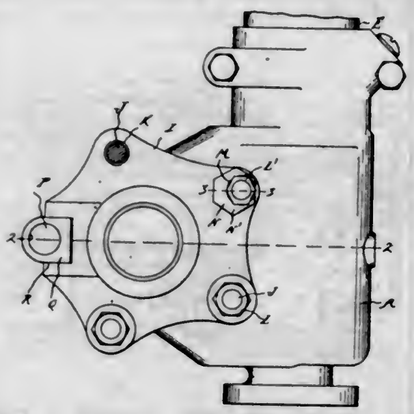
1. In the method of manufacturing butt weld tubing, the steps comprising preshaping the ends of a plurality of pieces of strip so as to adapt the pieces to be initially gripped between forming rolls, charging the pieces of strip into a furnace in side-by-side relationship, heating them to bring the edges thereof to a welding temperature, and thereafter successively withdrawing the pieces of strip and welding the edges thereof to form butt weld tubing by the action of forming welding and feeding rolls operable about vertical axes, and charging a fresh piece of strip into the furnace to replace the withdrawn piece.

1,686,701. METHOD AND APPARATUS FOR THE MANUFACTURE OF TUBES. ALEXANDER LAUGHLIN, Jr., Edgeworth, Pa.; Margaret M. Laughlin and The Union Trust Co. of Pittsburgh, executors of said Alexander Laughlin, jr., deceased, assignors to Central Tube Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 27, 1924. Serial No. 702,261. 3 Claims. (Cl. 205—3.)

1. Apparatus for the manufacture of tubing, comprising feeding rolls, forming means behind said rolls said forming means comprising a plurality of pairs of rolls operable about vertical axes, the same being arranged to successively act on material to be formed into tubes, and means for moving one of the feeding rolls away from the other, whereby the material may be readily positioned between the rolls and the rolls closed to feed the material to the forming means.

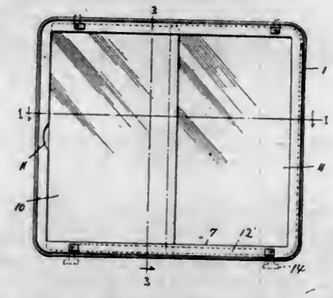
1,686,702. AIR GUN. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a Corporation of Michigan. Filed Apr. 19, 1926. Serial No. 103,119. 9 Claims. (Cl. 124—10.)

6. In a gun, the combination with a barrel, of a plunger engaging said barrel, a plunger shank formed from a sheet metal blank bent into cylindrical form and cut away to form diametrically opposed segments, a spring sleeved on said shank, a spring abutment between said segments having a bearing portion slidably engaging the concave surfaces thereof, the said spring and spring abutment being



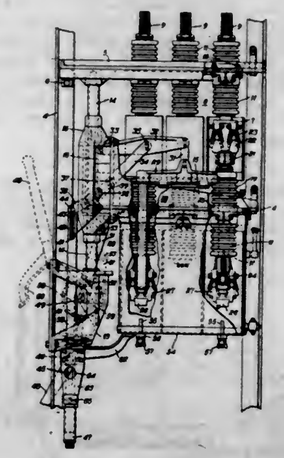
removable as a unit with the said plunger, a lever engaging said spring abutment and an opposed bearing on said shank, and a scar for engaging said opposed bearing when said plunger assembly is moved rearward by said lever whereby the forward movement of said spring abutment by said lever will compress the spring.

1,686,703. SOLID ACID MATERIAL. HERBERT T. LEO, Corona, Calif. Filed Jan. 31, 1927. Serial No. 165,030. 8 Claims. (Cl. 99—11.)



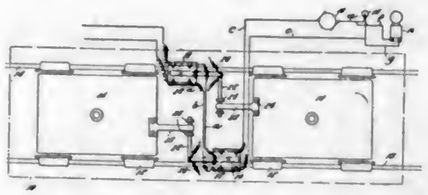
1. As a new article of manufacture, a non-deliquescent solid comprising dextrose and a normally liquid acid incorporated therewith.

1,686,704. WORM-GEAR ADJUSTMENT FOR MOTOR-VEHICLE STEERING GEARS. HENRY MARLES, Detroit, Mich., assignor to Gemmer Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 28, 1927. Serial No. 229,488. 2 Claims. (Cl. 74—79.)



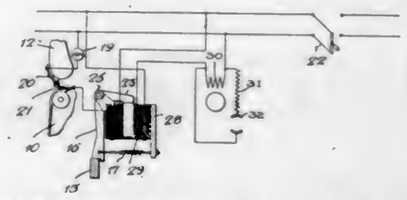
2. In a steering gear, adjustment means for shifting the worm wheel bearing member in relation to the worm bearing member comprising a stud projecting from the one through an aperture in the other, a split conical bushing sleeved on said stud, a second bushing sleeved on the stud provided with a conical recess for receiving said conical bushing and an eccentric peripheral portion for fitting the apertured member, a polygonal head on said eccentric bushing for facilitating rotative adjustment of the same on said stud and a clamping nut engaging said stud and bearing on said conical member to effect the contraction of the latter about the stud and the expansion of the eccentric bushing member to take up all lost motion.

1,686,705. REMOVABLE WINDOW FOR CLOSED CARS. GLENN E. MOSHER, Rockford, Iowa. Filed Nov. 26, 1927. Serial No. 235,868. 1 Claim. (Cl. 296—44.)



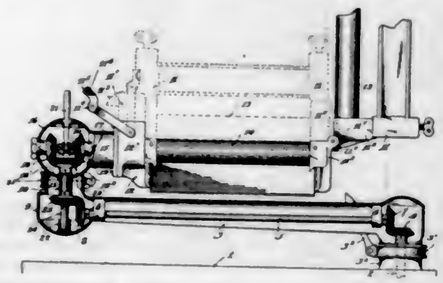
In a removable window adapted for disposition within the usual window opening of the closed type of automobile, a frame, a stationary pane supported within said frame, a slidable pane arranged within the frame, a flange at the upper and lower portions of the frame, said flanges being bent inwardly, an elongated bar adapted to be secured to the frame at the upper and lower portions thereof by said inwardly bent flanges, the ends of each bar being bent outwardly, and means associated with said bent ends for securing the frame within the window opening.

1,686,706. SWITCH MECHANISM. JOHN B. MACNEILL, Wilkinsburg, and ANDREW H. BAKKEN and CURTIS A. TUCKER, Edgewood, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 2, 1921. Serial No. 512,194. 4 Claims. (Cl. 200—50.)



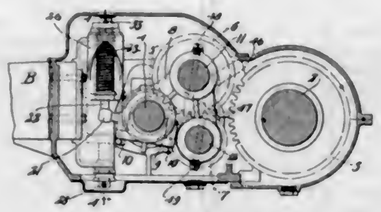
3. Switch mechanism comprising a disconnecting switch contact member, a circuit breaker movable bodily into and out of engagement with the said contact member, means for bodily moving the circuit breaker, a tank enclosing the circuit breaker and supported thereon and detachable therefrom and means carried by the said moving means for preventing disconnection of the tank from the circuit breaker while the said breaker is in engagement with the said contact member.

1,686,707. ELECTRIC SAFETY SWITCH. EUSEBI NAZZARENO, Telluride, Colo. Filed Aug. 10, 1927. Serial No. 212,035. 4 Claims. (Cl. 246—170.)



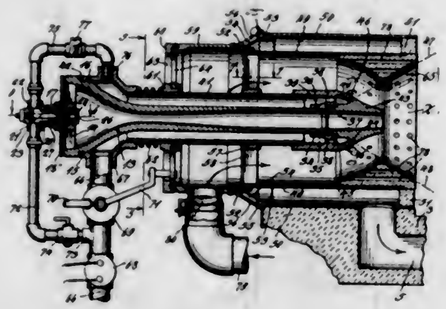
1. In combination with a railway car, an electric signal connected in circuit with a source of current, a normally open switch included in the circuit, laterally movable means operable to close the switch and actuate the signal when any of the wheels of the car leave the rails and means included in the switch closing means to permit of limited lateral movement of the car without closing the switch.

1,686,708. AUTOMATIC MAGNETIC RELEASE FOR IRONING MACHINES. HOMER E. NEWHOUSE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1924. Serial No. 746,475. 4 Claims. (Cl. 68—9.)



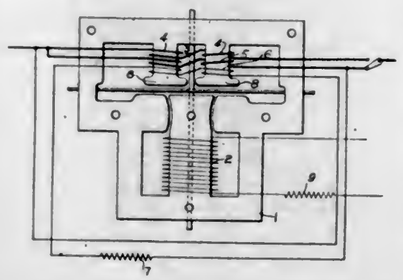
4. A safety latch for ironing machines provided with a movable ironing member comprising, in combination, a latch member, an electromagnet to operate the latch member to lock the ironing members in ironing relation, means operative to withdraw the latch member from its locked position when the electromagnet is deenergized, and means operative to establish the circuit of said electromagnet as the result of the positioning of the ironing members in ironing relation.

1,686,709. WRINGER MOUNTING. WILLIAM G. PETERS, Peoria, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 18, 1922. Serial No. 544,802. 3 Claims. (Cl. 68—32.)



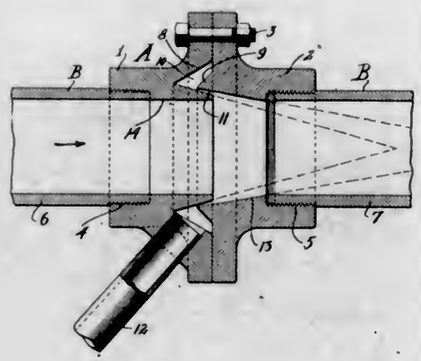
1. The combination in a washing machine, with a power element therein, of an arm pivotally supported on said element, a wringer pivotally mounted on the arm remote from the point of support of the same, adapted to swing in a horizontal plane, and gearing for transferring power through the arm from the element to the wringer-rolls, said gearing operating to drive said rolls in any position of the arm and wringer relatively.

1,686,710. LOCOMOTIVE BOOSTER. MONTAGUE H. ROBERTS, Englewood, N. J., and MAJOR T. FORKER, New York, N. Y., assignors to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 20, 1926. Serial No. 142,974. 25 Claims. (Cl. 105—48.)



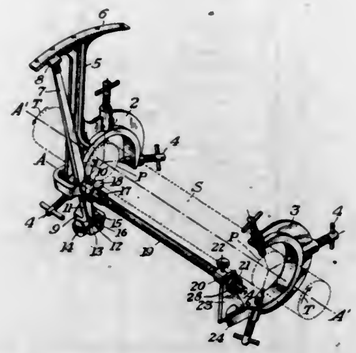
1. A locomotive booster apparatus comprising in combination, a booster driven pinion, an axle gear, an idler gear in mesh with the pinion, a second idler gear in mesh with the first, a movable member carrying both of said idler gears, and motor means for moving said member in one direction to mesh the first idler gear with the axle gear and in the reverse direction to mesh the second idler gear with the axle gear.

1,686,711. GAS BURNER. HAROLD D. SCHRADER, Denver, Colo. Filed May 31, 1927. Serial No. 195,285. 8 Claims. (Cl. 158—99.)



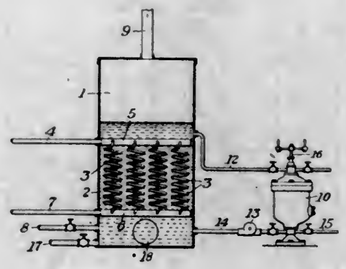
8. A compound gas burner comprising a primary burner composed of a Venturi tube, a detachable nozzle at one end and means at the other end for admitting air and gas, a secondary burner comprising a pipe enclosing the Venturi tube and spaced from the latter so as to form an annular passage, a burner head secured to the pipe and the tube at one end, a mixing head connecting the pipe and tube at the other end, means for admitting gas into the annular space, said burner head having a transverse perforated partition and a circular flange extending forwardly from the partition into close proximity to the outer surface of the nozzle whereby a passageway is provided for the escape of gas, a cylindrical housing enclosing said pipe, means for spacing the pipe from the housing, means for admitting air into the space between the pipe and the housing, a cylindrical member surrounding the cylindrical housing and spaced from the latter, means for connecting the ends of the cylindrical member with the cylindrical housing, means for admitting air into the space between the cylindrical member and the housing and a conduit extending from the last mentioned space to the space between the pipe and the cylindrical housing, a portion of said conduit being located in the path of the flame from the burners.

1,686,712. ELECTRICAL MEASURING INSTRUMENT. ARGYLE R. RUTTER, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 12, 1926. Serial No. 94,190. 12 Claims. (Cl. 171—264.)



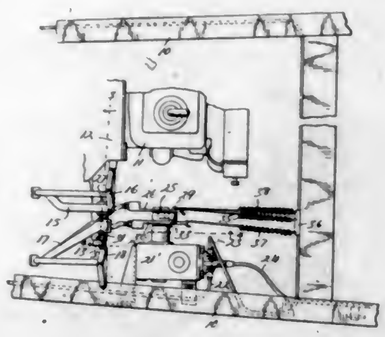
1. In combination with a plurality of series coils only one of which is in circuit relation for a given measurement, a circuit with a winding in shunt relation with one of said coils and a resistor in series relation to the shunt winding.

1,686,713. BLOWER NOZZLE FOR TRANSPORT LINES. ROBERT SCOTT, Melrose, Mass., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1926. Serial No. 149,076. 5 Claims. (Cl. 302—25.)



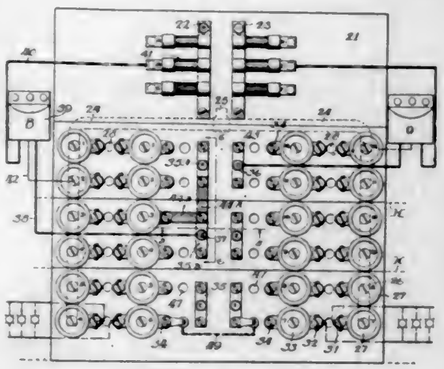
1. The combination with a transport line, of a blower therefor comprising a pair of coupling members, one having a rib and the other having a groove for receiving the rib, said rib and groove being of such size relative to one another as to provide a nozzle for directing fluid into the transport line, and means for admitting fluid to the nozzle.

1,686,714. TWIST METER. JOHN HAMMOND SMITH, Pittsburgh, Pa. Filed June 30, 1926. Serial No. 119,661. 11 Claims. (Cl. 265—25.)



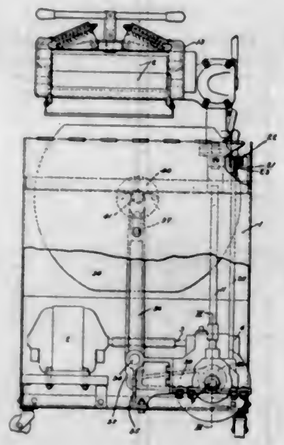
1. A twist meter comprising a pair of spaced yokes adapted to be secured to a test specimen, a member extending between and supported by the yokes in such manner that the member moves relative to one yoke when the yokes are moved relative to each other, and indicating means connected to the member.

1,686,715. TREATMENT OF EVAPORATOR WATER. GEORGE W. SMITH, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont Borough, Pa. Filed July 17, 1924. Serial No. 726,480. 6 Claims. (Cl. 210—15.)



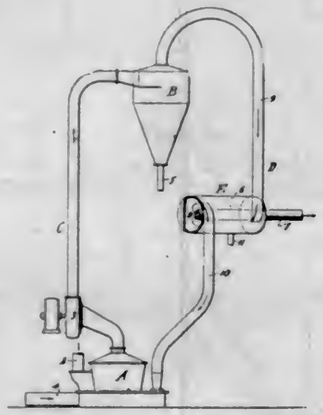
1. The process of treating water containing scale forming impurities, which comprises removing from the water impurities which would tend to soften the scale, evaporating the water to such concentration as to cause the formation of a hard scale on the heating surfaces of the evaporator, and periodically deforming such heating surfaces to crack off the scale.

1,686,716. COMBINATION CLUTCH AND BRAKE-CONTROL MECHANISM. HORACE T. THOMAS, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Oct. 3, 1927. Serial No. 223,724. 10 Claims. (Cl. 192—13.)



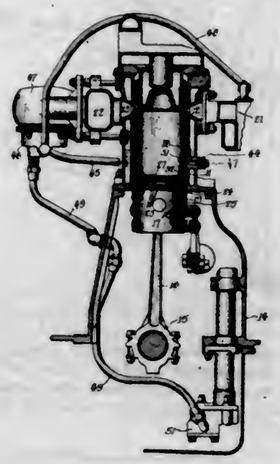
6. In apparatus of the character described, a clutch, a clutch operating lever, a hydraulic brake mechanism including a master cylinder operating arm and a pin and slotted link connection between said arm and said lever whereby the initial movement of said lever disengages said clutch and the further movement of said lever operates said brake mechanism.

1,686,717. METERING PANEL BOARD. ARTHUR C. MCWILLIAMS, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 9, 1921. Serial No. 467,801. 22 Claims. (Cl. 175—370.)



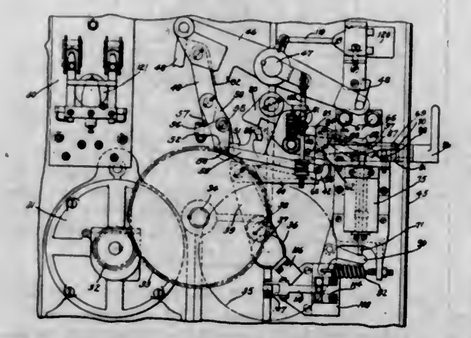
1. A metering panel board comprising a plurality of panels, each having upon its face a plurality of meter bars arranged in parallel rows between two rows of consumption circuit terminals, and detachable strap connectors of equal length connecting meter bars of one panel and of adjacent panels with each other and with the consumption circuit terminals.

1,686,718. CENTERING DRIVE FOR WASHING MACHINES. ALLEN S. WISE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1924. Serial No. 715,104. 9 Claims. (Cl. 74—14.)



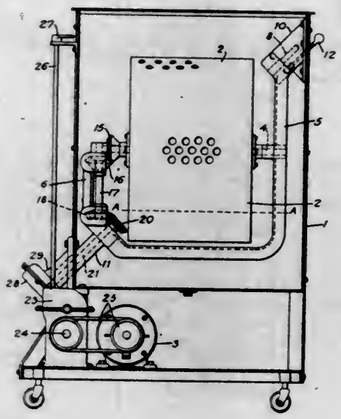
1. The combination of a container mounted for movement, drive means for moving said container, means for reversing the direction of said drive means, and means operative upon the reversal of said drive means to move said container to normal position and stop it in that position.

1,686,719. FUEL-PULVERIZING SYSTEM. WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed June 17, 1927. Serial No. 199,474. 6 Claims. (Cl. 83—11.)



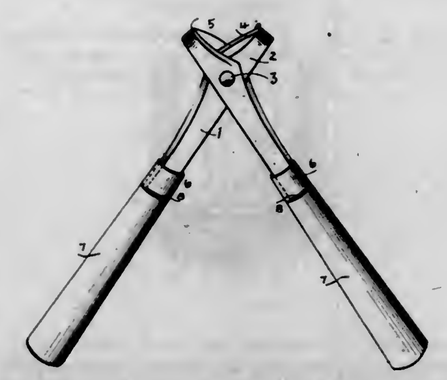
1. In a pulverizing system, a mill, a separator, a pipe between the mill and separator, a return pipe from the separator to the mill, means for setting up a current of a gas through the system, means for exhausting a portion of the gas in the system from the return side thereof, a centrifugal separator in the return line and from which said gas to be exhausted is withdrawn, means for introducing a relatively dry gas into the system in an amount corresponding to the amount of gas withdrawn.

1,686,720. SLEEVE-PRINCIPLE ENGINE LUBRICATION. ARTHUR A. WOODWARD, Detroit, Mich., assignor to Skinner Automotive Device Co., Inc., Detroit, Mich., a Corporation of California. Filed Dec. 16, 1926. Serial No. 155,243. 13 Claims. (Cl. 123—196.)



1. In an internal-combustion engine, the combination of an engine-cylinder having inlet and exhaust ports, movable sleeve-means in said cylinder controlling said ports, a reciprocatory piston in said sleeve-means, means to lubricate said piston, sleeve-means and cylinder means to remove fluids from around said piston intermittently, and means to remove fluids from around said sleeve-means continuously during the operation of the engine.

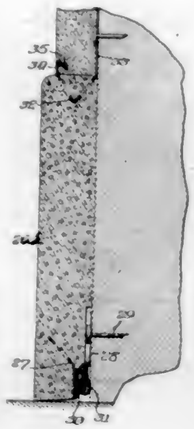
1,686,721. SWITCH-OPERATING MECHANISM. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1922. Serial No. 543,907. 9 Claims. (Cl. 200—89.)



1. In combination, a switch-operating lever, a lifting bar therefor, toggle mechanism connecting the bar and the lever, means for releasably locking the toggle mechanism in set position to maintain the lifting bar and the operating lever in spaced relation, means for latching the lifting bar in raised position, means for releasing the toggle lock, and means for unlatching the lifting bar.

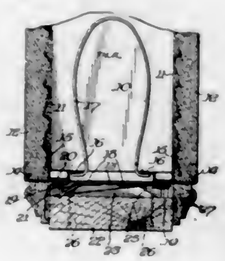
1,686,722. CLOTHES WASHER. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 19, 1924. Serial No. 726,960. 12 Claims. (Cl. 68—18.)

1. The combination of an outer container, a support, an inner container mounted to rotate on said support and means serving to secure said support for rotation within said outer container about an axis inclined to the vertical.



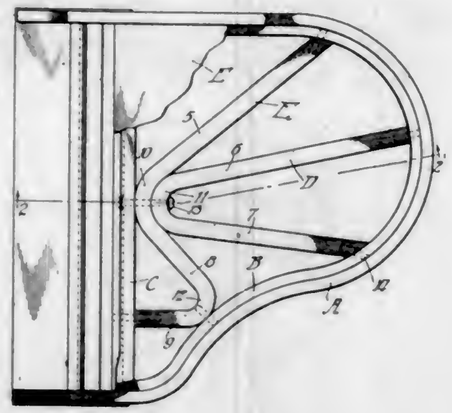
1,686,723. DEHORNER. EDWARD ANDERSON, Denver, Colo. Filed Jan. 25, 1926. Serial No. 83,764. 1 Claim. (Cl. 128—308.)

A dehorning implement comprising two loop members pivotally connected together in crossed relation at each side of the widest portion of the loops, said loop-members



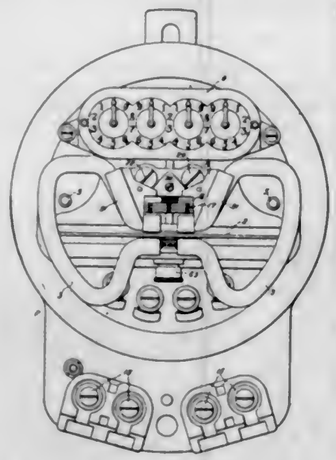
on one side of the pivot being substantially the form of hyperbolic curves forming cutting blades, said cutting blades gradually decreasing in width from the pivot points to the apex of the hyperbolic curve so as to give an angular shearing cut, and handles attached to the opposite ends of the loop members.

1,686,724. BUILDING ELEMENT. ISAAC A. BAUM, Chicago, Ill. Filed Dec. 27, 1927. Serial No. 242,632. 5 Claims. (Cl. 72—125.)



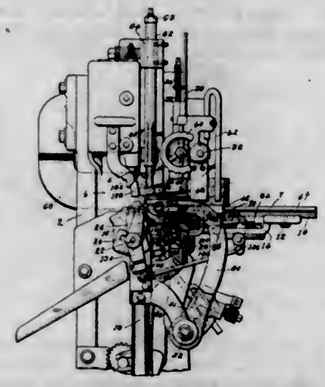
1. A building element comprising, in combination, a strip providing a tongue, and an attaching clip, both moulded into the element at opposite sides thereof, and means on the clip providing a plaster terminal and ground.

1,686,725. WOOD AND METAL DOOR FRAME. ISAAC A. BAUM, Chicago, Ill. Filed Dec. 27, 1927. Serial No. 242,633. 4 Claims. (Cl. 72—98.)



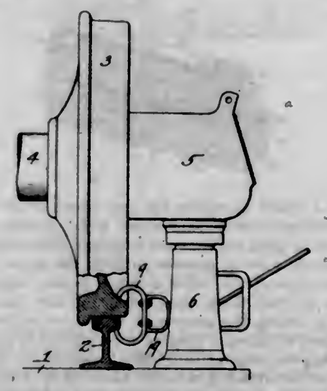
1. In means for framing wall openings, the combination with the wall of a metal plate having a substantially flat portion extending the full width of the wall and plaster, and providing means at its margins for a plaster terminal and ground, a wood frame member, clips joining the wood to the metal elements, and moulding overlying said attaching means.

1,686,726. GRAND PIANO. WILLIAM G. BETZ, Hammond, Ind., assignor to Straube Piano Co., Hammond, Ind., a Corporation of Indiana. Filed Aug. 21, 1925. Serial No. 51,690. 10 Claims. (Cl. 84—186.)



2. A grand piano including an inner rim, a front cross rail therefor, and a pair of U-shaped braces one set within the other and having abutting closed ends attached to the cross rail and the legs extending rearwardly into connection with the inner rim.

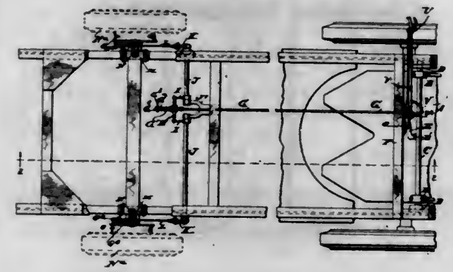
1,686,727. ELECTRICAL MEASURING INSTRUMENT. WILLIAM M. BRADSHAW, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,039. 7 Claims. (Cl. 171—264.)



4. A meter comprising an armature, a plurality of permanent magnets adjacent said armature, a bracket supporting said magnets, and a single adjustable shunt-member for said magnets, said shunt-member being solely supported by a screw mounted on said bracket.

1,686,728. MACHINE FOR OPERATING ON PARTS OF BOOTS AND SHOES. IRA C. BUCKMINSTER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 3, 1924. Serial No. 704,073. 37 Claims. (Cl. 12—47.)

1. In a machine of the class described, the combination of means for operating on a shoe blank, means for feeding the blank, and means engaged by the blank after its feeding movement commences and movable therewith to determine the orientation of the blank with respect to the direction of feeding movement.

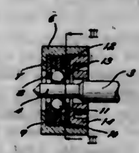


1,686,729. METHOD AND MEANS FOR REMOVING CAR BRASSES. MELBERN BERNIE BULLA, El Paso, Tex. Filed Mar. 1, 1927. Serial No. 171,902. 2 Claims. (Cl. 254—33.)

1. A clamp for clamping a car wheel to the rail when the car is lifted by a jack, said clamp having curved jaws for engaging the wheel rim and the underside of the rail head and a curved brace permitting the clamp to rest in engaging position against the lifting jack irrespective of the contour of the latter.

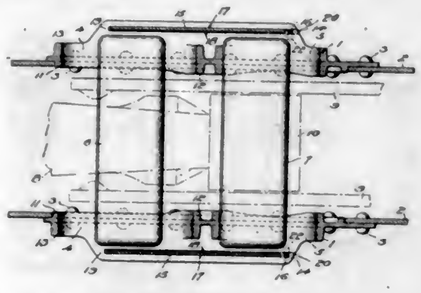
1,686,730. TRAILER-BRAKE MECHANISM. OBRA E. BYRON, Detroit, Mich., assignor to Wolverine Trailer Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 29, 1924. Serial No. 758,600. 6 Claims. (Cl. 188—112.)

6. A combination of a hauling vehicle including means for coupling the same to a coupling bar on the trailer, a trailer fitted with a coupling bar having a limited floating movement, a rocking lever pivoted on the trailer frame and having a brake operating rod secured thereto, brakes on the trailer, the said coupling bar being adapted to contact



with the rocking lever to set the trailer brakes upon increased speed of the trailer with reference to the hauling vehicle, and manual means for operating the rocking lever to set the trailer brakes.

1,686,731. INDEX DEVICE. EDWARD CARLSON, Buffalo, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1925. Serial No. 6,146. 16 Claims. (Cl. 129—16.)



15. In a record tray having an end wall and adapted to support a series of record holders flatwise thereon in overlapping and nested position, a follower having a holder-engaging section, and an operating member movably connected to said section and slidably adjustable relative to said end wall and adapted to releasably maintain said holder-engaging section in contact with a record holder.

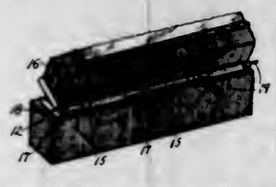
1,686,732. BEARING. GORDON B. CHEETHAM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Aug. 28, 1926. Serial No. 132,052. 4 Claims. (Cl. 308—189.)

1. In a device of the class described, in combination, a series of washers coaxially arranged and having openings of different diameters, and bearing balls within the openings of said washers, one of said washers being centrally located and having an opening smaller than the openings of the washers on either side thereof, the bearing balls rolling upon the surface of the opening of the centrally located washer.

1,686,733. DRAFT-KEY RETAINER. GLENN F. COUCH, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Sept. 22, 1925. Serial No. 57,911. 8 Claims. (Cl. 213—54.)

1. In a railway draft rigging, the combination with a draft key, of cheek plates provided with slotted portions engaging said key, said slotted portions being framed by flanges, with portions of said flanges extending outwardly beyond the ends of the key and provided with longitudinal grooves for receiving key retaining means.

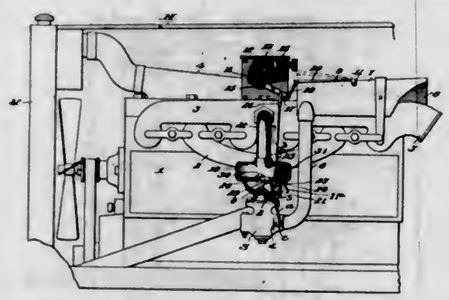
1,686,734. CABLE HOOK. MACKNEELE COX, Stollings, W. Va., assignor of one-half to H. M. McKee, Peach Creek, W. Va. Filed Jan. 21, 1925. Serial No. 3,882. 3 Claims. (Cl. 173—273.3.)



2. A hook for the purpose set forth comprising an outer casing of insulation open at its upper end and closed at its lower end, an inner casing of conducting material closed at its lower end and open at its upper end and extended from the upper end of the outer casing, said inner casing having its lower end seated upon the inner face of the lower end of the outer casing, said casings having the lower ends thereof provided with registering openings for coupling a cable therewith, said casings having their lower portions compressed and extended to provide inherent snugly engaging means to prevent the lengthwise separation of one casing relative to the other, a hook element extending into said inner casing and carrying means for electrically connecting it with said inner casing, the inner end of said hook element being spaced from the lower end of said inner casing, said hook element extended from the upper end of the inner casing, a pair of spaced cushioning elements surrounding and supported by said hook element, non-conducting means engaging with the extended part of said inner casing, abutting against the upper end of the outer casing and surrounding said hook element for confining said cushioning elements under a state of compression within said inner casing.

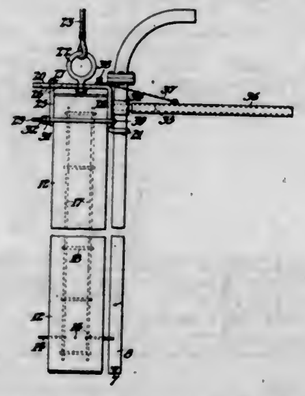
1,686,735. SEMAPHORIC INDICATOR. WILLIAM P. DALRYMPLE, Chicago, Ill. Filed Nov. 12, 1926. Serial No. 147,957. 6 Claims. (Cl. 116—114.)

4. In a device of the class described, a plate having a stud, a leaf spring secured to the plate, a semaphore arm having an aperture, said semaphore arm inserted between the leaf spring and the plate with the stud entered in said aperture, a condition responsively movable arm to directly engage and move the semaphore arm, and means for locking the leaf spring after the semaphone arm has been inserted to prevent said arm from being displaced.



1,686,736. CAN-COVER HINGE. FRANK G. DAVISON, Cambridge, Mass., assignor, by mesne assignments, to Arthur H. Parker, Lexington, Mass. Filed Dec. 18, 1924. Serial No. 756,689. 4 Claims. (Cl. 220—31.)

1. In a hinge structure for two sheet metal members, the combination with said sheet metal members, one of which has aligned portions alternately displaced in opposite directions to present grooves in both the inner and outer surfaces thereof, the other member having edge portions bent to provide three open-ended tubular bearings substantially fitting the grooves in the outer surfaces of the first-named member, a binding wire extending around and reinforcing the edge of said other member, the ends of the binding wire extendng into the outer ends of the two end tubular bearings but not through said bearings, and two pintles engaged with said bearings and with the grooves in the inner surface of the first-named member, said pintles abutting each other at their adjacent ends and abutting the ends of the binding wire at their outer ends and being insertable into operative position through the central groove in said outer surface.



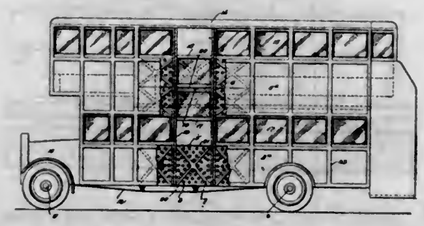
1,686,737. CHARGE-FORMING STRUCTURE FOR INTERNAL-COMBUSTION MOTORS. GEORGE W. DONNING, Bridgeport, Conn. Filed Apr. 18, 1922. Serial No. 554,684. 9 Claims. (Cl. 123—119.)

1. In combination, an internal-combustion motor, an intake-manifold leading thereinto, an exhaust-manifold leading out of the motor, a carbureter connected to the intake-manifold, a fuel-conditioning device encompassing the intake-manifold, a conduit leading out of the exhaust-manifold for conveying heated gases to and around the fuel-conditioning device and also into the intake-manifold, mechanism for controlling the flow of the heated gases into the intake-manifold and out of the fuel-conditioning device,

a thermostat associated with and influenced by thermal conditions of the motor and connected to said mechanism for actuating the same, an air-heater associated with the exhaust-manifold and having its contents influenced thereby, and a connection between the heater and the carbureter for conveying the contents of the heater to the carbureter.

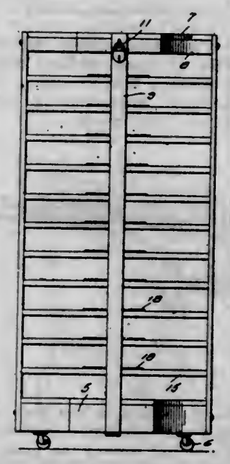
1,686,738. CONCRETE STRUCTURE. RUSSELL SCOTT ELLIS, Philadelphia, Pa. Filed Dec. 31, 1924. Serial No. 759,207. 4 Claims. (Cl. 61—86.)

4. The combination with a base of downwardly converging form having a water jet passageway from its lower apex to its upper surface; of a water conduit having means arranged for detachable connection with said base and passageway; and an adjustable suspension clamp including a bearing support for said conduit, arranged to permit rotary and axial movement of said conduit therein and screw bolts arranged to detachably clamp a columnar element in cooperative relation with said conduit and base; and means cooperatively connecting said conduit and clamp, whereby they may be applied and removed together, with respect to said columnar element.



1,686,739. CURTAIN FIXTURE. PLATO G. EMERY, Chicago, Ill. Filed May 15, 1924. Serial No. 713,405. 3 Claims. (Cl. 156—26.)

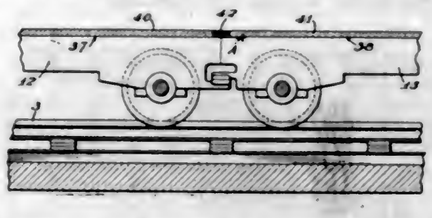
1. The combination with a shade stick, of a shoe at an end thereof provided with anti-friction devices adapted to ride along a stationary frame member, and an L-shaped pawl pivoted at the angle thereof to the shoe so as to be capable of swinging by gravity between a position in which one of its arms is parallel with the rod and projects out



past the line of contact of the said anti-friction devices and a position in which the other arm lies parallel to the rod and projects out past said line.

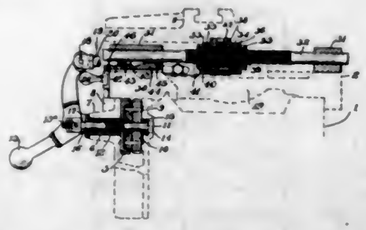
1,686,740. BUS BODY. WELLINGTON F. EVANS and BOYD V. EVANS, Detroit, Mich. Filed July 24, 1925. Serial No. 45,758. 5 Claims. (Cl. 296—28.)

1. A bus body having side walls provided with upper and lower windows, said side walls including panels, one of greater depth than the other affording window sash receiving wells above the lower windows.



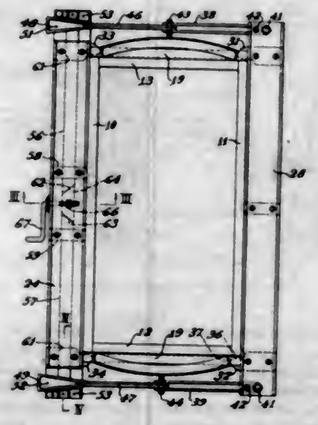
1,686,741. TIRE RACK. CHARLES M. FANNIN, Winona, W. Va. Filed Feb. 3, 1927. Serial No. 165,671. 1 Claim. (Cl. 211—24.)

In a tire rack of the class described, a base, a vertically spaced top, pairs of stationary bars arranged vertically at the sides of the rack and inter-connecting the base and the top, a stationary vertical bar at the rear of the rack, extending from the top to the bottom thereof, a hinged vertical bar at the front of the rack also extending from the top to the bottom thereof, horizontal spaced tire supporting shelves arranged between the base and the top, said shelves comprising bars secured at their ends to the adjacent vertical side bars, the intermediate portion of each of said bars being formed with a transverse



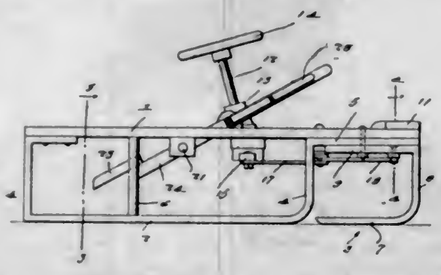
notch in its upper face, additional horizontal bars disposed transversely across the first mentioned horizontal bars for disposition in said notches whereby the intersecting bars have their upper faces disposed in the same plane, said last mentioned horizontal bars being secured at one end to the stationary rear vertical bar, the free ends of said bars adapted to engage the hinged front bar when the latter is disposed vertically, and reinforcing metallic strips extending across the intersecting portions of the horizontal bars and secured thereto, and means for locking the free end of the hinged vertical front bar in a closed position.

1,686,742. METHOD AND APPARATUS FOR SURFACING PLATE GLASS. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 21, 1927. Serial No. 207,407. 2 Claims. (Cl. 51—240.)



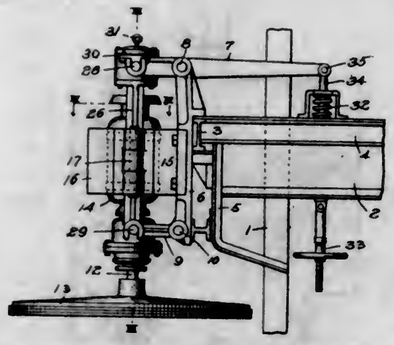
1. Apparatus for surfacing plate glass comprising a series of driven grinding and polishing runners, a track therebeneath, and two sets of cars or tables adapted to form a continuous train and carry on their upper surfaces the sheets of glass to be surfaced, said tables or cars being divided into two sets of fixed levels, with the level of the top surfaces of one set lying at an elevation which is less than that of the level of the top surfaces of the other set by a predetermined distance corresponding to the thickness of glass which is removed from the sheets by the surfacing operation.

1,686,743. CARRIAGE STOP MECHANISM FOR LATHES. FRED C. DULL, Sidney, Ohio, assignor to The Monarch Machine Tool Company, Sidney, Ohio, a Corporation of Ohio. Filed June 22, 1927. Serial No. 200,663. 4 Claims. (Cl. 82—24.)



1. In a lathe, a carriage, a tool rest free to move in either direction on said carriage, cross-feed mechanism for advancing said tool rest toward the work, driving means for said cross-feed mechanism, a clutch device for connecting the driving means to the cross-feed mechanism, a control device for holding a clutch engagement between the cross-feed and the driving means, a shiftable member to actuate the control device to release the clutch from the cross-feed mechanism, a rotatable turret on said shiftable member, adjustable stop elements on said turret, corresponding to the diameters of the work required, and a member on said tool rest for engagement with a selected stop element to move the shiftable member to release the clutch and stop the operation of the cross-feed mechanism when a required diameter on the work has been reached.

1,686,744. LOCK FOR COTTON-PRESS DOORS. THOMAS ELLIOTT, Birmingham, Ala., assignor to Continental Gin Company, a Corporation of Delaware. Filed Aug. 24, 1927. Serial No. 215,069. 6 Claims. (Cl. 100—19.)

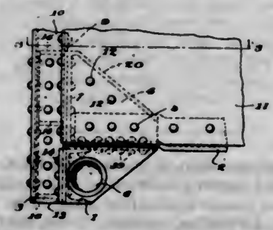


1. In a lock for the opposed doors of a cotton press, a locking member for connecting the opposed doors and holding them in place, wedge means for securing the locking member to one of the doors, and screw actuated wedge means for gradually releasing the first mentioned wedge means.

1,686,745. SLED. JOHN ARTHUR GLACKEN, Norwich, Conn. Filed Dec. 9, 1926. Serial No. 153,584. 2 Claims. (Cl. 280—16.)

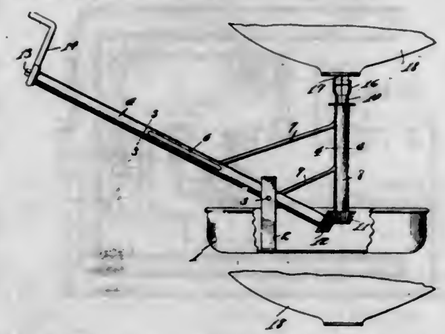
1. In a sled structure of the class described, a seat board, a pair of side runner units, each unit comprising a rear and front section, the rear section having its intermediate portion fashioned to form a slide for contact with the surface, having its opposite end portions directed upwardly and terminating in angular extremities rigidly fastened to the front and rear ends of the under side of said seat board, each front section being of general U-shaped formation and having its bight portion located at the forward end of the seat board, the upper arm or portion of each front section being in contact with the adjacent end portion of the complemental section, pivot bolts connecting said upper arms and said seat board, a connecting bar between the upper arms of the respective front sections, a rotatably mounted steering column, a hand wheel carried by the upper end of the column, and an operating connection between the lower end of the column and said connecting bar, whereby said front sections may be moved upon their pivots through the operation of said hand wheel.

1,686,746. DRIVING MECHANISM FOR WORK SPINDLES. ALBERT L. HARRINGTON, Rosslyn Farms, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 13, 1924. Serial No. 743,288. 8 Claims. (Cl. 51—100.)



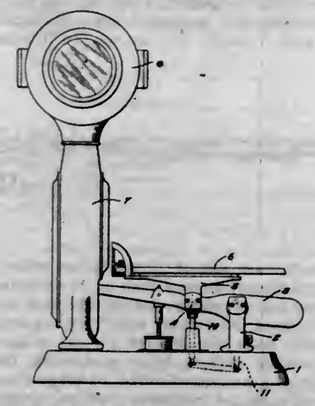
1. In combination, a supporting framework, a vertical work spindle or shaft, a motor armature secured to the shaft, a pair of bearings one above the armature and one below, in which the shaft is journalled, releasable means carried by the framework arranged to guide the shaft and bearings vertically, means for counterbalancing the shaft with its armature and bearings, a motor field frame surrounding the armature and secured to said framework, and field windings carried by said motor field frame, the shaft and armature being releasably supported with respect to the motor field frame, so that they may be removed leaving the field with its frame in position upon the framework.

1,686,747. TORCH SOLDERING IRON. JOSEPH GYSELS, San Francisco, Calif. Filed July 28, 1927. Serial No. 209,076. 2 Claims. (Cl. 158—26.)



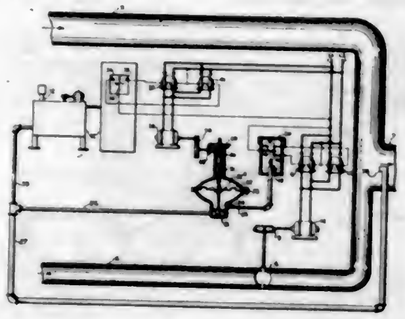
1. In a soldering iron, a tubular member, a pipe positioned within said tubular member, said tubular member having a plug positioned therein, a second plug positioned within said first plug, a boss formed on said tubular member, an offset tip formed on said pipe and positioned so as to discharge through said boss, a holder secured to said boss, a tip secured to said holder, and means for delivering gas to said tubular member and means for delivering air to said pipe.

1,686,748. CAR CONSTRUCTION. FRANK H. HARDIN, Bronxville, N. Y. Filed July 14, 1927. Serial No. 205,731. 3 Claims. (Cl. 105—411.)



1. In a railway car; the combination of a longitudinal frame member, a lateral frame member, a vertical frame member, a single piece bracket securing said members together, said bracket comprising an end wall offset for engagement and attachment with two sides of the vertical member, a side wall attached to the longitudinal member, and a horizontal wall integral with said end and side walls attached to the longitudinal and lateral members.

1,686,749. AUTOMOBILE CRANK-CASE DRAINER. HARLIN HIGGINS, ALBERT L. FISH, and JAMES L. O'HARE, Faith, S. Dak. Filed Dec. 23, 1926. Serial No. 156,672. 2 Claims. (Cl. 184—1.5.)



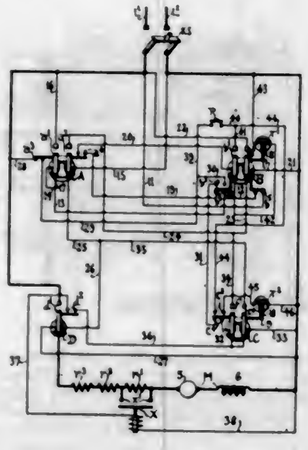
1. In a device for removing and replacing drain plugs of crank cases for the purpose specified, comprising in combination, a pan, a tubular handle pivotally supported on the pan, a driving shaft rotatable in the handle, a housing supported by the handle, a driven shaft rotatable in the housing, a gear connection between the driving and driven shaft, a socket member detachably engaged with the driven shaft for engagement with the drain plug upon pivotal movement of the shafts and rotatable with the driven shaft, as and for the purpose set forth.

1,686,750. WEIGHING SCALES. SAMUEL N. HURT, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 29, 1924. Serial No. 758,551. 8 Claims. (Cl. 265—27.)

1. In a device of the class described, in combination, a frame, weighing mechanism including a platform lever, a commodity-receiver supported on said platform, a check link comprising push and pull members, means for pivotally connecting said check link to said commodity-receiver, means pivotally connecting said check link to said frame, one of said connecting means comprising a member provided with a knife edge pivot, said member having a pair of depressions, and means including a pair of screws engaging said depressions for adjusting said member about an axis at right angles to the edge of said pivot.

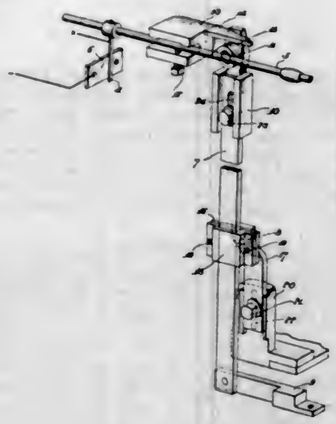
1,686,751. METHOD OF AND APPARATUS FOR MAINTAINING SUBSTANTIALLY CONSTANT THE TOTAL HEATING VALUE PER UNIT VOLUME OF A FLOWING COMBUSTIBLE MIXTURE OF FLUIDS. ULRIC O. HUTTON, Wauwatosa, and EDWIN X. SCHMIDT, Milwaukee, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 13, 1927. Serial No. 198,517. 10 Claims. (Cl. 48—180.)

1. The method of maintaining substantially constant the total heating value per unit volume of a flowing combustible mixture of fluids, which comprises substantially instantaneously subjecting certain of the constituent flows of said combustible mixture to rate control in accordance with variations in composition of the mixture, and modifying the control so effected in accordance with the determinations of a slow acting precision calorimeter burning a continuous sample of the mixture, said calorimeter being adapted to compensate for variations in temperature, pressure or saturation conditions of said mixture.



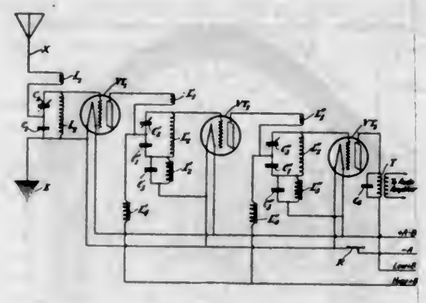
1,686,752. SPRING AIR GUN. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a Corporation of Michigan. Filed Mar. 9, 1925. Serial No. 14,261. 9 Claims. (Cl. 124—10.)

9. In a spring air gun, the combination with a barrel, and a spring actuated plunger therein, of a trigger, a sear forwardly movable to engage the plunger and rearwardly movable to retract the plunger and compress said spring, and releasable from the plunger by the trigger in its retracted position, and a lever mechanism controlling travel of the sear, and establishing an inherent lock upon said mechanism in the retracted position of the sear to maintain said position.



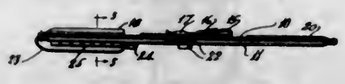
1,686,753. MOTOR CONTROLLER. RALPH G. LOCKETT, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 31, 1926. Serial No. 158,300. 12 Claims. (Cl. 172—288.)

1. In a controller for electric motors, the combination with means for initially completing a circuit for the motor for effecting running thereof at a predetermined constant speed, and means operable automatically upon



restoration of the power supply after failure thereof for completing a circuit for the motor for effecting running thereof at a different predetermined speed.

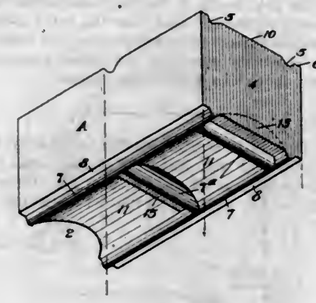
1,686,754. CONTROLLER ACTUATION. AARON E. LOEWY, Philadelphia, Pa., assignor to Liberman Manufacturing Company, a Corporation of Delaware. Filed June 24, 1926. Serial No. 118,181. 1 Claim. (Cl. 74—5.)



In a controlling mechanism, the combination of a pivoted lever, an element shifting mechanism associated with one end thereof and power controlling mechanism associated with the other end thereof including a rock shaft, a spiral cam adjustably mounted thereon, and a cooperating roller adjustably mounted near the end of the pivoted lever.

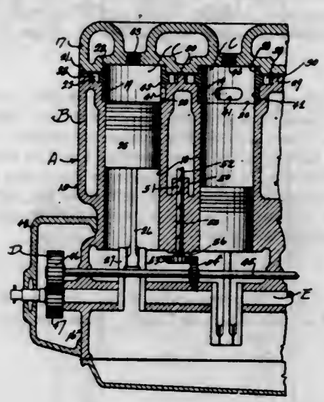
1,686,755. METHOD OF AND APPARATUS FOR OPERATING ELECTRICAL AMPLIFIERS. EDWARD H. LOFTIN, New York, N. Y., assignor to Edward H. Loftin, trustee. Filed Dec. 24, 1925. Serial No. 77,445. 19 Claims. (Cl. 179—171.)

1. The combination of a three-electrode vacuum tube adapted to amplify alternating currents over a range of frequencies, an output circuit in which said currents are amplified, and means to prevent reamplification in said tube of said amplified currents due to the reaction of said output circuit including capacitive and inductive reactive elements located in said circuit, and a tunable circuit associated with said output circuit through capacitive and inductive elements, said elements being chosen in values with respect to the values of the elements in the output circuit and tunable circuit to maintain the effective capacitive and inductive reactions of said output circuit substantially equal with variation of frequency.



1,686,756. COMBINED BILL FOLD, CARDCASE, AND KEY CASE. CHARLES LORBER, Louisville, Ky. Filed Nov. 13, 1926. Serial No. 148,216. 2 Claims. (Cl. 150—40.)

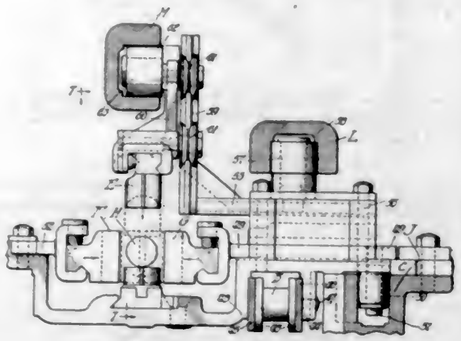
1. In combination, a billfold including a central section and wing sections, card pockets each secured to a respective section on the inner side thereof, the wing sections being foldable with their card pockets on the central section, key supporting means secured to one of said wing sections on the outer side of the bill fold and at the top edge thereof, a cover for said supporting means and keys supported thereby, and having one edge inserted between the end edges of the bill fold and pocket members at the respective wing and having its body adapted to lap over the outside of said wing and cover the key supports and keys, and snap button members carried by the cover and bill fold for holding the cover closed.



1,686,757. BUILDING BLOCK. HOWARD R. LOUGHRIDGE, Castle Shannon, Pa. Filed June 24, 1927. Serial No. 201,113. 13 Claims. (Cl. 72—41.)

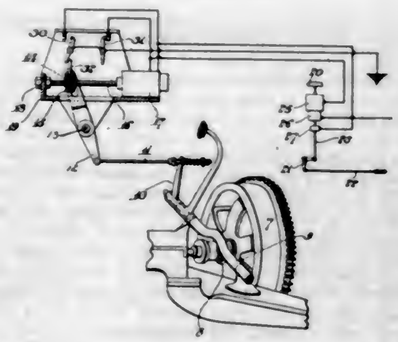
1. A building block having longitudinal grooves along its upper side edge portions and longitudinal ribs along its lower side edge portions for interfitting engagement with the grooves of an adjacent block, and provided with endmost grooves coincident with the longitudinal grooves

and ribs, the inner faces of the ribs being extended upwardly beyond their main body portions providing interior clearance.



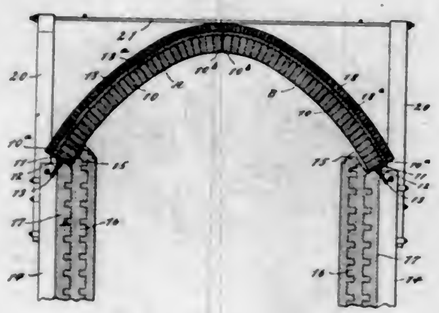
1,686,758. ROTARY-VALVE INTERNAL-COMBUSTION ENGINE. JAMES B. MANKIN, North Chattanooga, Tenn. Filed Aug. 17, 1925. Serial No. 50,693. 3 Claims. (Cl. 123—59.)

1. In an internal combustion engine the combination of a housing including a main body provided with a cylinder chamber therein, a rotary valve including a hollow cylindrical body portion of uniform internal and external diameter throughout the length thereof providing a passageway therethrough open entirely in unobstructed relation at the ends of the cylindrical valve body, the body exteriorly thereof having an annular series of extending gear teeth intermediate the ends of the valve body to divide the latter into an upper short portion and a lower longer portion provided with transverse ports, a detachable valve block having a valve seat passageway therein of a diameter to snugly receive the lower portion of the valve below the gear teeth thereof, said detachable valve block having an annular seating flange in the lower end of the valve seat upon which the lower edge of said rotary valve abuts, said flange defining a passageway of the same diameter and lying flush and unobstructed with the cylinder chamber, the valve passageway being of the same diameter and lying flush with the passageway of said flange and the cylinder chamber, said valve block inwardly of the upper surface thereof being recessed and enlarged to rotatably



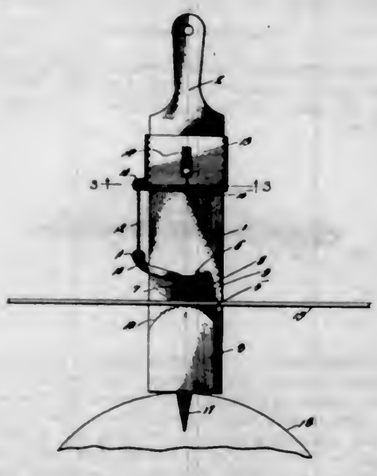
receive the gear teeth of the rotary valve therein throughout the height of said gear teeth so that only the upper portion of said valve above said gear teeth extends above the top surface of said detachable valve block, means to mesh with the gear teeth of the valve and drive the latter, and a detachable cylinder head over the valve block having a shallow recess extending upwardly into the lower surface thereof for rotatably receiving the upper portion of said rotary valve above the gear teeth thereof.

1,686,759. PLASTIC-CANDY-FORMING MACHINE. ROBERT F. MORRISON and EARL B. ELDER, Oak Park, Ill., assignors to Emil J. Brach, Chicago, Ill. Filed Aug. 12, 1925. Serial No. 49,754. 22 Claims. (Cl. 107—15.)



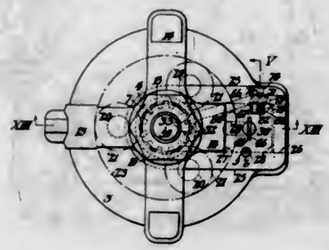
1. A plastic candy forming machine including a plurality of unit presses each including a single frame carrying a plurality of coacting dies for completely forming candies, means for advancing said unit presses along to successively and repeatedly act upon a candy rope fed to the machine, and mechanism for successively actuating the dies of the presses to compress the candy rope to form candies as the presses are advanced.

1,686,760. CLUTCH CONTROL. WALTER S. MYERS, Darby, Pa. Filed July 22, 1927. Serial No. 207,640. 5 Claims. (Cl. 192—.01.)



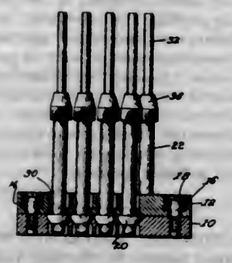
5. In a clutch control, the combination of an accelerator and a clutch, an electric motor for the actuation of the clutch into and out of clutch engagement, contacts in the motor circuit controlled by the accelerator-actuating means, and motor controlled cut-outs for limiting the movement of the motor in opposite directions.

1,686,761. MASONRY ARCH FOR HIGH-TEMPERATURE USE. FREDERICK HARWOOD NORTON, East Liverpool, Ohio. Filed Nov. 18, 1924. Serial No. 750,533. 4 Claims. (Cl. 110—99.)



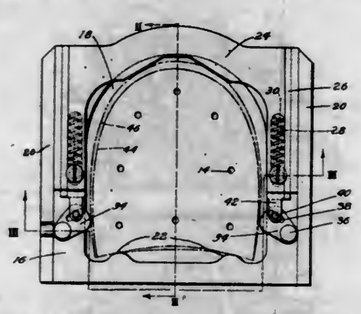
1. A furnace roof of refractory material for use under high temperature conditions, said roof being composed of two sections, each of which is free to move as a unit when heated, and said roof being of substantially an inverted catenary shape and supported only at its edges.

1,686,762. WIRE STRETCHER. JOHN W. OSBORNE, Alsey, and CHARLES C. FREITAG, Winchester, Ill. Filed Jan. 31, 1927. Serial No. 165,007. 2 Claims. (Cl. 254—77.)



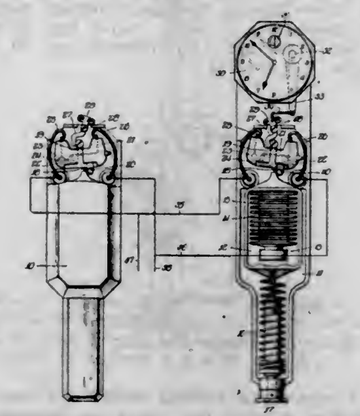
1. A wire stretcher of the character described, comprising an elongated body member, a spur upon one end of the body for securing the same to a fixed element, a fixed jaw upon one face of said body adjacent the spur carrying end and curving across the face thereof, a pivotally mounted jaw upon the same face of the body as said fixed jaw and having one face arranged in opposed relation to the working face of the fixed jaw, the working face of said pivoted jaw being eccentrically curved to increase or decrease the space between the jaws when the pivoted jaw is swung about its center, a control arm carried by the pivoted jaw and extending beyond one side of the body member, a band surrounding and slidably secured to the body member adjacent the outer end thereof, and a link connection between said band and the outer end of said arm for swinging the jaw upon shifting the band longitudinally of the body member.

1,686,763. VEHICLE LOCK AND ELECTRIC CIRCUITS. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Mar. 24, 1924. Serial No. 701,597. 3 Claims. (Cl. 70—127.)



1. The combination with a stationary steering column; of a rotary shaft journaled in said column and having a circular series of locking recesses; a cover for said column, having a lock casing socket with which said locking recesses are adapted to successively register when said shaft is turned; a key lock including a body fitted to said casing cesses are adapted to successively register when said shaft prevent steering movement of said shaft, and to release said shaft; said body having a notch in its perimeter; an electric switch comprising a movable member extending in said notch and arranged to be moved to operate said switch by the reciprocatory movement of said lock body; a motor for said vehicle; and an electric circuit including said switch arranged to control the operation of said motor; whereby, when said body is positioned to lock said shaft from turning, it shifts said switch to prevent operation of said motor, and when said body is positioned to permit operation of said shaft to steer the vehicle, it shifts said switch to permit operation of said motor; whereby an electric circuit may be maintained from a stationary portion of the vehicle to the rotary steering wheel thereof, despite rotation of the latter.

1,686,764. NAILING MACHINE. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1925. Serial No. 48,873. 11 Claims. (Cl. 1—32.)

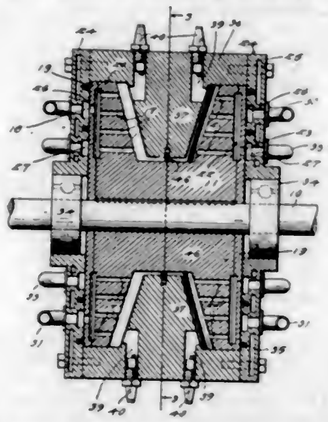


1. In a nailing machine, the combination of a plurality of self adjustable nail guiding tubes supported to permit transverse movement of their nozzle ends, a plurality of nail drivers operable through said tubes, and means, separate from the nail drivers, tending yieldingly to maintain the tubes in predetermined, definite positions.

1,686,765. HEEL-NAILING MACHINE. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 28, 1926. Serial No. 132,209. 8 Claims. (Cl. 1—32.)

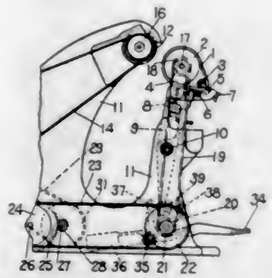
1. A heel holder comprising fixed, spaced abutments arranged to be engaged by a curved heel breast at separated points, a rear gage movable toward said abutments to engage the rear edge of the heel, and side gages connected to the rear gage and movable thereby into engagement with the side edges of the heel.

1,686,766. THERMOSTATIC CONTROL SYSTEM. HERBERT J. SAUVAGE, Chicago, Ill., assignor to trustees of The Electro Thermostatic Control Company, Chicago, Ill., a Trust Estate. Filed Jan. 11, 1927. Serial No. 160,386. 1 Claim. (Cl. 236—46.)



The combination of an electric switch, a thermostat to open and close said switch, means to hold said switch against response to the action of said thermostat, a clock having an adjustable spring-actuated alarm mechanism, and means connecting said alarm mechanism to said holding means, whereby when the latter is actuated to maintain the switch against response to the action of the thermostat, said alarm-spring will be wound up, and when the alarm mechanism is released, said spring in unwinding will restore said switch to responsive action to said thermostat.

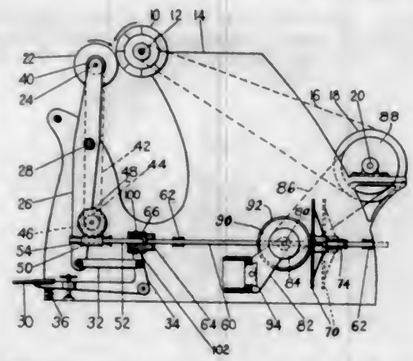
1,686,767. ROTARY INTERNAL-COMBUSTION ENGINE. JAMES ANGLO SAXON, Sapulpa, Okla. Filed Mar. 31, 1927. Serial No. 179,905. 10 Claims. (Cl. 123—14.)



1. In a rotary internal combustion engine, a rotor having a sinuous groove in its periphery, a stator having a rib extending into said groove and of less width than the mean width of said groove, said rib having transversely extend-

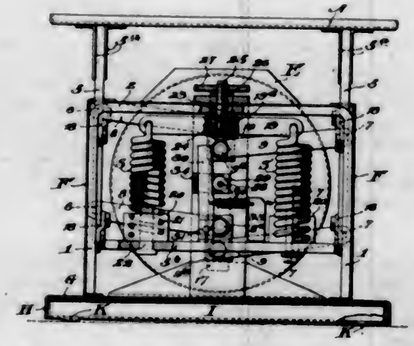
ing slots formed therein, plates slidable in the slots of said rib and fitting between the walls of the sinuous groove, adjacent plates combining with the walls of the rotor groove and the stator to produce at opposite sides of the

rib of the stator a pair of chambers of which the plates at all times form the end walls and means for introducing an explosive charge to said chambers and for exhausting the products of combustion therefrom.



1,686,768. MACHINE FOR TREATING HIDES, SKINS, LEATHER, AND OTHER LIKE PIECES OF MATERIAL. GUSTAV A. SCHETTLER, Leeds, England, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Sept. 8, 1926, Serial No. 134,190, and in Great Britain Sept. 29, 1925. 20 Claims. (Cl. 149—14.)

1. In a machine for treating leather and other like pieces of work, a rotary tool, means for presenting the work to the tool comprising an endless band, a member for backing the band along the line of thrust of the tool on the work, means comprising driving means for said member arranged positively to drive the band for feeding the work at a uniform rate past the tool, and means for causing relative bodily movement between the tool and the endless band to permit the work to be introduced therebetween.

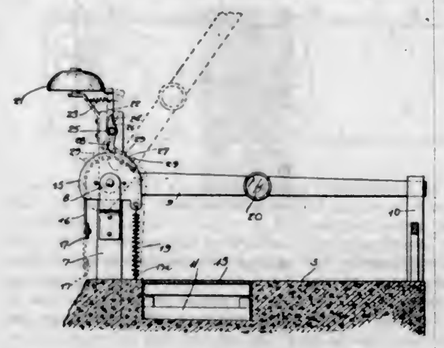


1,686,769. MACHINE FOR OPERATING UPON HIDES, SKINS, LEATHER, AND OTHER SIMILAR PIECES OF WORK. GUSTAV A. SCHETTLER, Leeds, England, and OSKAR BÖTTGER, Frankfort-on-the-Main, Germany, assignors to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Sept. 8, 1926, Serial No. 134,192, and in Germany Oct. 30, 1925. 22 Claims. (Cl. 149—16.)

1. In a machine for operating on hides, skins, leather, and other like pieces of work, a tool for operating on a piece of work, work supporting and feeding means movable between work receiving and work presenting positions relatively to the tool, power means for operating said means to feed the work, and manually operable means constructed and arranged to enable the operator to control directly the bodily movement of the work supporting

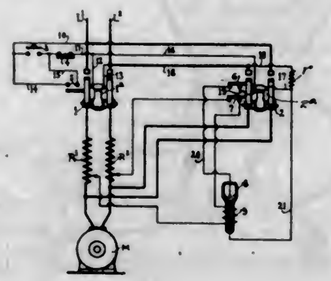
and feeding means between work receiving and work presenting sections and also to control connection and disconnection of said means with respect to its power driving means, the last-recited means comprising a direct connection between the manually operable means and the said power means.

1,686,770. WEIGHING SCALE. FRED A. SCHMITZ, Cleveland, Ohio. Filed June 23, 1927. Serial No. 200,971. 9 Claims. (Cl. 265—68.)



1. A weighing scale including a platform, a pedestal member for supporting the platform including spaced arms and a transverse connecting portion, springs connected to the transverse portion of said pedestal, a spring suspension member, means for adjusting the same, a frame, pivot shafts carried by said frame, compensating links connected at one end to said arms of the pedestal member, links mounted on said pivot shafts and connected to said compensating links, and a dial operatively connected with said pedestal member.

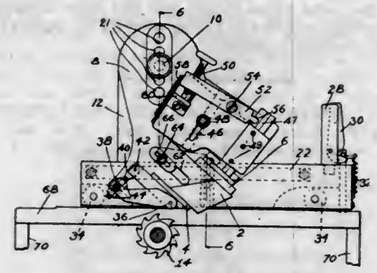
1,686,771. AUTOMATIC RAILROAD-CROSSING GATE AND SIGNAL. DANIEL SCHNEIDER, Lodi, Calif. Filed Apr. 21, 1927. Serial No. 185,520. 2 Claims. (Cl. 39—18.)



1. In a railroad highway crossing gate, a post at one side of the railroad tracks and at the center of the highway, a gate bar pivoted at its inner end on the post for vertical swinging movement and adapted to be lowered to closed position extending half way across the highway, a

hinged depressible platform ramp in the highway adjacent and at the approach side of the gate and having a free exit end, means operatively connecting the free end of the ramp to the gate for opening the latter upon depression of the ramp, yieldable means to normally lower the gate and raise the ramp, said connecting means embodying an

inwardly projecting bar rigid with the free end of the ramp, a pulley element on the pivoted end of the gate, and a flexible member attached to and passed over the pulley element and having its lower end attached to the bar and the yieldable means comprising a spring attached at one end to the pulley element and ground anchored at its other end.

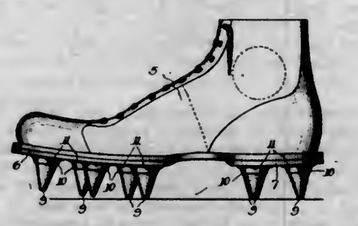


1,686,772. MOTOR STARTER. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 23, 1923. Serial No. 633,834. 5 Claims. (Cl. 172—288.)

1. The combination with a motor, of potential reducing means to be included in circuit therewith for starting, means to establish starting connections and running connections progressively, and a thermal device to effect operation of the latter means for establishment of running connections subject to delay pending a given operation of said device, said device having a heating coil and connections therefor to effect the aforementioned operation of said device within a given period after establishment of starting connections even though the motor fails to accelerate and to render such period variable by acceleration of the motor therewithin.

1,686,773. WOOD-HEEL MACHINE. WESLEY J. SHAW, Haverhill, Mass., assignor to New England Wood Heel Co., Haverhill, Mass., a Corporation of Massachusetts. Filed July 21, 1925. Serial No. 45,003. 9 Claims. (Cl. 12—47.)

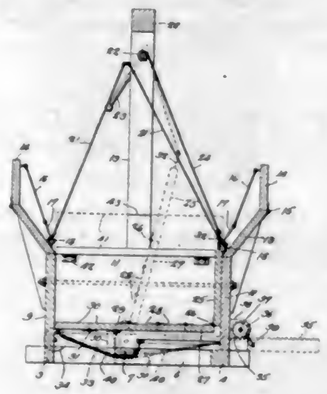
1. A machine of the class described having, in combination, two elements, one of the elements comprising means for clamping an article, the other element comprising a knife shaped to cut a groove in the article, a sliding member, and means connecting the sliding member with one of the elements to effect a movement of the said one



element in a curved path adjacent to the other element in response to a sliding movement of the sliding member, whereby the groove is cut in the article along a curve.

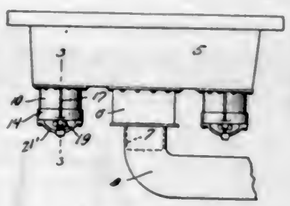
1,686,774. SUPPORTING MEANS FOR GOLF BAGS. ELMER A. SPERRY, Brooklyn, N. Y. Filed Sept. 10, 1920. Serial No. 409,308. 19 Claims. (Cl. 150—1.5.)

1. In a golf bag support, a plurality of movable supporting legs, means for moving said legs, and means for cushioning the blow transmitted initially by said first mentioned means to said legs.



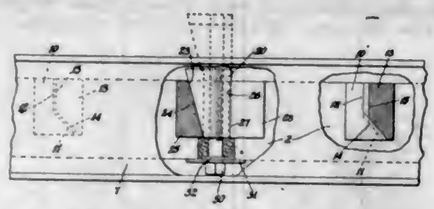
1,686,775. CALK FOR ATHLETIC SHOES. EDWARD C. STEINAMAN, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 11,932. 1 Claim. (Cl. 36—59.)

A calk structure consisting of a spur body tapered toward the outer end at its base and having a flat inner surface, a collar including a tapered portion snugly en-



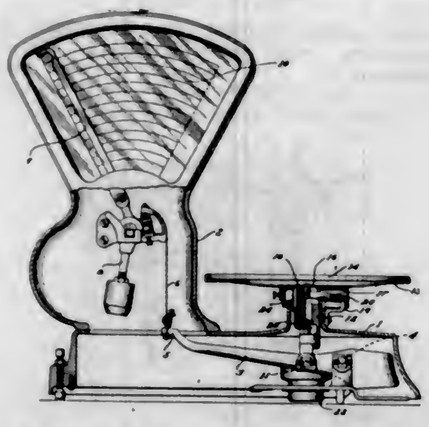
circling the base of the spur body to confine the latter against withdrawal from the collar and an annular securing flange formed on the inner edge of the tapered portion and extending radially thereof to locate its inner face in the same plane as the said flat inner surface of the spur body, said flange having a series of openings for receiving securing elements.

1,686,776. BOTTOM DELIVERY BODY FOR VEHICLES. ITURKE V. TUCKER, Nacogdoches, Tex. Filed Aug. 20, 1927. Serial No. 214,318. 7 Claims. (Cl. 298—31.)



1. A vehicle body, separate groups of hingedly connected members constituting the bottom of the body, means for supporting the members of one group in load retaining positions, means for shifting said supporting means to release the members of said group for downward movement under the weight of the load supported thereby, and means for elevating the members of the other group to deliver the load supported thereby through the space provided, by the lowered members of the first group.

1,686,777. FORCED-DRAFT-PAN VALVE STRUCTURE. OTTO G. WERNER, Rochester, N. Y., assignor to John C. Werner, Genoa, Ohio. Filed Sept. 16, 1927. Serial No. 220,000. 6 Claims. (Cl. 110—74.)

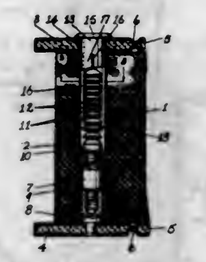


1. In combination, a forced draft pan having a bottom provided with an opening, a cylinder attached to the bottom registering with the opening, a plate detachably mounted on the outer end of the cylinder, means for holding the plate in place, said plate being provided with a valve seat, a plate valve closable in said seat, a spider of bowed construction having its ends attached to said valve plate and provided with a central aperture, a valve stem extending from the valve plate through the aperture, and a spring disposed about the valve impinging against the valve plate and the spider.

1,686,778. SECURING MEANS FOR DEMOUNTABLE RIMS. PHILLIP A. WHITE, Long Island City, N. Y. Filed Apr. 22, 1921. Serial No. 463,548. 3 Claims. (Cl. 301—17.)

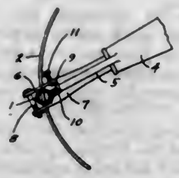
1. In combination a wheel having a felloe presenting a lock nut receiving recess, a felloe band mounted on said felloe, a tire carrying rim of a size to surround said felloe band, complementary interlocking means on the rim and band respectively for locking the rim to the band upon movement of the rim along the band, a lock nut having a portion to extend into the recess in the felloe and a wedging portion to engage and move the rim along the band, and a bolt to draw the lock nut into locking position.

1,686,779. WEIGHING SCALE. LEWIS C. WETZEL, Windsor, Ontario, Canada, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 25, 1924. Serial No. 694,867. 6 Claims. (Cl. 265—36.)



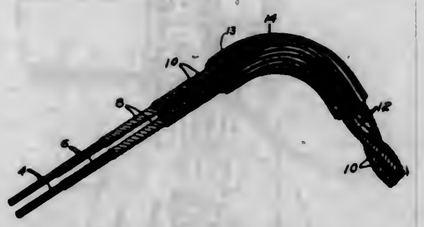
1. In a device of the class described, in combination, a supporting frame, a lever fulcrumed on said supporting frame and having a load pivot, a commodity receiver supported upon said load pivot, and a link positioned substantially above said lever and pivotally connecting said commodity receiver with said frame, the axes of the pivotal connections between said link, the commodity receiver and frame and the load and fulcrum pivots being in parallelogrammatic relation and arranged so that said pivotal axes lie in substantially vertical planes.

1,686,780. BINDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 7, 1924. Serial No. 704,655. 1 Claim. (Cl. 281—25.)



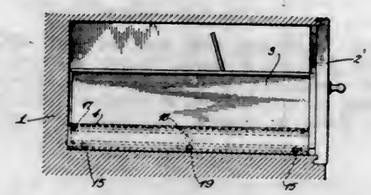
The combination in a binder for sheets perforated to receive binding posts, of binder bars, a binding post secured to the bottom binder bar and having a plurality of external annular grooves providing ratchet-like annular teeth detachably connected to said base section, and a

coacting tubular member disposed through the upper binder bar to telescopingly embrace said terminal section, said tubular member being longitudinally slitted providing a plurality of spring pawls having inturned ends coacting



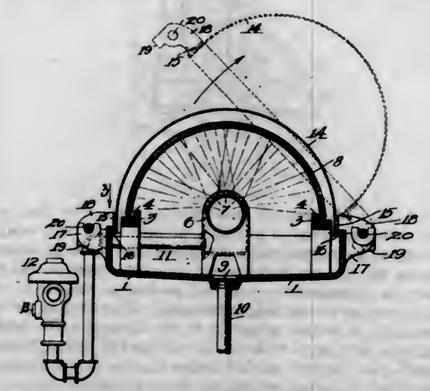
with the said teeth when the parts are telescoped within the said body, the perforations in said sheet body being of such diameter as to closely embrace said tubular member preventing disengagement of said spring pawls.

1,686,781. SELF-CLEANING RAKE. WARD S. WILLIAMSON, Rock Falls, Ill. Filed Aug. 17, 1925. Serial No. 50,694. 1 Claim. (Cl. 55—10.)



A device of the class described, comprising a handle, a frame on one end thereof provided with spaced jaws rigidly united one of which is fitted with a stop and the other with a set-screw adapted for operation in opposition to said stop, and a rake-head rockingly mounted in said jaws, and provided with a plurality of teeth and also provided with a projection positioned between said stop and set-screw and subject to regulation thereby.

1,686,782. ELECTRICAL CABLE. HANS V. WODTKE, Buffalo, N. Y., assignor, by mesne assignments, to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Oct. 14, 1922. Serial No. 594,440. 1 Claim. (Cl. 173—264.)



An electrical cable comprising, in combination, a pair of conductors, inner jackets of vulcanizable material, one about each of said conductors, and intermediate jackets of non-combustible, fibrous material, one about each inner jacket and embedded therein, fibrous, non-combustible, filler material disposed in the valleys presented by adjacent portions of said intermediate jackets, and an outer molded cylindrical jacket of flexible vulcanizable material of relatively high thermal conductivity, the said outer jacket being formed with a plurality of longitudinally extending integral ribs to provide a heat radiating surface having a superficial area exceeding by approximately 50% the normal superficial area of a smooth cylindrical surface of like diameter.

1,686,783. DRAWER SUPPORT FOR ARTICLES OF FURNITURE. CARL F. WOLTERS, Marietta, Ohio, assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 13, 1926. Serial No. 80,863. 5 Claims. (Cl. 45—77.)

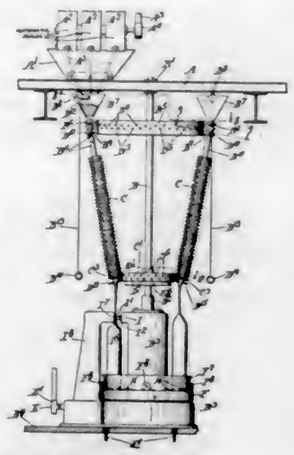
3. A drawer support having, in combination, a casing member, a carrying member entirely supported by said casing member, a drawer member entirely supported by said carrying member, and means between the casing and carrying members adapted to compensate for variations in the casing member, including a roll mounted on the carrying member for movement laterally to the direction of movement of said member and a cooperative, rigidly mounted roll on the carrying member.

1,686,784. COOLER FOR STEREOTYPE PRINTING PLATES. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 21, 1923. Serial No. 676,197. 7 Claims. (Cl. 62—11.)

1. In a cooling device for a stereotype printing plate, the combination with supports for the plates and a tank below the supports for receiving the water, of a spray pipe having spray perforations through its upper surface, a flush valve through which a predetermined amount of water can be discharged into the spray pipe and the supply then cut off automatically, and a removable cover over the trough covering the entire surface of the plate when located on said support.

1,686,785. FOOD PRODUCT AND PROCESS OF PREPARING THE SAME. ISAIAH N. ZELLER, New York, N. Y. Filed Apr. 18, 1919, Serial No. 291,103. Renewed Apr. 23, 1927. 9 Claims. (Cl. 99—5.)

1. A food product consisting of dried fruit reduced to flakes and compactly pressed together.

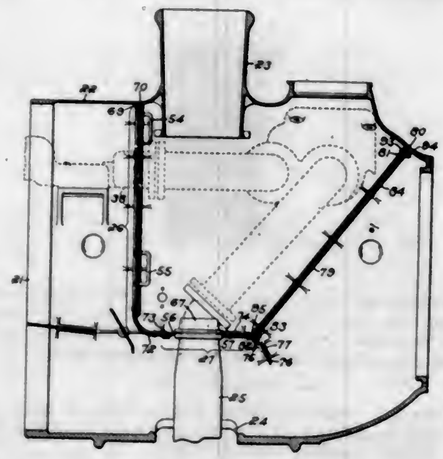


4. The process of preparing flakes of dried fruit which consists in drying pulpous fruits, reducing the dried fruits to flakes, and then drying the flakes.

1,686,786. FOOD PRODUCT AND PROCESS OF MAKING SAME. ISAIAH N. ZELLER, Brooklyn, N. Y. Filed Dec. 11, 1925. Serial No. 74,893. 6 Claims. (Cl. 99—11.)

1. A food product consisting of a solid compressed mass of different kinds of dried fruit.

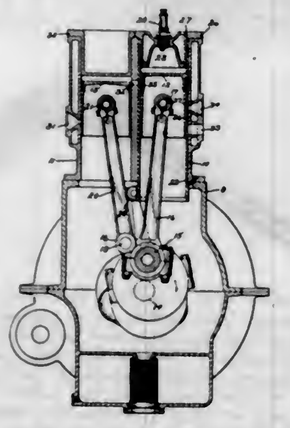
6. A food product consisting of a solid compressed mass of a plurality of superimposed layers of dried fruit, each layer having an edible coating, and adjacent layers consisting of different kinds of dried fruit.



1,686,787. MACHINE FOR MAKING AND FILLING BAGS. ADELMER M. BATES, Chicago, Ill., assignor, by mesne assignments, to Bates Valve Bag Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 6, 1919. Serial No. 343,073. 45 Claims. (Cl. 226—53.)

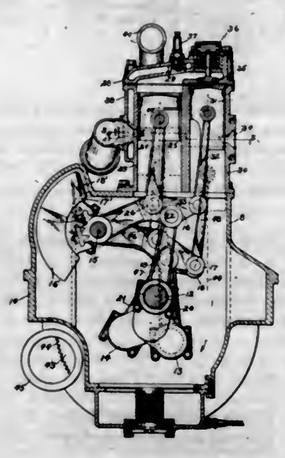
28. In a machine for making filled bags from bag tubes and filling material, a plurality of feed tubes each adapted to carry a longitudinally collapsed bag tube, a support, means for detachably fastening the food tubes to the support in substantially vertical positions, means to continuously move the support to carry the tubes in an endless path, a hopper attached to the support above and in registry with each feed tube, a stationary hopper beneath which the support carried hoppers pass in succession, a plurality of charge measuring devices discharging in succession into the same stationary hopper, a sewing machine in the path of the bag tubes beneath the feed tubes, and means to actuate the sewing machine continuously.

44. In a bag filling machine a large number of receiving hoppers having constricted discharge apertures, a guiding hopper adapted to come into register with them successively, a plurality of automatic scales all adapted to discharge their loads into the guiding hopper, selective means for automatically tripping said scales to cause an instantaneous discharge of a pre-weighed charge of material through the guiding hopper into successive receiving hoppers, means for operating said scales to weigh out another charge as soon as one has been discharged, and means for moving the receiving hoppers in a closed path beneath the guiding hopper at such rate that each receiving hopper will have discharged its contents between successive visits to the guiding hopper and at such rate that each scale will have time to weigh out a new charge before the next receiving hopper into which it is to discharge reaches the guiding hopper.



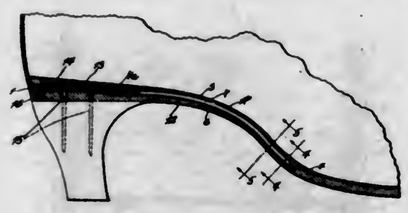
1,686,788. LOCOMOTIVE-SMOKE-BOX STRUCTURE. WILLIAM I. BEAN, West Haven, Conn. Filed June 2, 1925. Serial No. 34,405. 8 Claims. (Cl. 110—122.)

1. In a smoke-box structure, the combination of a smoke-box, a smoke stack and a deflector to deflect the gases and smoke on their way to said smoke stack, said deflector comprising a plate, means secured to said plate and presenting therewith a groove, and a part received in said groove.



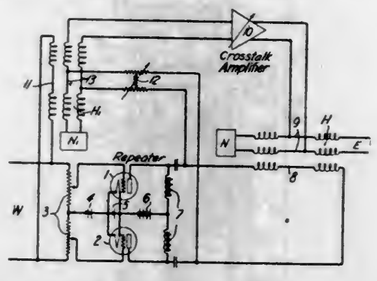
5. In a smoke-box structure for locomotives, the combination of a smoke-box having a groove, a smoke stack and a deflector to deflect the gases and smoke on their way to said smoke stack, said deflector comprising a sheet metal plate having a thickness less than the width of said groove and having a marginal portion received in said groove and having a part bent to provide a thickness within said groove greater than the thickness of said plate.

1,686,789. SLEEVE-VALVE TWO-CYCLE MOTOR. EDWARD H. BELDEN, Toledo, Ohio, assignor to Belden Patents Incorporated, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 21, 1923. Serial No. 682,010. 2 Claims. (Cl. 123—70.)



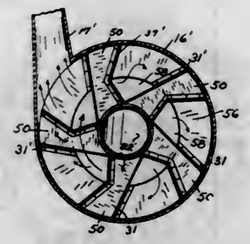
1. In an internal combustion motor, a working cylinder and piston, a charging cylinder and piston at one side of and parallel with the working cylinder, there being a port connecting the cylinders, a sleeve valve governing the port, a crank shaft, means connecting the pistons to a crank on the shaft, an eccentric on the shaft, and a link connecting the eccentric to the sleeve.

1,686,790. COUNTERBALANCED-PISTON MOTOR. EDWARD H. BELDEN, Toledo, Ohio, assignor to Belden Patents Incorporated, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 21, 1923. Serial No. 682,002. 8 Claims. (Cl. 123—70.)



2. In an internal combustion motor, a working cylinder having an open end, a lever fulcrumed beyond and at one side of said end, the fulcrum being at an end of the lever, a charging cylinder parallel with and on the other side of the working cylinder, pistons in the cylinders, rods connecting the pistons to the lever, a crank shaft, and a link connecting a crank on the shaft to a point on the lever between the points at which said rods are attached.

1,686,791. SHANK FOR TURN SHOES. JULIUS R. BINDNER, St. Louis, Mo. Filed Jan. 28, 1927. Serial No. 164,160. 2 Claims. (Cl. 36—76.)

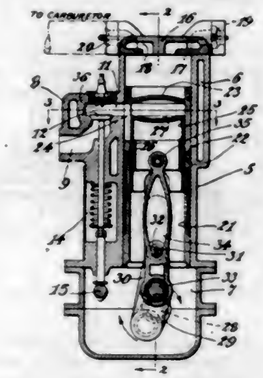


1. A shoe comprising a sole having a longitudinal groove in the upper side of the shank portion thereof and having a longitudinal outwardly undercut channel at each side of the forward portion of said groove, a metallic plate having side portions of approximately uniform thickness resting upon the top of the sole at the sides of said groove, a bead rigid with the underside of said plate fitting closely in said groove, and a pair of outwardly and downwardly inclined tongues integral with the forward end of said plate extending downwardly and laterally from near the plane of said bead into said channels.

1,686,792. TRANSLATING SYSTEM. HAROLD S. BLACK, Newark, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 3, 1925. Serial No. 6,529. 13 Claims. (Cl. 179—171.)

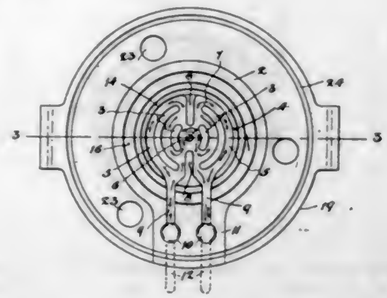
1. The method of suppressing even and odd order distortion components produced in an electric wave translating system and lying within the same frequency spectrum as the undistorted components which comprises isolating a portion of said distortion components from the system and, reimpressing upon the output circuit of said system said isolated distortion currents in opposite phase relation to the even and odd order distortion components therein.

1,686,793. ART OF ELEVATING GRAIN. CARL BRCECINSKI, Mauston, Wis. Filed Nov. 13, 1924. Serial No. 749,777. 4 Claims. (Cl. 302—37.)



1. In a device of the character described, the combination with a rotor comprising a set of chutes supported for rotation about a common axis and interconnected at their respective ends adjacent said axis, said chutes extending inwardly of the periphery of the rotor and being inclined rearwardly of the direction of rotation thereof, of a casing providing an outlet, and inlet areas leading respectively to the space between the ends of said chutes and to the spaces between said chutes outwardly of their interconnection, and a hopper arranged to deliver material into one of said inlet areas.

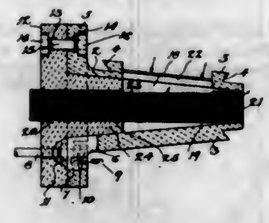
1,686,794. INTERNAL-COMBUSTION ENGINE. JOHN BRUGGER, New York, N. Y. Filed Jan. 13, 1927. Serial No. 160,812. 2 Claims. (Cl. 123—50.)



1. In an internal combustion engine, a cylinder, two pistons in said cylinder reciprocating one within the other and having spaced heads forming a combustion chamber therebetween, a power shaft having spaced cranks projecting from one side of its axis and a third crank between said spaced cranks projecting upon the opposite side of the shaft axis and out of radial alignment with said first named cranks, a pair of rods connected at one of their ends with said first named cranks, a wrist pin connection between the other ends of said rods and the lower end of the outer piston, a relatively long rod directly connected at one end with said last named crank, and a wrist pin connecting the

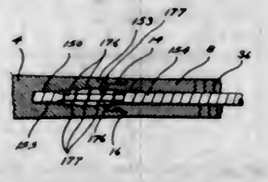
other end of said latter rod with the inner piston, said wrist pins being located in intersecting relation to the central axial line of the pistons, and said latter rod having

a longitudinally extending opening accommodating the first named wrist pin to permit of the relative angular movement of said connecting rod.



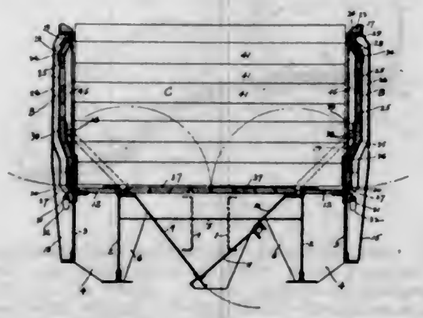
1,686,795. ELECTRIC HEATING UNIT AND METHOD OF FORMING AND ASSEMBLING SAME. EGERTON RYERSON CASE, Toronto, Ontario, Canada. Filed Dec. 12, 1924. Serial No. 755,489. 12 Claims. (Cl. 219—37.)

10. In an electric heating device, the combination of a unitary resistance element; a support therefor comprising a block of suitable material having a multiplicity of passages formed therein and intersecting each other at a series of points to provide a multiplicity of selectable paths, and further provided with two outlets; and a terminal mounted in each of said outlets, whereby a resistance element of predetermined capacity may be introduced into said support through and along as many of said passages as may be adapted to distribute and/or localize the resistance element in any desired area of the device, and adapted to supply thereto that length of resistance element calculated to afford the temperature desired; the said element being connected at its ends to said terminals and constituting a circuit therebetween.



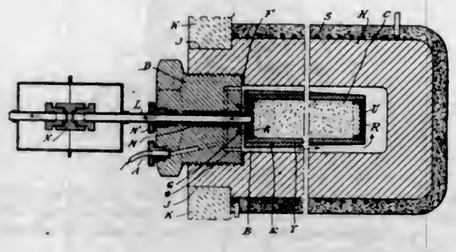
1,686,796. SUPPORT FOR ELECTRIC RESISTANCE ELEMENTS. EGERTON RYERSON CASE, Toronto, Ontario, Canada. Filed Aug. 20, 1925. Serial No. 51,302. 8 Claims. (Cl. 219—34.)

7. In combination a support made of any suitable material exteriorly provided with a plurality of radially-disposed spaced ribs integrally formed therewith and extending substantially longitudinally thereof; an exterior attaching flange at one end of said support, provided with a pair of spaced openings therethrough located laterally of and in spaced relation to said support; the ends of the de-



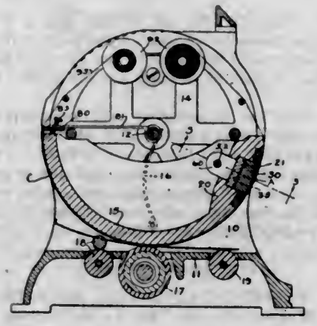
sired ribs adjacent said flange being spaced apart therefrom; a resistance element mounted on said support and around and between said ribs, and a terminal located in each of the said openings and to which the ends of said resistance element are secured.

1,686,797. SPECTACLE TEMPLE. GEORGE H. CHASE and OSCAR H. FLODIN, Rochester, N. Y., assignors to Bausch and Lomb Optical Company, New York, N. Y., a Corporation of New York. Filed May 17, 1926. Serial No. 109,583. 5 Claims. (Cl. 88—52.)



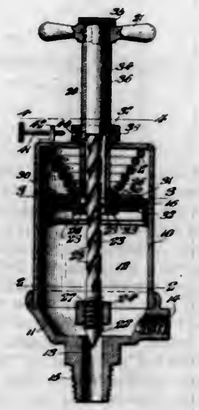
1. A spectacle temple comprising a member adapted to be hinged at the forward end, a reinforcing member projecting rearward beyond the rear end of the first-named member, and a non-metal helically cut tube member mounted on the projecting portion of the reinforcing member, one of the first-named and third-named members having a countersink and the other having a portion secured in the countersink.

1,686,798. RAILWAY CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1927. Serial No. 201,877. 13 Claims. (Cl. 105—243.)



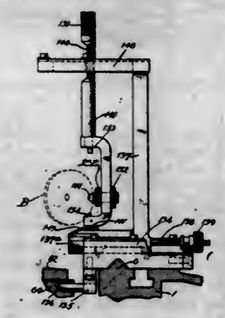
1. In a railway car, the combination with spaced plow guides on either side of the car; of a level floor extending between the plow guides; a side wall spaced outwardly beyond the plow guides; and means adapted to bridge the distance at an incline between the side walls of the car and the level floor.

1,686,799. APPARATUS FOR THE SYNTHESIS OF AMMONIA. GEORGES CLAUDE, Paris, France, assignor, by mesne assignments, to Lazote Inc., a Corporation of Delaware. Filed Dec. 22, 1921, Serial No. 524,087. Renewed Dec. 17, 1926. 10 Claims. (Cl. 23—289.)



10. An apparatus for the synthetic production of ammonia, comprising an outer pressure-supporting tube provided with an external heat-insulating covering and an electrical heating circuit within the said covering, said outer tube being constructed and arranged so as to resist the physical and chemical conditions to which it is subjected, an inner tube containing the catalyzing material and constructed with walls having a variable thermal conductivity along the length of said tube, a member constituting the closure of the said outer tube, said member and the portion of the outer tube with which it engages being constructed with male and female screw theads of interrupted formation, and means being provided for rotating the closure member into and out of engagement, an inlet conduit passing through the said member and through which conduit the gases that are to undergo reaction are introduced into the apparatus so as to cool the aforesaid member, and a conduit which constitutes the exit tube for the gases after reaction carried by but thermally insulated from the aforesaid member, the said conduit constituting the exit tube being continued beyond said member so as to project into the interior of the pressure-supporting tube and carrying on its extended portion the aforesaid inner tube containing the catalyzing material.

1,686,800. PRINTING DEVICE. PETER M. COLQUHOUN, Lakewood, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 1, 1926. Serial No. 151,878. 20 Claims. (Cl. 101—52.)

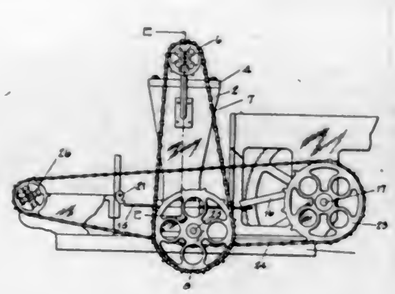


1. In a printing machine, the combination of means for carrying a body form, means for carrying an address form periodically changeable, and means for changing the height-to-paper of the address form to bring it into surface registration with the body form.

1,686,801. GREASE CUP. JOHN F. CULP, Philadelphia, Pa., assignor to Ideal Lubricator Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 5, 1927. Serial No. 166,239. 5 Claims. (Cl. 184—45.)

1. The combination of a grease cup having a discharge outlet, an internally threaded member fixed in said cup, a needle valve threaded through said member and arranged to control said outlet, a spring pressed plunger for discharging grease through said outlet, and means operated by said plunger for turning said valve in said fixed member to gradually open said outlet.

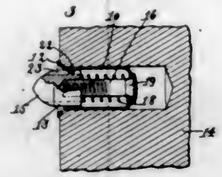
1,686,802. DRESSING ATTACHMENT FOR HOB-GRINDING MACHINES AND METHOD OF DRESSING GRINDING WHEELS. JOHN EDGAR, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Original application filed June 28, 1916, Serial No. 106,339. Divided and this application filed Mar. 19, 1923. Serial No. 625,939. 8 Claims. (Cl. 125—11.)



1. The combination with means for rotatably supporting a grinding tool, of an attachment for dressing the tool, said attachment comprising a base, a base mounted upon the first base for longitudinal adjustment thereon, a templet carried by the second base, and a dressing tool carrier comprising an arm having a dressing tool thereon, the lower end of said arm being mounted on the second base to turn on an axis substantially coincident with the point of the dressing tool, said arm being adapted to slide along said templet to guide the dressing tool carried thereby in a predetermined path with respect to the peripheral surface of the grinding wheel.

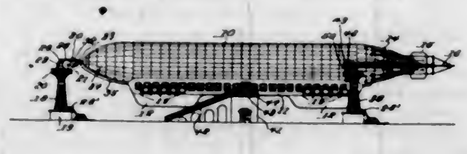
1,686,803. OUTBOARD MOTOR. OLE EVINRUDE, Milwaukee, Wis., assignor to Elto Outboard Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 2, 1926. Serial No. 78,745. 2 Claims. (Cl. 115—41.)

1. An outboard motor comprising a bracket adapted for attachment to a boat, a motor and housing assembly mounted on said bracket for tilting movement, said housing being vertically disposed normally, a propeller adjacent the lower end of the housing, means entirely contained within the housing for supporting the propeller and for driving the same from the motor, and a shoe rigid with the lower end of the housing and arranged below the propeller and having a broad bottom engaging surface of relatively great area operable to cause tilting movement of said housing upon continued forward movement of the boat after any portion of the shoe strikes bottom and to prevent accumulation of matter between the said propeller and the adjacent portion of the housing.



1,686,804. DISPENSING MACHINE. ADINO F. FILES, Maumee, Ohio. Filed Feb. 12, 1927. Serial No. 167,817. 5 Claims. (Cl. 107—17.)

2. In a dispensing machine for dispensing separated quantities of a substance, a hopper, a spindle extending to the bottom of the hopper, a plurality of blades connected to the spindle, certain of said blades bent for raising the material in the hopper and other of the blades bent for lowering the material in the hopper, a plate having an opening located at the bottom of a hopper and movable through the lower end of the hopper, means for reciprocating the said plate so as to place the part of the plate having the opening alternatively in position on the inside and outside of the hopper.



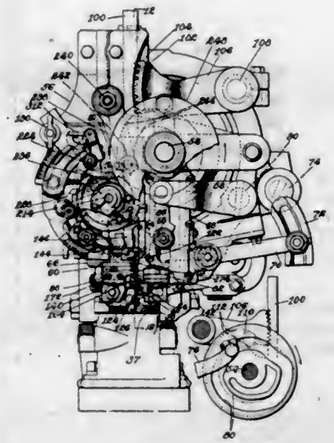
1,686,805. DOOR CATCH. FREDERICK E. FORD, Arlington, Mass. Filed Feb. 24, 1923. Serial No. 620,947. 1 Claim. (Cl. 292—74.)

In a door catch of the character described, in combination, a casing, a catch member having in its outer surface an axially extended slot and insertible into said casing from one end thereof and capable of being reciprocated in said casing and of being manually rotated therein to adjust it with relation to the end of the casing, means within the casing for supporting said catch member and upon which it may be rotated, and a yielding member carried by said casing and movable into and out of said slot, said member being normally extended into said slot in operative relation

to the catch member to restrain the latter from being unintentionally rotated and being moved out of said slot and into inoperative relation to the catch member by manual rotation of the latter.

1,686,806. MOORING MEANS FOR AIRSHIPS. RALPH P. FOX, Harrisburg, Pa. Original application filed Mar. 6, 1926, Serial No. 92,827. Divided and this application filed Aug. 10, 1926. Serial No. 128,436. 8 Claims. (Cl. 244—2.)

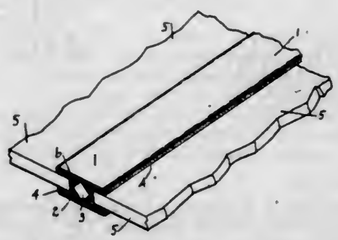
1. In a device of the class described, a cable for mooring an air craft, devices for winding, retaining and releasing the cable, and a channeled guard mounted on and extending partly around the hull of the craft, the cable passing thru the guard and being protected thereby.



8. The combination of a plurality of masts for mooring an air craft, tubular swiveled cable guiding means each including a pulley wheel, carried by the masts, cables extending downwardly thru the masts, means for securing the cables at the base of the masts, cables carried by the craft, at the nose portion thereof and on opposite sides of the hull forwardly of the stern, and means for winding, retaining, and releasing the cables last named, these cables being adapted for detachable connection with the cables first named.

1,686,807. TREATMENT OF PEAT. FELIX GINSBACH, Luxemburg, Luxemburg, assignor to Heinrich Horst, Berlin-Charlottenburg, Germany. Filed Apr. 23, 1927, Serial No. 186,177, and in Luxemburg Apr. 30, 1926. 3 Claims. (Cl. 44—27.)

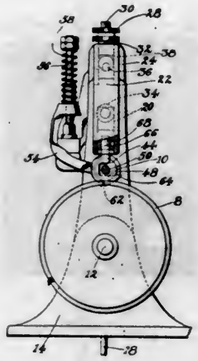
1. A process for de-watering peat by compression in stages, the first stage consisting in compressing and de-watering raw peat after admixture with it of peat previously de-watered by compression, and the second stage consisting in again compressing and de-watering the product of the first stage after first adding dry peat, substantially as hereinbefore described.



1,686,808. FASTENING-INSERTING MACHINE. GEORGE GODDU, Winchester, and FRED L. MACKENZIE, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 23, 1921. Serial No. 463,744. 144 Claims. (Cl. 1—30.)

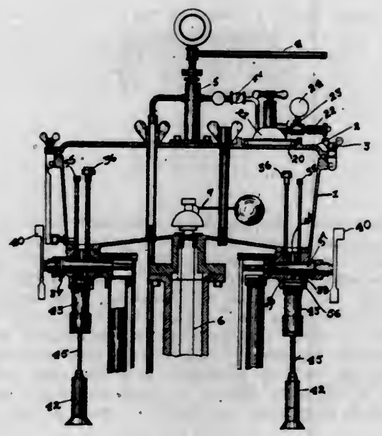
1. A machine for inserting fastenings having, in combination, means for inserting fastenings of a plurality of different kinds, and automatically operating means for insuring that a fastening definitely related to the end of each of several successive fastening inserting runs of the machine shall be of the same one of said different kinds

irrespective of the number of fastenings inserted during the run of the machine and irrespective of the thickness of the work.



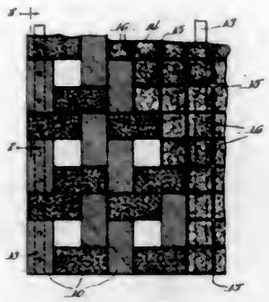
1,686,809. CAME. GEORGE A. GRAU, Cincinnati, Ohio. Filed July 25, 1924. Serial No. 728,256. 1 Claim. (Cl. 189—77.)

A came of the character described, body portions, connected by a heart element, and spaced apart on each side of said heart element to receive the glass, and composition for holding and suspending the glass around its entire edges, said heart element shaped other than vertical in face outline, the face of the heart being smooth.



1,686,810. SEAM-PRESSING MACHINE. ARTHUR E. GREENE, Endicott, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 30, 1925. Serial No. 19,341. 9 Claims. (Cl. 69—7.)

1. In a machine of the class described, a work support over which a piece of work is to be fed, and a reciprocating tool co-operating with the work support to press the work while it is being fed, said support and said tool being



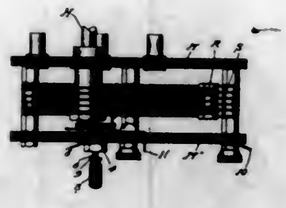
respectively constructed and relatively arranged to form a temporary depression in the work to receive said tool to facilitate the guiding of the work in a straight path.

1,686,811. BOTTLE-FILLING MACHINE. SAMUEL GREENHOUSE, Akron, Ohio. Filed May 15, 1922. Serial No. 560,876. 10 Claims. (Cl. 226—93.)

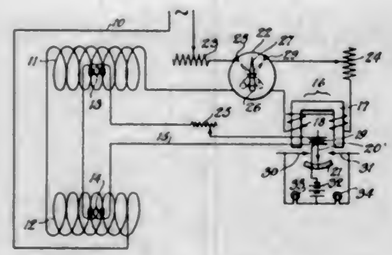
7. That method of bottling carbonated beverages which consists in first maintaining a body of carbonated liquid in an enclosed chamber, causing a continuous escape of air from the top of said chamber and withdrawing the carbonated liquid from the bottom of the chamber.

1,686,812. TILED WALL OR THE LIKE. GEORGE D. HAINES, Park Ridge, Ill., assignor to Porcelain Tile Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1927. Serial No. 175,066. 5 Claims. (Cl. 72—19.)

1. A tiled wall comprising a sheet having in its face sets of continuous parallel grooves, said sets intersecting each other to define similar geometrical figures thereon, and a plurality of tiles covering said sheet and secured thereto, said tiles having marginal members extending into said grooves.



1,686,813. SOCKET SHELL. HARVEY HUBBELL, Bridgeport, Conn.; Louie E. Hubbell executrix of said Harvey Hubbell, deceased. Filed Sept. 29, 1923. Serial No. 665,621. 4 Claims. (Cl. 173—362.)

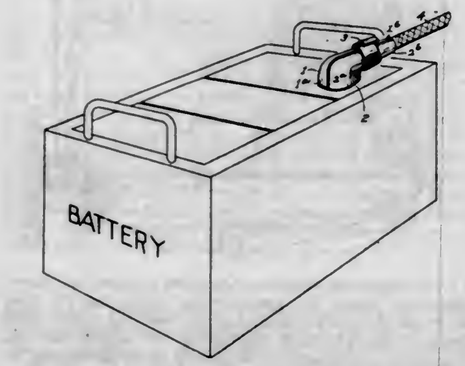


1. In a socket shell having telescoping sections, one of said sections having a plurality of grooves leading from one end thereof and openings spaced from said end at opposite sides of said section, and the other section being provided with a series of triangular teeth projecting laterally therefrom and integral therewith, said teeth adapted to enter said grooves and openings to secure the sections together the inner or transverse edges of the teeth being inclined outwardly from the free ends or points of the teeth toward the inlet end of the section to form in effect hooks to engage side walls of said openings.

1,686,814. CONDENSER. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1924. Serial No. 718,424. 10 Claims. (Cl. 175—41.5.)

1. A device of the class described including a stator element comprising a plurality of plates, a rotor element operatively associated with said stator element, end plate members for supporting said stator and rotor elements, and adjustable disk, one of said end plate members adjustably supporting said adjustable disk in operative position relative to one of the plates of said stator element, said one plate and said adjustable disk forming a condenser of a variable capacity.

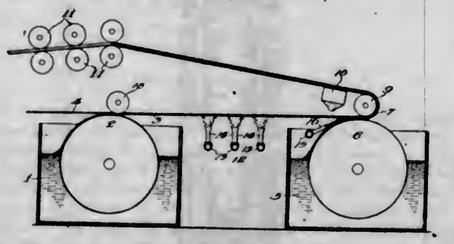
1,686,815. METHOD OF TESTING MAGNETIZABLE OBJECTS. ELMER S. IMES, Jersey City, N. J., assignor, by mesne assignments, to Magnetic Analysis Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 26, 1925. Serial No. 32,947. 7 Claims. (Cl. 175—183.)



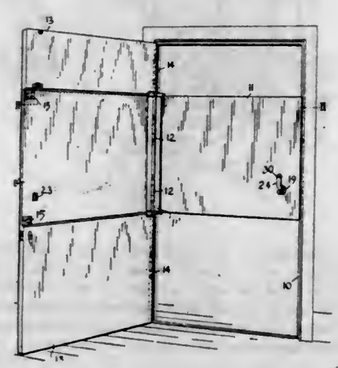
1. A method of determining one physical characteristic of a magnetizable object possessing two physical characteristics of unknown value, which consists in subjecting two standards to a varying magnetic field, said characteristics being pre-determined in each of the standards and one standard differing from the other as to the value of one of said characteristics, measuring on a dynamometer the differential energy absorbed by the two standards, adjusting the dynamometer to show no variation between the two standards, replacing one of the standards with the object to be tested, and noting the differential energy indicated by the dynamometer.

1,686,816. SCRAPER. CHRISTIAN JOHNSON, Chicago, Ill. Filed Feb. 2, 1927. Serial No. 165,304. 1 Claim. (Cl. 145—47.)

A device of the class described, comprising a scraper of opposed clamping members and a scraping blade therebetween, a threaded pin extending through the clamping members, a handle having a recess formed in one end thereof, a socket member secured in the recess and having a tapered socket in the outer end thereof, a complementary tapered member removably secured in the socket, extending therefrom, and threadedly engaging the said pin, and recess means formed in one of the clamping members engaged by the said complementary member at its larger end to retain the scraper at a fixed angle relative to the handle, and whereby downward force applied to the scraper is borne by the complementary member to relieve the said threaded pin of undue strain.

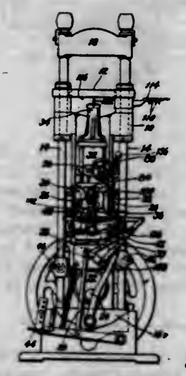


1,686,817. TERMINAL PROTECTOR FOR STORAGE BATTERIES. JARL A. JOHNSON, Taft, Calif. Filed Jan. 31, 1927. Serial No. 164,925. 2 Claims. (Cl. 173—259.)



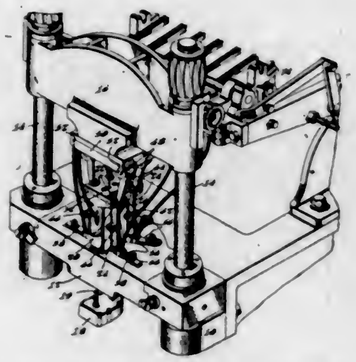
1. A battery terminal protector of the character described made in two complemental parts, each part comprising an enlarged terminal embracing part and a substantially right angular wire or cable embracing part and a clamp for binding said parts together, said complemental parts meeting along a vertical plane to adapt the said two parts to be brought together laterally of the battery terminal.

1,686,818. APPARATUS FOR MAKING PAPER. LESTER KIRSCHBRAUN, Chicago, Ill. Original application filed Nov. 4, 1921, Serial No. 512,808, Patent No. 1,526,522, dated Feb. 17, 1925. Divided and this application filed Jan. 12, 1925, Serial No. 2,039. Renewed Mar. 26, 1928. 6 Claims. (Cl. 92—41.)



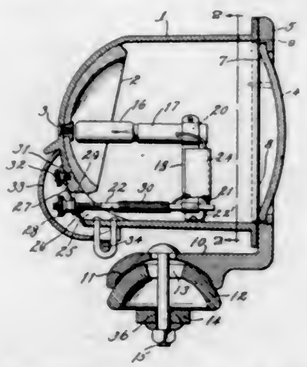
1. In an apparatus for producing a waterproof multiply fibrous sheet, the combination with spaced fibrous pulp vats, of cylinder molds adapted to be rotated therein, and adapted to have suction applied thereto to cause a layer of fibrous pulp solution to felt on the surfaces thereof, a continuous flexible web contacting and removing the felted layers from successive molds, and spraying means interposed between designated molds adapted to project waterproofing medium on the surface of predetermined fibrous plies.

1,686,819. DOOR. ALBERT KIRSCHBAUM, Newark, N. J. Filed May 26, 1927. Serial No. 194,277. 3 Claims. (Cl. 20—16.)



1. In combination with a door-frame, a screen door hinged to the door-frame for screening the middle portion of the frame opening, the main portion of the screen door being of approximately half of normal door thickness, and a main door for closing the upper and lower portions of the frame opening and hinged to the door frame, the middle portion of the main door being of approximately half thickness so that the screen door may be set in flush, the hinges for both doors having their axes on the same line.

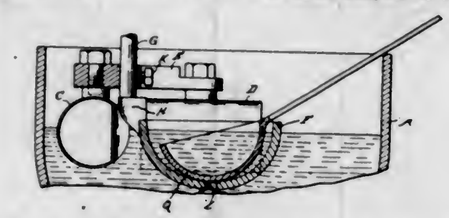
1,686,820. METHOD OF AND MEANS FOR INSERTING FASTENINGS. ROBERT H. LAWSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 11, 1924. Serial No. 692,054. 39 Claims. (Cl. 1—32.)



1. The method of inserting fastenings, which consists in positioning a fastening preparatory to insertion, forming the fastening while thus fixed in position to determine the direction of insertion, and effecting the insertion of the fastening from the forming position.

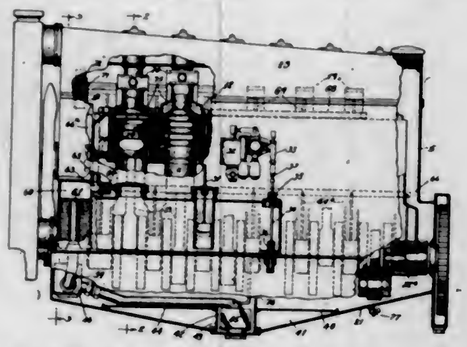
1,686,821. SHOE MACHINE. ROBERT H. LAWSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 5, 1924. Serial No. 718,058. 23 Claims. (Cl. 1—32.)

1. In a machine of the class described, a tool for operating upon the work, a carrier in which the tool is movable, said carrier being movable to change the relation of the tool to the work, an actuating member, and connections between the actuating member and tool to move said tool and thereby the carrier.



1,686,822. SIGNAL LAMP. STATES LEE LEBBY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Aug. 30, 1923. Serial No. 660,211. 5 Claims. (Cl. 240—44.)

1. The combination with a projector casing and its light source, of means for supporting and focusing the light source comprising a standard carrying said source at its upper end, a rod on which the standard is carried, said rod having its outer end projecting through the casing, a guide bracket for said standard carried by said casing in which the rod is movably mounted, and means carried by the casing for shifting the outer end of the rod in all directions.

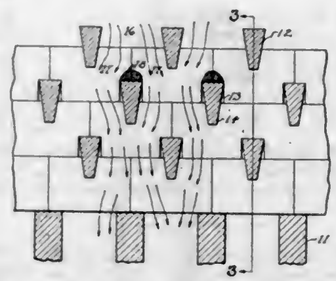


1,686,823. FLOAT-SUPPORTED MEASURING POT. JOHN LEYLAND, Detroit, Mich., assignor to Federal Mogul Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 30, 1927. Serial No. 243,518. 12 Claims. (Cl. 22—79.)

1. Means for effecting uniformity in the quantity of molten metal removed from a melting pot by ladling, consisting of an inferiorly apertured bowl of substantially the contour of a ladle, into which molten metal may proceed by gravity-induced flow, and means adapted to float

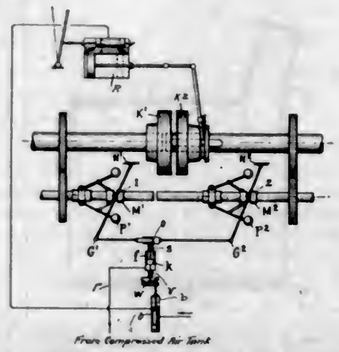
on the top of the contained molten mass, with which said bowl is adjustably connected at the desired relative elevation.

1,686,824. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. FRANK E. LONAS, New York, N. Y. Filed Sept. 26, 1925. Serial No. 58,770. 19 Claims. (Cl. 123—196.)



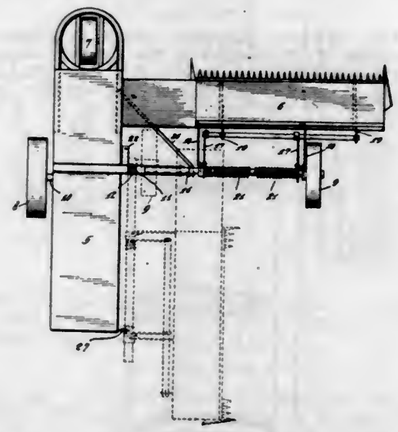
1. A lubricating system for internal combustion engines comprising means for transmitting lubricating oil from the crank case of the engine to the working parts under pressure, an auxiliary lubricating oil supply for the crank case, and means for supplying fresh lubricating oil to the crank case and directly to the oil transmitted from the crank case to the working parts.

1,686,825. ELEVATOR. HOWARD C. LISLE, Lansing, Mich., and FRANK H. LEWIS, San Jose, Calif., assignors to Bean Spray Pump Co., San Jose, Calif., a Corporation of California. Filed Apr. 27, 1927. Serial No. 186,850. 3 Claims. (Cl. 254—93.)



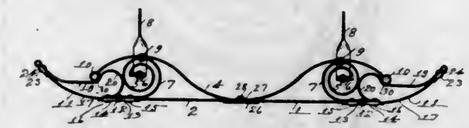
1. An elevator comprising a base; a longitudinally fixed inner member supported for rotation thereupon; a longitudinally movable tube surrounding said member and provided with a closed upper end; packing means between said member and said tube; and means for introducing fluid under pressure between the inner member and the closed upper end of said tube.

1,686,826. CHECKERWORK FOR OPEN-HEARTH AND BLAST FURNACES. FRED H. LOFTUS, Pittsburgh, Pa. Filed Feb. 8, 1927. Serial No. 166,669. 4 Claims. (Cl. 72—15.5.)



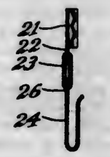
1. In a checker chamber for reverberatory furnaces, a plurality of parallel spaced vertical walls reaching across the chamber and extending from the top to the bottom thereof to form a plurality of narrow elongated wells separated one from another, and a plurality of spaced rows of super-imposed fixed heat exchangers rigidly mounted in said walls and extending across said wells, the exchangers in one row being in staggered relation to the next adjacent row forming a plurality of fixed uniform intake and discharge passages throughout said wells and adapted to afford a fixed predetermined minor resistance to the passage of the gas through the wells in one direction and upon reversal of the furnace a fixed predetermined major resistance in the opposite direction.

1,686,827. AUTOMATIC COUPLING DEVICE FOR TRANSMISSION OF POWER. GUSTAV C. MAAG, Duisburg, Germany. Filed Mar. 22, 1924, Serial No. 701,166, and in Germany Mar. 22, 1923. 8 Claims. (Cl. 192—103.)



1. In an apparatus of the character described, a pair of rotatable shafts, means including a clutch for connecting said shafts in operative driving relationship, a pair of centrifugal speed responsive devices, one for each of said shafts and operatively connected each with its respective shaft, means to actuate said clutch including means controlled by said speed responsive devices for permitting operation of the clutch actuating means only when said shafts are rotating in definite predetermined speed relationship.

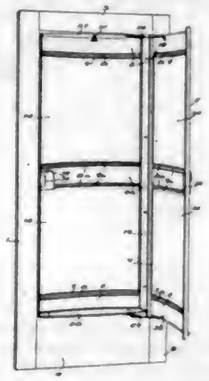
1,686,828. COMBINATION HARVESTER-THRASHER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Mar. 21, 1925. Serial No. 17,385. 10 Claims. (Cl. 56—20.)



1. In a machine of the class described, a thrasher, a harvester, a vertical hinge member connected to said thrasher, a coupling mounted on said member to turn horizontally in relation thereto, a stub-axle on said coupling, a support for said harvester connected to said coupling whereby the harvester may be swung horizontally and folded alongside said thrasher, and a wheel on said support adapted to be transferred therefrom to said stub-axle for sustaining said thrasher in traveling position when said harvester has been folded alongside thereof.

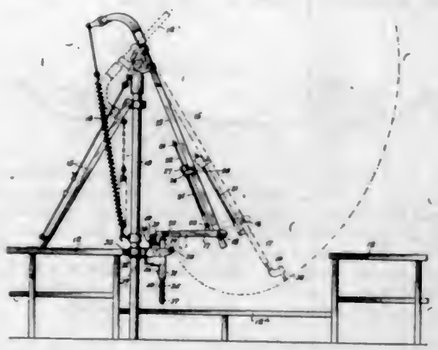
1,686,829. BUMPER FOR VEHICLES. MALTE J. MALLINO, Grand Rapids, Mich. Filed Oct. 12, 1927. Serial No. 225,641. 8 Claims. (Cl. 293—55.)

1. In a bumper for vehicles: front and rear horizontal bars, one of them being resilient; coiled springs, each mounted centrally thereof on the vehicle and connected at opposite points respectively to the front bar and to the rear bar inwardly from the adjacent end thereof; extensions of the front bar horizontally swingable relatively thereto, each of said extensions yieldingly engaging in its rearward movement the adjacent curved spring.



1,686,830. GARMENT SUPPORT. ULYSSES G. MASON, Birmingham, Ala. Filed Mar. 19, 1928. Serial No. 262,836. 2 Claims. (Cl. 24—81.)

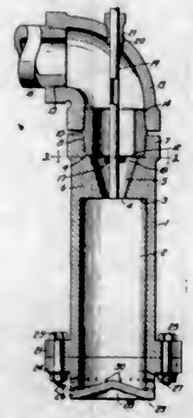
1. A garment support comprising an upper clasp member formed of sheet metal having one side thereof bent around against the front portion and having said side



corrugated the better to grip an upper garment, the front side of said clasp member being formed to have a monogram applied thereto, and a lower hook member formed of sheet metal bent rearwardly and upwardly to engage a supporting element on a lower garment.

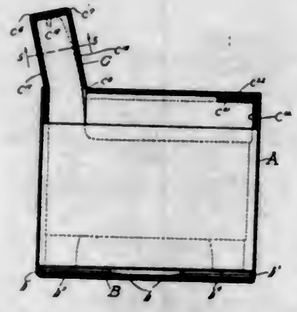
1,686,831. SERVICE CABINET. FRANK J. MATCHETTE, New York, N. Y., assignor to The Servidor Company, New York, N. Y., a Corporation of New York. Filed May 13, 1927. Serial No. 191,040. 18 Claims. (Cl. 189—46.)

1. In a door construction, spaced reinforcing members disposed transversely of the door and arched in the direction of their length, and a main door plate shaped about the convex faces of the reinforcing members and secured thereto.



1,686,832. STARTING GATE. PHILIP MCGINNIS, London, Ontario, Canada. Filed Sept. 27, 1927. Serial No. 222,242. 9 Claims. (Cl. 39—24.)

1. In a starting-gate, the combination of a barrier adapted to occupy an operative, restraining position, primary means whereby said barrier is movable to an inoperative position, and auxiliary means movably connected with said primary means whereby said barrier is supported in an operative position and is independently shifted downwardly from its operative position prior to its being carried by said primary means to said inoperative position.



8. In a starting-gate, the combination of a barrier adapted to occupy an operative, restraining position, primary means whereby said barrier is movable to an inoperative position, and auxiliary means movably connected with said primary means whereby said barrier is initially shifted downwardly from its operative position prior to its being shifted to said inoperative position, locking mechanism cooperating with said auxiliary means to lock said gate in its operative position, means for tripping said locking mechanism to release said gate, and means whereby unintentional disengagement of said auxiliary means from said locking mechanism is prevented.

1,686,833. FUEL-OIL BURNER. FORD H. MOORE, Kansas City, Mo. Filed Feb. 24, 1927. Serial No. 170,500. 4 Claims. (Cl. 158—76.)

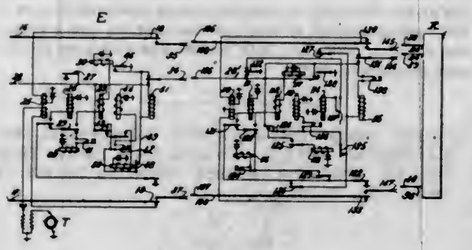
1. An oil burner comprising a tubular body portion having a mixing chamber provided with a convex end wall, an air conduit for the mixing chamber having a venturi-shaped outlet, a fuel inlet opening into the mixing chamber at the mouth of the venturi-shaped outlet, and a plurality of outlet ports peripheral of the mixing chamber and arranged in spaced rings.

1,686,834. SHIPPING CARTON. ORVA O. NICKERSON, Fort Wayne, Ind., assignor to Fort Wayne Corrugated Paper Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 20, 1925. Serial No. 10,531. 3 Claims. (Cl. 206—1.)

3. For use in constructing a shipping carton for a piece of furniture of the arm chair type, a combination of three blanks made of double faced corrugated paper; the first creased and slotted to form the sides and bottom, the second creased so as to be folded flat upon itself at both ends and then be placed upon the bottom within the open top box formed from the first blank, the third creased across from both pairs of opposite sides and slotted in toward the middle from one pair of opposite sides so as to be adapted to be folded upon itself in such a manner as to lie flat and cover the edges and top of the back and arms of the article packed with a plurality of thicknesses.

1,686,835. PROCESS FOR PRODUCING POTASSIUM SALTS AND BY-PRODUCTS. ROBERT D. PIKE, Piedmont, and ROSS CUMMINGS, Berkeley, Calif.; said Cummings assignor to said Pike. Filed May 25, 1927. Serial No. 194,226. 6 Claims. (Cl. 23—41.)

1. The process of extraction of potash salts from wyomingite and the like, which consists in fine grinding and treating the pulp under heat and pressure with a solution of common salt containing not to exceed 1% of bicarbonate of sodium.

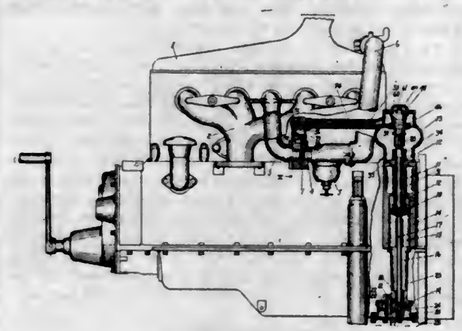


1,686,836. TREATING AND WETTING OUT FIBROUS MATERIAL. RAINER HERMANN POTT, Dresden, Germany, assignor to Chemische Fabrik Pott & Co., Dresden-N., Germany. Original application filed July 26, 1924, Serial No. 728,494, and in Germany July 10, 1923. Divided and this application filed Sept. 23, 1925. Serial No. 58,184. 4 Claims. (Cl. 8—12.)

1. The process of treating fibrous materials, which comprises adding sulphonic acid salts of substituted aromatic polynuclear hydrocarbons to an acid fiber treating bath.

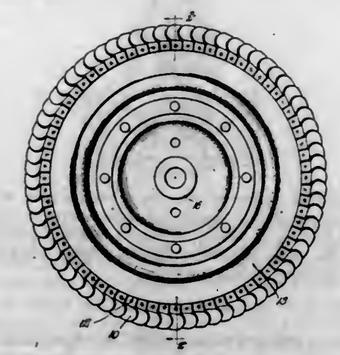
1,686,837. PROCESS OF CARBONIZING WOOLEN FIBERS. RAINER HERMANN POTT, Dresden, Germany, assignor to Chemische Fabrik Pott & Co., Dresden-N., Germany. Filed July 26, 1924, Serial No. 728,494, and in Germany July 10, 1923. 6 Claims. (Cl. 8—12.)

1. The process of treating fibrous materials, which comprises subjecting said material to treatment in an acid bath in the presence of sulfonic acids of substituted aromatic polynuclear hydrocarbons.



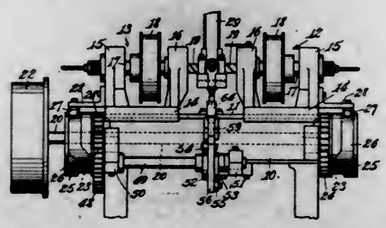
1,686,838. AUTOMATIC TELEPHONE SYSTEM. ARTHUR J. RAY, Cuba, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 8, 1926, Serial No. 86,754. Renewed Sept. 29, 1927. 18 Claims. (Cl. 179—17.)

1. In a telephone system, a first automatic switch, a second automatic switch, a third switch, means for extending a connection through the first and second switches to said third switch, means in said third switch operative responsive to the establishment of said connection for maintaining said three switches operated, means for releasing said third switch, means for releasing said second switch responsive to the release of said third switch, and means in said second switch for maintaining said first switch operated independent of said third switch.



1,686,839. ENGINE GOVERNOR. HARRY E. RHOADS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 21, 1919. Serial No. 284,127. 6 Claims. (Cl. 184—6.)

1. In an internal combustion engine, a casing, a hollow shaft mounted therein having an engine governor at the upper end thereof, means for driving said shaft, an oil pump detachably connected to said casing, and a hollow pump shaft in communication with the outlet of said pump, said shafts having interengaging portions at their



adjacent ends whereby, when said pump is in attached position, it is adapted to be driven by said first shaft and oil may be supplied through said shafts.

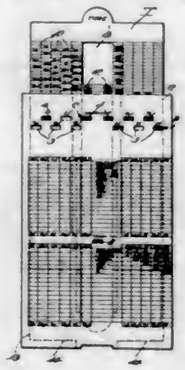
1,686,840. TURBINE ROTOR AND METHOD OF FORMING THE SAME. WILLIAM EDWARD RICHARD, Evansville, Ind., assignor to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed June 25, 1924. Serial No. 722,222. 6 Claims. (Cl. 253—39.)

1. A turbine wheel comprising a central disk and individual buckets welded thereto, said buckets being integrally formed and having a weldable foot bent therefrom whereby they are individually secured to the face of said disk.

1,686,841. MACHINE FOR COUNTERSINKING PIPE COUPLINGS. ALFRED BRIESE, Wheeling, and RUSSELL CALLOW, Boggs Run, W. Va. Filed Mar. 18, 1926. Serial No. 95,629. 5 Claims. (Cl. 77—21.)

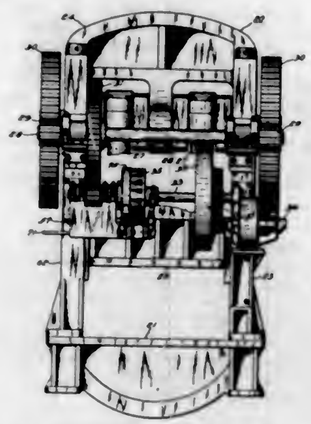
1. In a machine of the kind described, movable cutter heads, a holder for work pieces, means for moving said cutter heads toward and away from said holder, means for

actuating said holder in timed relation to the movement of the cutter heads, pivoted centering members for positioning a work piece in the holder, and means for withdrawing said positioning members from operative position in timed relation to the movements of the cutter heads.



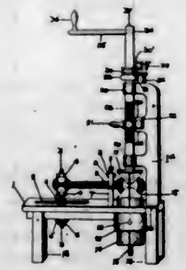
5. In a machine of the kind described, a frame, cutter heads mounted for movement on said frame, a work piece delivery chute mounted on the frame, a holder having a movable member mounted for sliding movement under said chute, said frame having an opening under the holder and offset from the chute, means for moving said cutter heads, and means for moving said holder member to secure a work piece from the delivery chute in the holder while the cutter heads are in cutting position and for releasing the work piece from the holder to permit the same to drop through said opening when the cutter heads are moved to inoperative position, the last mentioned cams including spring advanced fingers for engaging opposite ends of the work piece, and a member operable to retract said fingers.

1,686,842. ELECTRICAL CONNECTER. FRANCIS J. BULLIVANT, St. Louis, Mo., assignor to Valley Electric Company, St. Louis, Mo., a Corporation of Delaware. Filed Dec. 17, 1924. Serial No. 756,598. 1 Claim. (Cl. 173—273.)



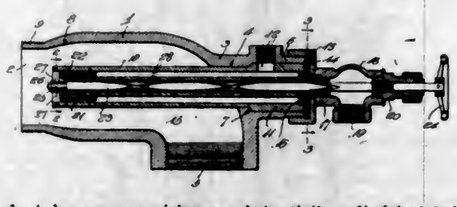
An electrical connecter clip comprising a pair of spring-closed jaws adapted to engage a terminal with a biting contact and having a closely adhering plating of cadmium covering the same and including the biting contacts so as to preserve their biting action.

1,686,843. HANDICAPPING DEVICE. WALTER B. BURKE, Chicago, Ill., assignor to The Domino System Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1925, Serial No. 23,615. Renewed Jan. 17, 1928. 4 Claims. (Cl. 235—85.)



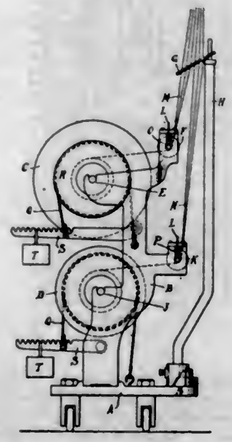
1. A handicapping device comprising a time slide having time figures, a track slide carried by said time slide, said track slide being adjustable with respect to said time slide and thereafter movable bodily with the latter, handicap figures on said track slide, a wall in front of said slides having distance openings for disclosing the time figures and a handicap opening for disclosing the handicap figures, and indicating means permitting setting of the track slide with respect to the time slide.

1,686,844. STAMPING PRESS. ARTHUR A. BYERLEIN, Detroit, Mich. Filed July 20, 1925. Serial No. 44,793. 18 Claims. (Cl. 113—38.)



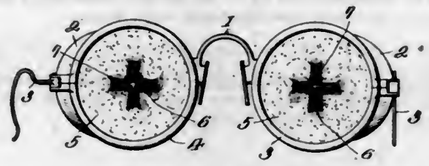
1. In a press, comprising a press frame having a pair of sides for guiding a plunger, and a plunger mounted in said frame; means for actuating said plunger, said means comprising a power shaft journaled for rotation at one side of the press frame, said power shaft having a bearing at its inner end, a bearing carried at the other side of the press frame, a second power shaft in extension of the first mentioned power shaft journaled for rotation in the bearing at the inner end of first-mentioned power shaft and in the bearing carried at said other side of the press frame, and a clutch carried by said power shafts adapted to connect said power shafts.

1,686,845. COMBINED CENTERING, BABBITTING, AND MACHINING DEVICE. CHARLES HALL CRONE, Titusville, Pa. Filed Sept. 30, 1924. Serial No. 740,763. 1 Claim. (Cl. 77—62.)



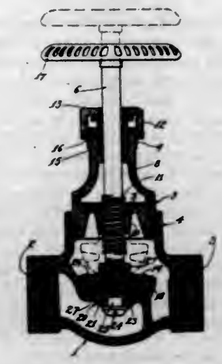
A centering, babbitting and boring machine for connecting rods, comprising a work table, adjustable means carried by said table for supporting a connecting rod adjacent the ends thereof, a tool axially adjustable and reversibly mounted in a guide in said table adjacent one of said supporting means, said tool having a conical bearing centering projection at one end and means at the opposite end for detachably securing a babbitting mold, an arm carried by said table having spaced bearings aligned with the axis of said reversible tool, a threaded tool spindle adjustably mounted in said bearings, and a split nut pivotally connected with said arm between said bearings and adapted to engage the threads of said tool spindle.

1,686,846. HYDROCARBON BURNER. CHARLES O. EVERHART, Girard, Ohio. Filed Apr. 4, 1928. Serial No. 267,304. 2 Claims. (Cl. 158—76.)



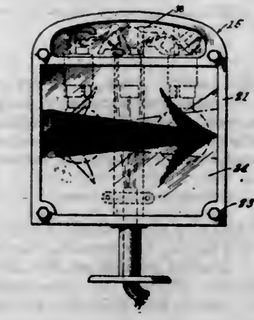
1. A burner comprising a substantially cylindrical hollow body open at its rear end, closed at its front end and provided with a lateral air inlet near said front end, said body being rearwardly tapered internally near its rear end but terminating in a cylindrical interior at said rear end, a high pressure fluid feeding tube disposed axially within said body and projecting from the closed front end thereof to a transverse plane substantially at the rear end of said tapered internal portion of the body, a fuel feed tube disposed axially within said high pressure fluid feed tube and having an enlarged tubular spray tip on its rear end spaced a slight distance forwardly from the rear end of said high pressure fluid tube, both of said tubes being open at their rear ends and said tip being internally flared at said rear end, and a stem passing longitudinally through said fuel feed tube, the rear end of said stem having a frusto-conical peripherally grooved spreader whose smaller end portions is disposed within said flared portion of said tip.

1,686,847. MILANESE MACHINE. SAMUEL STEWART FLETCHER, Nottingham, England. Filed Mar. 26, 1927, Serial No. 178,704, and in Great Britain Mar. 29, 1926. 5 Claims. (Cl. 66—81.)



5. In a Milanese machine, a series of carriages operatively connected together for motion in one direction, each carriage being provided with a plurality of warp-beams which are moved with it, a thread sley-plate supported by each carriage, and a plurality of spring-pressed rollers supported by each carriage and operating to guide the warp-threads to the said sley-plate.

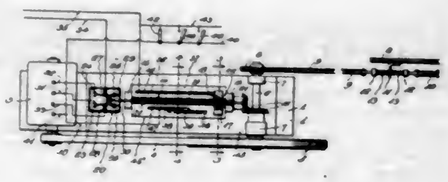
1,686,848. EYE PROTECTOR. HERBERT C. FOWLER, Columbus, Ohio. Filed Aug. 5, 1927. Serial No. 210,925. 4 Claims. (Cl. 2—14.)



1. An eye guard consisting of an opaque impervious disk having a cruciform offset at its center, a very narrow slit being formed through the offset, longitudinally of all arms thereof.

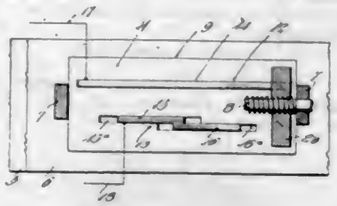
1,686,849. FLUID VALVE. ALOYSIUS M. FRAUENHEIM, Pittsburgh, Pa. Filed Oct. 15, 1927. Serial No. 226,273. 8 Claims. (Cl. 251—27.)

5. In a valve of the character described, a composite valve-disc having the shape of a spherical zone and a spherically shaped seat therefor, said composite disc comprising two rigid disc-members and an intermediate resilient disc-member severally adapted for sealing engagement with the seat when the valve is shut, and adjustable means for compressing the resilient disc-member between said rigid disc-members.



1,686,850. TRAFFIC SIGNAL. RAINSFORD FRENCH, Washington, D. C. Filed Sept. 27, 1924. Serial No. 740,212. 15 Claims. (Cl. 177—329.)

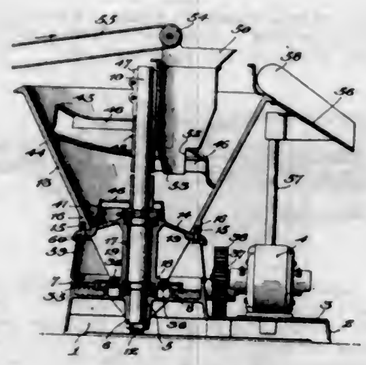
1. In a traffic signal, a light transmitting screen, a stencil back of said screen extending away from a point closely adjacent the back of the screen and bearing the



outline of a pointer with the tip portion of the same closest the screen and a light source behind said stencil in position to cast its light through the stencil onto the screen and to accentuate the tip of the pointer presented by that part of the stencil which is closest to the screen.

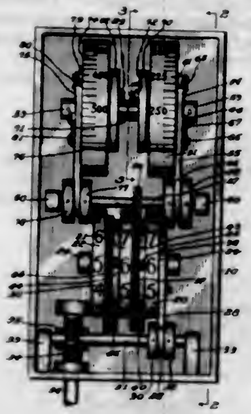
1,686,851. DOOR-OPERATING MECHANISM. CHARLES W. GORMAN, Muskogee, Okla. Filed Apr. 2, 1925. Serial No. 20,255. 1 Claim. (Cl. 172—240.)

A mechanism of the class described comprising a base, a reversible electric motor thereon, a screw rotatably mounted on said base and operatively connected with said motor, a reversing switch for the motor mounted on the base, an operating member for said reversing switch having trips at points spaced apart along said screw, and a non-rotatable body engaged with said screw, said body having a portion received between said strips to engage the same and shift said operating member to actuate the reversing switch; together with additional current controlling means for the motor comprising contact trackage mounted on the base parallel with the screw, and a traveling contact engaging said trackage and carried by said body, said traveling contact being adapted to move from operative engagement with said trackage to break the motor circuit, said contact trackage comprising a contact strip and a track parallel therewith formed of overlapping longitudinal adjustable strips.



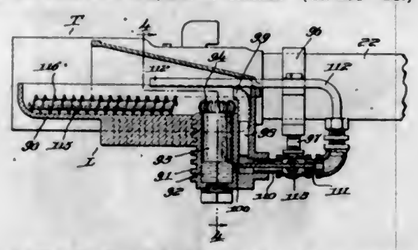
1,686,852. ELECTRIC SWITCH. CHARLES W. GORMAN, Muskogee, Okla. Original application filed Apr. 2, 1925, Serial No. 20,255. Divided and this application filed June 30, 1927. Serial No. 202,605. 3 Claims (Cl. 200—168.)

1. In an electrical switch, a base, a contact strip thereon, a track on the base parallel with said strip, said track being formed of overlapping longitudinally-adjustable strips whose overlapping portions contact with each other, and a traveling contact shoe adapted to bridge between said strip and said tracks.



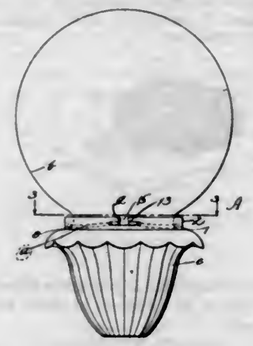
1,686,853. APPARATUS FOR ROUNDING UP LUMPS OF PLASTIC MATERIAL. HERBERT H. HACKSTEDDE, Cincinnati, Ohio. Original application filed July 21, 1921, Serial No. 486,510. Divided and this application filed Dec. 6, 1922. Serial No. 605,207. 15 Claims. (Cl. 107—9.)

10. In a machine of the class described, the combination of a base having an opening therethrough and a boss depending from the base at the opening, a post rising through the boss and provided with an annular shoulder adjacent the base, a rotatable bowl concentric with the base, a sleeve depending from the bottom of the bowl and counterbored at its top and bottom, anti-friction bearings between the post and the sleeve and located in the respective counterbores,



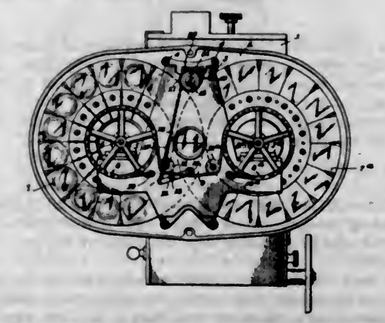
a stationary member of the lower bearing lying between the shoulder of the post and the base, and means cooperating with the bottom of the post and the bottom of the boss to impinge the shoulder against said stationary bearing member to secure the post in place.

1,686,854. ODOMETER. JOHN HAYS HAMMOND, JR., Gloucester, Mass., and ALBERT D. TRENOR, New York, N. Y.; said Trenor assignor to said Hammond. Filed July 13, 1921, Serial No. 484,379. Renewed Apr. 3, 1926. 15 Claims. (Cl. 116—115.)



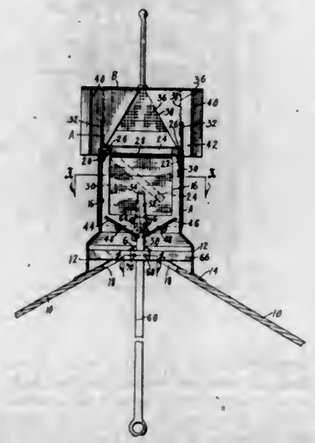
4. In an indicating device for motor vehicles, the combination of an odometer, a movable indicator, a step by step mechanism including a ratchet wheel having a predetermined number of its teeth cut away arranged to operate said movable indicator, means operated by said odometer for intermittently actuating said step by step mechanism, a plurality of indicia showing the parts of the vehicle requiring lubrication located in operative relation to said movable indicator, means for releasing said step by step mechanism, and means automatically operative upon the release of said step by step mechanism for resetting said movable indicator in its initial position.

1,686,855. PILOT FOR LIQUID-FUEL-BURNING APPARATUS. SINIUS M. HANSEN, Lynn, Mass., assignor, by mesne assignments, to A T Oil Burner Co., Lynn, Mass., a Corporation of Massachusetts. Filed July 19, 1926. Serial No. 123,491. 7 Claims. (Cl. 158—28.)



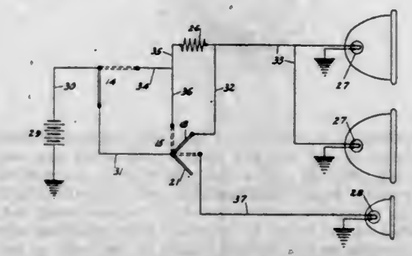
1. A pilot for liquid fuel burning apparatus comprising a main pilot; means to feed fuel to said main pilot; means to inject a charge of fuel into the flame of said main pilot when said apparatus is to be put into operation; and an auxiliary pilot arranged to provide an elongated flame and to be ignited upon the injection of fuel into said main pilot.

1,686,856. FIXTURE. WILLIAM HARRISON and EARL E. LUNCKFORD, San Bernardino, Calif. Filed Mar. 2, 1925. Serial No. 12,764. 1 Claim. (Cl. 240—134.)



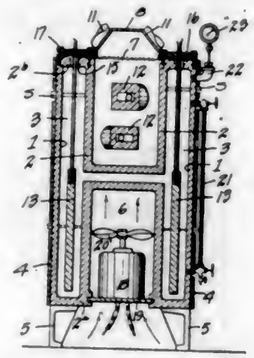
A device adapted to hold a globe having a curved flange member and a base in working relation, including a ring having inherent spring-like quality, said ring being provided with two wings forming the terminus for said ring, said ring diametrically opposite the said wings being formed with a notch and diametric side portions of said ring being curved longitudinally and vertically.

1,686,857. ANGULAR-VELOCITY STABILIZER FOR ROTATABLE GEAR-DRIVEN SHAFTS. ARTHUR J. HOLMAN, Boston, Mass. Filed Aug. 18, 1927. Serial No. 213,793. 3 Claims. (Cl. 188—83.)



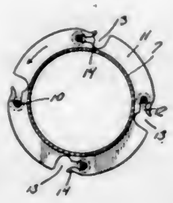
1. In a device of the character specified the combination of a pair of gear driven rotatable shafts arranged to rotate in opposite directions, brake-wheels fast mounted on said shafts, a belt arranged to contact with equal arcs on said brake-wheels, and means for varying the tension of said belt.

1,686,858. VENTILATOR FOR FARM BUILDINGS. CLARENCE A. HOSIER, Rolfe, Iowa. Filed May 2, 1927. Serial No. 188,181. 4 Claims. (Cl. 98—64.)



1. A ventilator comprising a hollow body having openings in its side walls and fabric covers therefor, a fabric partition at the top of said body, and a roof for said ventilator, said ventilator being provided with openings at the upper part of its side walls between said walls and the roof, said roof having baffle plates extending from its upper portion on its under side downwardly to the tops of said first openings in the side walls.

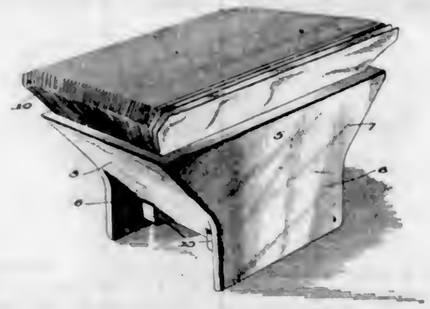
1,686,859. LIGHTING SYSTEM FOR AUTOMOBILES. EDWARD E. HUNTINGTON, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 17, 1923. Serial No. 681,165. 5 Claims. (Cl. 171—97.)



1. In a lighting system for automobiles, an electric current supply source, headlights, an auxiliary light, a primary switch, a secondary switch, electrical means for producing either bright or dim illumination in said headlights, conductors adapted to connect said electrical means and said auxiliary light with said current supply source through said switches, the secondary switch having two operating positions in one of which it is adapted to effect the dimming of the headlights and the turning on of the auxiliary light, and in the other of which it is adapted to turn off the auxiliary light and produce bright illumination of the headlights, the primary switch being arranged to effect the bright or dim illumination of the headlights when the secondary switch is in the latter position, and to effect dim illumination only when the secondary switch is in the former position.

1,686,860. ELECTRICAL HEATER. JAMES HANSON HUSSEY, Spokane, Wash., assignor of one-half to Joshua Hubbs, Spokane, Wash. Filed Sept. 13, 1927. Serial No. 219,104. 4 Claims. (Cl. 219—42.)

4. The combination in a heater with a pair of spaced walls forming an annular water chamber and an interior air chamber, and water tubes in said air chamber connected with the water chamber, of an electric heating element in the water chamber, a motor and impeller for air currents at the lower end of the air chamber, a dome at the upper end of the air chamber, and hot air flues connected to said dome.



1,686,861. BENDIX HOUSING. LAWRENCE M. KESLER, Independence, Kans. Filed May 10, 1927. Serial No. 190,235. 2 Claims. (Cl. 74—56.)

1. A Bendix cap comprising a one-piece elongated tubular body closed at one end and open at the other end, said body being provided on its open end with an integral external annular flange formed with spaced circumferentially extending elongated slots enlarged at corresponding ends, and means on the flange to cooperate with attaching bolts when engaged in the narrower ends of the slots to prevent accidental turning of the cap.

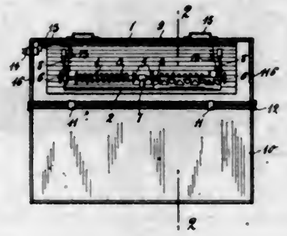
1,686,862. NAPKIN PACKAGE. JAMES W. KING, Saugerties, N. Y., assignor to The Tissue Company, Saugerties, N. Y., a Corporation of New York. Filed Nov. 19, 1924. Serial No. 750,861. 1 Claim. (Cl. 211—50.)

As an article of manufacture a fixture for dispensing triangularly folded napkins and comprising a molded body having side and end walls, the end walls sloping inwardly and downwardly and intersecting at their lower ends to support the side edges of triangular folded napkins to dispose the upper portions thereof above the tops of said side walls whereby the napkins can be readily grasped and removed, the side walls following the lines of said end walls from the upper edges of the latter a substantial distance and then flaring outwardly to define supporting flanges, and adjacent side and end walls being

cross-sectionally thickened at alined points adjacent the intersection thereof whereby to strengthen and reinforce the molded body at the point of greatest strain.

1,686,863. SCOURING DEVICE. RUSSELL B. KINGMAN, Orange, N. J., assignor, by mesne assignments, to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed May 29, 1924. Serial No. 716,609. 1 Claim. (Cl. 15—209.)

A scouring pad comprising a compact resilient spongiform abrasive mass formed of a rope of abrasive metallic fabric knotted onto itself.

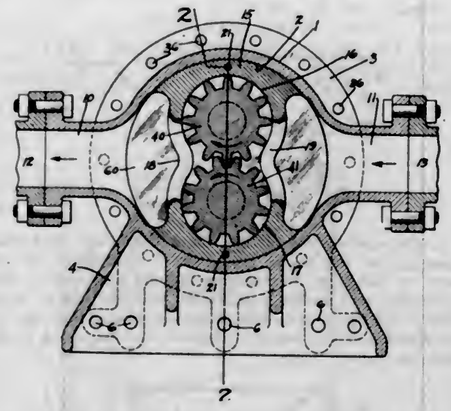


1,686,864. SCOURING-SOAP CAKE. RUSSELL B. KINGMAN, Orange, N. J., assignor to Metal Textile Corporation, a Corporation of Rhode Island. Filed Oct. 8, 1925. Serial No. 61,224. 2 Claims. (Cl. 87—23.)

1. An article for scouring and cleansing uses comprising an abrasive scouring element consisting of a resilient loosely compacted mass of comparatively open mesh metallic fabric material to form a foraminous body, and a hard soap impregnating said body and molded about the same to fill the interstices thereof.

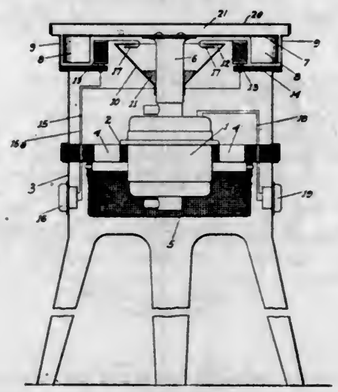
1,686,865. ELECTRIC-HEAT APPLICATOR. ALFRED KLOTZ, Munich, Germany. Filed Feb. 7, 1927, Serial No. 166,323, and in Germany Sept. 12, 1925. 3 Claims. (Cl. 174—177.)

1. A heat applicator of the character set forth, comprising an elongated downwardly deflecting main reflector, an insulating case therefor open below, bracket members convergingly extending from said reflector, an elongated upwardly deflecting secondary reflector of less width than the first said reflector adjustably mounted on said bracket members, an elongated heat element mounted on said bracket members intermediate said two reflectors in their



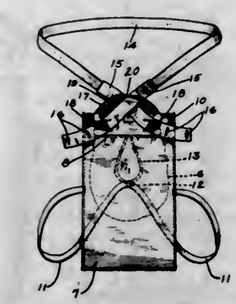
coincident focal planes, side panels hingedly secured to the two longitudinal edges of said case, and means for maintaining the side panels in their relatively adjusted positions.

1,686,866. PROCESS FOR OBTAINING ALKALOIDS. GEORG WILHELM FRIEDRICH FRANZ KNOTH, Hamburg, Germany. Filed Nov. 17, 1927, Serial No. 234,026, and in Germany Oct. 11, 1926. 3 Claims. (Cl. 260—25.)



1. A process of obtaining alkaloids which are volatile with water vapors characterized in stirring the finely divided plant material containing alkaloid with sufficient aqueous alkaline liquid to form a thin liquid pulp, introducing said pulp at the top of a column apparatus and leading steam in counter-current against the downwardly flowing pulp.

1,686,867. GEAR PUMP. LEWIS O. KUHN, Minneapolis, Minn. Filed Nov. 8, 1926. Serial No. 147,046. 14 Claims. (Cl. 103—126.)

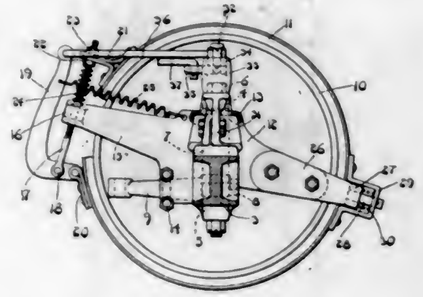


1. A device of the class described comprising a pump base having a main bore, and inlet and outlet conduits communicating with the bore, said conduits being horizontally and diametrically related, a liner element as a casting providing a twin-gear chamber, the opposite vertical walls of said chamber, being vertically slotted to provide girdlike intake and discharge orifices arranged for communication with respective conduits, and meshed gears within said chamber, each gear having shafts axially aligned at opposite sides and journaled in said base and bearing plates closing the bore and enclosing the liner, and receiving the shafts and dowels connecting said bearing plates with said liner to permit removal of the bearing plates in an axial direction.

1,686,868. ELECTRIC HEATER. HUGH GRAHAM LANDIS, San Francisco, Calif. Filed Nov. 2, 1925. Serial No. 66,212. 8 Claims. (Cl. 219—42.)

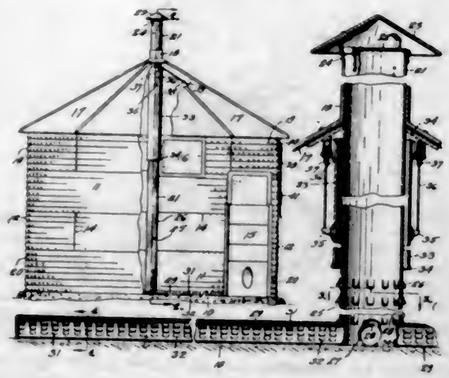
6. An electric heater comprising a vertically disposed motor, a driven spindle projecting upwardly therefrom, a horizontal plate supported by the spindle at the top, vanes depending from the plate to form a multivane centrifugal fan, electric heating elements arranged under the plate inwardly of the vanes, and a continuous deflector member extending upwardly and outwardly about the spindle and under the plate, and inwardly of the elements.

1,686,869. SUSPENSORY. ADDISON LEWIS, Minneapolis, Minn. Filed Jan. 10, 1927. Serial No. 160,105. 7 Claims. (Cl. 128—158.)



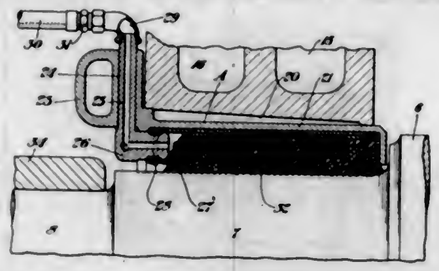
1. A suspensory, comprising in combination, an apron having slots therein, a pouch secured to said apron, a waistband for supporting the apron and pouch upon the body, and a one-piece sheet like member for detachably connecting the apron and pouch with the waistband, said member comprising oppositely extending tongues engageable with the slots in said apron to detachably secure the latter thereto.

1,686,870. VEHICLE BRAKE. RALEIGH V. LIPE, Cincinnati, Ohio. Filed Mar. 5, 1926. Serial No. 92,568. 1 Claim. (Cl. 188—194.)



A front wheel brake attachment for motor vehicles, comprising a brake drum attached to the wheel, a frame attached to the wheel steering knuckle, integral with said

frame a rearwardly extending arm with a bolt receiving lug at its upper end and a forwardly extending arm with a lug and a pin therein at its lower end, a brake band mounted in drum encircling position and a bracket attached to the middle of the brake band, an aperture in the bracket's top to take on and through itself the aforesaid pin, a lever hingedly mounted to one free end of the brake band and an upwardly extending bolt pivoted to the lever adjacent its hinge, a bolt receiving bracket

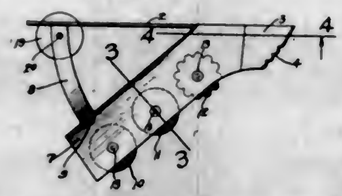


mounted on the remaining free end of the brake band and the bolt end attached thereto, an expansion spring encircling the bolt between the bracket and first mentioned extended arm for brake band easing off the drum, a pin bearing bracket attached to the axle portion of the motor vehicle and an arm with lugs mounting the pin, the outer of said lugs being linked to the lever and axially aligned with the king bolt of the steering knuckle, operable means for controlling the brake being attached to the inner of said lugs.

1,686,871. COMBINATION CORNCRIB AND GRAIN BIN. GEORGE A. MEEK, Leon, Iowa. Filed Oct. 27, 1924. Serial No. 746,184. 2 Claims. (Cl. 98—55.)

1. In a device of the class described, a grain bin, a ventilating pipe extending from above the bin downwardly to the lower portion thereof, ventilation tubes detachably connected with the lower part of said first pipe said tubes being loosely connected with the first pipe whereby their outer ends may be raised to permit their removal for the use of the bin floor, said tubes extending radially therefrom, the outer ends of said tubes terminating short of the wall of said grain bin, and ventilating holes in said tubes, said ventilating holes having tongues extending outwardly and downwardly from the upper sides thereof.

1,686,872. LUBRICATOR. LEWIS H. MILLER, Cleveland, Ohio. Filed Nov. 15, 1926. Serial No. 148,494. 4 Claims. (Cl. 308—122.)

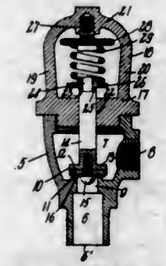


2. A lubricator for lubricating roll necks, journals and other bearing surfaces, comprising a hollow rigid body portion having one open side and adapted to be filled with a quantity of lubricant, said body being adapted to be mounted adjacent the bearing surface to be lubricated and with its open side toward said surface, and a normally collapsed, resilient, flexible fluid-tight pouch mounted between said body and said lubricant and adapted to be expanded by the admission of fluid under pressure to force said lubricant out of said body under constant pressure against the surface to be lubricated.

1,686,873. PROCESS OF MAKING OXY-COMPOUNDS OF PHOSPHORUS. CLAUDE G. MINER, Berkeley, Calif., assignor to Phosphorus Hydrogen Company, New York, N. Y., a Corporation of Maine. Filed Oct. 27, 1923. Serial No. 671,242. 5 Claims. (Cl. 23—165.)

1. Process of producing an oxy-compound of phosphorus, comprising reacting with water upon phosphorus in presence of an alkali metal which is intermixed with the phosphorus in the form of a condensate.

1,686,874. PLOW. ANDREW S. NELSON, Maple Plain, Minn. Filed Aug. 9, 1926. Serial No. 128,177. 10 Claims. (Cl. 97—129.)

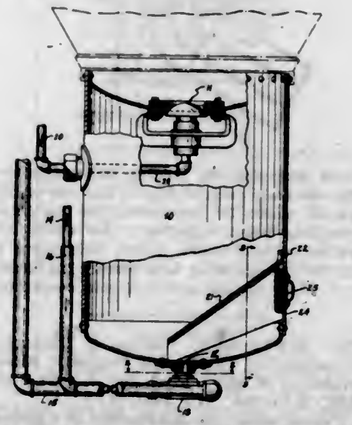


1. The combination with a plow moldboard, of a disk mounted on the under side thereof rearwardly of the point of the plow, and secured directly and only to the moldboard, and having a peripheral edge adapted to sever alfalfa and other roots and projecting beyond the edge of the moldboard, the rotative plane of the disk being at an angle to the horizontal.

1,686,875. SPRING-PRESSURE RELIEF VALVE. IRA I. NELSON, Boston, and CHETWOOD SMITH, Worcester, Mass.; said Smith assignor to said Nelson. Filed Apr. 28, 1927. Serial No. 187,378. 4 Claims. (Cl. 137—53.)

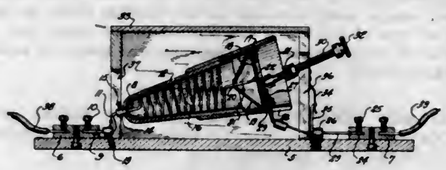
1. A pressure relief valve having, in combination, a casing provided with an inner and an outer chamber, with a fluid inlet entering the inner chamber and a fluid discharge outlet from the outer chamber, a movable valve member between said chambers adapted to be operated by excess pressure in said inner chamber to open a passage provided between said chambers, a valve stem on said

movable valve member projecting through the top of the casing, a spring outside the casing connected to the valve stem, and means to adjust the pressure of said spring to



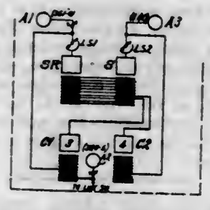
a predetermined amount, and said means being adapted to give an audible signal when the maximum limit of pressure adjustment is reached.

1,686,876. METHOD OF MANUFACTURING MAGNESITE BRICK. BERRY MARVEL O'HARRA, Westfield, and EDGAR A. SLAGLE, Trenton, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1926. Serial No. 136,203. 4 Claims. (Cl. 25—156.)



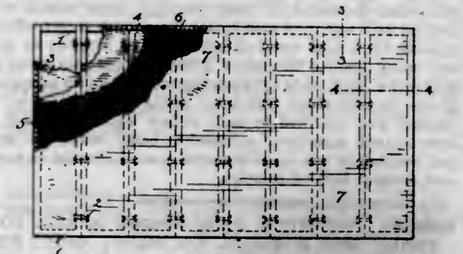
1. Process of manufacturing magnesite brick which consists in crushing calcined magnesite into small particles, mixing with said particles water containing magnesium chloride in amount equivalent to 5 to 10 per cent of the calcined magnesite, adding to said mixture an aqueous solution of sodium hydroxide or ammonium hydroxide in amount approximately equivalent to the magnesium chloride, thereby to form magnesium hydroxide in contact with the particles of magnesite, compressing the mixture into bricks, burning the bricks, whereby the magnesium hydroxide is converted to magnesium oxide, and continuing the burning at a higher temperature to convert the magnesium oxide into periclase.

1,686,877. ABRASIVE-SUPPLY TANK. LOUIS D. PEIK, Mishawaka, Ind., assignor to American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 21, 1926. Serial No. 136,781. 4 Claims. (Cl. 51—12.)



3. A sand blast tank including an outlet in the lower portion thereof, a port in the wall of said tank, and a shield attached to said wall and surrounding said port, said shield being extended to overlie said outlet.

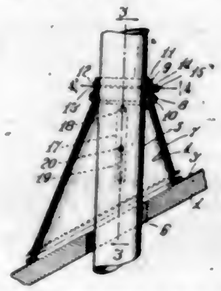
1,686,878. INTERFERENCE AND STATIC ELIMINATOR. EARL C. RAASCH, Waupun, Wis. Filed Mar. 30, 1927. Serial No. 179,512. 4 Claims. (Cl. 250—20.)



1. The combination with a radio receiver including an aerial circuit, of an interference eliminating device interposed in said circuit and comprising in series a choke member and a condenser member, a conical insulating housing enclosing said members, and a condenser adjusting member projecting from the conical housing.

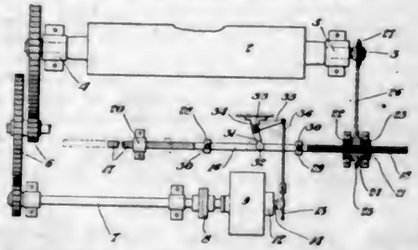
1,686,879. AUTOMATIC TELEPHONE SYSTEM. NORMAN H. SAUNDERS, Homewood, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 30, 1927. Serial No. 179,443. 13 Claims. (Cl. 179—17.)

1. In an automatic telephone system, a telephone exchange terminating subscribers' lines, a large portion of said lines being arranged for loop operation, while only a small portion of the lines are arranged for simplex operation over the two sides of the line and a ground return, selectors and connectors in said exchange for completing calls initiated on loop lines, said switches being operated according to the loop system of control, and selector repeaters in said exchange for extending to connectors connections originated on the simplex lines, said selector repeaters being arranged to operate over a simplex circuit and to repeat loop impulses to the connectors.



1,686,880. PICTURE SCREEN. JAMES M. SHAY, Cleveland, Ohio, assignor, by direct and mesne assignments, of one-third to Harry J. Lindig and one-third to Homer P. Yoder, Cleveland, Ohio, and one-third to Shay Motion Picture Screen Co., Springfield, Ill., a Corporation of Illinois. Filed Oct. 5, 1925. Serial No. 60,459. 1 Claim. (Cl. 88—24.)

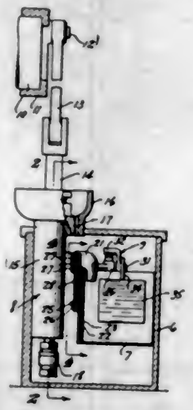
A picture screen comprising a supporting frame made of sections detachably secured together, said sections each having its front face formed of a sheet of fabric impregnated



with a pure white paint, and said sections having their front faces in the same plane with the edges of the fabric on one abutting the edges of the fabric on another, spacing strips secured to the front face of the frame, a fine mesh wire screen secured to said strips, spacing strips on the outer side of the screen and secured to the frame, and a sheet of white translucent fabric secured upon the outer spacing strips.

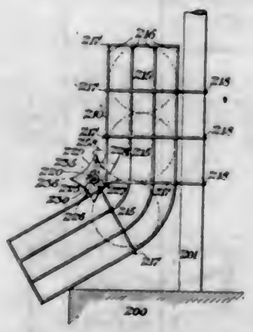
1,686,881. ROOF FLASHING. ROBERT J. STEPHENSON, Chicago, Ill. Filed Mar. 17, 1927. Serial No. 176,047. 4 Claims. (Cl. 285—31.)

1. A roof flashing comprising a base in the form of a flat metal plate having an extensible sleeve consisting of two overlapping sleeve sections, extending from one face thereof, connecting means between the sleeve sections for limiting their separation, a continuous inwardly tapering soft metal collar at the free end of the sleeve, and contractible means surrounding the soft metal collar and adapted to deform the collar and draw it into snug engagement with a pipe.



1,686,882. AUTOMATIC LIMIT STOP. WALTER C. SWANCOTT, Cleveland, Ohio. Filed Aug. 12, 1927. Serial No. 212,522. 3 Claims. (Cl. 192—141.)

2. The combination with a motor and a control element for said motor, of means operated by said motor for automatically operating said control element, said means comprising a screw shaft mounted for longitudinal reciprocatory movement and locked against rotary movement, a nut having threaded engagement with said shaft, said nut being journaled in fixed bearings, drive means connecting said nut with said motor whereby said nut will be rotated when said motor is operated, the rotation of said nut being adapted to compel a longitudinal movement of said screw shaft, stop collars adjustably mounted at spaced points on said shaft, and lever mechanism adapted to be engaged and operated by said collars when said shaft is reciprocated, said lever mechanism being connected with and adapted to operate said motor control element to move said element into off position.

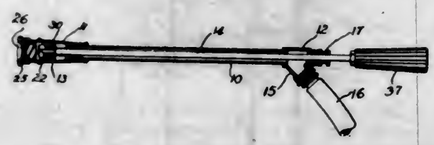


1,686,883. OIL-WELL BAND-WHEEL SPEED CONTROL. DELL G. TAYLOR, Los Angeles, Calif. Filed Mar. 29, 1926. Serial No. 98,309. 1 Claim. (Cl. 123—118.)

A device for controlling the speed of a driven mechanism comprising a sump tank, a receptacle mounted therein having a drainage port for discharging liquid at a constant rate from said receptacle into said sump, a valve for adjusting the flow of fluid through said port, a pump operated by said mechanism for transferring liquid from said sump to said receptacle whereby the rate of liquid

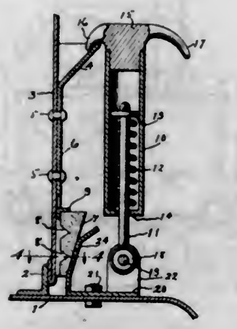
supply thereto is proportionate to the speed of said pump and mechanism, a float arm pivotally mounted on said tank, a float on said arm, and a double throw electrical contact switch operated by movement of said arm in either direction and controlling the driver.

1,686,884. MINE-DROPPING APPARATUS. ALBERT D. TRENOR, New York, N. Y., assignor to John Hays Hammond, Jr. Original application filed June 22, 1917, Serial No. 176,323. Divided and this application filed Sept. 10, 1920, Serial No. 409,376. Renewed May 6, 1927. 12 Claims. (Cl. 114—18.)



12. In a magazine for holding and releasing bombs, means for normally maintaining all but one of the bombs in alinement, means for restraining the remaining bomb, said restraining means including a star wheel having the configuration of said bombs, means including a fluid actuated device for operating said restraining means and a dashpot for delaying the action of said operating means.

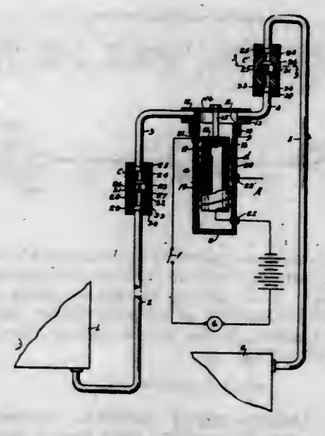
1,686,885. SPRAY GUN. GEORGE E. TRISLER, Salem, Ohio, assignor to The Deming Company, Salem, Ohio, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,656. 2 Claims. (Cl. 299—117.)



1. In a spray nozzle, the combination of a hollow casing member comprising the body of the nozzle through which fluid passes entering at one end of the member and discharging at the other end of the member, a conduit joined to the inlet end of the casing member, the outlet end of

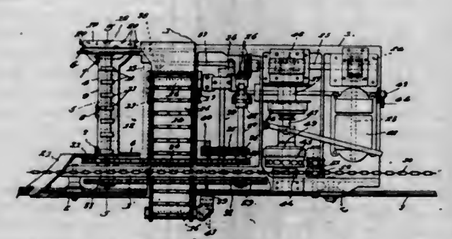
the casing member being internally threaded with a multiple thread, a cylindrically formed head of diameter equal to the internal diameter of the threaded portion of said hollow casing member, said head having multiple external threads on that portion disposed toward the inlet end of said hollow casing member, said threads being in engagement with the inner portion of the threads on said casing member, the end portions of the head disposed toward the discharge end of the hollow casing member being smooth and being in contact with the outer portion of the internal

threads in the hollow casing member, said head having longitudinally extending slots cut in its surface through the threaded portion thereof and of a greater depth than the depth of the threads, and extending in the direction of the flow of fluid a limited distance beyond the external threads, the number of slots equalling the number of threads in the casing member, means removably secured to the discharge end of said casing and having a centrally disposed orifice, and a stem secured to the end of the head remote from the discharge end of the casing and extending through said conduit.



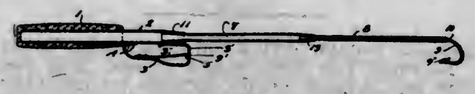
1,686,886. HOOD CLAMP FOR AUTOMOBILES. LOUIS C. VANDERLIP, Elkhart, Ind. Original application filed Dec. 11, 1926, Serial No. 154,055. Divided and this application filed June 24, 1927. Serial No. 201,041. 8 Claims. (Cl. 292—128.)

1. In an automobile hood clamp, the combination of a hood, a hood abutment within the hood, a spring actuated hold-down clamp positioned exteriorly of the hood and adapted to exert downward pressure upon the hood, and yieldable, non-metallic cam means carried by the hood operative when the hood is depressed by said clamp for projecting the hood laterally into engagement with said abutment.



1,686,887. FLUID ELEVATING AND FEEDING MEANS. LESTER E. VAN HISE, Altadena, Calif., assignor to James V. Baldwin, Los Angeles, Calif. Original application filed May 12, 1925, Serial No. 29,824. Divided and this application filed July 26, 1928. Serial No. 295,466. 2 Claims. (Cl. 103—1.)

1. A device of the character disclosed, including two concentric tubular members and a wire coil surrounding one of said members for heating said member upon electrifying the wire coil; the inner tubular member being hermetically closed at one end and the other tubular member being formed with a hermetically closed base portion, said inner tubular member having its open end directed



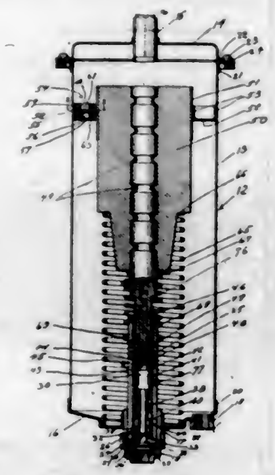
toward and spaced from the base portion; and valve controlled means connected to the open end of said other member to conduct liquid to and from said members.

1,686,888. SHOVEL. JOHN P. WALTER, Allentown, Pa. Filed Nov. 10, 1926. Serial No. 147,482. 7 Claims. (Cl. 262—9.)

1. A power shovel comprising a frame, a rotary shovel at the front end of the frame, a conveyor, a rocking plate for transferring the material from the shovel to the conveyor and a power device for operating said conveyor and the rocking plate, said power device driving a shaft connected by one train of gearing to the rotary cutter and by another train to the rocking plate.

1,686,889. GAFF HOOK. FRANK C. WOODS, Cleveland, Ohio. Filed June 15, 1927. Serial No. 199,000. 6 Claims. (Cl. 43—5.)

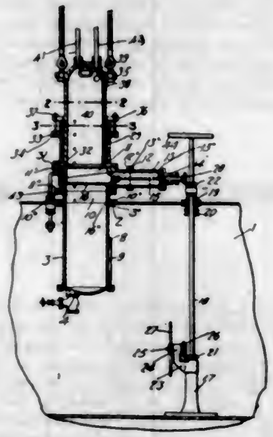
1. A gaff hook comprising collapsible, telescoping sections, each of substantially constant cross section throughout its length except at its ends, the telescoping ends of



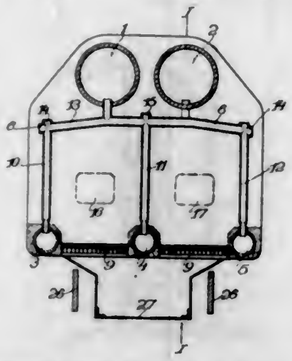
the several sections having relatively abrupt cooperating tapers and flares for effecting frictional retention of the sections in an extended condition while allowing easy and free sliding of the sections telescopically when such abrupt tapers are not in frictional engagement.

1,686,890. EXERCISER. ROBERT W. WOOD, Appleton, Wis. Filed Feb. 11, 1926. Serial No. 87,573. 1 Claim. (Cl. 272—79.)

A physical exerciser comprising a ball having its greatest mass peripherally disposed and provided wtih knobs on its opposite sides, cords passing through openings in the knobs, swivel connections on the ends of the cords, and connecting members having spaced notches engaged by the swivel connections.



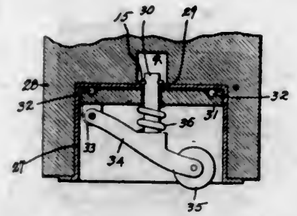
1,686,891. LIQUID-SUPPLY SYSTEM. CHESTER H. BRASELTON, New York, N. Y. Filed June 6, 1922. Serial No. 566,380. 6 Claims. (Cl. 103—28.)



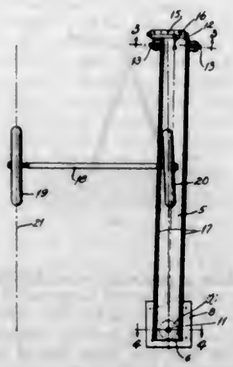
1. In a fuel supply system, the combination of a tank; a pump cylinder within the tank; a weighted plunger adapted to have axial movement in the cylinder; means including a spring for holding said plunger resiliently in a normal position; a ring positioned around the plunger and extending to the inner wall of said tank, adapted to restrain movement of fluid thereabove; and means including a valve adapted to permit the passage of gases only therethrough positioned in said ring.

1,686,892. ESCAPE DEVICE FOR SUBMARINES. HENRY BROWNLEE, Port Hope, Ontario, Canada. Filed Jan. 18, 1928. Serial No. 247,703. 4 Claims. (Cl. 114—16.4.)

1. The combination with the shell or wall of a submarine having an orifice therein, of a chamber depending from such orifice having an entrance opening, a closure for such opening, a valve chamber located exteriorly of the submarine wall and forming an extension of the entrance chamber, a cut-off extending transversely of the valve chamber to form a closure, a diving bell, means for forming a sealed connection between the lower end of the diving bell and the valve chamber, and means within the interior of the submarine for withdrawing the slide valve.



1,686,893. HIGH-PRESSURE STEAM BOILER FOR LOCOMOTIVES. JACOB BUCHLI, Winterthur, Switzerland. Filed Mar. 9, 1927, Serial No. 174,079, and in Germany Apr. 14, 1926. 4 Claims. (Cl. 122—94.)

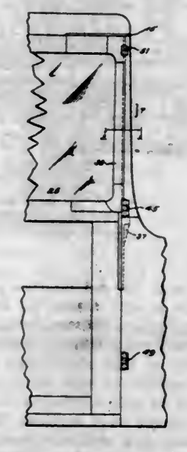


1. A locomotive boiler, comprising in combination, a pair of upper drums, lower drums, and a firebox comprising a front wall, a rear wall, and a plurality of fork shaped water tube elements arranged close together longitudinally of the locomotive boiler and forming the lateral walls and the roof of the fire-box to protect the upper drums and an intermediate wall inside the latter, said fork shaped tube elements consisting of three vertical tubes beaded into the lower drums and of a horizontal tube connecting said vertical tubes together, the horizontal tube of each tube element being provided with a single vertical branch and said branches being alternately beaded into said upper drums.

1,686,894. RECEDING OR DISAPPEARING CASTER OR ROLLER. HOMER A. BUCKERT, St. Louis, and EARL K. HALL, University City, Mo. Filed Nov. 23, 1925. Serial No. 70,824. 4 Claims. (Cl. 16—33.)

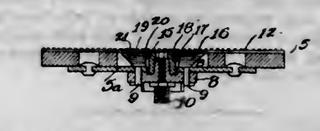
1. In a device of the class described a support having a recess therein, a housing located in said recess, a plate rotatably mounted in said housing, an arm pivotally secured at one end to said plate, a roller carried by the opposite end of said arm, a shank carried by said arm and extending through said plate and housing, and means located between said arm and said plate and surrounding said shank for normally causing said roller to project below said housing.

1,686,895. WHEEL-ALIGNMENT INDICATOR. HOMER A. BUCKERT, St. Louis, and EARL K. HALL, University City, Mo. Filed May 12, 1926. Serial No. 108,506. 2 Claims. (Cl. 33—203.)



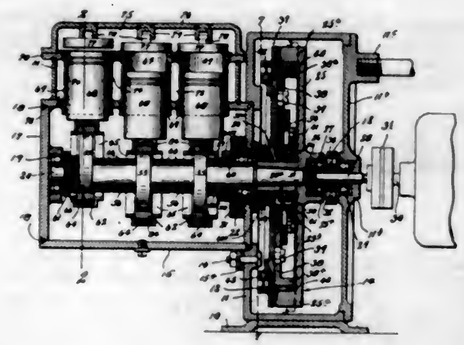
1. A wheel alignment indicator comprising an elongated horizontally swinging member pivoted at one end and having upturned longitudinal edges, said member adapted to be moved by the thrust of a mis-aligned wheel, an indicating finger carried by said finger at one end, and a graduated gauge located below the projecting end of said finger whereby the amount of movement of said arm can be ascertained.

1,686,896. AUTOMOBILE CREEPER. HOMER A. BUCKERT, St. Louis, and EARL K. HALL, University City, Mo. Filed Feb. 2, 1927. Serial No. 165,306. 6 Claims. (Cl. 280—61.5.)



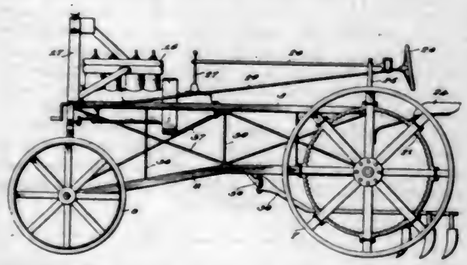
1. An automobile creeper comprising a body portion having recesses in its underneath surface, swiveling rollers carried by said body portion and located in said recesses for supporting the same, and means for resiliently supporting said rollers so that the same can recede into said recesses and the entire body portion rest flat on a floor when said body portion is subjected to a weight in excess of a predetermined amount and again be automatically raised to its original position when said excess weight is removed.

1,686,897. CORNER CONSTRUCTION FOR CLOSED VEHICLES. ALEXANDER CARLSON, Detroit, Mich. Filed Sept. 7, 1927. Serial No. 217,933. 8 Claims. (Cl. 296—28.)



1. An automobile body of the closed type having front corner assemblies of small dimension to provide clear vision for the driver, said assemblies including a top-supporting post extending from below the belt line to the roof and comprising a transverse web of small width, forwardly and rearwardly projecting ribs at the outer and inner sides, respectively, of the upper portion of the post, said web being widened adjacent the belt line and offset to provide a box-like reinforcement open at the outer side and providing a seat to house a hinge leaf, said outer rib extending along and projecting forwardly of the open side of the seat, said inner rib terminating adjacent the belt line to permit closure past the same of the thick lower body of a cooperating door but overlapping and merging with the heavy body of material at the inner wall of said seat and a transverse rib on the forward face of said web at the location of said body merging with the outer rib and tying together said inner and outer ribs whereby to provide a structure of small bulk and weight having a rigid exposed portion of small dimension adapted for close nesting with a door and windshield while providing a maximum resistance to flexion in the vicinity of the belt line.

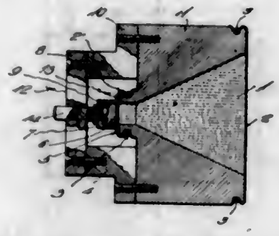
1,686,898. ABRASIVE ARTICLE. RICHARD P. CARLTON, St. Paul, Minn., assignor, by mesne assignments, to The Stratmore Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 11, 1927. Serial No. 182,886. 5 Claims. (Cl. 51—197.)



1. An abrasive element comprising a relatively rigid paper backing, a cloth backing adhesively secured thereto, and abrasive material adhesively secured to said cloth, the composite structure being sufficiently ductile to permit of distortion of a part without actual rupture and without material distortion of the entire backing.

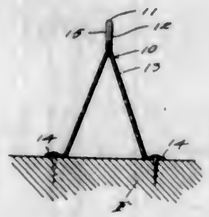
1,686,899. COMPRESSOR. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. Chicago, Ill. Filed July 25, 1927. Serial No. 208,143.

1. In a compressor, the combination of a sealed casing, compressing means in said casing, an actuating shaft for said means and having one end projecting from said casing, a sectional fly wheel comprising a driven section fixed to the projecting end of said shaft, and a driving section loosely mounted relative to said shaft, centrifugally operable means carried by said driving section and adapted to operatively interengage said sections for actuating said compressing means, and elements cooperating with said shaft and said casing, a spring for maintaining said seal elements under normal sealing pressure, said seal elements cooperating with said fly wheel sections and being controlled by said centrifugally operable means to increase the sealing pressure when said compressor is idle.



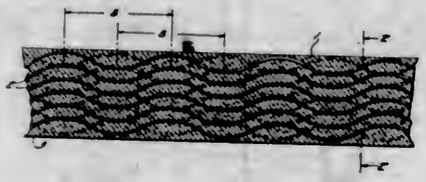
1,686,900. CULTIVATOR. JOSIAH E. COLEMAN and JESSE K. COLEMAN, Fort Smith, Ark. Filed Jan. 13, 1927. Serial No. 160,912. 1 Claim. (Cl. 180—1.)

A tractor frame comprising front and rear arch shaped frame members connected by longitudinally extending frame members, said arch shaped members being formed of double spaced apart vertical side members connected at their lower ends whereby to provide an axle housing at the opposite sides of the lower ends of said arch members of a length equal to the distance of the space between said double vertical side members.



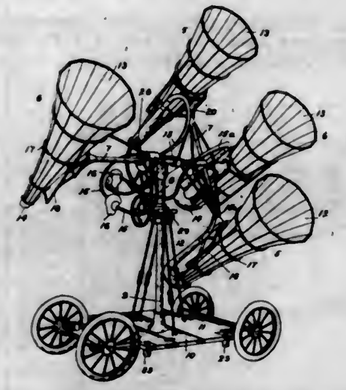
1,686,901. MICROPHONE. CHARLES A. CULVER, Northfield, Minn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed July 1, 1927. Serial No. 202,962. 2 Claims. (Cl. 179—132.)

1. A microphone comprising a chamber enclosing a liquid content, flexible walls enclosing opposite ends of said chamber, metallic foils carried by the exterior of said flexible walls, a microphonic device positioned in electrical contact with said metallic foils and located with respect to



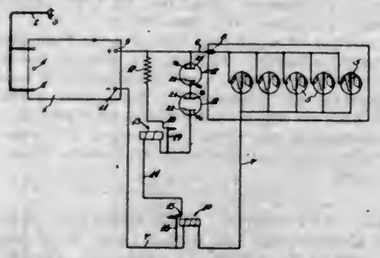
said flexible walls for receiving forces incident thereon from said liquid content corresponding to pressures derived from sound waves impinging against said flexible walls.

1,686,902. CONCRETE-FLOOR SCREED LEVELER. ALVIN DUDFIELD, Liberty, and GRANVILL P. MORRIS, Kansas City, Mo. Filed Feb. 26, 1927. Serial No. 171,258. 1 Claim. (Cl. 72—122.)



A screed holder comprising a conduplicate sheet, the fold of which is notched for the reception of a straight edge bar, the ends of the sheet being provided with means whereby they may be attached to a form, portions of the sheet abutting from the fold to a point spaced therefrom a distance greater than the depth of the notch, the remaining portions of the sheet diverging from one another and adapted to be bent at varying angles thereby providing an adjustable holder.

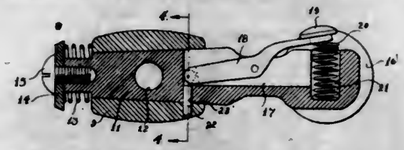
1,686,903. BRAKE LINING. FRANK J. EISENHARDT, Waukegan, Ill., assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1926, Serial No. 134,832. Renewed Feb. 17, 1928. 17 Claims. (Cl. 188—259.)



1. As a new article of manufacture, a body of dense, tough, material, having embedded therein, and extending approximately parallel to the surface thereof, a plurality of continuous wires each slightly curved in wave-like form, and arranged in a plurality of groups, the constituent wires of each of said groups lying in a separate plane, and all said planes being parallel one to another and sunk at different depths from the surface of the strip.

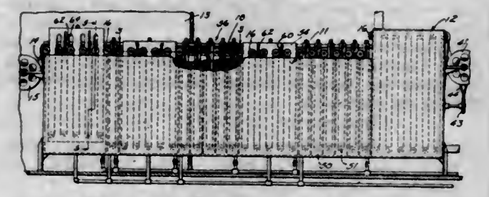
1,686,904. SOUND-LOCATING APPARATUS. HIRAM B. ELY, U. S. Army, Philadelphia, Pa. Filed Sept. 14, 1926. Serial No. 135,483. 2 Claims. (Cl. 181—26.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A sound locating apparatus embodying a wheeled mount, a pedestal hinged to the mount, a cross-arm support and pintle adapted to be mounted as a unit on the pedestal and to be carried on the mount when removed from the pedestal, a plate on each extremity of the cross arm support, a group of horns each including a cradle and saddle for removable attachment to the plate, a carrier including a pair of U-shaped frames securable to the mount and having yielding supports for receiving the horns when dismounted from the cross-arm support.



1,686,905. VOLTAGE REGULATOR. EDGAR W. ENGLE, Lake Forest, and ELMER W. LINCOLN, Chicago, Ill., assignors to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Sept. 17, 1926. Serial No. 136,169. 8 Claims. (Cl. 250—27.)

1. In a device of the class described in combination, a source of "A" current, a plurality of thermionic tube filaments, connections between said source and said filaments, a voltage regulating circuit comprising a valve cell, a resistance, means to connect said cell in parallel with said filaments upon the passage of current through one or more of said filaments, and means for connecting said resistance in parallel with said valve cell upon the passage of a predetermined current through said valve cell.

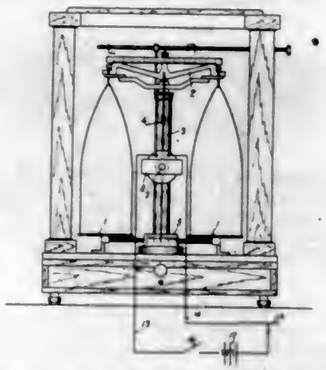


1,686,906. SAFETY LOCK FOR GAS-STOVE VALVES. LUIGI FABA, Detroit, Mich. Filed Sept. 7, 1926. Serial No. 133,965. 2 Claims. (Cl. 251—164.)

1. A stop cock of the class described comprising: a shell having a plurality of radially extending openings formed therein adjacent one end thereof and provided with a recess in said end, the base of said recess lying in the same plane as the base of said openings; a plug rotatably mounted in said shell, said plug having a radially extending opening formed therein, said opening being adapted for registering with the openings formed in said shell upon rotation of said plug to predetermined positions, said plug having a longitudinally extending recess formed adjacent one end communicating at its outer end with a transversely extending pocket; a coil spring positioned in said pocket; a rocker arm pivotally mounted in said longitudinally extending recess and engaging at one end the outer end of said

spring; a locking pin pivotally connected to the other end of said rocker arm and engaging in the opening formed in said plug, and adapted for projecting into the openings formed in said shell upon registering of the opening formed in said plug with said openings in said shell.

1,686,907. FILM-DEVELOPING MACHINE. HARRY K. FAIRALL, Los Angeles, Calif., assignor to Binocular Stereoscopic Film Company, Los Angeles, Calif., a Corporation of California. Filed May 18, 1927. Serial No. 192,311. 3 Claims. (Cl. 271—2.3.)

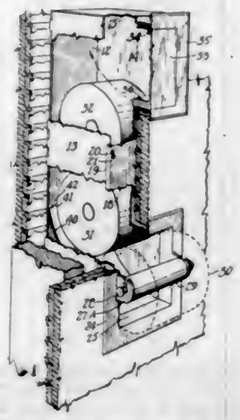


1. In a film developing apparatus, the combination of: driven rollers on which a film is carried; drive rollers arranged at intervals in said apparatus, said drive rollers being adapted to drive said film; and means for driving said drive rollers, said drive rollers being driven progressively faster as the backward end of said apparatus is approached, said drive means including a drive unit having a plurality of drive pulleys, a driven pulley drivably associated with said drive rollers, and belts whereby said drive pulleys operate said driven pulleys.

1,686,908. LENS FOR HEADLIGHTS. HARRY C. FOSTER, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind., a Corporation. Filed Feb. 14, 1927. Serial No. 167,997. 1 Claim. (Cl. 240—48.4.)

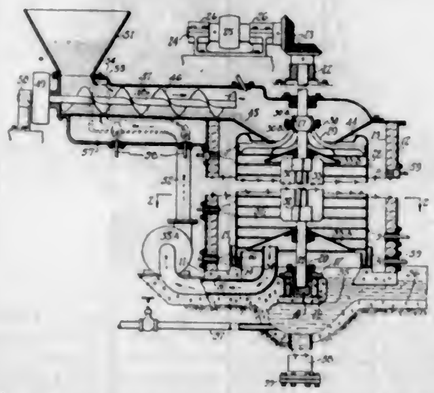
A lens having a plurality of vertical flutes and horizontal prisms, said prisms being divided into sections of different refractive power, said horizontal prisms dividing the lens into a plurality of zones, the uppermost and lowermost zones being narrower and of greater refractive power than the central zone, and a plurality of horizontally extending flutes associated with the uppermost and lowermost zones.

1,686,909. OSCILLATION-RETARDING DEVICE. JOHN G. FRAYNE, Yellow Springs, Ohio, and FRANCIS D. MORAN, Chicago, Ill. Filed July 25, 1927. Serial No. 208,143. 10 Claims. (Cl. 188—104.)



1. The combination of a moving part arranged to oscillate and having a position of rest, a magnet, and a member connected with said part and movable through the field of said magnet, said member having the characteristic of being non-magnetic as a whole and possessing the property of conducting electrical currents induced by the magnetic field of the magnet.

1,686,910. LEVER ARCH. HERXTHAL F. FREASE, Canton, Ohio. Filed Mar. 15, 1926. Serial No. 94,757. 22 Claims. (Cl. 189—37.)

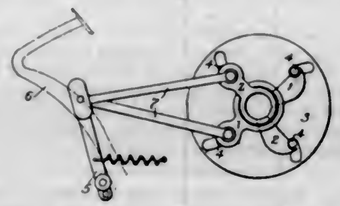


1. A structural member including triangular arch struts having apexes and bases opposite the apexes, means providing apex abutments between adjacent apexes, and means spaced from the adjacent apexes connecting the bases opposite the apexes, and an arch bar secured along the outer edges of the arch struts.

1,686,911. PAPER-DISPENSING DEVICE. ROGNOR F. FREDLUND, Portland, Oreg. Filed Feb. 26, 1927. Serial No. 171,102. 3 Claims. (Cl. 242—55.2.)

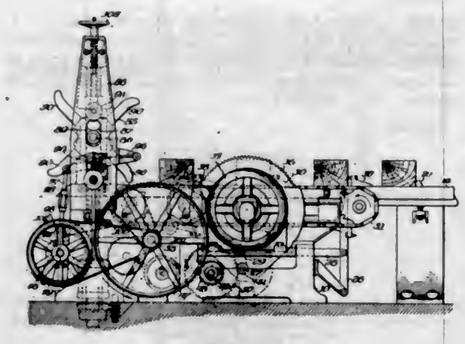
1. A cabinet for holding a plurality of rolls of paper in a superimposed contacting position consisting of an upright box member having a curved bottom sloping downwardly toward the front thereof; an outlet therefor provided with a roller bracket; a roller mounted in said bracket across said outlet; and an inlet opening at the top of said cabinet provided with a closure member.

1,686,912. SMELTING APPARATUS. CHARLES E. GLESSNER, Portland, Oreg. Filed June 9, 1927. Serial No. 197,597. 2 Claims. (Cl. 266—10.)



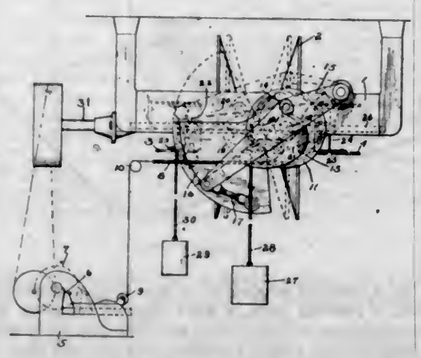
1. A smelter having a centrifugal extractor having a vertical axis and having annular grooves formed therein; a metal collector at the lower end of said extractor forming a seal therefor; means for circulating air downwardly through said extractor; and means for feeding crushed ore uniformly into the top of said extractor.

1,686,913. PURIFICATION OF BENZOIC ACID AND ITS DERIVATIVES. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 18, 1927. Serial No. 227,063. 9 Claims. (Cl. 260—108.)



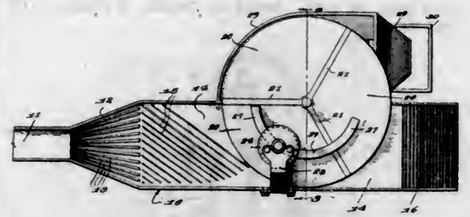
1. A method of separating benzoic acids from phthalic acids which comprises subjecting a mixture containing benzoic acids and phthalic acids to the action of steam at a temperature not substantially above that which the phthalic acids are substantially transformed into the anhydrides, permitting the steam and benzoic acid vapors to leave the mixture and separating the benzoic acids from these vapors.

1,686,914. AUTOMATIC GEAR-SHIFTING DEVICE. JOHN KIRKEBY, San Luis Obispo, Calif. Filed Sept. 22, 1927. Serial No. 221,213. 1 Claim. (Cl. 74—58.)



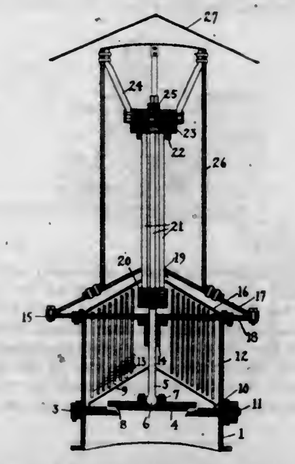
In the gear shifting device described, the operating mechanism comprising two opposed dogs or cams adapted to be rocked from a common center, means for rocking said cams one quarter turn in each direction by the movement of the clutch pedal, four ratchets disposed to engage alternately by the forward and backward movement of said dogs, whereby the shifting cam is revolved, first one quarter turn to neutralize the gears and the next quarter turn to engage the gear selected by the operator.

1,686,915. WOODWORKING MACHINE. FRANKLIN L. LANE, Beloit, Wis., assignor to P. B. Yates Machine Company, Beloit, Wis., a Corporation of Wisconsin. Filed Jan. 12, 1925. Serial No. 1,742. 23 Claims. (Cl. 144—3.)



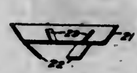
1. In a woodworking machine, means for feeding railway ties sidewise through the machine, including a support for the tie, two feeding devices arranged in tandem for moving the tie along corresponding portions of the support, and means for operating the two devices in synchronism at relatively different linear speeds along the support, the slower device serving to move the ties continuously along one portion of the support, and the faster device serving to move the ties intermittently along another portion of the support.

1,686,916. MECHANICALLY-OPERATED SPEED-CONTROLLING DEVICE. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Aug. 23, 1922. Serial No. 583,897. Renewed Mar. 1, 1928. 18 Claims. (Cl. 74—7.)



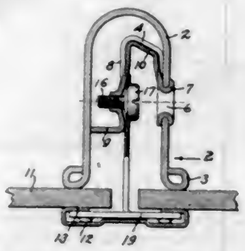
1. The combination with a machine having a movable element and a variable speed transmission mechanism for driving said machine, said transmission mechanism having adjustable parts, of a rotating drum, a cam operable with said drum, a beam operated in one movement by said cam, means operable by the movement of said beam for shifting the adjustable parts of said transmission mechanism, a flexible element extending from said drum to said movable element of the machine for causing said drum to rotate in one direction incident to the movement of said element, and means for operating said drum and beam operable means to reverse movement.

1,686,917. MAGNETIC ORE SEPARATOR. WILLIAM L. MCADAMS, Coquille, Oreg. Filed Mar. 16, 1926. Serial No. 95,055. 2 Claims. (Cl. 209—222.)



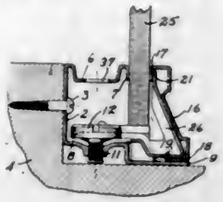
2. A magnetic ore separator comprising a trough, a rotatable member journalled upon an axis fixed at the side of the trough, said rotatable member being composed of an underplate of insulating material, spaced magnetizable segments mounted upon the upper surface of said insulating material, each of said segments being of sufficient size to completely bridge the trough when disposed thereover, and a magnet located above the rotatable member and having a shoe adapted to contact with said segments.

1,686,918. SAFETY APPLIANCE FOR INFLAMMABLE-MATERIAL CONTAINERS. RICHARD J. MONNETT, St. Louis, Mo., assignor to Monnett Company, El Dorado, Ark., a Corporation of Arkansas. Filed Mar. 3, 1927. Serial No. 172,510. 11 Claims. (Cl. 220—89.)



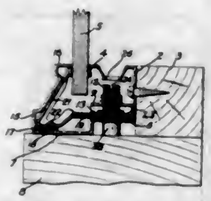
1. A vapor outlet for inflammable material containers, comprising a vent pipe, a pressure relief valve disposed therein, and thermo-expansive means in said pipe and operable on said valve for closing said pipe under influence of heat.

1,686,919. NONSLIP FLOOR. DANIEL J. MURNANE, San Francisco, Calif. Filed June 14, 1924. Serial No. 720,080. 6 Claims. (Cl. 94—5.)



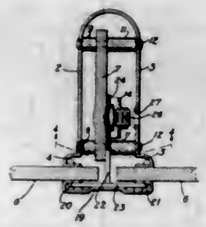
5. An inlay for a non-slip floor comprising a metallic shell for seating a plate forming a tread, and studs on said shell and extending in substantially opposite directions for simultaneously anchoring the plate and shell in the floor.

1,686,920. SASH FOR HOLDING GLASS. DANIEL J. MURNANE, San Mateo, and DANIEL J. MURNANE, Jr., San Francisco, Calif., assignors to Non-Pressure Glazing Company, San Francisco, Calif., a Corporation of California. Filed Sept. 16, 1925. Serial No. 56,657. 8 Claims. (Cl. 189—78.)



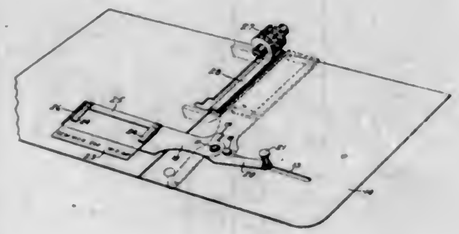
1. A sash for holding glass comprising a stationary member adapted to engage one side of the glass, an adjustable member adapted to engage the other side of the glass, a tie bar secured to one of said members and having a corrugated end, a bracket on the other member, and clamping means embedding in said corrugated end for locking the bar to the bracket.

1,686,921. SASH FOR HOLDING GLASS. DANIEL J. MURNANE, San Mateo, and DANIEL J. MURNANE, Jr., San Francisco, Calif., assignors to Non-Pressure Glazing Company, San Francisco, Calif., a Corporation of California. Filed Sept. 16, 1925. Serial No. 56,658. 5 Claims. (Cl. 20—56.4.)



1. In a sash for holding glass, a stationary sash bar comprising a wall adapted for connection to the supporting structure, a top flange integral with the wall and forming a fixed glass-engaging edge, a base flange integral with the wall and providing a tie bar seat, an adjustable sash bar adapted to engage the opposite side of the glass, a tie bar interlocked with the adjustable sash bar and extending over said seat, and means for locking the tie bar to the seat.

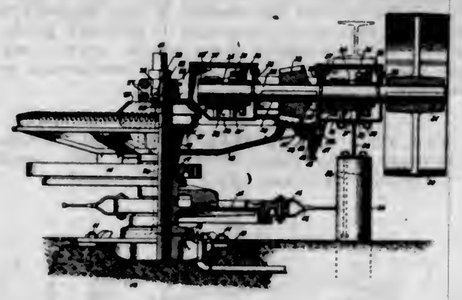
1,686,922. SASH FOR HOLDING GLASS. DANIEL J. MURNANE, San Mateo, Calif., assignor to Non-Pressure Glazing Company, San Francisco, Calif., a Corporation of California. Filed May 22, 1926. Serial No. 110,874. 13 Claims. (Cl. 20—56.4.)



1. A sash for holding plate glass comprising a stationary bar adapted to engage one side of the glass, an adjustable bar adapted to engage the other side of the glass, a tie bar fixed to said adjustable bar and engageable with said stationary bar, a bridge secured to said stationary bar, and a screw threaded in said bridge for clamping said tie bar to said stationary bar when said bars are in assembled position.

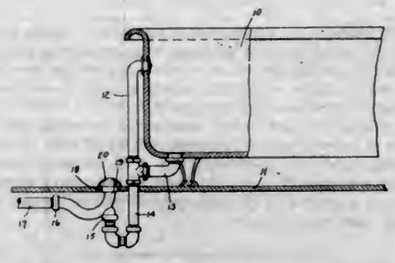
1,686,923. SASH FOR HOLDING GLASS. DANIEL J. MURNANE, San Mateo, Calif., assignor to Non-Pressure Glazing Company, San Francisco, Calif., a Corporation of California. Filed May 22, 1926. Serial No. 110,875. 6 Claims. (Cl. 189—78.)

1. A sash for holding glass comprising a stationary member having spaced sides the edges of which are adapted to engage one side of the glass, an adjustable member adapted to engage the other side of the glass, means for operatively connecting said members, and a bar rigidly disposed between the spaced sides of the stationary member to form a stiffening member therefor.



1,686,924. PRINTING MECHANISM FOR CASH REGISTERS. EMIL E. OBERHAUSER, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Oct. 21, 1926. Serial No. 143,232. 7 Claims. (Cl. 101—407.)

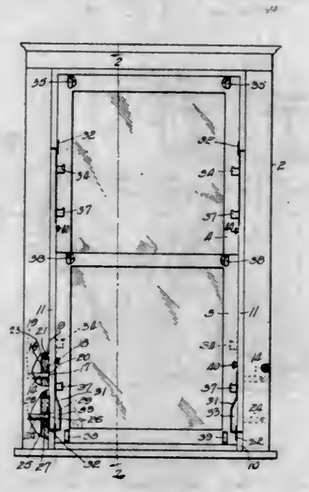
1. In a printing mechanism, a type line, an impression platen, a printing table, a lever adapted to swing in a horizontal plane to move record material from a non-printing position to a printing position between said type line and said impression platen, means for holding record material on said lever, means for stopping said lever in both of said positions, means for normally retaining said lever in non-printing position, and an adjustable pivot for said lever.



1,686,925. GEAR POWER. JOHN REID, Oil City, Pa., assignor to Joseph Reid Gas Engine Company, Oil City, Pa. Filed Nov. 22, 1927. Serial No. 235,102. 2 Claims. (Cl. 74—14.)

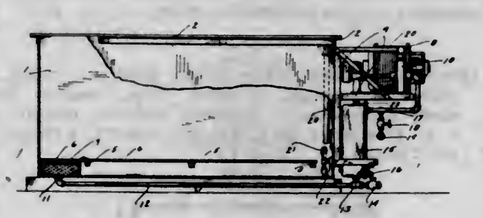
1. In a power device of the character described, a shaft, eccentrics mounted on said shaft, a gear mounted on said shaft and fixed to said eccentrics for rotation therewith, a frame releasably connected to said shaft for supporting said shaft, a drive shaft mounted on said frame, a gear on said

drive shaft meshing with said first-mentioned gear, and independent means for supporting the outer end of said frame.



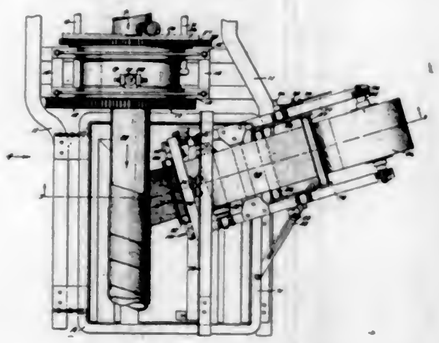
1,686,926. WATER SEAL FOR WASTE PIPE. EARL W. RICH, Indianapolis, Ind. Filed July 31, 1926. Serial No. 126,266. 1 Claim. (Cl. 182—7.)

A trap including a clean-out passage directed upwardly, an intake passage directed downwardly and an outlet passage directed upwardly and terminating between the terminations of the clean-out and inlet and above the connection therebetween for simultaneously sealing both the intake and clean-out from the discharge, said clean-out and intake passages each having a gradual curvature in general direction and oppositely directed and arranged in V-formation, with the outlet passage being connected thereto at the junction of the other two passages and including an intermediate downwardly curved sealing portion formed as a continuation of the clean-out passage curvature.



1,686,927. WINDOW. DAVID REES RICHARDS, St. Louis, Mo. Filed May 31, 1923. Serial No. 642,487. Renewed Mar. 1, 1928. 8 Claims. (Cl. 20—42.)

1. In a window construction, a window casing having a pair of opposed fixed outer sash guide strips, a pair of opposed inner sash guide strips, means for pivotally supporting and laterally moving said inner sash guide strips, a pair of opposed fixed upper and lower parting bead strips, a pair of opposed intermediate parting bead strips, means for pivotally supporting and laterally moving said intermediate parting bead strips, sash supporting arms fixed to the pivotally supported and laterally movable inner sash guide strips, hooks and loops fixed to the lower sash for engagement with said arms to secure the lower sash to the inner sash guide strips during inward swinging movement of the lower sash, sash supporting arms fixed to the pivotally supported and laterally movable intermediate parting bead strips, hooks and loops fixed to the upper sash for engagement with said arms to secure the upper sash to the intermediate pivotally supported and laterally

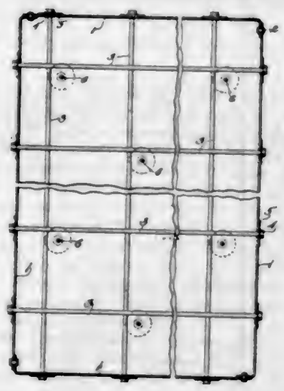


movable parting bead strips during inward swinging movement of the upper sash after the lower sash has been lowered by inward swinging movement thereof.

1,686,928. BULB STERILIZER. JOHN H. ROGERS, Portland, Oreg. Filed Aug. 28, 1926. Serial No. 132,210. 3 Claims. (Cl. 146—197.)

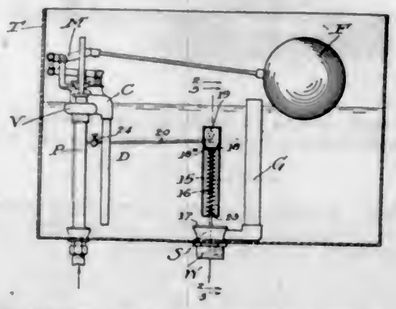
1. In a bulb sterilizer, an oblong tank for holding a liquid solution, a submerged horizontal diaphragm in said tank for supporting the products being sterilized, said diaphragm being elevated above the bottom and spaced from the side walls of said tank to permit a liquid contained in said tank to circulate freely thereabout; an agitator at one end of said tank adapted to cause a liquid contained therein to circulate toward the opposite end and to pass about the products resting upon said diaphragm, said agitator being located at one end of said diaphragm and vertically positioned relative thereto to enable the current of greatest strength created thereby to pass immediately above and below said diaphragm thereby carrying the refuse matter liberated from the products to the end of the tank opposite said agitator, a liquid discharge outlet in the end of the tank opposite said agitator, means preventing the entrance of liberated refuse matter into said discharge outlet, a liquid outlet adjacent the aforesaid agitator adapted to return the liquid passing through the outlet to said tank, and means to heat the liquid as it passes from the outlet to the inlet.

1,686,929. PIPE-WRAPPING MACHINE. LELAND S. ROBBNER, San Francisco, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed July 28, 1924. Serial No. 728,551. 26 Claims. (Cl. 242—11.)



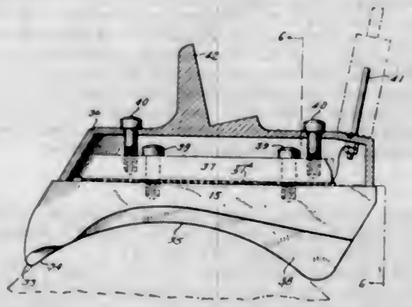
1. In a machine for wrapping cylindrical objects, a frame, feed rollers journaled on said frame, means for rotating said rollers, and means for rotating said frame to rotate the object being wrapped.

1,686,930. EMETINE DERIVATIVES FOR THERAPEUTICAL PURPOSES. ERNST ROTHLIN and FRITZ MÜLLER, Basel, Switzerland, assignors to The Firm Chemical Works formerly Sandoz, Basel, Switzerland. Filed Dec. 22, 1927, Serial No. 242,007, and in Switzerland Jan. 12, 1927. 4 Claims. (Cl. 260—25.)



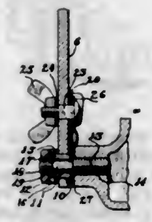
1. As new articles of manufacture, a bile acid salts of cephaeline alkylethers, being slightly yellowish powders, easily soluble in alcohol and methanol, more difficultly soluble in acetone and ether, nearly insoluble in water and possessing a strong antiparasitic action.

1,686,931. PRESSURE-RESISTING STORAGE TANK. GORDON W. RUSSELL, Brookline, Mass., assignor, by mesne assignments, to Johannes Kjekstad, Brooklyn, N. Y. Filed May 4, 1923. Serial No. 636,577. 4 Claims. (Cl. 220—4.)



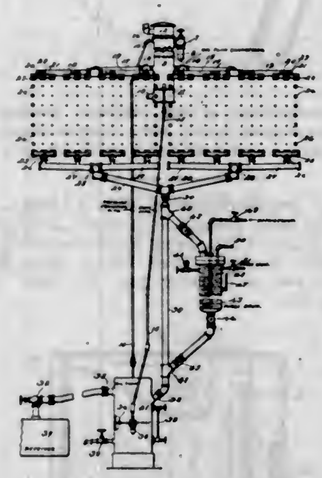
1. A storage tank embracing in its construction top, bottom and side walls comprising plates tightly secured together, and a series of stay rods arranged in horizontal groups at different levels, each group comprising two angularly disposed rows of rods arranged in closely adjacent planes and anchored to opposed walls to sustain outward pressure, and series of vertical stay rods anchored to the top and bottom walls and arranged in close proximity to one or both rows of rods comprising the horizontal groups, whereby the whole interior of the tank is rendered accessible when the stay rods are in place, substantially as described.

1,686,932. FLUSH-VALVE MECHANISM. MORRIS SCHILLER, Venice, Calif. Filed Sept. 26, 1927. Serial No. 222,076. 18 Claims. (Cl. 4—41.)



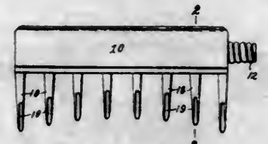
1. A flush valve mechanism comprising a spud, a valve yieldably urged to open position with respect to the spud, means for closing the valve, means adapted for connection to a water supply pipe for conducting water to said means so that its pressure actuates said means to effect a positive closing of said valve, means for relieving the first means of water pressure to allow opening of said valve, and a check valve for maintaining a predetermined pressure of water in the first means whereby temporary reduction of water pressure in the supply pipe will be ineffective to permit opening the valve.

1,686,933. SEAM-PRESSING MACHINE. LOUIS B. SEMEL, New York, N. Y. Filed May 22, 1926. Serial No. 110,904. 1 Claim. (Cl. 68—9.)



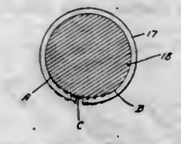
In a seam pressing machine, the combination with a feed roll, of a pressing iron having a pressing surface complementary to the surface of the feed roll, and also having a tip portion in advance of the pressing surface adapted to separate the seam and to flatten it and to guide the seam to the pressing iron, said tip including a thin, pointed nose having lateral faces which are substantially vertical and parallel at the forward end of the nose and which incline increasingly outward toward the rear of the nose, and finally merge into the pressing surface of the iron.

1,686,934. BRUSH AND HANDLE FOR VACUUM CLEANERS. ADAM A. SERVA, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 23, 1922. Serial No. 590,113. 3 Claims. (Cl. 306—4.)



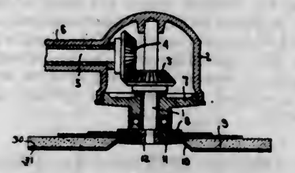
1. In combination with a vacuum cleaner, a threaded stud upon each side thereof, a headed bushing mounted upon each stud, a handle bail journaled upon the bushing and a nut upon the stud for tightening the bushing against the side wall of the cleaner.

1,686,935. CONDENSER. THOMAS SHIPLEY, York, Pa., assignor, by mesne assignments, to York Ice Machinery Corporation, York, Pa., a Corporation of Delaware. Filed May 31, 1924. Serial No. 717,072. 10 Claims. (Cl. 257—36.)



1. A condenser for refrigerating systems, comprising in combination, a plurality of pipe coils arranged to drain themselves of liquid refrigerant by gravity flow; a manifold offtake for the condensed liquid arranged for gravity flow, and having at all points a gravity liquid flow capacity in excess of the condensing capacity of the coils discharging thereinto, whereby a gravity flow outlet for heavy gases is afforded by said offtake; a chamber in communication with said offtake; a liquid seal beyond said chamber arranged to intercept gases and pass liquid refrigerant; means serving to segregate the non-condensible portion of said intercepted gases within said chamber; and means for venting said chamber.

1,686,936. FOUNTAIN COMB. WILLIAM C. SIMPSON, Muskogee, Okla. Filed Aug. 18, 1927. Serial No. 213,925. 7 Claims. (Cl. 132—13.)

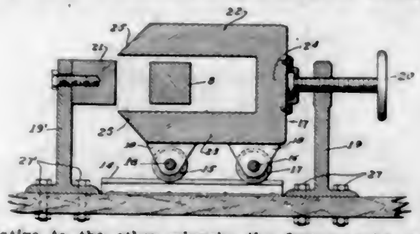


1. A fountain comb including teeth which are tubular at their upper ends and substantially spoon-shaped at their lower ends, the middle and lower end portions of the teeth being substantially U-shaped in cross section substantially as shown.

1,686,937. PROCESS OF MAKING PISTON RINGS. WALTER J. SIX, Indianapolis, Ind., assignor, by direct and mesne assignments, to B. D. Emanuel, trustee. Filed Sept. 28, 1926. Serial No. 138,242. 8 Claims. (Cl. 29—56.6.)

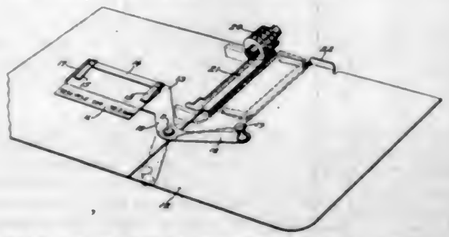
1. The process of forming split rings consisting in distorting said rings so that the adjacent free ends thereof will extend within a true circle passed thereabout, heat treating said rings in such deformed condition, and thereafter grinding or turning the same so as to vary the stress of the metal and cause said ends to resume their normal circular position.

1,686,938. SURFACING APPARATUS. HERBERT R. STRATFORD, Cleveland, Ohio, assignor to The Stratmore Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 10, 1926. Serial No. 101,087. 3 Claims. (Cl. 51—195.)



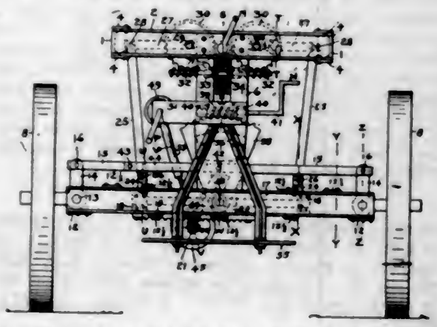
1. A surfacing device consisting of a supporting pad and a surfacing disk, said disk consisting of a stiff and strong sheet of a cellulose product, a sheet of cloth adhesively secured over substantially its entire area thereto, and a coating of grains adhesively secured over the free surface of said cloth, said composite disk being relatively stiff and rigid and having the capacity of resisting the torsional and buckling strains imposed upon it under rotation at high speed from a central point and when supported over its rear surface by said pad free therefrom except adjacent such central point, and having also the capacity of flexing when under lateral pressure.

1,686,939. MEANS FOR REGULATING ALTERNATING CURRENT. CLINTON E. STRYKER, North Chicago, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Jan. 31, 1927. Serial No. 165,018. 2 Claims. (Cl. 171—242.)



1. In a choke-ring for varying the impedance in a secondary circuit, a U-shaped, laminated iron block formed by spaced horizontal bars with a connecting bar integral with one end of each, tapered portions at the other end of

each horizontal bar, a laminated iron block adapted to fit between the horizontal bars, means for supporting this block and the U-shaped block, and means for moving one

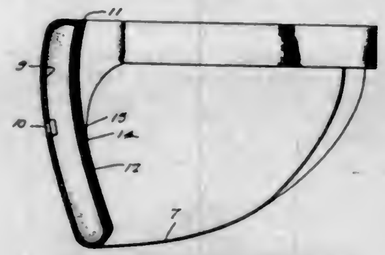


relative to the other whereby the first may be spaced from the second, adjacent its tapered portions, or entirely between its horizontal bars.

1,686,940. PRINTING MECHANISM FOR CASH REGISTERS. CHARLES TATOUSEK, Buffalo, N. Y., assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Oct. 29, 1926. Serial No. 144,970. 2 Claims. (Cl. 101—407.)

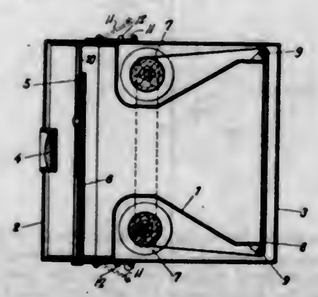
2. In a machine of the class described, the combination with a printing mechanism, and a table; of a ticket-carrying lever pivotally mounted intermediate its ends on the table; and having a broadened arm, the opposite arm of the lever serving as a handle to swing the broadened arm towards and from the printing mechanism; an abutment fastened to the broadened arm of the lever to constitute an aligning bar against which one edge of the work is positioned; a flange formed on the broadened arm of the lever against which another edge of the work is positioned; and spring clips extending over the broadened arm with their free ends in contact therewith, beneath which fingers the work is slipped to position it against the aligning bar and flange.

1,686,941. VEHICLE LEVELING MACHINE. WILLIAM M. TAYLOR, Indianapolis, Ind., assignor to Mary A. Taylor, Indianapolis, Ind. Filed Mar. 4, 1927. Serial No. 172,649. 25 Claims. (Cl. 37—157.)



1. A body frame and an axle mounted on wheels, in combination with two arms rigidly attached to the body frame and hinged to the axle and means for leveling the body frame when the axle is inclined to the horizontal.

1,686,942. SPEECH VENT. HENRY J. THIELKER, New York, N. Y., assignor to Triplex Safety Glass Company of North America, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1928. Serial No. 247,774. 3 Claims. (Cl. 20—40.)

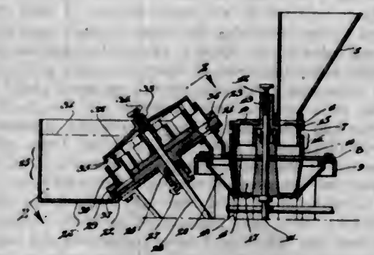


1. A device for securing a guard plate in spaced relation with an apertured wall, said device comprising a reversely hooked bar adapted to engage at one end the edge of the apertured wall and at the other end the edge of the guard plate, a wedge block interposed between the hooked bar and the adjacent wall, and means to draw the wedge into position.

1,686,943. SUSPENSORY. ALONZO TRITCH, Paterson, N. J. Filed Aug. 23, 1927. Serial No. 214,907. 3 Claims. (Cl. 128—60.)

2. In combination, a body attaching member, an inflatable pad secured thereto and a sheet of flexible impression recording material removably carried by said pad.

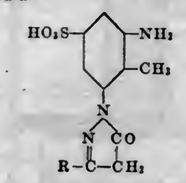
1,686,944. PHOTOGRAPHIC BOX CAMERA. FRANZ WEIDERT, Berlin-Zehlendorf, Germany, assignor to Optische Anstalt C. P. Goerz Aktiengesellschaft, Berlin-Friedenau, Germany. Filed Aug. 5, 1924. Serial No. 730,147, and in Germany Aug. 13, 1923. 1 Claim. (Cl. 95—31.)



In a photographic film box-camera a carrier element adapted to carry the film spools and provided with film guiding rollers, a wall mounted on said carrier element in front of the film spools and film guiding rollers, a shutter and a diaphragm mounted on said wall, two caps adapted to be put on said carrier element from opposite ends thereof so as to form a light tight casing or box and an objective in the form of a meniscus mounted in the front end cap.

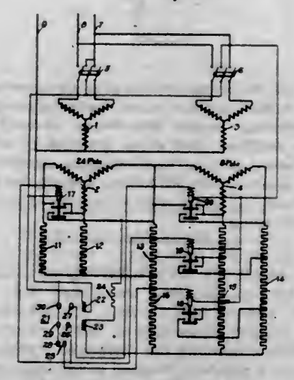
1,686,945. WEIGHT-REGULATING DEVICE. JAMES S. ABERCROMBIE, Houston, Tex. Filed July 1, 1927. Serial No. 202,887. 2 Claims. (Cl. 255—27.)

1. In a device of the character described a nipple, an inwardly directed flange thereon having opposite keyways therein, a mandrel slidable in said nipple, keys on said mandrel fitting in said keyways, means on said mandrel engaging said flange to limit the movement longitudinally of said mandrel in said nipple, said keys being freed from said flange when the mandrel is at its upper limit of movement in said nipple whereby said mandrel may rotate slightly relative to said nipple, and means to limit said rotation and guide said keys into said keyways.



1,686,946. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J., a Corporation of New Jersey. Filed Mar. 24, 1927. Serial No. 177,871. 4 Claims. (Cl. 226—102.)

1. In a can filling machine, a brine tank; a bed plate sloping downwardly into the tank, and a series of open ended measuring cylinders carried above the bed plate and slidable thereon in a curved path extending into the tank, the bed plate having a reduced part extending upwardly from its lower edge under the downward path of travel of the brine cylinder.

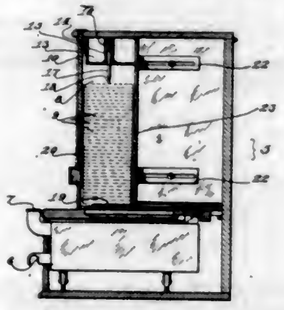


1,686,947. DIAZOTIZABLE AZODYESTUFFS. MELCHIOR BOENIGER, Basel, Switzerland, assignor to Chemical Works formerly Sandoz, Basel, Switzerland. Filed Oct. 15, 1925, Serial No. 62,659, and in Germany Mar. 28, 1925. 4 Claims. (Cl. 260—78.)

1. The herein described unsymmetrical azodyestuffs deriving from one molecule of a tetrazodiaryl, one molecule of a 2'-methyl-3'-amino-5'-sulpho-1-phenyl-5-pyrazolone of the general formula

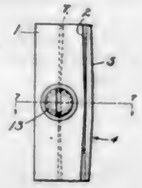
where R stands for CH_3 or COOH, and one molecule of an azo component, the herein mentioned pyrazolone derivatives excluded dyeing unmordanted cotton in shades varying from orange to red and dark brown, which, diazotized on the fibre, can be developed to similar shades fast to washing, constituting in form of their sodium salts brick red to brown black powders, easily soluble in water with orange to violet brown colour, dissolving in concentrated sulphuric acid with red violet to black violet coloration, their ammonical watery solution boiled with zinc dust being decolorized, this solution becoming in contact with the air rapidly violet.

1,686,948. MOTOR-CONTROL SYSTEM. EDGAR M. BOUTON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1922. Serial No. 577,828. 6 Claims. (Cl. 172—289.)



1. The combination with an alternating-current motor having windings corresponding to different speeds and separate accelerating switches for each speed winding, of a single accelerating relay for controlling said switches.

1,686,949. INDICATING MEANS FOR VENDING MACHINES. FRANCIS J. BRANDT, Philadelphia, Pa., assignor of two-thirds to Hollweck & Bauer, Philadelphia, Pa. Filed June 4, 1927. Serial No. 196,444. 6 Claims. (Cl. 312—68.)



1. In a vending machine, a compartment adapted to contain a stack of material, an indicating device within the compartment, means on said device for enabling it to

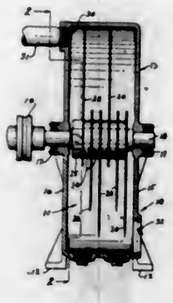
slide in said compartment with its bottom part in a plane substantially perpendicular to the sides of the compartment, said device having supporting means adapted to

exert a variable pressure on a stack of material within the compartment, and means at the bottom of the compartment for receiving said supporting means and fixing the indicating device in a predetermined position.

1,686,950. DENTAL ATTACHMENT. WALTER G. BRIDGE, Newton, Mass., assignor to Charles E. Parkhurst, Somerville, Mass. Filed Jan. 5, 1927. Serial No. 159,106. 4 Claims. (Cl. 32—12.)

1. A dental attachment comprising elements adapted to secure an artificial denture to an abutment tooth, said elements comprising loosely interfitting dovetailed tongue and groove portions, and a pin adapted to be threaded into the grooved element and engaging an oblong slot in the tongue element, said pin having a head and a threaded shank adjoining the same, the remainder of the pin being free from threading.

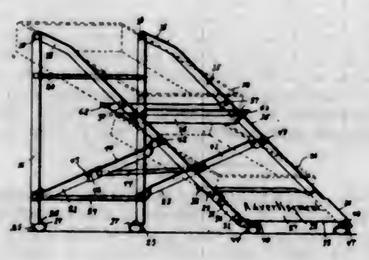
1,686,951. BEARING AND METHOD OF MAKING IT. JOSEPH BRINCIL, Reading, Pa. Filed Sept. 21, 1926. Serial No. 136,894. 16 Claims. (Cl. 308—242.)



10. The method of making a self-lubricating bearing which comprises abrading the surface of a base metal, applying thereto a powdered bearing metal and a binder, and uniting the powdered metal to the abraded base by means of pressure.

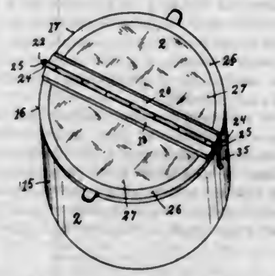
13. A self-lubricating bearing in cylindrical form comprising a metal base having an abraded surface and a spongy layer of graphite and powdered bearing metal in the cold state united to said abraded surface.

1,686,952. GELATINIZED EXPLOSIVE COMPOSITION. KENNETH R. BROWN, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 10, 1926. Serial No. 134,752. 12 Claims. (Cl. 52—13.)



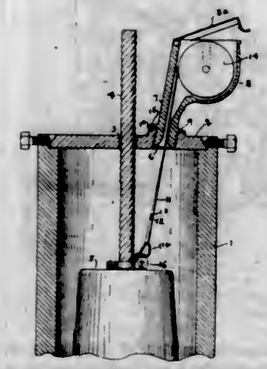
1. The method of promoting the gelatinization of dynamites containing nitrocellulose-nitro-glycerine-nitrated sugar mixtures which comprises incorporating therein a nitroglycol

1,686,953. MIXING APPARATUS. RALSTON B. BROWN, Los Angeles, Calif. Filed Dec. 29, 1924. Serial No. 758,562. 3 Claims. (Cl. 146—67.)



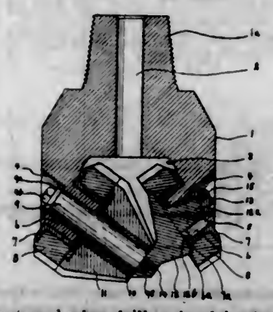
3. An apparatus for the continuous mixing and delivery of semi-solid material, comprising a housing having an inlet port in the upper portion of one side wall and an outlet port in the lower portion of the opposed side wall, a rotatable shaft extending between said walls, a plurality of knives mounted on said shaft and spaced longitudinally thereof and in staggered relation to each other.

1,686,954. DISPLAY STAND. EDWARD BRUNHOFF, Wyoming, Ohio. Filed Apr. 2, 1926. Serial No. 99,400. 2 Claims. (Cl. 211—85.)



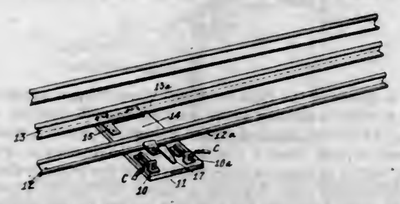
1. A display stand comprising a relatively long front frame having a short section near its upper end bent to an obtuse angle relative to the main section of said front frame and a plate spanning the lower front of said front frame, and adapted to display advertising matter, said front frame being composed of front side rails and a plurality of channeled cross bars serving to space apart the front side rails and to form supports for the front of the bottoms and front ends of the downwardly inclined articles to be displayed, a relatively short rear frame pivotally attached at its upper end to the upper end of said front frame and composed of rear side rails and cross rods serving to space apart said rear side rails, front brace links and rear brace links respectively pivotally connected together near one end thereof upon a cross-bar and respectively pivotally attached at their opposite ends to intermediate positions on said front side rails and rear side rails, said brace rods serving when in their extended positions to rigidly support the front frame and rear frame relatively in their extended position and when folded one upon the other to permit said front and rear frames to assume a collapsed position side by side and substantially parallel one to the other, and means carried by said frames to support the rear ends of the articles to be displayed independently of the support for the front end of said articles to be displayed.

1,686,955. DISPLAY LID. EDWARD BRUNHOFF, Cincinnati, Ohio. Filed May 21, 1926. Serial No. 110,765. 3 Claims. (Cl. 220—82.)



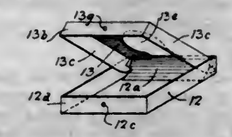
1. A display lid comprising two lid sections, a pair of spring fingers located outside of said lid sections and serving to detachably attach said lid sections to the rim of an original container, and a hinge axle common to both of said lid sections and extending beyond said lid sections at opposite ends thereof and constituting outside of said lid sections a pivotal attachment between said spring fingers and lid sections.

1,686,956. MEASURING TAPE. CLINTON H. M. BULL, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Apr. 15, 1927. Serial No. 184,010. 6 Claims. (Cl. 33—137.)



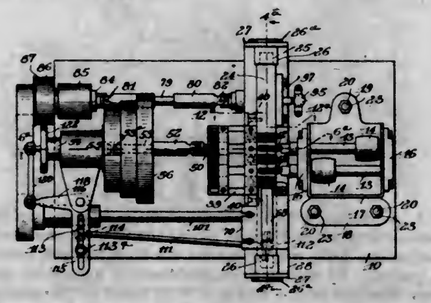
1. In well drilling apparatus, a soluble tape whereby the depth of a well may be measured.

1,686,957. ROLLER BIT. CLINTON H. M. BULL, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed May 20, 1927. Serial No. 192,846. 6 Claims. (Cl. 255—71.)



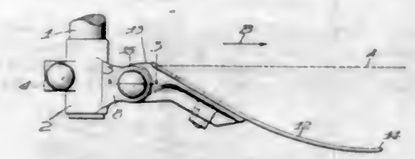
5. In a rotary boring drill, a head having a recess, an annular flange on one wall of said recess, a pin extending from the opposite wall of said recess, cutters on said flange and pin, and a removable device to hold said cutters on said flange and pin and to support said pin.

1,686,958. SPRING BINDING POST. LOUIS CARUSO, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a Corporation of New York. Filed May 26, 1925. Serial No. 32,893. 3 Claims. (Cl. 173—259.)



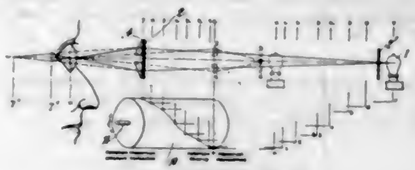
1. A terminal clip of the character described comprising a body member constructed at one end thereof with a looped portion having openings to form an upstanding skeletonized stanchion, a substantially U-shaped spring tongue having a hole at one end thereof, and means on said member for anchoring the tongue against displacement with the unperforated end projecting through the openings in the loop portion, said anchoring means including a lug extending from said member adjacent the stanchion for locking with the hole in said tongue, and holding means on said member for engaging said tongue at a spaced distance from said hole.

1,686,959. POSTAGE-STAMP HOLDER. GEORGE W. CASTEEL, San Diego, Calif. Filed Aug. 27, 1927. Serial No. 215,788. 2 Claims. (Cl. 206—39.)



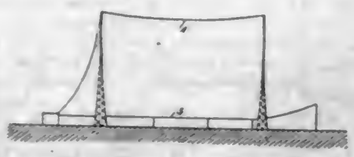
2. A box for postage stamps, comprising a rectangular base member having its bottom upwardly inclined at one end and slotted on the sides of said inclined portion, and a cover member having one end open and its side walls provided at said end with projections adapted to enter said slots to form a hinge connection, the top of said cover member having a finger opening.

1,686,960. CARVING MACHINE. JAMES E. COOPER, Perry, N. Y. Filed Jan. 27, 1926. Serial No. 84,051. 26 Claims. (Cl. 144—2.)



1. In a machine of the class described, a base, a work holder, a plurality of supporting devices for the holder mounted upon the base and adapted for oscillation in different directions at the same time, one upon another, means for simultaneously operating said devices and a tool adapted to operate upon the work during movement thereof.

1,686,961. ADJUSTABLE PLOW AND SHOVEL. JAMES T. DAVENPORT, Galesburg, Ill. Filed Feb. 28, 1927. Serial No. 171,636. 2 Claims. (Cl. 97—203.)

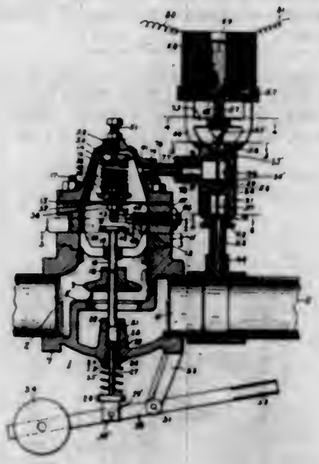


2. A device of the type described comprising a support, a body portion arranged to be secured to said support and having an arcuate-shaped groove therein, a shovel, a bracket secured to said shovel and having arcuate-shaped walls, one of which is adapted to be received in the arcuate-shaped groove of said body portion, a clamp having an arcuate-shaped groove adapted to receive the other of said arcuate-shaped walls, and means for adjustably securing said bracket between said body portion and said clamp.

1,686,962. METHOD OF TESTING VISION. JACOB Z. A. DENINSON, New York, N. Y. Filed May 28, 1921, Serial No. 473,517. Renewed June 5, 1928. 12 Claims. (Cl. 88—20.)

1. A method of testing the refractive power of an eye which consists in causing an object to create a series of images by causing the light rays issuing from said object to be separated by bodies which change the directions of said rays and then moving the said object and said bodies through a series of consecutive positions at each of which the eye of the patient is kept in substantially the same position to view the said series of images.

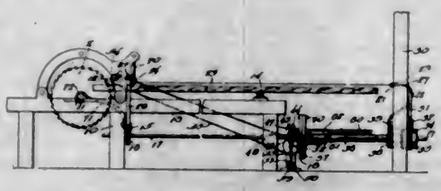
1,686,963. AERIALS FOR WIRELESS SIGNALING. THOMAS LYDWELL ECKERSLEY, Danbury, Essex, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 19, 1921, Serial No. 516,286, and in Great Britain Jan. 4, 1921. 7 Claims. (Cl. 250—33.)



1. An aerial system consisting of the combination of a conductively related aerial, aerial inductance, and screen, said screen being insulated from the earth and composed of a plurality of substantially horizontal wires each of which is of a length at least equal to the height of the aerial above the ground plus the length of the vertical projection of the aerial, and each of which is spaced from the next adjacent wire by a mean distance of between two and four times the height of said screen above the ground, the outer portions of said screen being raised above the remaining portions.

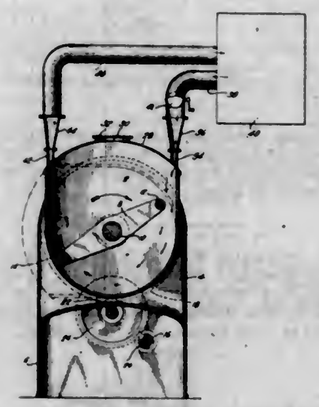
1,686,964. METHOD OF TREATING PLANTS. WILLIAM EGGERT, Jr., Brightwaters, N. Y. Filed Dec. 22, 1924. Serial No. 757,441. 10 Claims. (Cl. 47—58.)

1. The method of treating seed-producing plants to improve their quality and tendencies consisting of supplying to the roots of the plant at its blossoming time a fermented solution of leaves and petals of the same variety of plant, said solution containing a sweetening ingredient, and a derivative of gum benzoin.



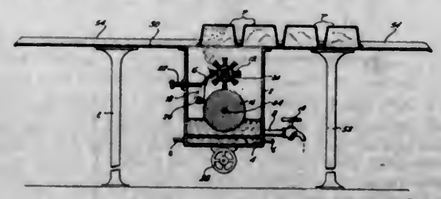
9. Improved products of tobacco plants which have been treated with a derivative of gum benzoin, the products, namely, leaves and seeds being characterized by a constitutional change as compared with products of the original untreated tobacco plants, said improved products being more aromatic, sturdier, more capable of resisting disease, and less bitter than those of the original plants.

1,686,965. SAFETY DEVICE FOR GAS-FIRING SYSTEMS. EUGENE OSCAR ENGELS, Saginaw, Mich., assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Oct. 3, 1925. Serial No. 60,319. 19 Claims. (Cl. 67—115.)



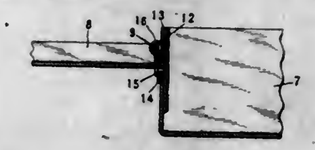
1. A mechanism for cutting off the supply of gas to gaseous fuel burners provided with igniting devices, said mechanism including a normally open valve permitting free flow of gas to said burners, and means for holding the valve normally in open position and for causing the closing of the valve either upon a fall in the pressure of the gas flowing to the burners below a predetermined point or upon the failure of the igniting devices to function.

1,686,966. ATTACHMENT FOR SAWMILL EDGERS. LEMUEL R. FOREMAN, Elizabeth City, N. C. Filed July 18, 1913, Serial No. 779,725. Renewed Feb. 23, 1924. 10 Claims. (Cl. 143—168.)



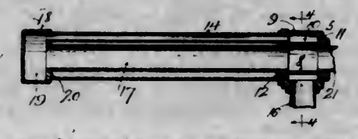
10. The combination with a saw mill edger including fixed and movable saws, an operating shaft, and connections between said operating shaft and the movable saw of the edger, whereby said shaft is adapted to adjust the movable saw with respect to the fixed saw, of a pair of gages associated with the edger, one of said gages being fixed and arranged in alignment with the fixed saw, one end of the other gage being in alignment with the movable saw and adjustable simultaneously therewith when the movable saw is adjusted in relation to the fixed saw, a mounting for the other end of the movable gage, said mounting being adjustable independently of the first-mentioned end of the movable gage, a tubular shaft surrounding said operating shaft, connections between said tubular shaft and said mounting for adjusting the latter, releasable means for locking the operating and tubular shafts together, driving connections for automatically operating the movable saw with respect to the fixed saw during the advancing movement of the board through the edger, and a variable-speed controlling device included in said driving connections.

1,686,967. AIR-COOLING MEANS FOR MIXING DEVICES. LAURENCE S. HARBER, White Plains, N. Y., assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Nov. 28, 1923. Serial No. 677,460. 6 Claims. (Cl. 107—31.)



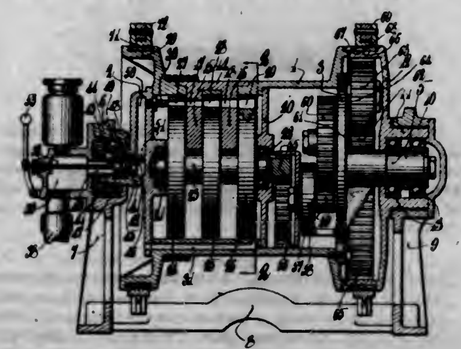
4. A mixing machine having in combination a mixing chamber, a mixing device mounted to rotate on an axis extending in a general horizontal direction within said chamber, means for actuating said mixing device, an air inlet located on one side of said chamber and extending substantially throughout the length thereof, an air outlet located on the opposite side of said chamber and also extending substantially throughout the length thereof, and means for delivering relatively cool air through said inlet into said chamber and for withdrawing the air through said outlet after it has acted upon the material in the chamber.

1,686,968. PAN-GREASING MACHINE. LAURENCE S. HARBER, Saginaw, Mich., assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Dec. 22, 1924. Serial No. 757,304. 5 Claims. (Cl. 91—44.)



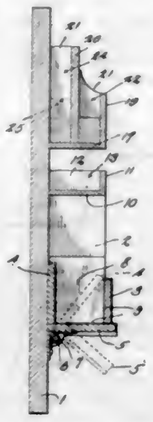
1. A pan greasing machine having in combination a grease container, a grease spraying brush and a pan guideway positioned above said grease spraying brush along which the pans may be passed over said brush and in positions to receive a spray of grease upon the interiors thereof.

1,686,969. SWITCH BOX. GEORGE R. HEBDEN, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Sept. 23, 1925. Serial No. 58,050. 4 Claims. (Cl. 220—31.)



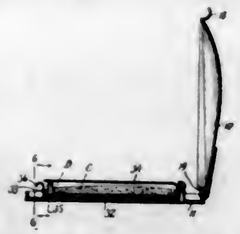
1. A hinge construction including a rectangular box having a hinge slot, a cover for said box having a hinge slot in register with the hinge slot in the box and having an integral hinge pintle adjacent the hinge slot, an entirely preformed hinge strap having one end passing through the respective hinge slots and having an abruptly bent end portion in flat engagement with the inner wall of the box, an arched portion engaging the said pintle and an outer end portion in flat engagement with the outer wall of said box together with means for securing the outer end of said hinge strap in position.

1,686,970. WATER HEATER. ALFRED H. HOADLEY, New York, N. Y. Filed Nov. 28, 1927. Serial No. 236,099. 7 Claims. (Cl. 257—254.)



1. A water heater of the type set forth comprising a plurality of spaced headers, a series of relatively small tubes, a common return tube of larger diameter than said first tubes, said several tubes being connected at opposite ends to said headers whereby the water flows first through said smaller tubes and returns in a common stream through said larger tube.

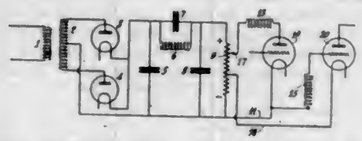
1,686,971. HOISTING MECHANISM. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Corporation, a Corporation of Massachusetts. Filed Jan. 27, 1922. Serial No. 532,338. 15 Claims. (Cl. 254—186.)



1. In a hoisting mechanism, a rotatable drum, driving means therefor including a turbine with its rotor disposed coaxial of said drum, and means movable with and extending into said drum for directing fluid flow to said turbine.

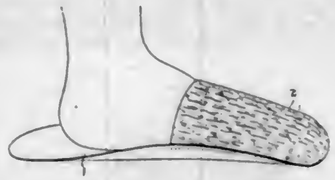
1,686,972. WALL BRACKET. PATRICK WHITSTEAD HUGHES, Charleston, W. Va. Filed Feb. 3, 1926, Serial No. 85,745. Renewed Aug. 21, 1928. 1 Claim. (Cl. 220—18.)

The combination with a base having a compartment extending forwardly therefrom for receiving trash, of a member hingedly mounted and constituting the bottom of the compartment, a wall upstanding from and movable with the said bottom and normally bearing against the base to constitute a portion of the back wall of the compartment, and yielding means for holding the bottom of the compartment normally closed against the front and side walls of the compartment, the upstanding wall carried by the bottom being movable violently against the front wall when the bottom is swung downwardly to open position, thereby to dislodge material accumulating on said upstanding wall and on the bottom.



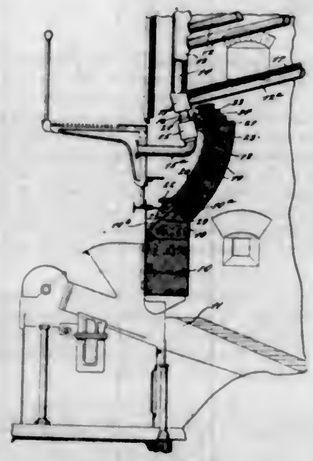
1,686,973. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed Sept. 6, 1927. Serial No. 217,605. 4 Claims. (Cl. 132—82.)

1. In a vanity case, the subcombination of a compartment adapted to hold a cake of cosmetic, an ejector located in the said compartment and tiltable therein, said ejector having a projection extending through a slot in the wall of the said compartment, said slot being closed at the top thereof.



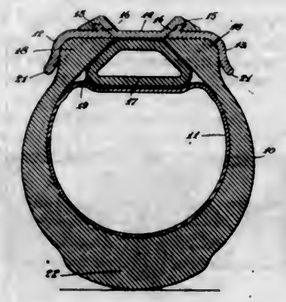
1,686,974. RECTIFYING AND FILTERING SYSTEM. FRED H. KROGER, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 6, 1925. Serial No. 7,229. 2 Claims. (Cl. 250—27.)

1. In a direct current supply system for vacuum tubes and the like, the combination of a source of power adapted to be energized by alternating current, means for rectifying said alternating current, means for smoothing out fluctuations in said rectified current comprising a filter, a resistance connected across the output side of said filter, a vacuum tube, a plate circuit and filament return therefor tapped across one portion of the resistance, a second vacuum tube and a grid filament circuit therefor tapped



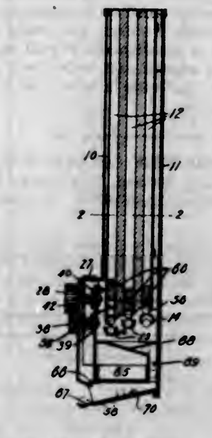
across another portion of said resistance the grid being energized at the same potential as the filament return of said first named tube.

1,686,975. SANITARY SANDAL. FREDERICK O. LAWSON, Toronto, Ontario, Canada. Filed Aug. 15, 1927. Serial No. 213,090. 3 Claims. (Cl. 36—1.)



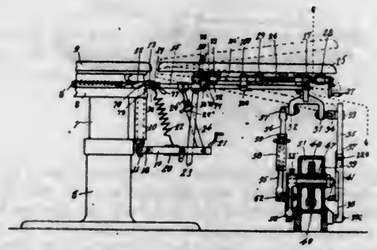
1. A sanitary sandal having a sole portion formed of a flexible fabric, and an upper formed of a unitary piece of extensible fabric placed flat upon the toe end of the sole and secured around the edges.

1,686,976. FURNACE WALL. NATHAN E. LEWIS, Plainfield, and HOWARD J. KERR, Bayonne, N. J., assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 29, 1920. Serial No. 385,118. 62 Claims. (Cl. 110—95.)



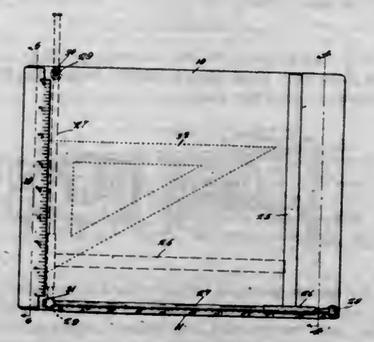
1. In a furnace for a steam boiler, a relatively fixed wall and an auxiliary wall extending upwardly from the fixed wall and inclined to the vertical with its top substantially horizontal, said auxiliary wall comprising a series of metallic supports extending upwardly along the auxiliary wall and tile attached to the supports with the tile between the furnace and the supports, said tile being free to move longitudinally of said supports with the lowermost tile abutting against the fixed wall.

1,686,977. PNEUMATIC TIRE. ZENO LITTMAN, New York, N. Y. Filed Dec. 20, 1924. Serial No. 757,098. 1 Claim. (Cl. 152—22.)



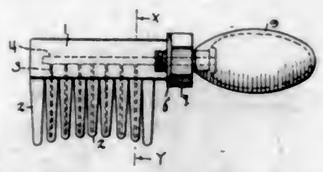
In a device as specified, the combination of a tire supporting rim having rim flanges thereon, a pneumatic tire shoe supported on said rim, a pneumatic tube within said shoe, a valve for said tube, and a supplemental tire mounted on the tire supporting rim to project beyond the peripheries of the rim flanges to thereby protect the pneumatic tube and shoe from injury, when collapsed, by the rim, said supplemental tire having terminal portions arranged to lie in close adjacency to opposite sides of the valve for the pneumatic tube, one of said terminal portions being provided with an inflation valve, and means connected to the terminal portion carrying the inflation valve and extending transversely across the end of the inflation valve for preventing contact of said valve with the pneumatic tube.

1,686,978. COIN-CONTROLLED VENDING MACHINE. HANS K. LORENTZEN, New York, N. Y. Filed July 25, 1923. Serial No. 653,653. 8 Claims. (Cl. 312—83.)



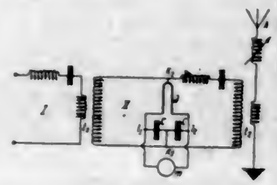
1. In an article dispensing device, a plurality of vertically extending article storage spaces, an article support for each of said article storage spaces normally supporting the articles therein and movable to constitute a releasing device at the lowermost extremity of each storage space for releasing one article therefrom at a time, a push rod actuating member for each device, the ends of the push rods remote from the devices being arranged in an arcuate disposition, and a master push rod having an arm angularly adjustable for cooperative relation with any of said push rods for actuation of the corresponding releasing device.

1,686,979. TREATMENT TABLE. JOHN V. MCMANIS, Kirksville, Mo. Filed Sept. 14, 1922. Serial No. 588,267. 5 Claims. (Cl. 128—170.)



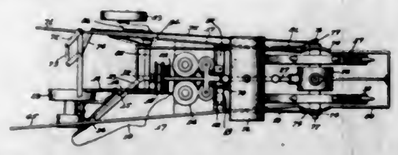
1. A table of the class described comprising a main table top section, an auxiliary table top section pivotally mounted near one end thereof relative to said main top section upon a substantially vertical axle and upon a substantially horizontal axle and adapted to be oscillated in both horizontal direction and in vertical direction relative to said main top section, means to actuate said auxiliary top section by power comprising a power driven shaft located beneath said auxiliary top section and provided with crank arms and variably adjustable crank pins at opposite ends of said shaft, a lever pivotally connected at a fixed point at one end and pivotally and slidably connected at its opposite end to said auxiliary top section near its free end to oscillate said auxiliary top section in a substantially horizontal direction, said lever being engaged at an intermediate point by a crank pin at one end of said shaft to oscillate said lever, and a connecting member connected at one end to the crank pin at the opposite end of said shaft and at its opposite end to said auxiliary top section near its free end to oscillate said auxiliary top section in a vertical direction.

1,686,980. DRAWING BOARD AND ATTACHED STRAIGHTEDGE. CLAUDE C. NUCKOLS, Menands, N. Y. Filed July 26, 1927. Serial No. 208,650. 2 Claims. (Cl. 33—76.)



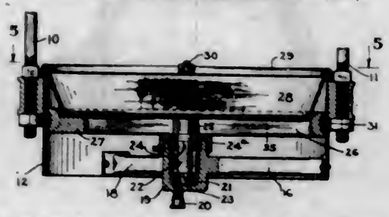
1. In combination, a drawing board, a straight edge permanently secured along one edge of the board, a combined straight edge and clamp secured to the adjacent edge of the board and adapted to hold a sheet of paper in position thereon, said board having spaced openings, a pair of headed studs, a guide rod supported by said studs, an additional straight edge slidably mounted on said rod, and said studs being adapted for interchangeable engagement with said openings, whereby said rod can be arranged parallel with either of the first mentioned straight edges.

1,686,981. SCALP COMB. OSCAR O. OLSON, Chicago, Ill. Filed Sept. 22, 1926. Serial No. 137,126. 1 Claim. (Cl. 132—13.)



A comb of the class described comprising a back having a duct therein enlarged and threaded at one end of the back, teeth extending from the said back and having ducts therein communicating at their upper ends with the duct in the back, a coupling having a shank removably threaded into the enlarged end of the duct in the said comb back and provided at the outer end with a bead, the coupling having a polygonal enlargement extending beyond all sides of said back, a washer upon the shank between the said end of the back and the enlargement, and a bulb fitted to the outer end of the coupling and held thereon by the bead.

1,686,982. TELEPHONY OR KEYING ARRANGEMENT. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 22, 1925, Serial No. 64,246, and in Germany Nov. 15, 1924. 10 Claims. (Cl. 179—171.)

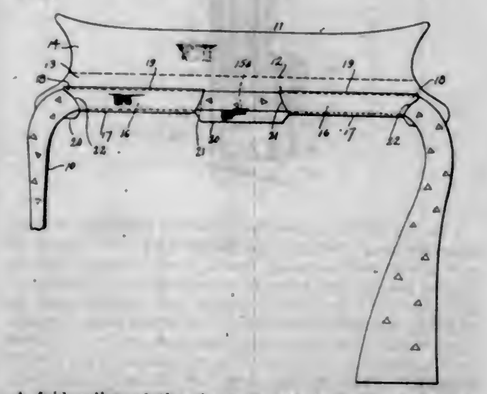


1. In combination, an iron core frequency changer modulator, a voltage step-up transformer for introducing high frequency into the modulator and a voltage step-down transformer for transferring energy output from the modulator to a load circuit.

1,686,983. TRACTOR PLOW. JOSEPH N. PARKER, Bedford City, Va. Filed May 3, 1920. Serial No. 378,563. 4 Claims. (Cl. 180—19.)

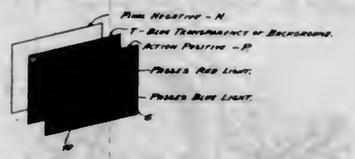
1. A tractor plow as characterized comprising a plurality of tractor wheels; a frame; means pivotally connecting said wheels and said frame; manually actuated means for pivoting said wheels; a prime mover mounted on said frame; a transmission mechanism operatively connecting said wheels and said prime mover, said mechanism embodying a rotary driving member and two rotary driven members constantly engaged with said driving member, said driven members being loosely mounted on the driving shaft of said transmission mechanism; and means manually operated for operatively connecting said driven members successively with said shaft, said means embodying a plurality of expansion bands, each operatively disposed in one of said driven members, both of said bands being operatively associated with the driving shaft of said transmission mechanism; a shifting wedge adapted for insertion below said bands to expand the same; and power devices intermediate said bands and said shifting device for multiplying the power applied in setting said bands.

1,686,984. VIBRATOR OR AGITATOR. GEORGE B. PICKOP, New Haven, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn. Filed Dec. 26, 1922. Serial No. 609,037. 13 Claims. (Cl. 209—367.)



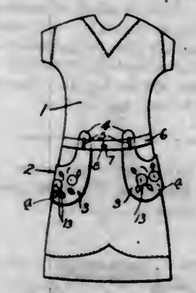
1. In an agitator, a frame, including a circular housing, an agitating rotor rotatably mounted within the housing having its periphery formed to present blades and means to direct a fluid under pressure upon said blades and in a downward direction.

1,686,985. FLUSH-TANK VALVE. ROBERT M. PIERSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 11, 1927. Serial No. 160,400. 3 Claims. (Cl. 4—56.)



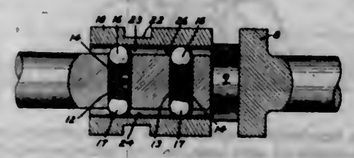
1. A flush-tank valve of resilient rubber composition including a lower or seating member which is relatively thickened annularly thereof in its upper marginal portion, an upper or roof member, and an intermediate, relatively thin and flexible annular member, the height of which is a small fraction only of the diameter of said upper member, connecting the outer edge of said upper member with the thickened margin of the lower member, within the onter periphery of the latter.

1,686,986. COMBINED COLLAR AND NECKTIE HOLDER. WILLIAM POLGAR, New York, N. Y. Filed Dec. 31, 1926. Serial No. 158,177. 1 Claim. (Cl. 2—137.)



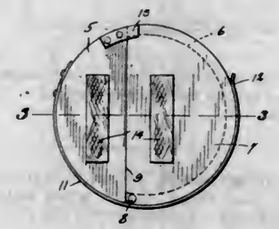
A fold collar of the character set forth, comprising a neckband and an outer member over the neckband, said neckband having a pair of integral folded tongues formed by cutting through the lower edge of the neckband, the lower edge of the neckband at the front ends of the collar being below the fold line of said tongues, each of said tongues extending at one of its side portions in proximity to a front end of the collar, and at the other side portion in proximity to the rear center part of the neckband.

1,686,987. METHOD OF MAKING COMPOSITE PICTURES. ROY J. POMEROY, Los Angeles, Calif., assignor of one-half to Famous Players-Lasky Corporation, Los Angeles, Calif., a Corporation of New York. Filed Feb. 7, 1927. Serial No. 166,303. 5 Claims. (Cl. 88—16.)



1. A method of producing a composite photograph embodying images of two components, that includes making on a limited area of a ground an image of one component, coloring the image area substantially uniformly in a selected color to transmit substantially only light of that selected color, and coloring the surrounding ground substantially uniformly in a color having a minus relation to the selected image color so that the ground will transmit predominately light of said last mentioned color, making an image of the other component, and selectively printing the two components onto different parts of a fresh actinic surface with printing lights of the two said colors.

1,686,988. ORNAMENTATION FOR WASH DRESSES. HELEN LOUISE RAY, Los Angeles, Calif. Filed Feb. 23, 1927. Serial No. 170,252. 3 Claims. (Cl. 2—247.)



1. An ornamental pocket attachment for dresses comprising a belt having means for detachably securing the same to a dress, and a pair of spaced pockets disposed below the belt and respectively having a projection extending upwardly from one side thereof and connected to said belt.

1,686,989. CLUTCH. GRAHAME B. RIDLEY, San Francisco, Calif. Filed Jan. 18, 1926. Serial No. 81,919. 2 Claims. (Cl. 192—67.)

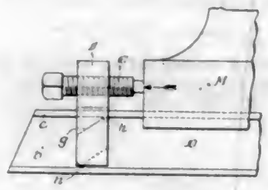
1. A clutch comprising two axially aligned shafts, a collar rotatably mounted on the first shaft and adapted to be axially shifted to engage the second shaft, said collar being provided with interior longitudinal grooves, spring pressed balls mounted on said first shaft and adapted to seat in said grooves, and means cooperating with said balls for resisting axial shifting of said collar.

1,686,990. STOCK CASTRATOR. OTLEY B. ROSS, Novinger, Mo. Filed Dec. 23, 1927. Serial No. 242,086. 2 Claims. (Cl. 128—306.)

1. In a device of the character described, a body portion to be worn over the scrotum of an animal, said body portion including a stationary blade and a movable blade, and means engaging the movable blade to exert a gradual pressure on the movable blade to cut the scrotum held between the blades.

1,686,991. CAR BUMPER. KARL O. SCHAUMAN, STIRLING R. YANCEY, and JOSE L. MIFSUD, New York, N. Y., assignors to Sure-Guard Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1927. Serial No. 225,466. 6 Claims. (Cl. 293—55.)

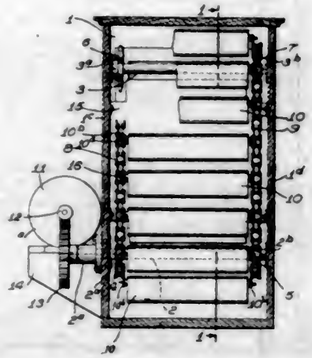
1. A car bumper comprising a base bar, a resilient bracket extending lengthwise of the bar attached thereto at the end portions and adapted for attachment to a car, and a guard member spaced apart from and extending generally parallel with the base, the end portions of the guard member being formed into loops extending around and spaced from the ends of the base, the terminals of the guard member being secured to the back of the base.



1,686,992. PROCESS OF MAKING TETRA-NITRO-DIANTHRONE. BERTHOLD STEIN, Elberfeld, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 28, 1926, Serial No. 119,200, and in Germany June 25, 1925. 4 Claims. (Cl. 260—57.)

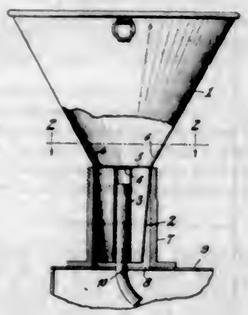
4. As a new compound, tetra-nitro-dianthrone in which the nitro groups are attached in a beta position, which is obtained in the form of colorless crystals difficultly soluble in concentrated sulfuric acid and in most organic solvents and which by weak alkaline agents is transformed into salts of the isomeric tetra-nitro-dianthranol.

1,686,993. MACHINE MOUNTING. PHILIPP SUTER, Baden, Switzerland, assignor to A. G. Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Apr. 2, 1926, Serial No. 99,247, and in Germany May 14, 1925. 2 Claims. (Cl. 308—11.)



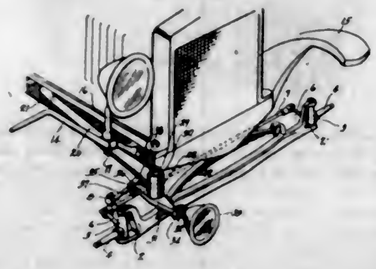
1. A machine mounting comprising, in combination, a bed rail, a machine frame shiftably mounted thereon, an

anchor block shiftably mounted on the rail, said anchor block having binding portions for biting engagement with



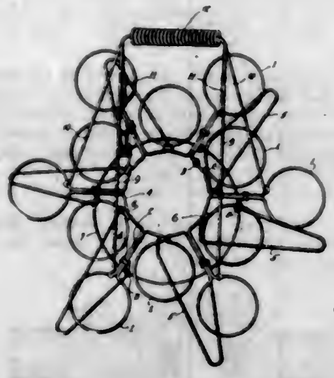
the rail, and an adjustable member cooperating with the machine frame to hold the binding portions in fixed engagement with the rail.

1,686,994. CHANGEABLE ADVERTISING SIGN. LEE THOMPSON, San Diego, Calif. Filed Oct. 29, 1926 Serial No. 144,937. 3 Claims. (Cl. 40—97.)



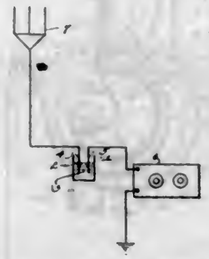
1. In a unit member of a plurality of panels forming a movable group in an advertising cabinet, two blackboard faced display surfaces, channel members secured to the margins thereof, forming grooves for supporting one or more independent display members over said blackboard surfaces and studs projecting from each end of said panel for pivotally suspending same.

1,686,995. FUNNEL. GEORGE B. TRAPNELL, Chester, Pa. Filed Apr. 8, 1926. Serial No. 100,631. 1 Claim. (Cl. 226—29.)



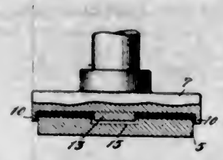
A funnel for filling automobile radiators comprising a tapered body portion and a tapered spout joined together, a longitudinally disposed inner tube mounted within the spout and having its ends flush with the respective ends of the spout, the outer or lower end of the said tube being open to receive the free end of an overflow tube and the inner or upper end of the same being closed to prevent water from entering said overflow tube, and a cross bar terminally attached to the opposite sides of said body portion and centrally connected to the closed end of the inner tube to support the same.

1,686,996. DIRIGIBLE SPOTLIGHT FOR AUTOMOBILES. WILLIAM V. VAN ETTEN, Everett, Wash. Filed Nov. 3, 1925. Serial No. 66,483. 1 Claim. (Cl. 240—62.)



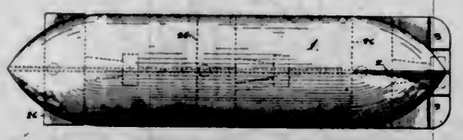
In a vehicle of the character described having a steering mechanism and a side beam with a fender mounting brace bar fixed thereto and extending laterally from the beam and a headlight mounting standard having a threaded lower end extending through the said brace bar, of an elongated bar disposed adjacent the side beam, an ear at the rear end of said bar adapted for attachment to the beam; said bar having an aperture therethrough near its forward end adapted to receive therein the threaded end of the standard, a vertical bearing sleeve at the forward end of the bar, a shaft rotatably contained in the sleeve, an arm fixed between its ends to the lower end of the shaft, means for mounting a spotlight at the forward end of the arm and a link connecting the rear end of the arm with the vehicle steering mechanism.

1,686,997. EGG HOLDER. HEINRICH HUBERT WEBER, Maspeth, N. Y. Filed Jan. 19, 1928. Serial No. 247,797. 4 Claims. (Cl. 53—1.)



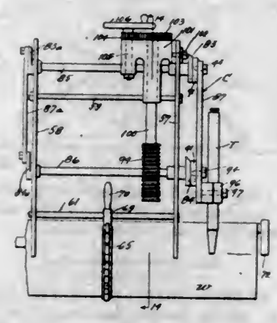
1. An egg holder embodying a frame constructed from a single length of wire bent to form a succession of closed loops constituting egg seats with the free ends of the wire united to one another, each loop being provided with a shank which constitutes a continuation of the shanks of the adjacent loops, and all parts of said frame lying in the same plane, in combination with supporting members embodying lengths of wire bent upon themselves to form feet and the free end portions of which wires are bent upwardly and coiled about the shanks of the frame loops for the purpose of maintaining said loops in closed condition and simultaneously supporting the frame above a flat surface on which the feet are adapted to rest, and a suitable handle secured to the frame.

1,686,998. METHOD OF REMOVING STATIC. CHARLES W. WOODRUFF, Columbus, Ohio. Filed Feb. 4, 1925, Serial No. 6 813. Renewed Feb. 11, 1928. 3 Claims. (Cl. 250—20.)



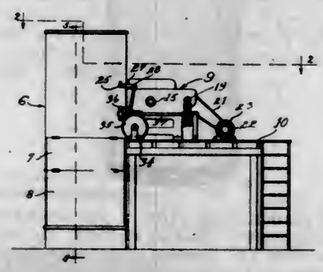
2. In combination with a signal receiving circuit, an electrolytic cell serially associated with a portion of said circuit traversed by both desired signals and also by impulses above a desired intensity, the elements comprising said cell being of such chemical relation as to materially increase the resistance of said circuit portion in response to said impulses.

1,686,999. METHOD OF MAKING SHIMS. JOHN CLIFFORD YONDON, Queens Village, N. Y., assignor to Laminated Shim Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Mar. 19, 1923. Serial No. 625,960. 3 Claims. (Cl. 153—10.)



1. The herein described method of making shims which consists in providing a plurality of flat superposed sheets of the same size and binding said sheets together by simultaneously bending the edges thereof through an angle of substantially 45 degrees into overlapping relation.

1,687,000. AIRSHIP. JOAQUIN SILVEIRA ABREU, San Francisco, Calif. Filed Apr. 12, 1927. Serial No. 183,113. 6 Claims. (Cl. 244—6.)

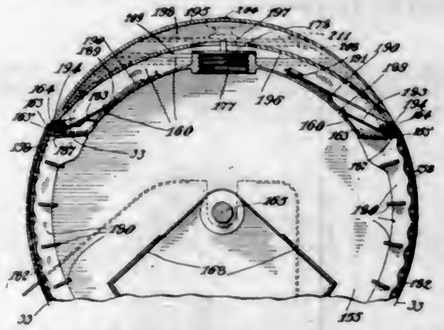


1. The combination of an air ship, comprising a dirigible balloon, of a plurality of aeroplanes detachably, pivotally and rotatably connected to said balloon whereby the same may be propelled and controlled by said aeroplanes, and said aeroplanes may be detached from and operated independently of said balloon; and means for rotating each aeroplane on a vertical axis relatively to the balloon and independently of the other aeroplanes, to facilitate control of said dirigible balloon.

1,687,001. TORCH-OPERATING MECHANISM. JAMES ORRIN BISHOP, Torrance, Calif. Filed Sept. 22, 1926. Serial No. 137,159. 11 Claims. (Cl. 266—23.)

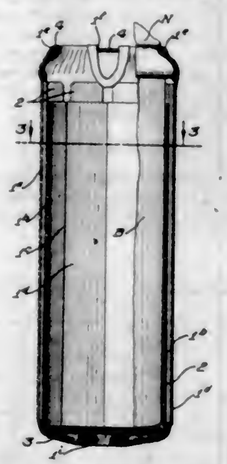
1. A device of the character described, embodying a body member, means for supporting work of given variational cross-sectional characteristics in predetermined relation to the body member, a cutting torch movably mounted on the body member, and means acting automatically to move the torch across the thicker portions of the work with less speed than across the thinner portions.

1,687,002. MATTRESS-MAKING APPARATUS. JOSEPH W. BOWERSOX, Los Angeles, Calif. Filed Sept. 1, 1927. Serial No. 216,831. 5 Claims. (Cl. 19—144.)



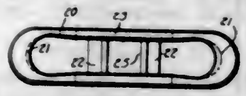
1. A mattress-making apparatus comprising a box, a passage for cotton communicating with the interior of the box through one wall thereof, a means to feed cotton through the passage, a movably mounted deflector in the box adjacent to the passage, and a means to move the deflector into different positions to distribute the cotton in the box as it leaves the passage, the deflector extending substantially to said box wall at a level higher than the discharge end of the passage so as to deflect the cotton downwardly.

1,687,003. STENCIL DUPLICATING MACHINE. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 8, 1925, Serial No. 61,172. Divided and this application filed Nov. 2, 1926. Serial No. 145,760. 18 Claims. (Cl. 101—116.)



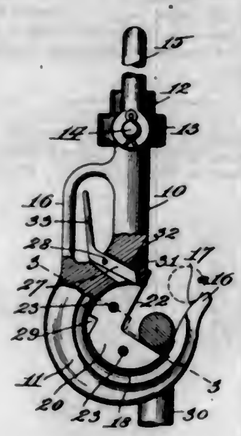
1. In an apparatus of the character described, in combination, a printing cylinder including outside walls,

interior walls, a diaphragm secured to said interior walls in a leak-proof manner, a plate secured to said interior walls



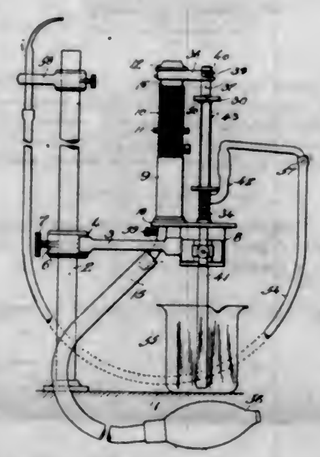
and to the ends of said diaphragm in a leak-proof manner, and a supplementary frame covering said plate and removably secured to said outside walls.

1,687,004. NURSING-BOTTLE COVER AND NIPPLE SUPPORT. MARIE BRIGGS, San Diego, Calif. Filed Dec. 16, 1926. Serial No. 155,187. 3 Claims. (Cl. 215—11.)



1. In a nursing bottle cover, a pair of bag-like cover members composed of pliable material, the one placed within the other and provided with longitudinal stitches forming a plurality of pockets, a plurality of semi-flexible reinforcing members positioned in said pockets, and a cord positioned around the upper end adapted to gather the upper end around the bottle nipple.

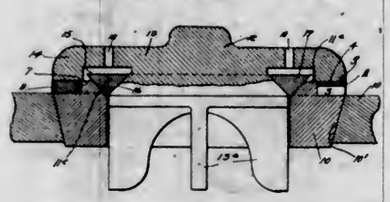
1,687,005. CONVEYER CHAIN. CLARENCE A. BROCK, Detroit, Mich. Filed Feb. 25, 1927. Serial No. 170,793. 2 Claims. (Cl. 198—189.)



2. A chain comprising a link consisting of an elongated loop having its inner end surfaces formed with spherical concave seats, and integral cross bracing members between the sides of said loop, said sides and cross members defining a square seat adapted to receive a squared portion of an accessory device.

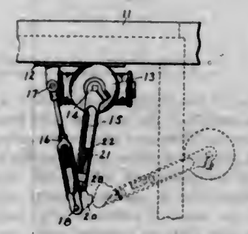
1,687,006. LATCHING HOOK FOR OIL-WELL ELEVATORS. WESLEY F. CORNELIUS, Whittier, Calif. Filed Jan. 12, 1927. Serial No. 160,617. 4 Claims. (Cl. 24—241.)

1. A latching hook of the character described, comprising a shank, a hook formed integral with one end of said shank, a notched latching member arranged for rotation within the hook, a handle formed integral with said shank and hook, there being an opening formed thru the hook at the point where the same joins the shank, a spring pressed detent extending thru said opening and pivotally mounted therein for engaging and holding the rotary latching member in closed position and a handle formed integral with and projecting upwardly from the rear end of said detent, which handle is arranged between the handle of the hook and the shank thereof.



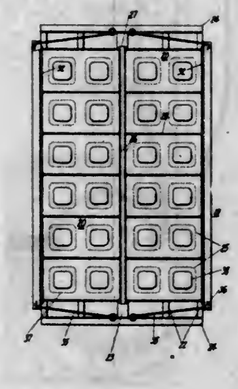
1,687,007. AUTOMATIC DISTRIBUTING APPARATUS FOR LIQUID. LEON H. CORNWALL and GEORGE PHILIPP SCHMITT, New York, N. Y. Filed Apr. 8, 1922. Serial No. 550,922. 3 Claims. (Cl. 221—103.)

1. An apparatus for distributing liquids having in combination a liquid measuring and distributing member comprising a main stem and a substantially lateral branch



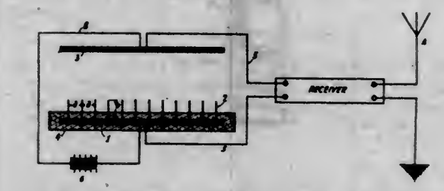
stem, a piston mounted to reciprocate in said main stem, valves controlling the opening of the main stem and the branch stem, and means to operate said piston to definite set distances, said means including a power cylinder having a regulating stop ring and a power piston operating in said power cylinder to the distances determined by the position of the stop ring.

1,687,008. PUMP VALVE. GROVER C. DEAKINS, Anaheim, Calif. Filed Sept. 30, 1925. Serial No. 59,504. 2 Claims. (Cl. 277—44.)



1. In a valve, a relatively stationary part including a relatively soft seat member, a movable valve body, a relatively soft sealing member carried by the body, and a detachable relatively hard member having tight fit on the the stationary part and underlying the valve body, said relatively hard member having a relatively frangible portion adapted to be broken away to relieve the last-mentioned member from its tight fit with the stationary part, said body being adapted to seat on said hard member, and said sealing member being adapted to seat on the body and stationary part.

1,687,009. DETENT MECHANISM FOR DOOR CLOSERS AND THE LIKE. JOSEPH J. DREXLER and HENRY H. MUNSON, New Haven, Conn., assignors to Sargent & Company, New Haven, Conn. Filed Nov. 4, 1925. Serial No. 66,754. 9 Claims. (Cl. 16—49.)

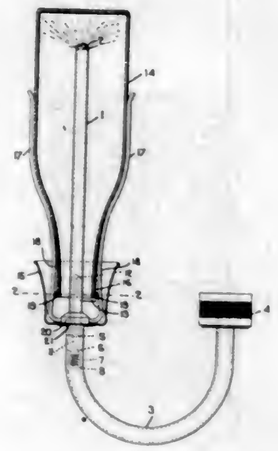


1. A door closer, including a pair of pivoted arms, and automatically operating means to releasably hold said arms in predetermined angular relation, comprising a detent member rigidly attached to one of said arms and a cooperating detent member movably attached to the other arm, said last named detent member being spring pressed into engagement with the first, and means for adjusting the tension of said spring.

1,687,010. MULTIPLE MOLD. STEPHEN FLAM, Walnut Park, Calif., assignor to Supertile Machinery Corporation, Los Angeles, Calif., a Corporation of California. Filed Jan. 4, 1926. Serial No. 79,158. 2 Claims. (Cl. 25—121.)

1. In a mold structure, an apertured plate forming the bottom of a mold, means forming the sides of the mold, including a pair of loosely anchored plates, and a detachable apertured plate inserted between the said bottom apertured plate and said loosely anchored plates, for permitting any desired smaller size of core to be used than that corresponding to the aperture in the said bottom plate.

1,687,011. LOUD SPEAKER. LIONEL FLEISCHMANN, Berlin-Wilmersdorf, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Nov. 13, 1926, Serial No. 148,183, and in Germany Jan. 22, 1926. 10 Claims. (Cl. 179—113.)



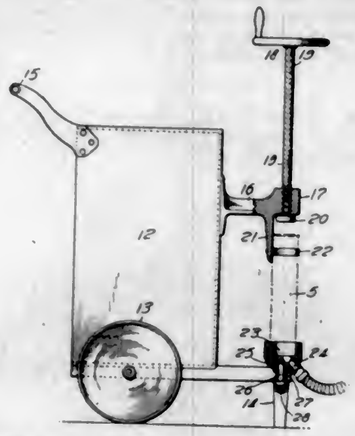
1. The method of reproducing sound which comprises superimposing a variable potential of audio frequency upon a definite potential bias at a point, obtaining thereby an electrostatic point discharge into the atmosphere and creating by said electrostatic point discharge trains of sound waves varying in proportion to the varying audio potential.

1,687,012. BOTTLE WASHER. MICHAEL J. FORTH, Dorchester, Mass. Filed Apr. 2, 1927. Serial No. 180,451. 7 Claims. (Cl. 141—7.)

1. In a bottle washer, the combination with a spray pipe having jet openings at its end and an opening between its ends, of a valve controlling the flow through said pipe,

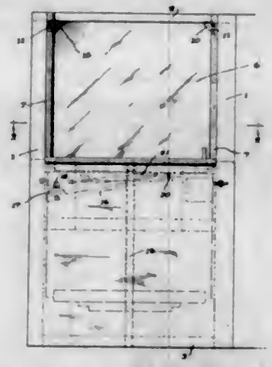
a valve stem connected to said valve and projecting through said opening, the projecting portion of said valve stem constituting a finger adapted to be engaged by the neck

of a bottle which is placed over the spray pipe, whereby pressure of the bottle against said finger will open the valve.



1,687,013. ARMORED ELECTRIC CABLE. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to National Electric Products Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 7, 1927. Serial No. 238,356. 10 Claims. (Cl. 173—267.)

1. An armored electric conductor comprising, an insulated wire, a protecting covering of insulating material surrounding the insulated wire, a metallic sheath or jacket enclosing the protecting covering and insulated wire, and a bushing interposed between the insulated wire and the metallic sheath or jacket to protect the wire insulation from the edge formed at the end of the metallic sheath or jacket.

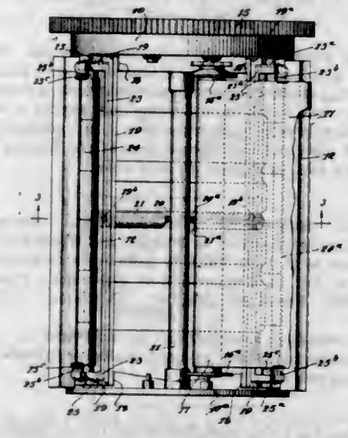


1,687,014. APPARATUS FOR DISPENSING LUBRICANTS. FREDERICK D. GATCHELL, New York, N. Y. Filed June 16, 1926. Serial No. 116,433. 1 Claim. (Cl. 221—47.1.)

Apparatus for dispensing grease from original containers, comprising, in combination, a main support, auxiliary supports for receiving a grease container and centering it with relation to devices for operating on it, one of said auxiliary supports being a cup shape element constituting a discharge nozzle for the container, a spring retracted device operatively mounted in said cup shape

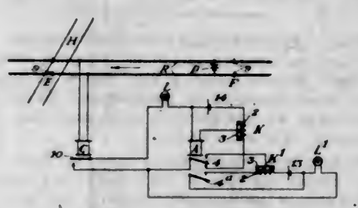
element for piercing the container, means for operating said device, and means operatively mounted in the other auxiliary support for forcing the grease towards the nozzle.

1,687,015. WINDOW CONSTRUCTION. BERTRAM J. GOLDSMITH and EMIL KOEB, New York, N. Y., assignors to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed May 28, 1925. Serial No. 33,379. 3 Claims. (Cl. 296—48.)



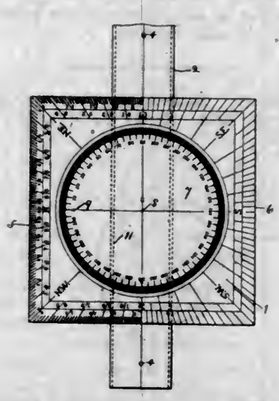
3. In a device of the character described, a frame, channel members mounted on the sides of said frame, a window extending within said channel members, spring devices carried by corners of said window and slidably engaged within said channel members, an additional channel member within said frame and a spring element fastened to the lower edge of the window substantially centrally thereof and frictionally and slidably engaged within said additional channel member.

1,687,016. MEANS FOR CONTROLLING THE TRAVEL OF THE INK RIBBON USED WITH ROTARY PRINTING MACHINES. CHARLES FREDERICK GREEN, Romford, England, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1926, Serial No. 135,722, and in Great Britain Jan. 15, 1926. 3 Claims. (Cl. 101—336.)



3. The combination with a printing machine of the character described, including a type carrying drum, an

ink ribbon disposed over the type, and spools for the ribbon, of means for maintaining the ribbon in alignment with said spools as it travels from one to the other, said means including a guide roller slightly longer than the width of the ribbon, rotatably mounted on a frame pivoted midway between its ends to the drum at right angles to the axis of the frame and radially to the drum, whereby the roller



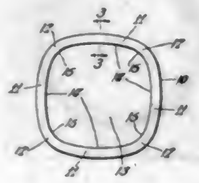
may swing in either direction out of parallel with the axis of the cylinder, and a plate on each end of the frame overhanging and almost touching the extremity of the roller in the frame, whereby when the ribbon deviates toward one side of the drum it engages between an overhanging plate and the roller to pivot the roller, the roller thereupon acting to move the ribbon into normal alignment with said spools.

1,687,017. APPARATUS FOR CAUSING INTERMITTENT OPERATION OF ELECTRORESPONSIVE DEVICES. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,855. 1 Claim. (Cl. 1770—347.)

In combination two electric lamps, an electromagnetic relay having front and back contacts; a circuit including a source of current, the first lamp, a back contact of said relay and the heating element of a thermo-sensitive device; a circuit for said relay including a source of current and the thermo-sensitive element of said device; a second thermo-sensitive device; a circuit for the heating element of said second device including a source of current and a front contact of said relay; and a circuit including said second lamp, a source of current, the thermo-sensitive element of said second device, and a second front contact of said relay; whereby a time interval occurs between the extinguishing of the first lamp and the lighting of the second lamp, which time interval is determined by the characteristics of the second thermo-sensitive device.

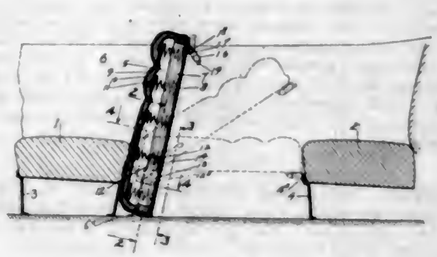
1,687,018. NAUTICAL POSITION FINDER. CHARLES GEORGE GUY, Vancouver, British Columbia, Canada. Filed July 6, 1926. Serial No. 120,847. 1 Claim. (Cl. 33—1.)

A navigational instrument of the type described comprising, a rigid square flat transparent member having angular divisions indicated on the surface adjacent its periphery, said angular divisions on one half of the periphery corresponding to the divisions of the mariner's compass, concentric circular lines on the surface of and centrally disposed on said square member, said concentric circular lines being angularly subdivided by radial lines, a rigid and relatively long flat rectangular and transparent member of the nature of a flat ruler centrally connected to said square member, a shallow recess in the underside of said square member adapted to receive in slidable relation said flat ruler member whereby when said ruler member is rigidly positioned upon a chart the said square flat member may be slidden along it to any desired position thereupon.



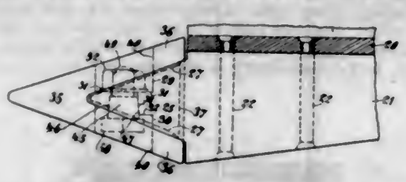
1,687,019. LAVATORY FIXTURE. AUGUST W. HALLBERG, Waterbury, Conn., assignor to Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed July 8, 1925. Serial No. 42,156. 1 Claim. (Cl. 45—38.)

In a lavatory fixture, the combination with a post-member, of a socket-member applied to the upper end thereof, a holder carried by and overhanging the latter, the said post-member being formed at its upper end with



a bifurcated stem encircled by teeth parallel with the axis of the said post-member, and a chamber in said socket-member shaped to correspond to the upper end portion of said post-member, whereby said bifurcated portion is received, compressed, and maintained under compression in said chamber and provided with a complementary series of teeth parallel with its axis for engagement with the teeth of the post-member, whereby the said post-member and socket-member may be joined in a plurality of relative, rotary positions in any one of which they will be positively held against relative rotation by the said teeth and in which they will be frictionally held against being drawn apart by the co-action of the bifurcated stem with walls of the said chamber.

1,687,020. RING. MILTON H. HERZOG, Chicago, Ill. Filed Apr. 23, 1923. Serial No. 634,078. 2 Claims. (Cl. 63—15.)

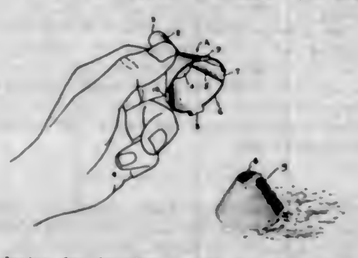


2. A finger ring having a four-sided finger receiving opening defined by pairs of oppositely arranged oppositely curved wall portions of comparatively slight curvature connected integrally by wall portions of sharper curvature.

1,687,021. CONVERTIBLE AUTOMOBILE BODY. OLIVER E. HORNER, San Diego, Calif. Filed May 25, 1925. Serial No. 32,629. 3 Claims. (Cl. 155—7.)

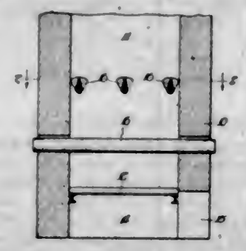
1. In a convertible automobile body structure, front and rear seat members, supports for said seat members, a pair of tubular back supporting and hinge members supported on the floor of the automobile behind said front seat member and extending upwardly from said floor, a back member positioned behind said front seat member with a portion thereof extending above and the other portion thereof extending below the same and positioned over said supporting and hinge members, and longitudinally slotted hinge members secured in the lower portions of and within said back member, said slotted hinge members being pivotally connected to the upper ends of said supporting and hinge members and extending into the tubular portions thereof when said back member is in a back supporting position, said back member being vertically slotted at the lower portion of its back wall behind the hinge members mounted therein, the slotted portions of said back member being adapted to receive the supporting and hinge members mounted on the floor when said back member is shifted to a vertical position.

1,687,022. TOOTH FOR EXCAVATING SHOVELS. WILLIAM T. HULSIZER, Clinton, N. J. Filed July 2, 1926. Serial No. 120,081. 4 Claims. (Cl. 37—142.)



1. In a tooth of the character described the combination of a body portion having a tapered nose, a point having tapering members located upon said nose, a connecting brace for said members, a locking lug having a tapered face extending from said brace and a key adapted to engage said nose and the tapered face of the locking lug to detachably lock said point to said nose.

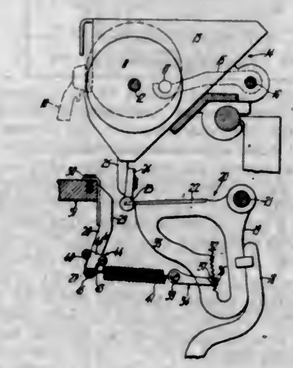
1,687,023. DYNAMITE COMPOSITION. NORMAN G. JOHNSON and SAMUEL G. BAKER, Jr., Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 18, 1927. Serial No. 206,783. 13 Claims. (Cl. 52—11.)



1. An explosive composition characterized by its low density which comprises a liquid explosive ingredient and ground popped corn.

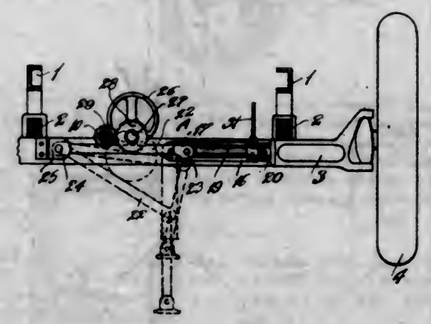
1,687,024. DEVICE FOR FORMING GOLF TEES. MATTHEW J. KEEVERS, Northampton, Mass. Filed Aug. 19, 1927. Serial No. 213,995. 3 Claims. (Cl. 273—33.)

1. A device for forming a golf tee of sand or other earthy material comprising a cup in which the tee is to be molded, said cup having means associated therewith for forming a groove in the side of the molded tee.



1,687,025. ELECTRICALLY-HEATED KILN. GOTTLIEB KELLER, Brugg, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Dec. 13, 1926. Serial No. 154,448, and in Germany Jan. 6, 1926. 2 Claims. (Cl. 266—1.5.)

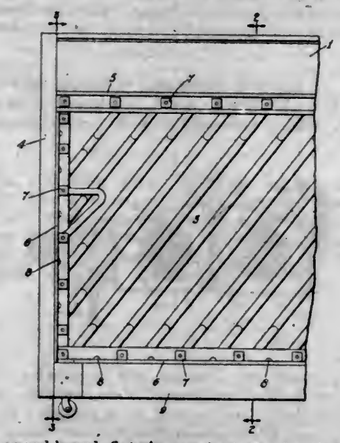
1. In apparatus of the character described, means providing a vertically-disposed heating chamber, heat-radiating elements disposed within said chamber and supported



in spaced relation with respect to each other in such manner as to provide for retarded gravity-induced movement of material in said chamber, and heating means disposed within said elements and sealed thereby against direct contact with said material.

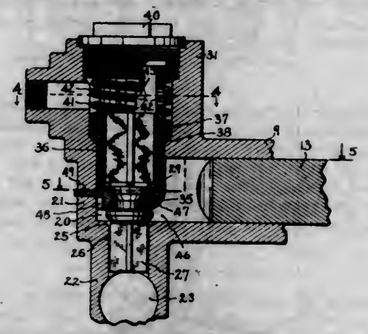
1,687,026. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 3, 1927. Serial No. 217,322. 9 Claims. (Cl. 197—73.)

5. In a typewriting machine, a counter-balancing coiled wire spring with an end terminating in an integral closed ring or loop, a notched bracket-member around which said ring hooks for engaging in the notch thereof, and instrumentalities for building up an eye or hole in said bracket whose rim engages around the wire rim of said loop.



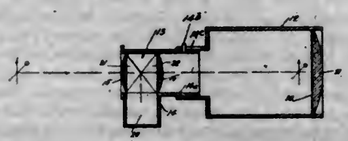
1,687,027. AUTOMOBILE JACK. JOHN A. MAAZOLF, Seattle, Wash. Filed June 20, 1927. Serial No. 200,027. 2 Claims. (Cl. 254—86.)

2. The combination in an automobile jack with an axle of a pivoted guide frame and a jack bar guided in said frame, a lever link pivoted to said axle and to said jack bar, an eccentric shaft and an eccentric disk thereon engaging the lever link, an operating shaft, a motor, and transmission mechanism between the motor and the operating shaft, for the purpose described.



1,687,028. PIANO. JULIAN T. MAYER and EDMOND LEVIS, New York, and HERMAN SCHUM, Bronx, N. Y., assignors, by mesne assignments, to Rudolph Wurlitzer Mfg. Co., North Tonawanda, N. Y., a Corporation of New York. Filed May 29, 1923. Serial No. 642,159. 4 Claims. (Cl. 84—187.)

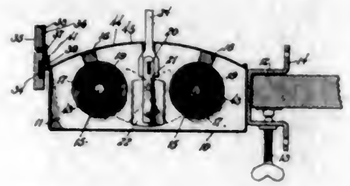
3. In a piano, the combination of a metal string plate and sound-board support having beveled crowning flanges extending rearwardly therefrom, a sound-board, and means at the opposite side of said board from said flanges and in registry therewith for uniformly clamping the margin



of the sound-board flatwise against the beveled faces of said flanges to hold the sound-board in predetermined standard tension.

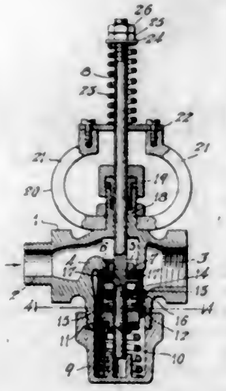
1,687,029. PUMP. JOHN M. MCCLATCHIE, New York, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1926. Serial No. 158,143. 3 Claims. (Cl. 103—153.)

1. A pump comprising, a cylinder, a piston mounted to reciprocate in the cylinder, means for actuating the piston, a chamber communicating with the forward end of the cylinder, an inlet valve in the bottom of the chamber, a cylindrical valve casing extending downwardly into the chamber, an outlet valve seated in the casing, the forward end of the piston being provided with a vertical groove the arc of which is formed on substantially the same radius as that of the valve casing.



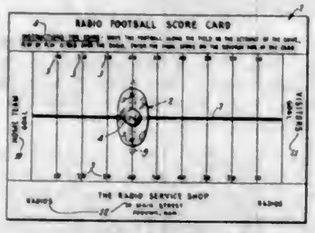
1,687,030. ERECTING FINDER. GEORGE A. MITCHELL, Los Angeles, Calif., assignor to Mitchell Camera Corporation, a Corporation of California. Filed May 22, 1926. Serial No. 110,866. 4 Claims. (Cl. 88—1.5.)

3. In an erecting finder, an erecting objective combination comprising an erecting prismatic system, and an



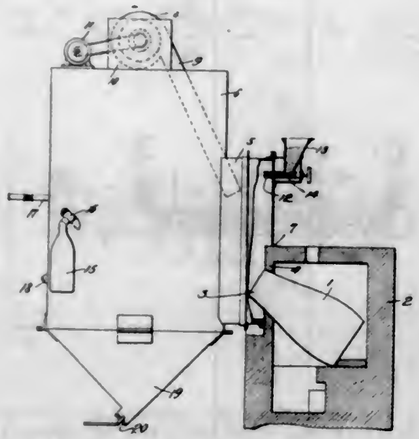
objective of two lenses secured directly to the front and rear faces of the prismatic system; the lenses being of such focal lengths as to act as a single objective with a focal length that throws an image behind the rear lens; and an image receiving surface behind the rear lens.

1,687,031. BANDAGE ROLLER, CUTTER, AND CABINET. JOHN J. MOORE, South Charleston, Ohio. Filed Apr. 30, 1927. Serial No. 187,933. 13 Claims. (Cl. 164—39.)



1. A machine for cutting and dispensing surgical bandage and the like, comprising, in combination; a casing having provision to be secured to a support; a spindle carrying a bandage roll mounted within said casing; means to rotate said spindle; a cutter within the casing mounted for longitudinal adjustment adjacent to the roll and adapted to be forced into cutting relation thereto; a guide associated with said casing over which severed strips are adapted to be pulled; and cutter means associated with the guide to sever the strips.

1,687,032. BY-PASS VALVE. EDWARD MULLER, North Bergen, N. J. Filed Oct. 21, 1927. Serial No. 227,711. 5 Claims. (Cl. 251—146.)

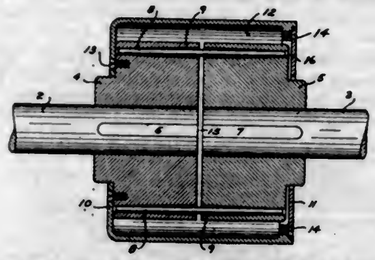


1. A by-pass valve, comprising a body having an inlet and an outlet separated by a partition with a valve opening surrounded by a valve seat at the outlet side, a slidable valve stem projecting from the valve body at the inlet side and having, a valve head fixed on said stem to cooperate with said valve seat, a spring on said stem normally seating the valve head, a cup slidable upon said valve stem providing a cylinder for the valve head with its open end arranged to abut said partition around said valve seat and having lateral openings near said open end, a spring normally influencing said cup toward said partition, so that said cup after being moved away from said partition by the valve head in opening will engage said partition in advance of the valve head in closing, and an adjustable spring upon the valve stem outside the valve body for changing the action of the said spring for seating the valve head in relation to the cup spring.

1,687,033. RADIO FOOTBALL SCORE BOARD. GERALD D. NELSON, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed July 8, 1926. Serial No. 121,082. 2 Claims. (Cl. 116—120.)

2. An advertising novelty comprising a card having a series of parallel lines thereon and a slot arranged transversely of said lines, a flat indicator simulating a ball and having a mark thereon adapted to align with one of said parallel lines and a central aperture, a securing member having a circular head whose lower face engages said indicator and a pair of tangs passing thru said aperture and said slot and being bent over to contact the under side of said card, the outer faces of said tangs contacting with the bounding edges of said slot and the width of said tangs being substantially greater than the width of said slot, whereby rotation of the indicator is prevented and the mark thereon remains parallel to the lines on the card as it is moved along the slot.

1,687,034. PROCESS OF PRODUCING A METAL-DUST MIXTURE. MINTON H. NEWELL, San Francisco, Calif., assignor to The Alloys Company, San Francisco, Calif., a Corporation of California. Filed Apr. 11, 1927. Serial No. 182,972. 6 Claims. (Cl. 75—28.)

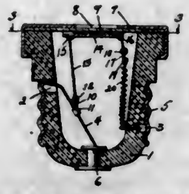


1. The process of producing a zinc-lead dust which consists in vaporizing zinc, decomposing lead oxide in the zinc vapor and then cooling the mixture sufficiently rapidly to condense the zinc in a finely divided condition.

1,687,035. COUPLING. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 17, 1924. Serial No. 699,665. 4 Claims. (Cl. 64—96.)

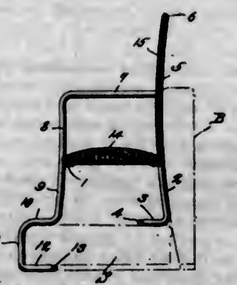
1. A flexible coupling comprising, rotary driving and driven members having normally alined holes provided with tapered circular bounding surfaces, the surface of

the hole of one member converging away from that of the other, and a circular resilient pin having its end portions snugly confined but slidable within the smallest portions



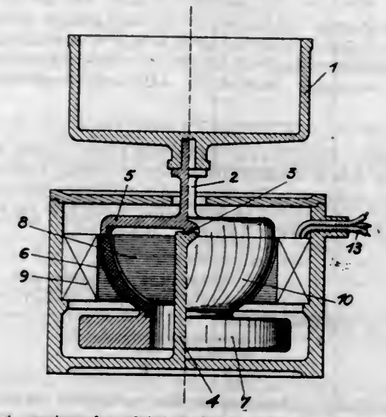
of said holes, and the medial portion of said pin being universally deflectable into contact with said tapered surfaces.

1,687,036. BASE EXCHANGE SILICATE AND PROCESS OF MAKING SAME. ESKEL NORDELL, Fort Wayne, Ind., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1925. Serial No. 70,694. 8 Claims. (Cl. 23—113.)



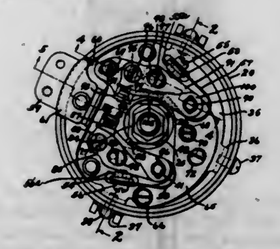
7. Base exchange silicates resulting from the reaction of a solution of a soluble aluminum salt of an organic acid with a solution of an alkali metal silicate, said gel product partially dried, leached, broken up and screened to size for use.

1,687,037. INDICATING FUSE PLUG. JOSEPH FRANCIS ORLANDO, Washington, D. C., assignor of one-half to Robert Glorioso, Washington, D. C. Filed May 1, 1926. Serial No. 106,157. 14 Claims. (Cl. 200—121.)



1. In a fuse plug embodying a fusible element, means to indicate the condition of the fusible element comprising an indicating member having a supporting means, secured to the fusible element at the point of the greatest resistance, and means to operate the indicating member on a parallel plane with the supporting means comprising a spring.

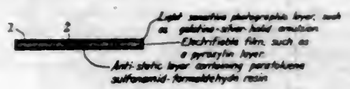
1,687,038. SUPPLEMENTAL CHAIR FOR AUTOMOBILES AND THE LIKE. CHARLES WILLIAM PETTIGREW, Parkersburg, W. Va. Filed Nov. 3, 1925. Serial No. 66,554. 1 Claim. (Cl. 155—11.)



The combination with a vehicle seat including a seat cushion and a back, of a supplemental chair bearing against the back and including front and back legs, a seat supported thereby remote from the cushion, forwardly extending feet upon the legs for bearing on the front and back portions of the cushion, and means carried by the feet of the front leg and cooperating therewith to constitute hooks for straddling the front portion of the seat cushion, all of the feet constituting means for thrusting the cushion downwardly onto the lower portions of the hooks, and transverse rods connecting the rear feet and the lower portions of the front hooks respectively.

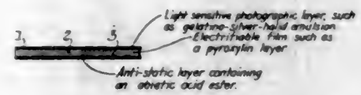
1,687,039. MOTOR FOR DRIVING HYDRO-EXTRACTORS. HENDRIK ARNOLD ROMP, Arnhem, Netherlands, assignor to Naamlooze Vennootschap Nederlandsche Kunstzijdefabriek, Arnhem, Netherlands. Filed May 3, 1926, Serial No. 106,530, and in the Netherlands Feb. 13, 1926. 4 Claims. (Cl. 172—36.)

1. A motor for driving hydro-extractors comprising stator windings fixed to a casing, a column, a core fixed to said column, a rotor between the pole pieces of the stator windings and the core, the rotor, the core, and the pole pieces of the stator being provided with spherical bounding surfaces, the centres of the latter substantially coinciding with the point of support of the shaft which supports the hydro-extractor.



1,687,040. IGNITION DEVICE. WILLIAM D. SCHROPE, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 2, 1926. Serial No. 126,413. 7 Claims. (Cl. 200—21.)

3. An ignition device comprising in combination a housing; a cam in said housing; an apertured mounting plate secured in the housing; a conducting bridging member insulatingly secured to the one side of the said mounting plate, said member having angular portions extending through the apertures in said plate; circuit interrupters in said housing on the side of the mounting plate opposite the bridging member, said interrupters each including a stationary contact bracket and a movable arm carrying a contact adapted to engage with the contact of the sta-

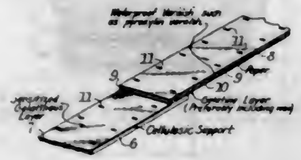


tionary bracket; and a leaf spring conductor interposed between each contact arm and an angular portion of the bridging member extending through the mounting plate, and being in electrical connection with both.

1,687,041. NONSTATIC PHOTOGRAPHIC FILM AND FILM BASE THEREFOR. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 12, 1927. Serial No. 212,568. 3 Claims. (Cl. 95—9.)

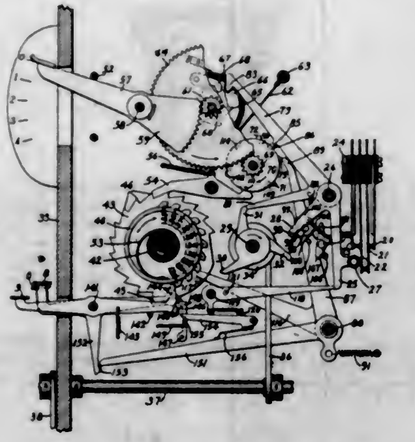
1. A flexible, photographic film comprising an electrifiable support carrying on one face a light-sensitive photographic coating and on the other face an antistatic layer containing paratoluene sulfonamid-formaldehyde resin.

1,687,042. ANTISTATIC PHOTOGRAPHIC FILM AND FILM BASE THEREFOR. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 12, 1927. Serial No. 212,569. 3 Claims. (Cl. 95—1.)



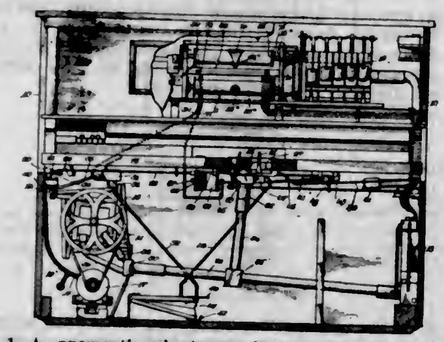
1. A flexible, photographic film comprising an electrifiable support carrying on one face a light-sensitive photographic coating and on the other face an antistatic layer containing an abietic acid ester.

1,687,043. SIGN. CLARENCE E. STRICKLAND, Atlantic City, N. J., assignor of one-third to David S. Brown and one-third to Emma R. Dawson, Atlantic City, N. J. Filed Mar. 19, 1927, Serial No. 176,803. Renewed Apr. 26, 1928. 1 Claim. (Cl. 40—138.)



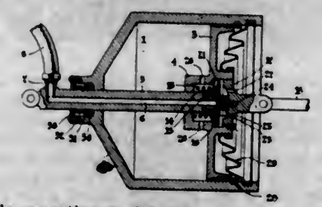
A sign comprising, in combination, a fixed part including a tubular standard, a shaft disposed therethrough, a sign plate carried by the shaft, a disc carried by the shaft, and a retractile spring having connection with the disc at a point offset from the shaft and with the fixed part to normally maintain the sign plate in a predetermined position.

1,687,044. MOTION-PICTURE-FILM STRIP. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,812. 9 Claims. (Cl. 95—9.)



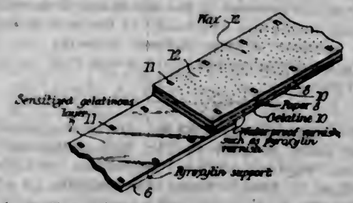
1. A motion picture film strip including a band of sensitized film with an unsensitized protective band at each end thereon, one end of each protective band being secured to one end of the film band, and each protective band comprising a strip of paper and a layer of stiffening and waterproofing cellulosic composition.

1,687,045. MULTISPEED VARIABLE-SIGNAL TRANSMITTER. NATHAN H. SUREN, Needham, Mass., assignor to The Gamewell Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1924. Serial No. 729,918. 10 Claims. (Cl. 177—380.)



1. In a signal transmitter comprising signal formulating means and pausing mechanism,—elements revoluble at a substantially uniform speed and adapted to thereby cause functional actuations of said means and said mechanism to formulate a series of strokes separated by time intervals of diverse relative durations, mechanism for variably determining the number of such strokes to be formulated, and means whereby the actuations of both said pausing mechanism and said number determining mechanism may be controlled by greater or lesser numbers of said elements to thereby effect substantially proportional variations in the durations of said intervals, respectively, while maintaining the speed of revolution of said elements substantially constant.

1,687,046. AUTOMATIC MUSICAL INSTRUMENT. ALFRED SWENSEN, Riverside, Ill., assignor to The Cable Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 12, 1916, Serial No. 97,153, now Patent No. 1,404,805. Divided and this application filed Aug. 13, 1921. Serial No. 491,895. 32 Claims. (Cl. 84—123.)



1. A pneumatic sheet-controlled musical instrument comprising a device for inducing air-tension, a motor for operating said device, and a hand-operated device for controlling the traveling speed of the music-sheet and for controlling said motor.

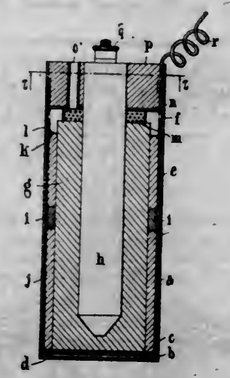
1,687,047. BRAKE-OPERATING MECHANISM. HERBERT HORATIO TRAIL, Vancouver, British Columbia, Canada. Filed Oct. 22, 1925. Serial No. 64,249. 9 Claims. (Cl. 121—41.)

1. Brake operating mechanism comprising a valve chamber having two parts of different diameters, a valve seat at the junction of said parts of different diameters, a valved biassed towards said seat, a port connecting the part of larger diameter with the atmosphere, a port communicating with the part of smaller diameter, a passage adapted to be subject to sub-atmospheric pressure, and an axially movable controlling member adapted in one position to engage said valve and thereby cause closure of said passage and unseating of said valve and in another position to be withdrawn from engagement with said valve whereby the valve is permitted to engage its seat and said passage is opened.

1,687,048. MOTION-PICTURE FILM STRIP. EDWARD C. VAN DOORN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 28, 1926. Serial No. 130,799. 7 Claims. (Cl. 95—9.)

1. A motion picture film strip including a band of sensitized material and a protective strip therefor comprising two co-extensive paper bands laminated together by a waterproof adhesive.

1,687,049. METAL CROSSTIE FOR RAILROAD USE. ANTON WHITNEY, Radisson, Wis. Filed Apr. 4, 1927. Serial No. 180,060. 2 Claims. (Cl. 238—114.)

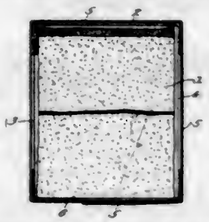


1. A railway tie structure of the character described, comprising a pair of elongated box like sections, designed to be arranged in alined end-opposed relation each for the support of a track rail, and each having an opening formed through the top thereof to permit the introduction of ballast material thereinto, a cover plate for the opening of each section, a draw bar section extending from each of the opposed ends of the tie sections, and an aligned relation, said draw bar sections each being provided with screw threads upon its free end, and a turn-buckle connection between the said free ends of the draw bar sections designed to assist in shifting the tie sections relative to one another.

1,687,050. PROCESS FOR PRODUCING LIPASE. SHOZO YAMAMOTO, Osaka-Fu, Japan. Filed June 9, 1925, Serial No. 36,035, and in Japan Aug. 16, 1924. 3 Claims. (Cl. 167—7.)

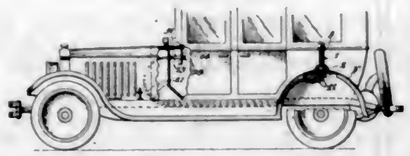
3. The process of producing lipase which comprises subjecting castor bean refuse to fermentation, adding soya bean refuse thereto and continuing the fermentation at about 30° C. to 40° C. until protein material in the refuse is converted into a yeast-like substance, immersing the material in water to dissolve the yeast-like substance, removing the undissolved material, and thereafter treating the solution with acetic acid to precipitate lipase.

1,687,051. ELECTRIC BATTERY OF THE LECLANCHÉ TYPE. GEORGE NICHOLAYEVICH ANTONOFF, London, England, assignor to Matthew Atkinson Adam, London, England. Filed May 26, 1924, Serial No. 716,062, and in Great Britain June 8, 1923. 23 Claims. (Cl. 136—107.)



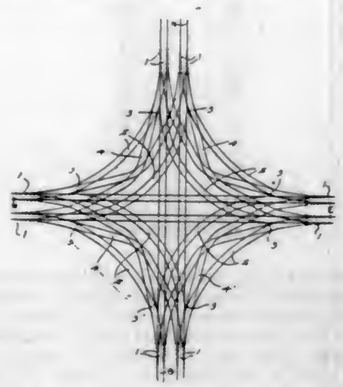
1. An electric cell of the Leclanché type with an outer moisture-retaining case provided with free ventilation for the zinc electrode externally as well as internally and with an electrolyte mixture gelatinous yet firm and substantially non-porous at the itme of making but turning to a firm porous mass of the consistency of cheese without liquefaction.

1,687,052. FOOD PACKAGE. GEORGE G. BARBER, New York, N. Y., assignor to Continental Baking Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 1, 1926. Serial No. 133,031. 3 Claims. (Cl. 206—46.)



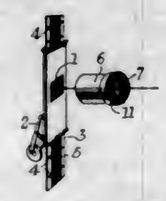
1. A merchantable package comprising a container having bottom, top, and side walls, a body of cake within said

container, and a transparent wrapper completely surrounding the container, the top and a side wall of the con-



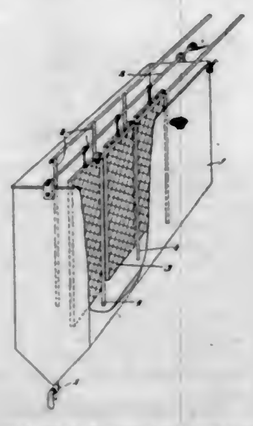
tainer having apertures permitting inspection of two surfaces of the cake without opening the wrapper or breaking it.

1,687,053. AUTOMOBILE SIGNAL. ALBERT S. BOWERSOX, Fletcher, Ohio. Filed Oct. 19, 1927. Serial No. 227,300. 6 Claims. (Cl. 116—53.)



1. In signal mechanism of the class described, a housing, a signal member pivotally suspended within the housing for swinging movement to extend laterally from the housing in various positions of angular adjustment, a manually operable actuating member, means for supporting the same, a tubular guide sheath extending between the said housing and the supporting means for the actuating member, and a semi-flexible connecting element operatively connected with the signal member and with the actuating member and extending through said sheath and in frictional contact with the sheath whereby to provide for maintenance of the signal member in positions of adjustment.

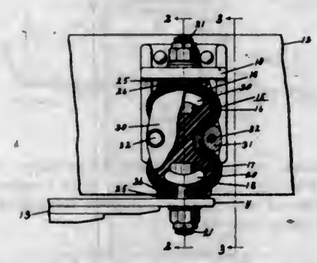
1,687,054. RAILROAD CROSSING. JULIUS CAESAR BRADSHAW, Mobile, Ala. Filed Sept. 10, 1927. Serial No. 218,739. 1 Claim. (Cl. 104—130.)



A railroad crossing comprising parallel intersecting main tracks, a three throw switch located in each main track on each side of the intersecting points, a switching track connecting each one of the switches in each of the main tracks with a switch in one of the intersecting trackways, a switching track connecting said first named switch with a switch in the second intersecting trackway at the opposite side of the points of intersection, and a switching track connecting one of each pair of first named switching tracks with an intersecting main track parallel to the main track with which the second of said pair of switching tracks connect.

1,687,055. APPARATUS FOR PHOTOGRAPHIC COLOR PROCESS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 22, 1927. Serial No. 214,467. 7 Claims. (Cl. 95—2.)

1. A polychromatic screen for use in a color process utilizing a photographic element having associated therewith numerous image-forming elements and comprising a series of light transmitting areas of different color side by side, each area varying in length from side to side and its middle portion being the longest.



1,687,056. PROCESS OF ELECTROLYTICALLY SEPARATING THE ALLOYS OF SILVER WITH OTHER PRECIOUS OR BASE METALS. RUDOLF CARL, Vienna, Austria. Filed July 27, 1923, Serial No. 654,269, and in Austria Nov. 24, 1922. 3 Claims. (Cl. 204—57.)

1. In a process of electrolytically separating the alloys of silver with other precious and base metals, the step consisting in employing these alloys as anode in a neutral electrolyte whose anion is able to form with the silver and the base metals of the alloy easily soluble salts, whereby hydroxyllons are released at the anode and form oxides of the precious metals and hydroxides of the base metals, the hydrogen released at the cathode reducing the silver oxide to a finely distributed silver which does not adhere to the cathode.

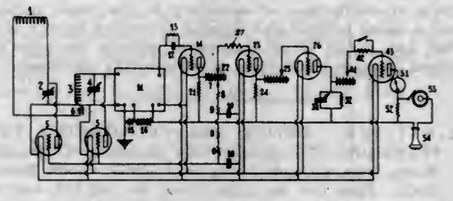
1,687,057. SPRING SHACKLE. LOUIS P. CHRISTMAN, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 3, 1926. Serial No. 146,049. 6 Claims. (Cl. 267—30.)

1. An extension shackle for connecting two relatively movable members and having a molded unit comprising: an elastic rubber block of substantial dumb-bell form, a flexible rubberized fabric band surrounding said elastic rubber block and vulcanized thereto, a metal attaching means molded in place at each end of said molded unit for secur-

ing said unit to said relatively movable members, and an exterior metal yoke confining the neck portion of said molded unit to prevent spreading thereof when said unit is put under compression.

1,687,058. CONTROLLER LOCK. WILLIAM A. CHRYST, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 8, 1926. Serial No. 114,563. 12 Claims. (Cl. 70—14.)

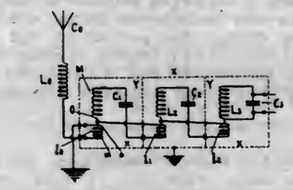
1. A controller lock comprising, in combination, a movable controlling member having "on" and "off" positions, a locking bolt engageable with the member to prevent movement thereof, a spring urging the bolt into locking position, a key operated device for moving the bolt into non-locking position and for retaining it in said position, the key being removable while the device remains operative, and means operated in response to movement of the member to "on" position for moving the device to inoperative position, the member having a portion for maintaining the bolt in non-locking position when the member is moved away from "off" position.



1,687,059. PROCESS OF ESTERIFYING MERCERIZED CELLULOSE WITH LOWER FATTY ACIDS. HANS T. CLARKE and CARL J. MALM, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester N Y., a Corporation of New York. Filed Apr. 23, 1927. Serial No. 186,170. 8 Claims. (Cl. 260—101.)

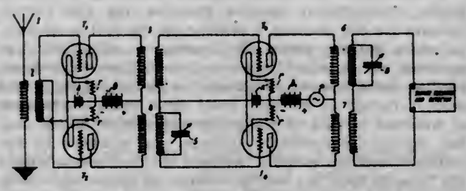
1. In the process of making a cellulose ester of a fatty acid, mercerizing the cellulose and thereafter heating together the mercerized cellulose and a fatty acid having more than 1 and less than 8 carbon atoms without a catalyst at a temperature between 100° and 170° C. inclusive until the acyl group in the ester thus produced reaches at least 8%, said acid being the sole acylating agent.

1,687,060. CELLULOSE ESTERS CONTAINING HALOGENATED ACYL GROUPS AND PROCESSES OF MAKING SAME. HANS T. CLARKE and CARL J. MALM, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 4, 1927. Serial No. 188,859. 43 Claims. (Cl. 260—101.)



1. A cellulose ester in which there is an acyl group containing a halogen-substituted chain, the halogen being more than 1% of the weight of the ester.

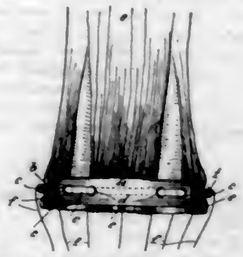
1,687,061. ANTIPARASITE RECEIVER FOR WIRELESS COMMUNICATION SYSTEMS. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Paris, France. Filed June 2, 1923, Serial No. 642,882, and in France July 21, 1922. 6 Claims. (Cl. 250—20.)



6. In a radio receiving apparatus a tuned circuit and detector associated therewith, means associated with the detector for varying the damping of said tuned circuit in accordance with the amplitude of detected currents, means associated with said first mentioned means for limiting the amplitude of disturbing oscillations, and a circuit of high time constant for further decreasing the amplitude of the disturbing oscillations and increasing their duration.

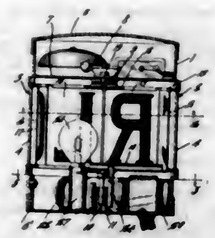
1,687,062. FILTER FOR HIGH-FREQUENCY OSCILLATIONS. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Toulon, France. Filed June 2, 1923, Serial No. 642,883, and in France June 8, 1922. 2 Claims. (Cl. 178—44.)

1. In a filter arrangement, a plurality of inductively coupled resonant circuits, each of said circuits having a primary and a secondary coupling coil, the primary one of said circuits being connected end to end with the secondary of the next successive circuit, and a ground connection joined to each common connection of the primary and secondary.



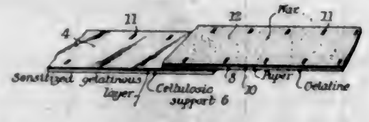
1,687,063. ELECTRIC SIGNALING. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Paris, France. Filed Dec 24, 1924, Serial No. 757,783, and in France Dec. 28, 1923. 6 Claims. (Cl. 250—20.)

1. In combination, an antenna circuit responsive to signal waves of frequency f and static pulses, a first series of circuits for amplifying the signal waves and the static pulses and for modulating the signal waves and then converting the static pulses into a train of damped



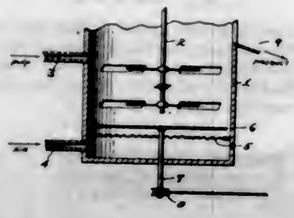
oscillations of the signal frequency plus or minus the modulating frequency, a second series of circuits parallel to said first series for amplifying the signal waves and the static pulses and converting the static pulses into a train of oscillations of the signal frequency and then amplifying and modulating both the signal waves and the train of oscillations corresponding to the static pulses, and a signal receiver and detector responsive to both said first and second series of circuits, whereby the ratio of signal effect to static effect is substantially increased.

1,687,064. DEVICE FOR FACILITATING THE SPREADING OF PARACHUTES. GIUSEPPE FURMANIK, Rome, Italy, assignor to Giacomo Achille Calabi, Rome, Italy. Filed Oct. 18, 1926, Serial No. 142,487, and in Italy June 5, 1926. 3 Claims. (Cl. 244—21.)



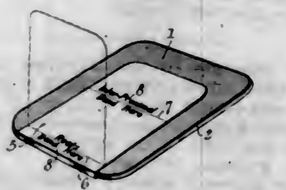
1. A device for facilitating the spreading of parachutes including a ring having perforations therein and a channel in the outer circumference thereof, and an elastic cable passing through the perforations and partially locked in the channel and adapted to clamp the ropes and peripheral portion of the body of a parachute to ensure the admission of air at the moment of launching.

1,687,065. SIGNAL FOR AUTOMOBILES. JOHN P. HANSON, Butte, Mont. Filed June 17, 1924. Serial No. 720,648. 1 Claim. (Cl. 177—337.)



A semaphore for motor vehicles including a housing having diametrically opposed windows, top and bottom closures for the housing, a bearing on the bottom closure, an upper bearing within the housing, a cylindrical cage mounted for rotation between the windows, means extending therefrom for engagement with the bearings, said cage including an arcuate lower cross head, a plurality of windows carried by the peripheral portion of the cage for exposure successively through the windows of the housing, separate radially disposed electromagnets within the housing upon the bottom closure, an armature depending from the cage at a point remote from the center thereof, a lamp fixed upon the lower closure and supported within the cage, and means under the control of the operator for energizing any one of the electromagnets, thereby to attract the armature thereto and rotate the cage to a predetermined position, said lamp projecting past the cross-head.

1,687,066. MOTION-PICTURE-FILM STRIP. JAMES H. HASTE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,786. 6 Claims. (Cl. 95—9.)

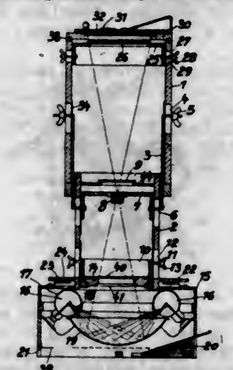


1. A motion picture film strip including a band of sensitized material and a protective band forming a continuation thereof and having a deposit consisting of wax upon one surface thereof.

1,687,067. PROCESS FOR MAKING CELLULAR CEMENTITIOUS MATERIALS. GEORGE BOOLE HINTON, Mexico City, Mexico. Filed Feb. 2, 1928. Serial No. 251,402. 5 Claims. (Cl. 83—73.)

1. In the process of making set cellular cementitious products by aerating a pulp of cement in the presence of a frothing flotation reagent, the steps which comprises initially forming small bubbles of air of substantially the size desired in the final set product in the pulp of cement from an entering air stream and then mixing said bubbles with said cement pulp without substantial change in size of the bubbles.

1,687,068. DENTAL X-RAY PACKAGE. MILLARD B. HODGSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 7, 1926. Serial No. 140,133. 6 Claims. (Cl. 250—34.)



1. A dental X-ray film package having an impressionable tab attached thereto adjacent one edge and having a free portion exterior of the package lying flat upon the package and extending over half way across the package, and being bendable on a line near the edge of the package and also on a line bisecting the package transversely of the tab.

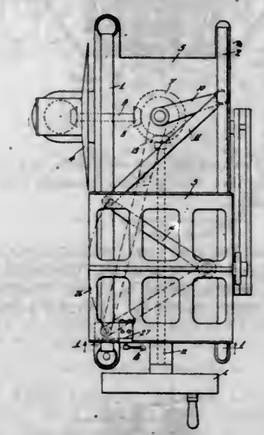
1,687,069. COPYING DEVICE FOR PHOTOGRAPHIC PURPOSES. ADALBERT ISER, Reichenberg, Czechoslovakia. Filed Nov. 26, 1923, Serial No. 677,115, and in Germany Dec. 7, 1922. 3 Claims. (Cl. 88—24.)

1. In a copying apparatus for photographic purposes, the combination of a fixed source of light including a reflecting bowl and projecting lamps on the circumference of the bowl so arranged as to direct their light on the central zone of

the bowl in a condensed manner, a positive carrier fixed relatively to the source of light, a light-proof casing between the source of light and the positive carrier, a negative

carrier and a set of lenses arranged between the source of light and the positive carrier, and a colored member for interrupting the light rays projected from the source.

1,687,070. FOOT SUPPORT. GUSTAV KRAUSE, Schneidemuhl, Germany. Filed July 11, 1921, Serial No. 483,826, and in Germany Feb. 11, 1916. 2 Claims. (Cl. 36—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. A boot or shoe comprising in combination with its outer parts, an inner sole, an upwardly bulged middle portion formed in said inner sole, said portion having such a configuration and position with respect to the sole as to be adapted to support the arch of the human foot and to correctly fill a cavity formed thereat while the wearer is walking, said portion extending forwardly from the heel longitudinally of the foot approximately to the middle of the sole, a substantially inelastic insertion corresponding to the shape of said portion extending lengthwise under a portion of the inner sole, a filling material, and an outer sole holding said insertion and said filling material permanently upon said inner sole at that portion of the foot where the cavity is formed.

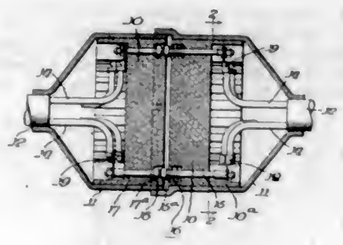
1,687,071. SURFACING DISK. HERBERT R. STRATFORD, Cleveland, Ohio, assignor to The Stratmore Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 27, 1927. Serial No. 201,961. 2 Claims. (Cl. 51—195.)

1. A composite surfacing disk consisting of abrasive integrally joined to one surface of a disk of cloth, and a supporting element for said cloth integrally joined thereto and consisting of vulcanized fibre having a longitudinal tensile strength for a section one inch wide and ten mills thick in excess of 150 pounds and a transverse tensile strength for the same strip in excess of 75 pounds.

1,687,072. SLICING MACHINE. CORNELIS F. M. VAN BERKEL, Wassenaar, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Nov. 11, 1926, Serial No. 147,664, and in Germany Nov. 13, 1925. 9 Claims. (Cl. 146—102.)

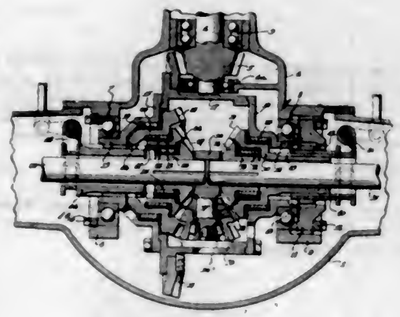
1. The combination with a slicing machine having a reciprocating table and driving mechanism therefor, of means for releasably connecting said driving mechanism with said reciprocating table, and means for restricting the path of movement of said driving mechanism when released from said table.

1,687,073. SHOVEL HANDLE. LEWIS EDMOND WEBSTER, Wilkes-Barre, Pa. Filed Nov. 27, 1926. Serial No. 151,176. 8 Claims. (Cl. 294—57.)



1. A shovel handle comprising a stem, a frame, a longitudinal slot in said stem, and a key in said socket portion coacting with said slot to prevent movement between the stem and socket.

1,687,074. ELECTRICAL COUPLING. ALFRED WICHERT, Mannheim, Germany, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Sept. 20, 1926, Serial No. 136,389, and in Germany Sept. 26, 1925. 2 Claims. (Cl. 173—328.)

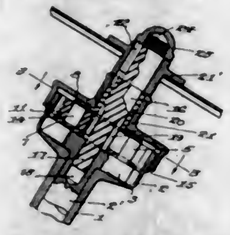


1. In an electrical coupling, a coupling member provided at one side thereof with a recess forming a marginal encompassing wall, said wall being provided with slots ex-

tending longitudinally of and being arranged circumferentially of said member and opening into said recess, and contact elements extending through said member and being

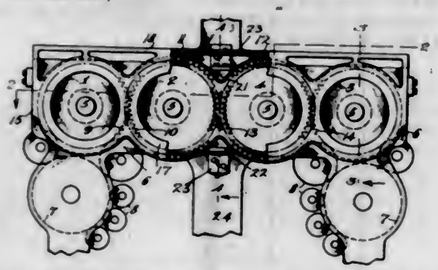
aligned with and extending into said slots, the ends of said elements at the other side of said member being exposed for contacting action.

1,687,075. VARIABLE-SPEED-TRANSMISSION MECHANISM. ARTHUR A. WIEDMAIER, Cleveland, Ohio, assignor of one-half to Lloyd M. Field, Cleveland, Ohio. Filed June 6, 1927. Serial No. 196,727. 8 Claims. (Cl. 74—99.)



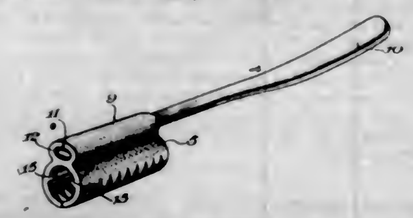
1. In a variable speed transmission mechanism, a driven differential casing, axle shafts extending therein, differential gears operatively connecting said axle shafts, change speed gears rotatable about the differential gears in said casing, means operatively connecting said change speed gears to said differential gears, a conditioning clutch adapted to connect one of said speed gears to said differential casing for high speed and fix the same change speed gear for other speeds, and a reduction clutch driven by said differential casing and adapted to be connected to other of said change speed gears to establish low and intermediate speeds.

1,687,076. PROCESS FOR COOKING WOOD CHIPS BY THE ALKALINE PROCESS OF PULP MANUFACTURE. ROBERT WOODHEAD, Hopewell, Va., assignor to Venning D. Simons, Chicago, Ill. Filed Oct. 12, 1927. Serial No. 225,854. 5 Claims. (Cl. 92—13.)



1. The process of manufacturing paper pulp which comprises the operations of preheating wood chips in the presence of previously used digesting liquor to which a small quantity of fresh digesting liquor has been added, drawing off said liquor, and then effecting a final cooking of said wood chips in a digester.

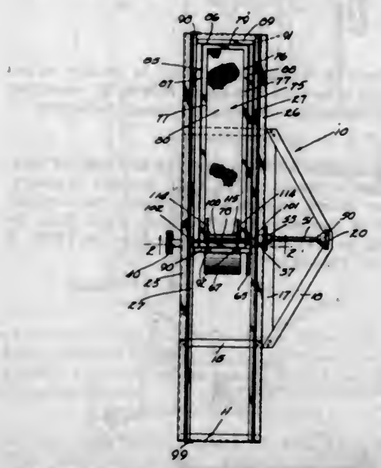
1,687,077. PLANETARY-REDUCTION-GEAR CONSTRUCTION. ERLE K. BAKER, Detroit, Mich., assignor to Baker Reduction Gear Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1923. Serial No. 611,266. 6 Claims. (Cl. 74—34.)



1. A device of the class described embodying therein an internal gear, a centrally arranged external gear, a steering post, spaced rings secured to rotate with the steering post, and a plurality of gears unequally spaced around the central gear, rotatably mounted between said rings, and meshing with both the internal and external gears.

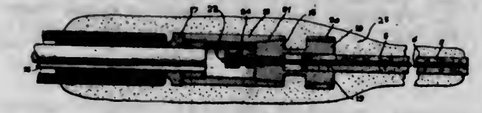
1,687,078. COMBINED GEAR GUARD AND STEP. HARRY V. BALL, Concord, Mass., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed May 27, 1925. Serial No. 33,096. 2 Claims. (Cl. 74—56.)

1. The combination of a plurality of cylinders arranged in line, intermeshing gears on the cylinders at one end thereof, for driving them, a casing over the gears having a wide flat top providing a platform on which an operator may walk along the line of cylinders, and means for securing the casing in position.



1,687,079. DENTAL DEVICE. HORACE E. BARKER, Brooklyn, N. Y. Filed Dec. 2, 1927. Serial No. 237,148. 4 Claims. (Cl. 15—110.)

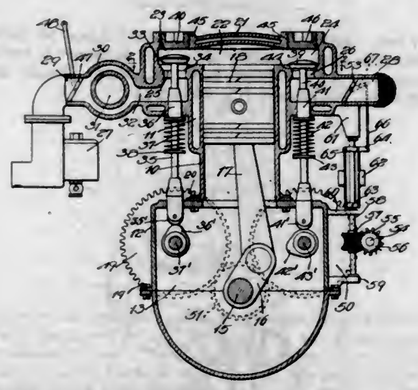
1. A dental device comprising a tubular body of soft resilient material divided longitudinally through one side thereof and serrated along its meeting edges to form two opposing series of arcuate rubbing members which are normally held in contracted position by the inherent elasticity of the body, said body having a longitudinally perforated back portion, and a handle having a portion adapted to be forcibly inserted in the perforation of the back portion, the relative cross-sectional form and proportions of said handle portion and the perforation being



such that the turning of the handle relatively to the perforation variably expands the walls of the perforation and adjusts the said rubbing members toward or from each other.

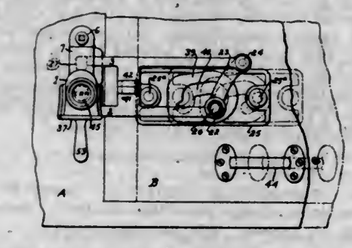
1,687,080. METHOD OF AND APPARATUS FOR STENCILING. ROY CHRISTIAN BECK, Los Angeles, Calif., assignor to Selectasine System, San Francisco, Calif., a Corporation of California. Filed Apr. 19, 1927. Serial No. 184,932. 9 Claims. (Cl. 101—123.)

8. An apparatus for stenciling, which comprises: a stencil; means for disposing said stencil in a flat plane; means for moving said stencil longitudinally; means for supporting the work out of contact with said stencil; means for moving the work into contact with said stencil in rolling relation therewith; means connecting said stencil and said work whereby said work makes a rolling contact with said stencil when said stencil is moved longitudinally; and means for directing pigment through said stencil upon said work at the position of said rolling contact.



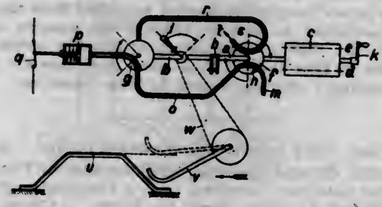
1,687,081. APPARATUS FOR CUTTING OR WELDING METAL. RALPH E. CHAPMAN, Miami, Fla. Filed Oct. 9, 1925. Serial No. 61,391. 8 Claims. (Cl. 219—8.)

1. A tool of the character described comprising, in combination, an electrode having an air passage therethrough, a hose, a clamp having an air passage therethrough connected to said hose and adapted to hold said electrode with the air passage of the electrode connected with the air passages through the clamp and hose, a holder to which said clamp is detachably connected, and an electrical conductor extending through the hose and connected to the electrode.



1,687,082. INTERNAL-COMBUSTION ENGINE AND METHOD OF TIMING THE VALVES THEREOF. DON COLE, Chicago, Ill., assignor of one-half to John A. Dienner, Chicago, Ill. Filed June 19, 1920, Serial No. 390,077. Renewed Nov. 30, 1923. 5 Claims. (Cl. 123—75.)

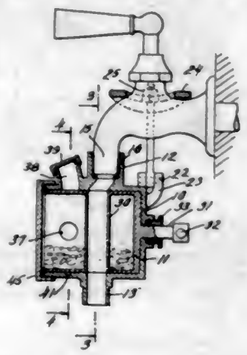
1. In an internal combustion engine, a cylinder, a piston therein adapted to establish a relatively high vacuum on the suction stroke for sucking fuel into the cylinder, intake means for supplying air at atmospheric pressure and fuel in a rich mixture, an auxiliary air valve for admitting additional air at atmospheric pressure, valve



means controlling the said auxiliary air valve, and governing means associated with the engine for controlling the degree of opening of said valve means to compensate for changes in engine speeds and maintain the vacuum constant in said cylinder.

1,687,083. SEAL LATCH. ERNEST A. CONAWAY, Little Rock, Ark. Filed May 22, 1926. Serial No. 110,956. 7 Claims. (Cl. 292—113.)

1. In a device of the character described, a keeper, two levers adapted to engage said keeper, a support for said levers attached to a sliding freight car door, said support comprising a base plate provided with means whereby said levers may be pivotally supported at different points on said base plate, substantially as described.



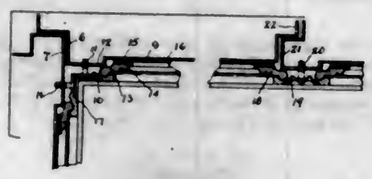
1,687,084. SAFETY DEVICE FOR TRACTION OPERATION. ABRAHAM COUWENHOVEN, Baden, Switzerland, assignor to A. G. Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Mar. 4, 1926, Serial No. 92,325, and in Italy May 27, 1925. 10 Claims. (Cl. 191—3.)

1. A protective device for traction motors operating on multi-voltage systems, comprising a change-over switch on the vehicle, a divided shaft for controlling said switch,

hand operable means for adjusting said shaft, a throwing device at the junction of high and low voltage sections of the system, and means on the vehicle operable thereby for actuating one section of said shaft.

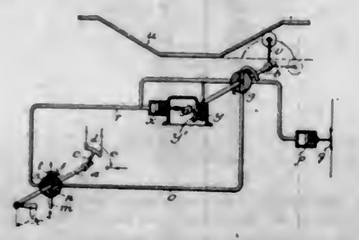
1,687,085. SPRAYING APPARATUS. ALVA M. DOW, Braintree, Mass., assignor of one-half to Robert I. Johns, Brooklyn, N. Y. Filed Sept. 22, 1926. Serial No. 137,002. 8 Claims. (Cl. 299—84.)

1. A device of the character described comprising a casing having an inlet opening and a discharge opening, a second casing rotatably mounted in said first casing and having a conduit therethrough but not communicating therewith, said conduit being adapted in one position of adjustment of the inner casing to establish direct communication between said inlet and outlet openings, and oppositely disposed openings in said second casing adapted to register with said inlet and outlet openings.



1,687,086. POP-BOTTLE WHISTLE. IRWIN H. ERB, San Francisco, Calif. Filed May 28, 1927. Serial No. 194,976. 3 Claims. (Cl. 46—46.)

1. In a unitary member of the character described, adjustable arms arranged to engage the neck of a bottle; and a hollow mouthpiece member extending from the arms and positioned at such an angle to the opening of the bottle that when the member is attached a person may be able to blow through said mouthpiece into the bottle for causing a sound or sounds to issue therefrom.



1,687,087. ELEVATOR-CAR CONSTRUCTION. MOGENS FARCH, Cleveland Heights, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 11, 1925. Serial No. 42,990. 5 Claims. (Cl. 189—1.)

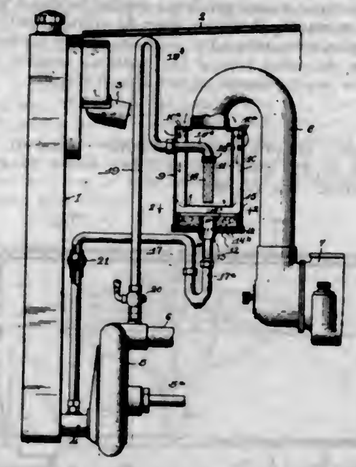
1. A wall construction for elevator cars comprising spaced parallel frame members provided with panel receiving sockets, a panel removably disposed between said frame members in said sockets, and panel retaining strips re-

movably secured to said frame members in position to engage and retain in position said panel, said strips consisting of a unitary combination ornamental trim and lock strip.

1,687,088. SAFETY DEVICE FOR TRACTION OPERATION. PLINIO FERRARI, Milan, Italy, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Sept. 24, 1926. Serial No. 137,583, and in Italy Sept. 26, 1925. 3 Claims. (Cl. 191—3.)

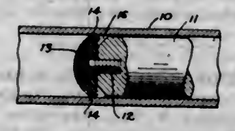
1. A protective device for traction motors operating on a system having high and low voltage sections, comprising, in combination, a main switch on the vehicle, a throw-over switch on the vehicle, a control device for the main switch, a throwing device at the junction of high and low voltage sections for cooperation with the control device, and means for latching the control device in position for opening the main switch.

1,687,089. SAWING WIRE. RICHARD DUANE GREEN, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Apr. 17, 1926. Serial No. 102,643. 3 Claims. (Cl. 125—12.)



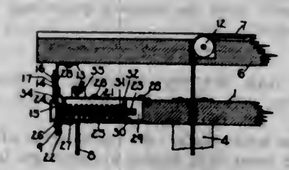
1. A sawing wire consisting of a strand formed of a plurality of wires laid up helically in the same direction upon and in contact with a single center element and held out of contact with each other to provide large abrasive carrying areas.

1,687,090. AIR CLEANER. DREW HEAD, Chicago, Ill. Filed Dec. 9, 1925. Serial No. 74,225. 8 Claims. Cl. 123—25.)



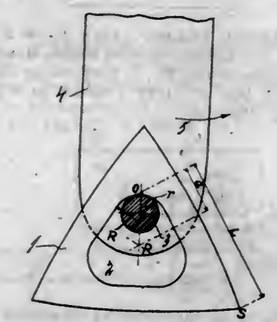
1. In a cleaning device of the character described, the combination with an internal combustion motor including a cooling system and a carburetor, of a casing having a

vertical passage communicating at its upper end with said carburetor and at its lower end with the atmosphere and the bottom of said casing, a nozzle mounted in said pas-



sage and connected with said cooling system for directing a spray of water transversely of said passage, and a pipe connected with the bottom of said casing and leading to said cooling system.

1,687,091. SYRINGE. GEORGE N. HEIN, San Francisco, Calif. Filed Oct. 4, 1926. Serial No. 139,244. 3 Claims. (Cl. 128—219.)

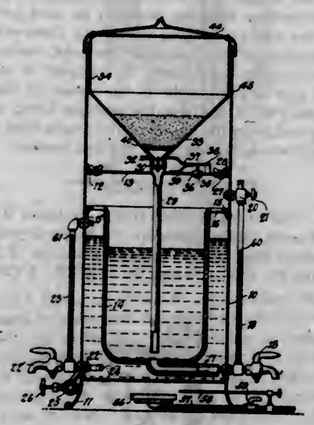


1. In a syringe of the piston type, a packing member between the plunger and barrel, comprising an elastic and compressible member having a thin, flat section contacting with the surface of one of said elements to form a sliding joint, and a relatively thick section exposed to pressure within the barrel, whereby there will be a tendency to compress the packing member axially, resulting in a corresponding expansion radially, said packing member being free to be deflected sufficiently to cause a corner of the thin, flat section to engage the co-operating surface.

1,687,092. VENETIAN-BLIND APPLIANCE. AZEL C. HOUGH, Janesville, Wis., assignor to Hough Shade Corporation, Janesville, Wis., a Corporation of Connecticut. Filed Oct. 15, 1926. Serial No. 141,717. 11 Claims. (Cl. 156—17.)

1. In an appliance of the class described, a rock bar, a bracket and means to support said bar from said bracket, said means including a fixed friction member on the inside and a spring-pressed friction member on the outside of said bracket, whereby said bar is held at any point of adjustment about its axis.

1,687,093. STONE-DRESSING TOOL. ERLING THUNE HOLM, Billingstad, near Oslo, Norway. Filed June 18, 1925, Serial No. 37,895, and in Norway June 27, 1924. 3 Claims. (Cl. 125—40.)

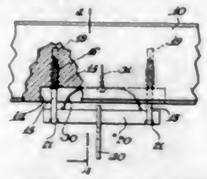


1. In a stone dressing tool a polygonal striking hammer, having a polygonal hole of substantially the same shape as the hammer, loosely journaled to rotate on a connecting bolt on the outer portion of a rapidly swinging member, the radius of the bolt being less than the radius of curvature of the corners of the hole in the hammer through which the bolt is passed, whereby the only contact between the hammer and the bolt is a line contact.

1,687,094. FREEZING-POINT DEPRESSANT. SAMUEL ISERMANN, East Orange, N. J., and WALDEMAR VERNET, New York, N. Y. Filed July 9, 1925. Serial No. 42,606. 4 Claims. (Cl. 252—5.)

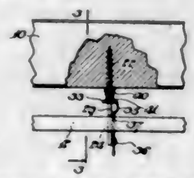
1. A composition of matter for depressing the freezing point of water or an aqueous solution said composition comprising a sluble amid and glycerine.

4. As a new composition of matter for depressing the freezing point of water or aqueous solution, glycerine and a substance reducing the viscosity of an aqueous solution of glycerine and having freezing point depressing properties sufficient to yield an aqueous mixture having a freezing point of —15° C. and capable of being pumped efficiently at temperatures immediately above the freezing point by the water circulating pumping means obtaining in automobile practice.



1,687,095. COFFEE URN. THOMAS H. JONES, Plainfield, N. J. Filed July 22, 1925. Serial No. 45,297. 11 Claims. (Cl. 53—3.)

1. A method of brewing coffee which consists in boiling a body of water, transferring heat from said body of water to a second body of water, utilizing the steam from the

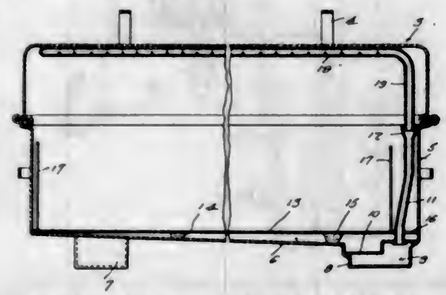


boiling water to force the second body of water through a mass of ground coffee, and then condensing the steam to draw the water back by suction through the coffee.

1,687,096. HEDDLE FRAME. JOHN JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1927. Serial No. 215,804. 6 Claims. (Cl. 139—92.)

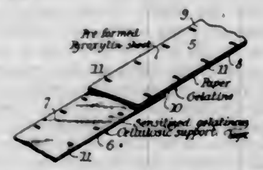
1. In a heddle frame, the means for supporting the heddle bars intermediate their ends comprising bolts adjustably mounted in the top and bottom rails of the same, said bolts having slotted head portions, a bar adapted to pass through the slotted heads of the bolts, said bar having recesses adapted in the normal position of the bar to be seated with respect to the head portions of the bolts, means adapted to hold said bar in its seated position with respect to the sloted ends of the bolts and, a member mounted on the bar adapted to support the heddle bars.

1,687,097. HEDDLE FRAME. JOHN JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1927. Serial No. 215,805. 6 Claims. (Cl. 139—92.)



1. In a heddle frame, the means for supporting the heddle bars intermediate their ends, comprising a bolt member threaded directly in the heddle frame rail, said bolt member having a flattened head portion provided with a recess adapted to receive and support the heddle bar, and a member slidably mounted on said bolt having a central slot and an opening extending from said slot to the side margin of said slidable member, said slot and opening forming an overlapping lip adapted to engage the heddle bar and lock the same in the recess in the head of the bolt, one end of the slidable member being bent over and being provided with an aperture in said bent over portion through which the shank of the bolt passes.

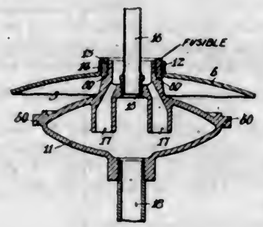
1,687,098. BED CONSTRUCTION. CHARLES J. KINDEL, Grand Rapids, Mich., assignor to Foote-Reynolds Company, Grand Rapids, Mich., a Corporation of Michigan. Filed June 21, 1926. Serial No. 117,573. 1 Claim. (Cl. 5—132.)



In a bed having a frame and detachable ends, vertically arranged angle members attached to the respective ends of the frame, the outwardly extending portion of each angle member having an inclined slot near its vertical center, and angle shaped retaining members adapted to be permanently secured in vertical position to said detachable ends, one face of each retaining member having a pin projecting outwardly therefrom near its vertical center, each of said pins being adapted to enter one of said inclined slots whereby the other face of the retaining member will be caused to closely engage an end of said frame.

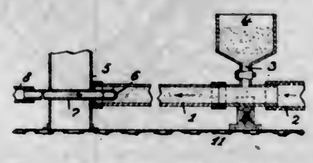
1,687,099. GRAVY PERCOLATOR. LOUIS G. LAUN, Utica, N. Y. Filed Mar. 9, 1928. Serial No. 260,301. 3 Claims. (Cl. 53—6.)

1. In a structure of the class described, a hollow body provided with supporting feet, provided with an inclined bottom, and a collecting gravy and juice receptacle at one end of the bottom, an apertured false bottom resting on the inclined bottom and located within the body, a sectional removable cover, and a gravy conducting conduit arranged within the boiler and communicating at one end with said receptacle, one section being carried by said cover and the other section being mounted upon said body.



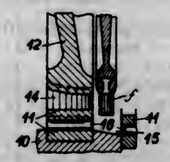
1,687,100. MOTION-PICTURE-FILM STRIP. FRANK W. LOVEJOY, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,791. 2 Claims. (Cl. 95—9.)

1. A motion picture film strip including a band of sensitized film with a protective band at each end thereof, one end of each protective band being secured to one end of the film band, the film band comprising a support of cellulosic film and a sensitive layer thereon and each protective band comprising a strip of paper and a pre-formed film of cellulosic material thinner than the film support and coextensive with the strip of paper and adherently secured thereto.



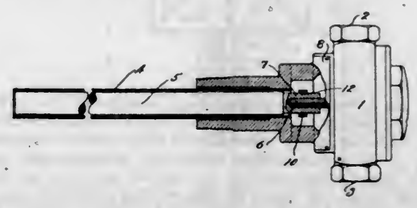
1,687,101. GAS WATER HEATER. VICTOR MAUCK, Merion, Pa. Filed Mar. 31, 1926. Serial No. 98,790. 5 Claims. (Cl. 122—18.)

1. In a gas water heater; the combination with a casing, including an outer shell having a diaphragm intermediate of the length thereof forming a water container above said diaphragm and a combustion chamber below said diaphragm; said diaphragm having an axial opening surrounded by a flange provided with an internal screw thread; of a spreader comprising a hollow casting having an axial tubular neck adapted to extend within said diaphragm opening, in spaced relation with the walls thereof; an annular shoulder on said spreader below said neck; a sleeve of a fusible metallic alloy, fusible below 800° F., softer than said diaphragm and spreader, and having an internal screw thread fitted to said spreader neck and an external screw thread fitted to said diaphragm flange; the internal screw thread in said sleeve being straight and the external screw thread being tapered to a pipe standard; whereby relative rotation of said spreader and diaphragm to assemble them deforms said sleeve into contact with said shoulder on the spreader and into contact with said screw thread in said diaphragm flange, forming a water tight joint; said joint being readily disconnected by reverse relative rotation of said spreader and diaphragm and or by fusing said sleeve.



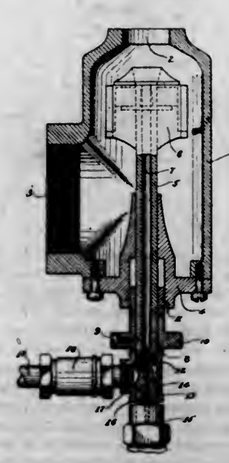
5. An article of manufacture, formed of soft metal having a fusing point below 800° F., adapted to form a conduit joint, and consisting of a conical body having a cylindrical opening therethru; and having a tapered screw thread at its conical surface, and a cylindriform screw thread at its cylindriform surface.

1,687,102. METHOD OF TREATING THE INTERNAL AND EXTERNAL SURFACES OF ELONGATED BODIES. NICOLAUS MEURER, Berlin-Tempelhof, Germany, assignor to Metallogen Gesellschaft mit beschränkter Haftung, Berlin-Neukolln, Germany. Filed June 7, 1923, Serial No. 643,984, and in Germany Nov. 29, 1922. 5 Claims. (Cl. 91—70.1.)



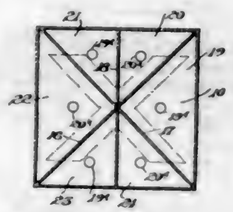
1. A method of treating elongated pipes open at both ends throughout their entire length which comprises injecting the treating material under pressure, and maintaining the pressure throughout the length of the pipe to be treated substantially the same.

1,687,103. STEAM-TURBINE CONSTRUCTION. ADOLF MEYER, Kusnacht, near Zurich, and KARL FREY, Ennetbaden, Switzerland, assignors to A. G. Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Feb. 19, 1926, Serial No. 89,451, and in Germany Apr. 23, 1925. 8 Claims. (Cl. 253—76.)



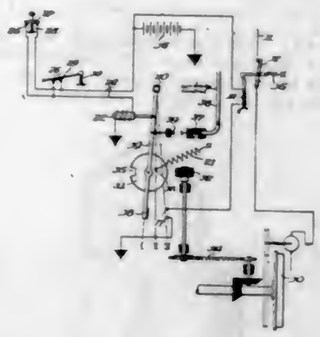
1. In steam turbine construction, a stator casing, and fixed blade mountings extending inwardly from the casing bore surface to afford intervening channels extending in the circumferential direction of the casing, said mountings being provided with passages arranged for drainage of liquid from one of said channels to another.

1,687,104. THERMOSTATIC-INDICATOR-SECURING MEANS. CLARENCE H. MORROW, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 26, 1926. Serial No. 131,805. 2 Claims. (Cl. 236—102.)



1. In an article of the class described, a valve, a thermally responsive element, a cylindrical rod secured with said element and in threaded relation with the stem of said valve, an indicator for adjustment and indication of said relation, and means for adjustably securing said indicator from movement upon said rod, said means comprising an annular groove in said rod and a member threaded in said indicator and adapted to be turned therein to engage the bottom of said groove.

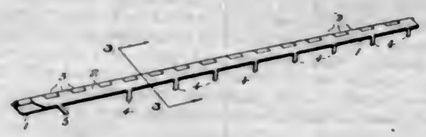
1,687,105. RECUPERATOR-TYPE OIL BURNER. GEORGE F. NAAB, Lakewood, Ohio, assignor to The North American Manufacturing Company. Filed Nov. 14, 1927. Serial No. 233,158. 2 Claims. (Cl. 158—76.)



1. In a liquid fuel burner, a hollow body having openings arranged to pass high temperature air through the hollow thereof, an atomizing head having a stem extending in said hollow, said stem being tubular and having connection with a fuel supply at pressure greater than that of the air passing through said body and being arranged to convey said fuel to said head, and means for cooling said stem to prevent carbonization of fuel therein and comprising means for adding a cooling medium to fuel entering said stem, said cooling medium being at a pressure greater than that of said air and lower than that of said fuel.

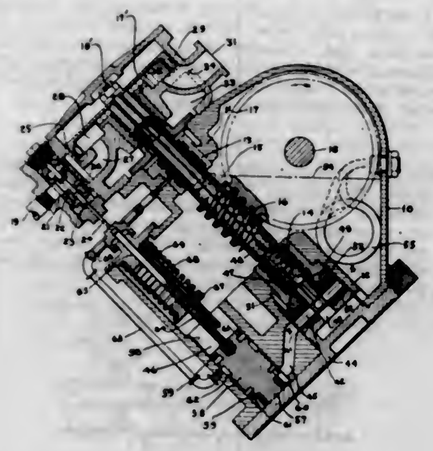
1,687,106. ILLUMINATED DISPLAY SIGN. FRANK B. RAE, Berkeley, Calif. Filed Mar. 30, 1926. Serial No. 98,437. 4 Claims. (Cl. 40—132.)

1. An illuminated display sign comprising an opaque display plate having a translucent indicium formed thereon, said indicium being divided into zones each completely forming the indicium when illuminated independently, separate illuminating means at one side of the plate for each of said zones, and means for illuminating said illuminating means alternately to give the indicium the appearance of being in motion.



1,687,107. SAFETY DEVICE FOR MACHINE CONTROL. HENRI RUEGG, Zurich, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Apr. 4, 1927, Serial No. 180,982, and in Switzerland Apr. 14, 1926. 5 Claims. (Cl. 303—19.)

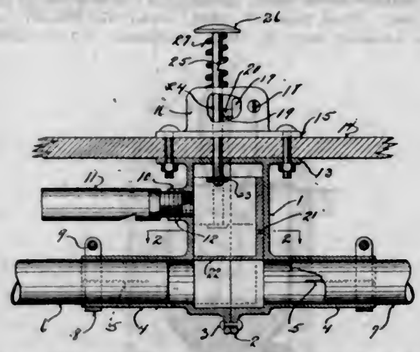
1. Control apparatus comprising, in combination with the controlled machine, a switch controlling power in-put to the machine, switch means for effecting controlling movement of said control switch, a trip device for actuating said switch means and comprising a plurality of parts, means for operating said trip device, and control apparatus for controlling operative connection and disconnection of the trip device and said operating means therefor, said control apparatus tending normally to maintain operative connection of the trip device and said operating means therefor and requiring restraint by an operator to keep them disconnected, certain of the parts comprising said trap device being carried by said switch means.



1,687,108. SHIFT BAR FOR VISIBLE INDEXES. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Co., Holyoke, Mass., a Voluntary Trust Association of Copartnership having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Dec. 22, 1927. Serial No. 241,781. 3 Claims. (Cl. 129—1.)

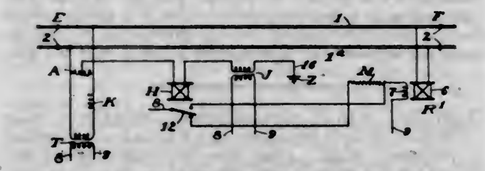
2. A shift bar for use in connection with a visible index book having posts and pages consisting of sheets or slips having perforations and arranged in overlapping relation with said posts extending through certain of said perforations, comprising upper and lower members hinged together, the lower member adapted for insertion beneath the sheets

to be shifted while the upper member carries projections extending therefrom and adapted to enter the perforations in the sheets to be shifted when the members are closed.



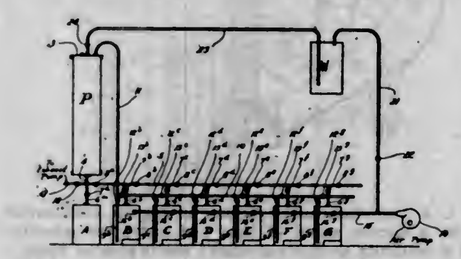
1,687,109. POWER PLANT. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1925. Serial No. 43,806. 12 Claims. (Cl. 253—52.)

1. In power plant apparatus, the combination of a shaft, a turbine for driving the shaft, a driving gear provided on the shaft, a driven gear meshing with the driving gear, the region of enmeshment of the gears being below the axis of the driven gear, a housing enclosing the gears and adapted to contain a body of lubricating liquid, and a fluid-translating device having its inlet communicating with the interior of the lower portion of said housing, said fluid-translating device being driven by the shaft, whereby when the device is in operative position the level of the lubricating liquid may be above the intermeshing gears and below the axis of the driven gear.



1,687,110. BURGLAR ALARM FOR AUTOMOBILES. EMIL G. SCHULTZ, Milwaukee, Wis. Filed Mar. 28, 1927. Serial No. 179,070. 2 Claims. (Cl. 116—33.)

1. In an automobile, the combination of an exhaust pipe, a two-part casing having its two parts riveted together and having an inlet portion connected to the exhaust pipe and having a pair of outlet openings, a muffler pipe connected to said casing at one of the outlet portions and in line with the exhaust pipe, a sounding device connected to said casing at the other of said outlet openings, and a slide valve carried within said casing and slidable to either of two positions, said slide valve having a closed bottom positioned above the exhaust pipe and muffler pipe when in one position, and having a hollow interior placing the sounding de-



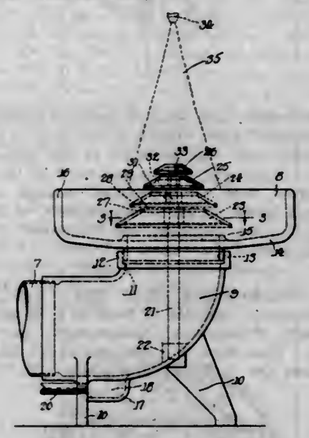
vice in communication with the exhaust pipe when in another position, said valve and said casing being of rectangular construction.

1,687,111. RAILWAY SIGNALING APPARATUS. ANDREW A. SKENE, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1926. Serial No. 126,985. 7 Claims. (Cl. 246—40.)

1. In combination with a section of railway track provided with a source of track circuit voltage and a track relay, an auxiliary conductor in contact with the track ballast, and means for varying the voltage applied to a winding of said track relay in response to variations in the resistance of the ballast between said auxiliary conductor and the track rails.

1,687,112. PROCESS OF MAKING LIQUID COFFEE EXTRACT. FRANK L. SLOCUM and WILLIAM E. TROUTMAN, Pittsburgh, Pa., assignors to Magic Coffee Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 2, 1923. Serial No. 622,333. 13 Claims. (Cl. 99—11.)

5. The process of making coffee extract, consisting in placing roasted ground coffee in a closed vessel, removing the air and occluded gases, thoroughly saturating the roasted ground coffee with a liquid formed by previously percolating cold water through roasted ground coffee, allowing the saturated coffee to macerate in the surrounding liquid, separately drawing off a fraction of the percolate, drawing off the balance of the percolate and utilizing the latter to saturate a fresh portion of roasted ground coffee, said percolation and repercolation being carried on under pressure in excess of atmospheric pressure.

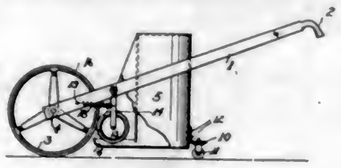


6. The process of making coffee extract, consisting in percolating water through roasted ground coffee, taking off the percolate in separate successive fractions of measured volume, and using all fractions, in succession, to percolate a fresh portion of coffee.

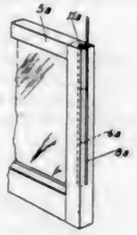
1,687,113. CASTER. WILLIAM A. STOCKDALE, Zanesville, Ohio. Filed Nov. 10, 1926. Serial No. 147,458. 2 Claims. (Cl. 16—45.)

1. A furniture caster comprising a rubber load-supporting and tread annulus, a plurality of layers of fabric webbing material joined together to form a stiff disk and vulcanized integral with said annulus and having its outer periphery substantially flush with the outer periphery of said annulus, thereby providing a reinforced tread therewith, and a metal sleeve axially through said disk to provide an axle bearing for said caster.

1,687,114. OIL BURNER. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Engineering Company, Rockford, Ill., a Corporation of Illinois. Filed May 19, 1924. Serial No. 714,212. 3 Claims. (Cl. 158—28.)



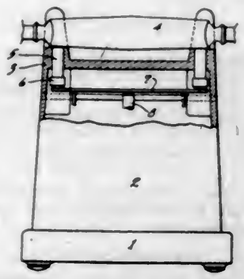
1. An oil burner having, in combination, an air blower, a burner bowl, an air conduit from the blower to the bowl, said conduit entering the bowl axially thereof, a plurality of spaced cone-shell frustums disposed in the bowl over the opening of the conduit, said frustums decreasing in size away from said opening, the lower base of one frustum being larger than the upper base of the next lower frustum, the uppermost frustrum having an imperforate upper end, supporting means for said frustums, and a fuel nozzle disposed above said frustums.



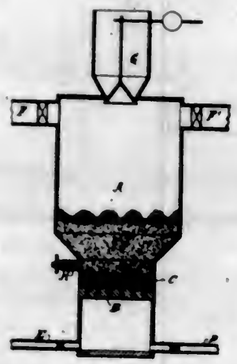
1,687,115. LINE-PROJECTING DEVICE. COLIN R. WALCOTT, Newaygo, Mich. Filed Feb. 10, 1927. Serial No. 167,141. 2 Claims. (Cl. 91—50.)

1. In a line-projecting device, a pair of rearwardly-diverging guide members; a line-projecting wheel rotatably mounted between their forward ends; a vacuum

tank supported by and between said members and adapted to contain liquid marking pigment; an open-top vessel adjacent the bottom of the vacuum tank and communicating with the interior thereof; a cross member extending between the guide members; a pair of supporting arms pivotally mounted on and depending from the cross member; a pigment-transferring wheel rotatably mounted on and between the arms, the periphery of the pigment-transferring wheel being adapted to dip into the pigment in the vessel and to directly contact the periphery of the line-projecting wheel; spring urging the arms and the pigment-transferring wheel toward the line-projecting wheel.

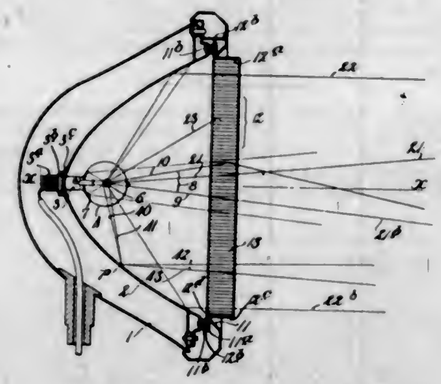


1,687,116. REVERSIBLE WINDOW. ANDREW A. WARD, Oakland, Calif. Filed Apr. 21, 1928. Serial No. 271,823. 5 Claims. (Cl. 20—43.)



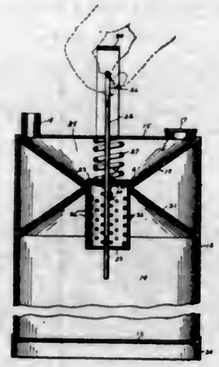
1. In a reversible sash window, enclosed passages down the side members of the window frame, slots of restricted width leading from said passages to the adjacent side edges of the frame and terminating short of the top and bottom thereof, sash cords passable through the slots, and enlarged heads on the adjacent ends of the cords movable along the passages but incapable of passing through the slots.

1,687,117. TELEPHONE DESK SET. OTTO WEEBER, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Sept. 11, 1925, Serial No. 55,650, and in Germany Dec. 5, 1924. 10 Claims. (Cl. 179—100.)



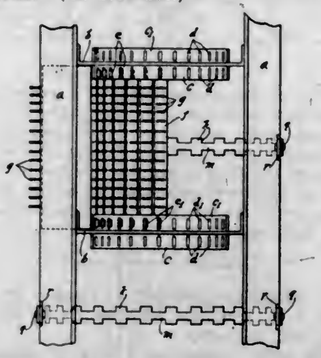
1. In a telephone desk set comprising a hand telephone and a base, a support for said hand telephone rigidly connected to said base, and a plurality of switching members projecting from said support and operable directly by said hand telephone as it rests on said support.

1,687,118. MANUFACTURING FUEL GAS. FRITZ WINKLER, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 27, 1923, Serial No. 665,221, and in Germany Sept. 27, 1922. 2 Claims. (Cl. 48—206.)



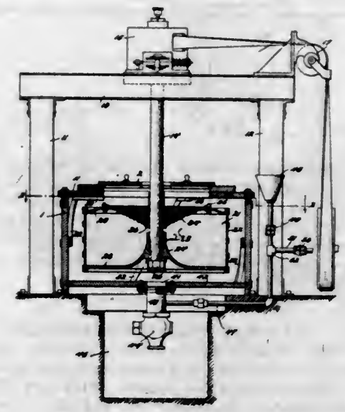
1. The process of manufacturing fuel gas in a generator having a bed of small-sized, incandescent solid carbonaceous material supported by a grate, consisting in blowing a gas adapted to produce fuel gas through said material with sufficient speed to establish a boiling action in the material, thereby causing gasification thereof by reaction between the incandescent material and the gas.

1,687,119. LIGHT-DISTRIBUTING DEVICE. ELOF BENSON, Newton Highlands, and FREDERICK M. DURKEE, Brookline, Mass. Filed Mar. 13, 1923. Serial No. 624,787. 4 Claims. (Cl. 240—48.4.)



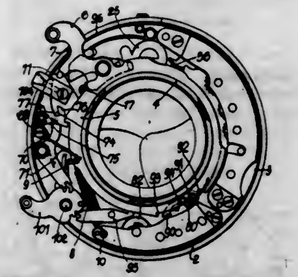
1. A light-distributing device having in combination with a narrow source of light and means for reflection of a vertically narrowly-divergent nearly-parallel beam, a lens disposed across said beam comprised of transparent horizontally disposed laminæ having their principal thickness in the axial direction of the beam, said laminæ each having an upper plane surface adapted to reflect internally impinging light, and bearing an integral absorbing layer adapted to diminish reflection of downwardly-emergent light, said layer having substantially the same index of refraction as the transparent portion integrally united therewith.

1,687,120. SAFETY CAN. FORREST S. BLANCHARD, Stoneham, Mass., assignor to Ideal Can Company, Everett, Mass., a Corporation of Massachusetts. Filed July 13, 1927. Serial No. 205,495. 5 Claims. (Cl. 221—16.)



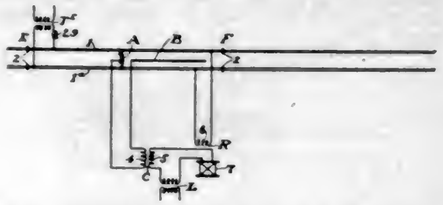
1. A safety can comprising a body, a bottom, an outer head having a filling inlet and a dispensing outlet, a funnel-shaped inner head joined at its larger end to the body, extending inwardly and downwardly from the outer head, and having a central opening communicating with the storage space of the can, and bounded by an upwardly facing valve seat, a valve formed to bear on the valve seat, a stem fixed to the valve, movable in a guide in the outer head, and provided above the outer head with a pull handle, and a spring interposed between the outer head and the valve, and normally closing the valve on the seat, the outer and inner heads forming a space communicating with the filling inlet, the dispensing outlet and the storage space, the arrangement being such that when the valve is opened, the storage space may be charged through the filling inlet and the inner head, and the can may dispense liquid through the inner head and the dispensing outlet, the valve being adapted to yield and relieve gas pressure within the storage space.

1,687,121. BANK CONTACT FOR TELEPHONE SWITCHES. KURT BÖHME, Berlin-Siemensstadt, Germany, and KARL GIESE, Nowawes, Germany, assignors to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Nov. 25, 1922, Serial No. 603,170, and in Germany Mar. 12, 1921. 13 Claims. (Cl. 175—306.)



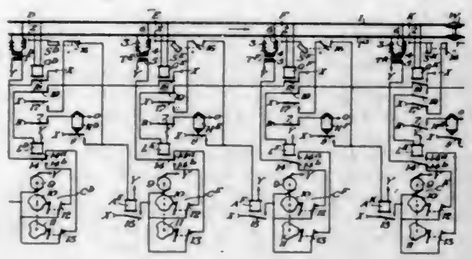
6. A bank contact assembly comprising a plurality of perforated individual contacts arranged in a row one above the other and embedded in insulating material, and a metallic stiffening member passing through the perforations in the contacts.

1,687,122. PROCESS FOR TREATING FABRICS. TANDY A. BRYSON and JOHN J. MCKEON, Troy, N. Y., assignors, by mesne assignments, to General Laundry Machinery Corporation, Philadelphia, Pa., a Corporation of Delaware. Original application filed Jan. 18, 1924, Serial No. 686,986. Divided and this application filed Dec. 12, 1924. Serial No. 755,398. 11 Claims. (Cl. 8—5.)



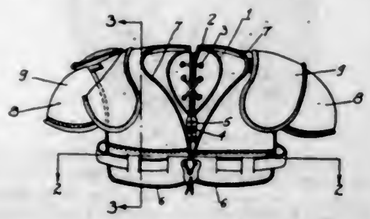
1. The process of dyeing fabric which comprises rotating the fabric in a centrifugal basket in water, to wet down the fabric, introducing the dyeing liquid and rotating the basket to effect distribution and uniform impregnation of the dye through the fabric, gradually raising the temperature of the dye liquor during said dyeing operation, subsequently continuing the heating for a desired period, removing the dye liquor, rotating the basket at a higher speed to remove the excess liquor from the fabric, surrounding the basket with wash water and rotating the basket to effect thorough penetration and distribution of the wash water, drawing off the wash water, and rotating the basket relatively rapidly to dry the fabric.

1,687,123. CAMERA SHUTTER. FRIEDRICH DECKEL and MARTIN GEIGER, Munich, Germany, assignors to the Firm: Friedrich Deckel Präzisionsmechanik und Maschinenbau, Munich, Bavaria, Germany. Filed Oct. 23, 1926, Serial No. 143,551, and in Germany Dec. 2, 1925. 25 Claims. (Cl. 95—63.)



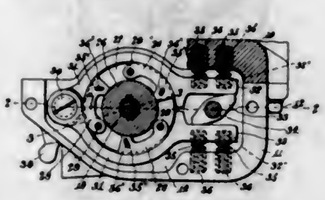
1. In a photographic shutter the combination with a blade mechanism including a blade actuating ring and a master member for operating said ring, of a retarding device operated by said master member and a second retarding device also operated by said master member, the first of said retarding devices controlling the duration of exposure and the second controlling the master member before the beginning of the exposure.

1,687,124. RAILWAY SIGNALING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1926. Serial No. 127,007. 7 Claims. (Cl. 246—34.)



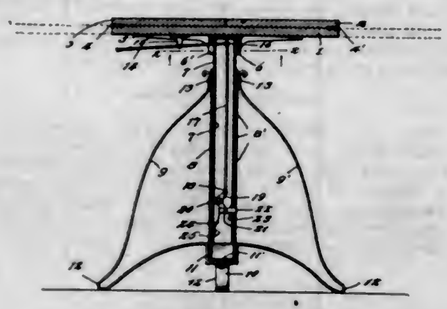
5. In combination with a section of railway track provided with a source of track circuit voltage and a track relay, an auxiliary conductor in contact with the track ballast, and a transformer having its primary included in circuit with a winding of said relay and its secondary terminals connected with said conductor and the track rails.

1,687,125. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 21, 1927. Serial No. 207,422. 9 Claims. (Cl. 246—41.)



1. In combination, a section of railway track, means for supplying train governing current to said section when and only when the section is occupied by a train and for normally starting the supply of such current as soon as a train enters the section, and means for delaying the supply of said current to the section when a train enters the section of traffic conditions in advance of the section are unsafe.

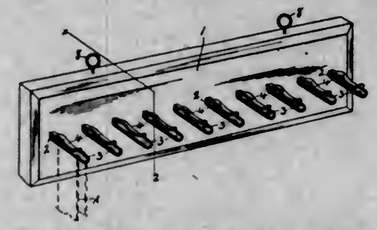
1,687,126. FOOTBALL PROTECTIVE HARNESS. HUGO GOLDSMITH, Cincinnati, Ohio, assignor to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 14, 1925. Serial No. 75,324. 3 Claims. (Cl. 2—2.)



1. An athlete's protective vest, having pieces which extend from the front lower side of the vest up over the shoulders to the back side of the shoulder portions of the vest, said pieces of stiff material contoured to a greater curvature than will occur on the vest when it is adjusted on the body, said pieces supported on the vest only at their ends so that portions of the pieces intermediate the ends will be spaced from the vest, and the clavicles and neck bones of a wearer thereby protected.

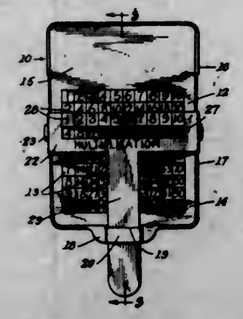
1,687,127. BRAKE MECHANISM FOR LIFTING JACKS. FRANK L. GORMLEY, Brookline, Mass., assignor to The Buda Company, Harvey, Ill., a Corporation. Filed Dec. 21, 1926. Serial No. 156,110. 6 Claims. (Cl. 188—184.)

1. The combination of a rotatable worm; a worm gear meshing therewith and rotatable in one direction only; a disk carried by the worm shaft having a peripheral groove; brake shoes pivotally mounted in the groove of said disk and adapted to be moved outwardly about their pivots by centrifugal force during the rotation of said shaft; and adjustable brake arms with the inner faces of which the free ends of said shoes coact.



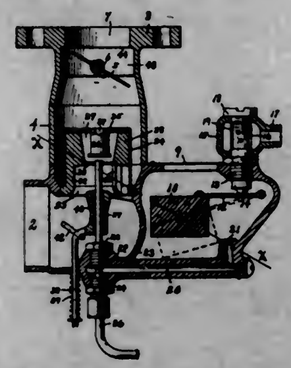
1,687,128. COMBINATION STOOL, CHAIR, AND TABLE. FRANCIS CADWALADER HALL, New York, N. Y. Filed Nov. 11, 1924. Serial No. 749,182. 1 Claim. (Cl. 45—111.)

An article of furniture comprising a supporting top, inner and outer telescopic tubes of square cross-section, the inner tube being secured to said supporting top, the outer telescopic member having resilient supporting legs comprising straps secured at their extremities to opposite walls of said outer tube and the central portion of each strap being formed with a socket portion within which the lower end of the outer tube is clasped.



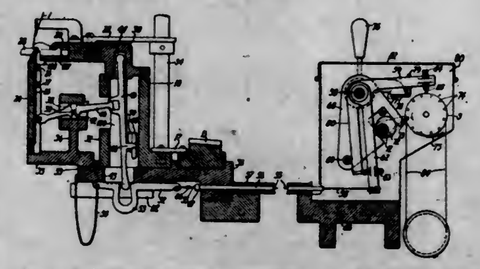
1,687,129. NECKTIE HOLDER. NICHOLAS HENNINGER, Syracuse, N. Y. Filed Mar. 14, 1928. Serial No. 261,672. 1 Claim. (Cl. 211—89.)

A necktie holder comprising a laterally elongated bar having a multiplicity of openings therethrough in parallel spaced relation and a corresponding number of dowel pins and relatively thin flat springs resting on the upper faces thereof, said dowel pins and springs having corresponding ends inserted into said sockets and their opposite ends projecting outwardly beyond the front face of the bar, the portions of the dowel pins and springs within the sockets being provided respectively



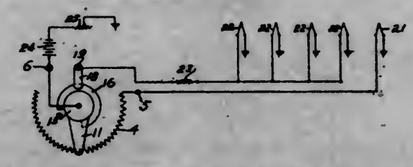
with notches and shoulders, said shoulders entering their respective notches to hold the springs against endwise displacement relatively to the dowel pins.

1,687,130. CALCULATOR. ADOLPH HUNAU and PAUL HAMMALIAN, New York, N. Y., assignors to H. & H. Calculating Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 3, 1923. Serial No. 610,474. 2 Claims. (Cl. 235—1.)



1. In a calculator of the class described, a plate, a T shaped slide movable longitudinally of said plate, flanges formed on the ends of the upper member of said slide engaging the edges of said plate, said member having an elongated horizontal sight opening, and a loop integral with said plate through which the lower member of said slide extends.

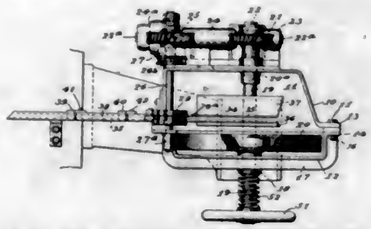
1,687,131. CARBURETOR. CHESTER F. JOHNSON, Detroit, Mich. Filed May 5, 1921. Serial No. 466,957. 3 Claims. (Cl. 261—63.)



3. In combination, a carburetor body having an air inlet and a plurality of air passages connecting thereto and to the outlet for the fuel, one of said passages being central and axial with the body of the carburetor and other passages extending radially therefrom; a fuel nozzle extending axially of said central passage, a valve slidable on the nozzle and adapted to vary the effective area of said central passage, and means controlled by the flow of air through the central passage to regulate the flow of air through said radial passages.

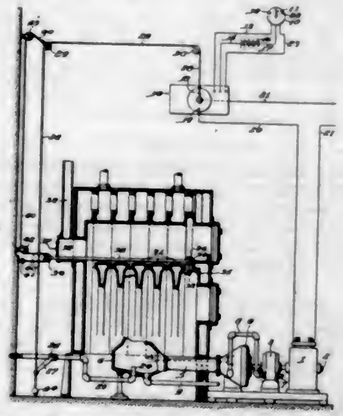
1,687,132. KNITTING MACHINE. VINCENT LOMBARDI, Brooklyn, N. Y. Filed Sept. 17, 1925. Serial No. 56,895. 13 Claims. (Cl. 66—16.)

9. A knitting machine comprising a circular row of needles, a grooved stationary element carrying said needles, a control member individual to each needle for causing at times the advancement of its associated needle, a plurality of yarn carriers, rotating cam means for causing said members to produce a full advancement of the associated needles, a second rotating cam means for producing a partial advancement of said needles, means for retracting said needles, and automatic pattern mechanism for simultaneously selecting a group of said needles and responsive to the passage of one yarn carrier to cause said first cam means to be effective on all of a group of said needles and responsive to the passage of a second yarn carrier to cause said second cam means to be effective to advance only a fractional portion of the needles of said group, the remainder of the needles of said group being unaffected by said first and said second cam means, said pattern mechanism when moved to a different position by the operation of the machine, being responsive to the passage of said first yarn carrier to cause said second cam means to be effective to advance only said remaining needles of the group while said fractional portion of said group remain unaffected by said first and said second cam means and being responsive to the passage of said second yarn carrier to cause said first cam means to be effective to advance all the needles of said group, said pattern mechanism also causing the number of needles in said group to vary from time to time in a predetermined manner.



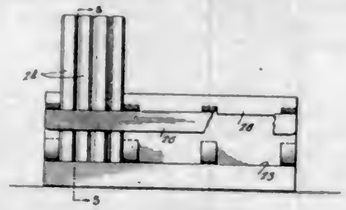
1,687,133. VOLUME CONTROL AND SWITCH FOR RADIOCIRCUITS. DIMMITT ROSS LOVEJOY, New York, N. Y., assignor, by mesne assignments, to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed July 15, 1926. Serial No. 122,560. 2 Claims. (Cl. 201—55.)

1. A unitary volume control and switch for radio circuits, comprising a resistor, a rotatable shaft, a contact arm rotatable with the shaft into and out of engagement with the resistor, and two conducting members one of which is rotatable with the shaft into and out of



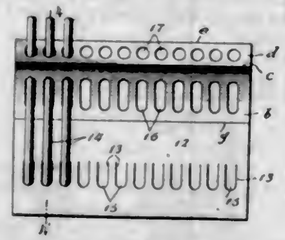
engagement with the other and electrically connected to the contact arm, the parts being so constructed and arranged that there is one position of the shaft in which the rotatable conducting member and the contact member are disengaged from the other conducting member and the resistor respectively.

1,687,134. MACHINE FOR FEEDING HEADED BLANKS. JOHN M. LYNCH, Oakville, and WILLIAM S. GILMOUR, Waterbury, Conn., assignors to Blake & Johnson Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 6, 1923. Serial No. 661,209. 4 Claims. (Cl. 10—165.)



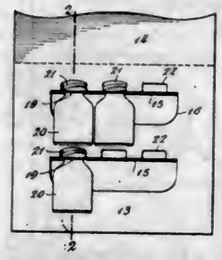
3. In a blank feeding machine, a hopper adapted to contain a quantity of headed blanks, a feed wheel mounted to rotate vertically within the hopper and located adjacent one side thereof, said feed wheel having side buckets open only on the inner side of said wheel and facing into the hopper away from the side with which the wheel is adjacent and adapted to collect blanks from the body of said hopper, and an inclined chute projecting into the hopper and arranged contiguous to said feed wheel, for receiving the blanks fed from said feed wheel, each bucket provided at its forward end wall with a laterally inclined end wall adapted to deflect blanks toward the front of the feed wheel and toward the inclined chute, and means for preventing blanks from escaping upwardly from said chute.

1,687,135. DEVICE FOR AUTOMATICALLY CONTROLLING PILOT LIGHTS OF HEAVY-OIL BURNERS FOR FURNACES, BOILERS, AND THE LIKE. STEPHEN L. MERSHON, Llanerch, Pa. Filed Jan. 17, 1923. Serial No. 613,119. 1 Claim. (Cl. 158—28.)



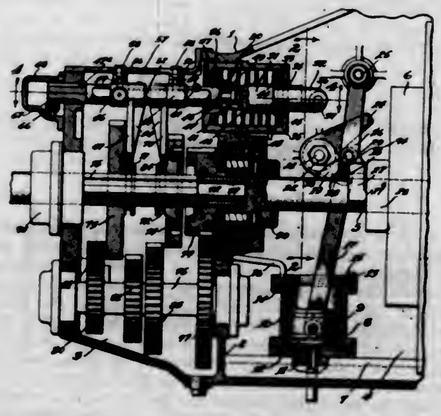
In a heater the combination of a pot or burner, means to project atomized fuel into said burner comprising an atomizer and a motor to drive the same, a thermostat, a controller actuated by said thermostat to stop and start said motor, a pilot gas light, means to supply gas to said pilot light comprising a pipe and valve therein normally set to cause a small flame at said pilot light, a connection between said controller and said valve whereby whenever said controller is actuated to start said motor, said controller also opens said valve through said connection to enlarge the flame of said pilot light prior to the projection of fuel into the said pot and to maintain said enlarged flame until said fuel ignites, and a thermostatic element in said heater operative when expanded by the heat produced by the combustion of said atomized fuel to in effect substantially lengthen said connection and permit said valve to close and reduce said flame to a normal pilot light flame.

1,687,136. DISPLAY STAND FOR MERCHANDISE. HAROLD L. MYERS, Morristown, N. J. Filed May 22, 1926. Serial No. 110,892. 2 Claims. (Cl. 211—69.)



1. A display device for articles of merchandise, comprising a support provided with a plurality of apertures through which ends sections of said articles are adapted to extend so as to lie upon the outside surface of said support to one side of said apertures and upon the inside thereof at the other side of said apertures, said support at said apertures being flexed out of its plane by said articles of merchandise whereby said support is caused to exert a clamping action from the inside and outside respectively upon said articles of merchandise, flexible tongues connected at one end with said support in registry with said apertures and adapted to lie upon the inside of said articles and to exert a clamping action thereon from the inside, and a continuous flap extending across said support and having spaced openings through which other portions of said articles of merchandise project, said flap being connected at one point with said support and being otherwise free therefrom and being adapted to exert a clamping action on said articles of merchandise toward said support.

1,687,137. DISPLAY DEVICE FOR MERCHANDISE. HAROLD L. MYERS, Morristown, N. J. Filed Mar. 25, 1927. Serial No. 178,199. 9 Claims. (Cl. 211—69.)

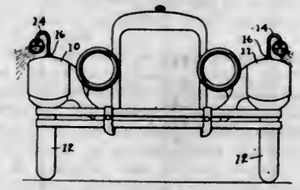


1. A display device comprising foldably connected end members arranged to diverge from the point of connection, and provided with openings for the accommodation of articles of merchandise, side members foldably connected with said end members and arranged to converge from the points of connection, said side members being provided with openings in registry with the openings of said end members, and additional members located below said first side members and arranged to occupy divergent positions, said additional members being provided with openings in registry with the previously mentioned openings.

1,687,138. DISPLAY STAND FOR MERCHANDISE. HAROLD L. MYERS, Morristown, N. J. Filed May 22, 1926. Serial No. 110,893. 4 Claims. (Cl. 211—157.)

1. A display stand for merchandise comprising a support and a tongue formed by cutting said support, adapted to be flexed out of the plane of said support so as to project outwardly therefrom, said tongue being provided with recesses of predetermined form to receive individual articles of merchandise and suspend the same in surface engagement with said support, the latter being provided with apertures communicating with said recesses dimensioned to permit portions of said articles of merchandise which are larger than said recesses to be adjusted to positions above and in suspending engagement with said tongues.

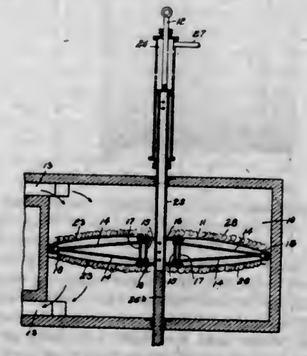
1,687,139. TRANSMISSION-OPERATING DEVICE. PAUL W. NEFF, Cincinnati, Ohio. Filed May 8, 1926. Serial No. 107,801. 11 Claims. (Cl. 74—58.)



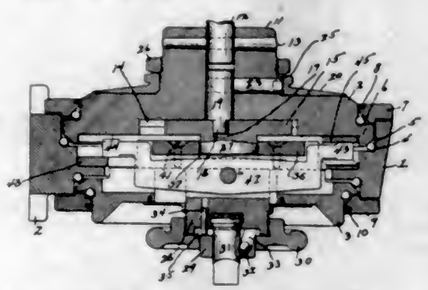
1. A slide gear speed-change transmission, including, a clutch controlled power shaft, a clutch therefor, a clutch throw-out lever, a gear shifting rod, a power operated device adapted to move said clutch throw-out lever and translate said gear shifting rod in the named sequence, said gear shifting rod set up by translation for a selective gear shift, a control lever for rotating said rod to connect said rod to the desired gear to be shifted, and means for retracting said rod and shifting said gear.

1,687,140. WATERMARKED PAPER. ANTON PLEYER, Spechthausen, near Eberswalde, Germany, assignor to Gebr. Ebart, Berlin, Germany, a Corporation of Germany. Filed Nov. 2, 1922, Serial No. 598,471, and in Germany Nov. 19, 1921. 1 Claim. (Cl. 92—38.)

Paper comprising a body consisting of long fibers and a short fiber layer deposited as loose pulp upon only a predetermined section of said body while the latter is still in a pulpous state, the fibers of said body and layer being intimately interlocked and said short fiber layer merging into said body along an irregular line visible upon a surface thereof

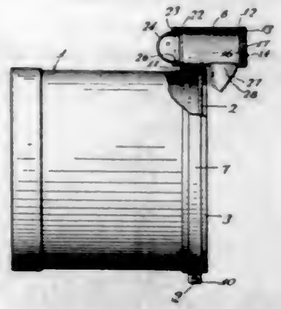


1,687,141. LAMP. ALFRED D. PRICE, East Cleveland, Ohio. Filed Sept. 9, 1926. Serial No. 134,363. 1 Claim. (Cl. 240—48.4.)



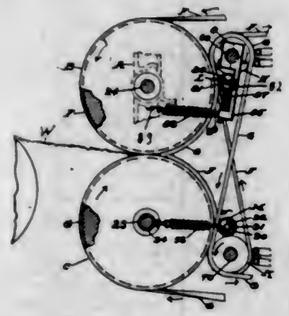
In a lamp for an automobile, a substantially cylindrical shell adapted to be arranged with its axis extending longitudinally of the automobile, a tubular supporting bracket secured to the top of said shell having a portion arranged in lateral spaced relation thereto whereby when said bracket is secured to the fender of an automobile the outer side of the shell will lie substantially vertically above the outer edge of the fender, said shell having a window along one side through which light may be projected along the side of the road and a window at its front end, a reflector on the interior of the rear wall of the shell adapted to project light through the last mentioned window, an opaque shield in the upper portion of the front end of said shell for directing the light rays downwardly, a colored lens mounted in the shield above the plane of the downwardly directed light rays, and a lamp receiving socket arranged in said bracket adjacent to its point of connection to the shell.

1,687,142. HEATING METHOD AND APPARATUS. FRANZ PUENING, Pittsburgh, Pa. Filed July 24, 1925. Serial No. 45,815. 13 Claims. (Cl. 263—1.)



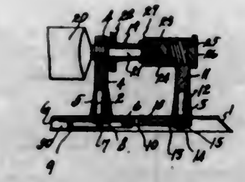
1. The method of cooling a chambered member employed in actuating heated gases, which comprises conducting relatively cool fluid to the interior and exterior walls of said chambered member simultaneously

1,687,143. WORK-HOLDING HEAD FOR LATHES. CLARENCE A. RICHARD, Detroit, Mich., assignor, by direct and mesne assignments, of one-third to Otis K. Richard and two-thirds to Clement C. Richard, Detroit, Mich. Filed Mar. 3, 1924. Serial No. 696,411. 9 Claims. (Cl. 82—40.)



1. In a work holding head, a stationary body, a driving member and a driven member rotatably supported therein in axial alignment, a work holder carried by the driven member and rotatable therewith, the work holder being provided with an elongated way, an eccentric on the driving member adjustable as to its distance from the axis of rotation thereof and engaging in the way whereby, during rotation of the driving member, the work holder is intermittently caused to move on a diametrical line of the driven member, a rock lever pivotally mounted relative to the driven member having the opposite ends extending into an annular recess provided between the inner face of the driving member and the stationary body, a cam ring on the driving member, a complemental ring on the stationary member, the rings being so arranged that the lever is intermittently rocked, first locking the driving and driven members together and then holding the driven member stationary, and an index plate for determining the eccentricity of the said eccentric.

1,687,144. HEADLIGHT ATTACHMENT. DIRK RINGERS, Long Beach, Calif. Filed Dec. 15, 1927. Serial No. 240,153. 5 Claims. (Cl. 240—41.)

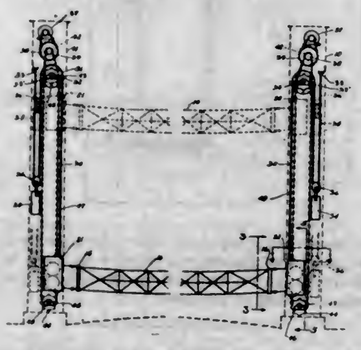


4. An attachment for a headlight, comprising a tubular casing, a band secured to the side of said casing and adapted to encircle the headlight to position the casing thereupon with its forward end projecting beyond the front of the headlight, means for clamping said band in place, a mirror secured within the forward end of said casing and facing rearwards, an apron depending from said casing before said headlight and adapted to reflect some of the rays of light emanating from said headlight through an aperture in said casing and onto said mirror and a colored, translucent jewel secured within the after end of said casing and adapted to be illuminated by light reflected from said mirror.

1,687,145. TAPE-CONDENSER CLEARER ROLL. HENRY J. ROGERS and FRANK H. BOYLE, Lowell, Mass., assignors of one-third to Gardner W. Pearson, Lowell, Mass. Filed Apr. 28, 1926. Serial No. 105,321. 6 Claims. (Cl. 19—151.)

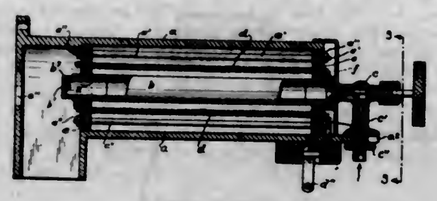
1. In a tape condenser for a carding machine having divider rolls, tape rolls and tapes which pass partly around the divider rolls and tape rolls; the combination of a clearer roll which engages the part of a tape roll which is free from tape; with means to revolve it in the same direction with the tape roll.

1,687,146. DISPENSING DEVICE. SAMUEL E. ROSS and PHILIP H. BOWLSBY, Walkerville, Ontario, Canada. Filed Mar. 21, 1927. Serial No. 177,002. 4 Claims. (Cl. 221—60.)



1. In a dispensing device, a base, a pair of members rotatably mounted in the base, a nozzle supported in one of the members, the nozzle being adapted for threaded relation with the discharge end of a paste tube, a spring pressed nozzle closure member supported in the other rotatable member and normally closing the nozzle, a disc secured to the rotatable member in which the nozzle is supported, a slotted member secured to the other rotatable member, a pin extending from the disc and adapted to engage in the slotted member to turn the slotted member to a limited extent as the disc is turned, the disc being provided with a notch and a flat spring having an end engaging in the said notch when the nozzle is in the closed position.

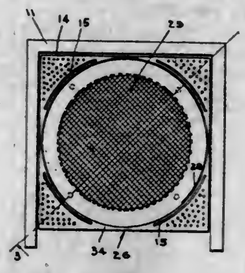
1,687,147. BARRIER DEVICE FOR STOPPING VEHICLES. EMERSON D. SAWYER, Chicago, Ill. Filed Dec. 27, 1921. Serial No. 525,236. 28 Claims. (Cl. 39—1.)



1. A device of the class described comprising oppositely arranged columns; a barrier between said columns adapted to resist the impact of a vehicle; carriages mounted on said columns for slidable movement; flexible reserve members within said carriages and secured to said barrier to permit said barrier to move in the direction of the travel of a vehicle striking the same; and means actuated by the movement of said barrier for increasing the resistance thereof.

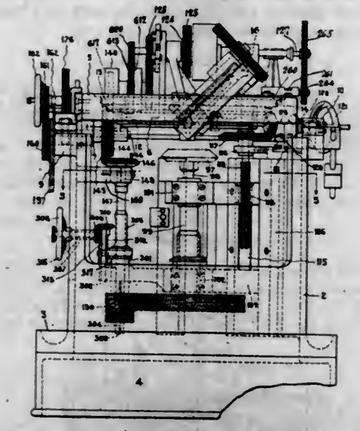
8. A device for stopping vehicles comprising columns arranged on opposite sides of a roadway; a barrier extending across said roadway between said columns; carriages slidably mounted longitudinally on said columns; reserve members within said carriages and fixedly secured to said barrier to permit said barrier to move in the direction of the travel of a vehicle striking said barrier; and means including a friction brake a cone shaped pulley and a member engaging said pulley and actuated by the paying out of said reserve members, for increasing the resistance of said barrier upon being struck by a vehicle.

16. A device for stopping vehicles, the combination with oppositely arranged supports having vertically extending passages, of a barrier between said supports; carriages slidably mounted in said passages; reserve cables within said carriages and fixedly secured to said barrier to permit said barrier to move in the direction of the travel of a vehicle striking said barrier; shock absorbing means carried by said carriages for resisting the shock communicated to said carriages when said barrier is struck by a vehicle; and means actuated by said barrier for increasing the resistance thereof.



1,687,148. GAS-GENERATING APPLIANCE. HOMER L. SCHNEIDER, Cleveland, Ohio. Filed Oct. 21, 1921. Serial No. 509,305. 2 Claims. (Cl. 158—53.)

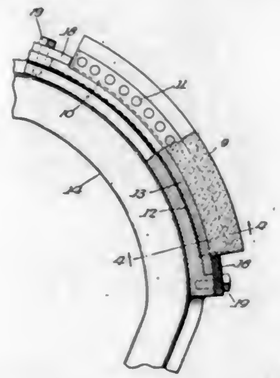
1. In apparatus of the class described, the combination with a supporting casing, of a removable electrical heating element, and an associated removable vaporizing chamber, both adapted to be inserted within said casing in operative relation, and a controllable fuel supply connection for the vaporizing chamber, substantially as set forth.



1,687,149. REFRIGERATOR REVOLVING RECEPTACLE. LOUIS S. SHAUER and ROSE SHAUER, Los Angeles, Calif. Filed Aug. 10, 1927. Serial No. 211,951. 2 Claims. (Cl. 211—152.)

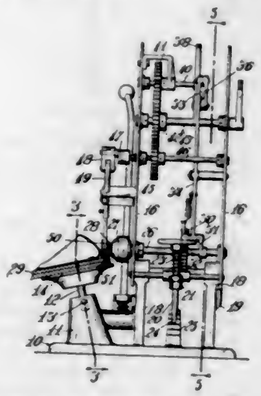
1. A receptacle comprising in combination a bracket structure, rectangular in plan and adapted to be secured to three sides of a rectangular container, said bracket having a large circular opening in the center with a horizontal structure adjacent said opening, vertical segmental rims spaced outwardly from the opening and separated one from the other, and a circular tray with means to support the tray on the said horizontal portion of the bracket adjacent the opening for a rotary movement, the tray having a peripheral rim cut away at one section to

allow ready inserting and removing of articles, the rim on the tray and the segmental rims on the bracket being adjacent each other.



1,687,150. BEVEL-GEAR-CUTTING MACHINE. CHARLES H. TAYLOR, Toronto, Ontario, Canada. Filed Nov. 13, 1920. Serial No. 423,928. 68 Claims. (Cl. 90—1.)

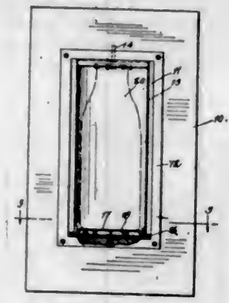
1. In a spiral gear cutting machine the combination of a blank carrier; means for continuously rotating the same; a train of cutters disposed in the direction of a generatrix of the pitch-cone of the gear blank; means for driving the cutter-train; means for swinging the latter on a center coincident with the axis of the gear blank to cause the cutters to traverse the gear blank tangentially; and means compensating for the difference in speeds of the gear blank-carrier, traversing motion and the cutter-train.



40. In a spiral gear cutting machine the combination with the machine frame, having a slideway thereon, a train of cutters disposed in the direction of a generatrix of the pitch cone of the blank, and means for driving said train, of a carrier slidably mounted in said slideway, a blank carrying spindle journaled in said carrier, means for continuously rotating said spindle, means for adjusting the blank relatively to the cutting train, said means consisting of a feed-screw connected to the carrier and adapted to move the same along the slideway operatively, and means for rotating said feed-screw, means for swinging the cutting train to cause the cutters to traverse the gear blank tangentially, and means compensating for the difference in relative speeds of the gear blank and the traversing motion cutters.

1,687,151. FRICTION BRAKE. JAMES S. THOMPSON, New York, N. Y., assignor to American Brake Materials Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1926. Serial No. 137,415. 10 Claims. (Cl. 188—250.)

5. As a new article of manufacture, a friction brake shoe comprising a composition body, a metal back in the form of a shell on the body, and a bar interposed between the back of the shell and the body and projecting beyond the ends of the shell and body.

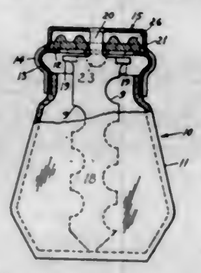


1,687,152. SHOE-REPAIR MACHINE. GIUSEPPE VITALE, Chicago, Ill. Filed Apr. 30, 1927. Serial No. 187,878. 7 Claims. (Cl. 12—17.)

1. A machine of the class described comprising a revolving table, a knurled feed wheel adapted to engage and feed the edge of a shoe sole, and a reciprocating knife for severing stitches in said shoe sole edge.

1,687,153. MILK-BOTTLE PROTECTOR. STANLEY BARDAXOGLOU, New York, N. Y. Filed Apr. 9, 1927. Serial No. 182,491. 2 Claims. (Cl. 232—1.)

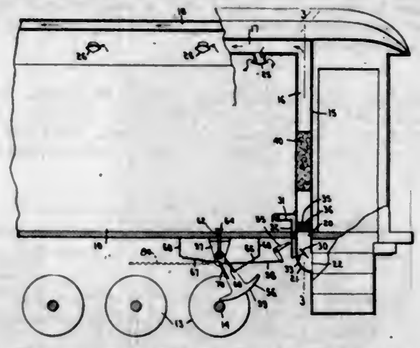
2. Milk bottle protector comprising a half-cylindrical hollow body open towards one side, pins entering said body from opposite ends for allowing a rotation of said body within an opening in a door frame, a guide for the lower end of said body, a platform within said body adapted to receive the milk bottle, a plurality of means for yieldingly supporting said platform, a depending member on the bottom of said platform adapted to enter a bore in the door frame upon the depression of the platform under the weight of a full bottle placed thereon to constitute a locking means, said locking means being located at predetermined points, and said yielding platform supporting means of a tension to ensure the proper operation of said



locking means for holding the closed bottle protecting side of said body towards the outside of a building to prevent a theft of the bottle and tampering with the bottle contents after delivery of the bottle.

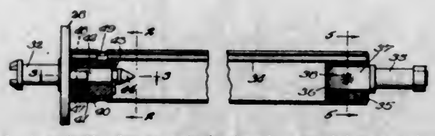
1,687,154. FOOD PRODUCT AND PROCESS OF MAKING THE SAME. MYRLE S. BOLTON, Rosemeade, Calif. Filed Aug 31, 1926. Serial No. 132,898. 4 Claims. (Cl. 99—11.)

1. A process of producing a food product which consists in mixing a nut butter with water, adding thereto cut up cucumber pickles, sealing the mixture in containers, and cooking the same until the mass becomes a solid or a semi-solid.



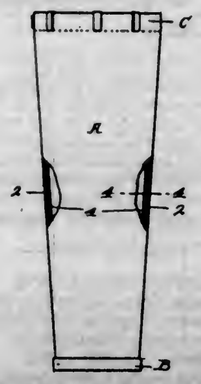
4. A new food product of the consistency of soft cheese, made by cooking under pressure peanut butter and small sweet cucumber pickles whereby the peanut butter is jellified and free of the oily taste of ordinary peanut butter.

1,687,155. SELF-CLEANING SALT SHAKER AND THE LIKE. JOSEF CAYOT, Oakland, Calif. Filed Mar. 25, 1926. Serial No. 97,209. 8 Claims. (Cl. 65—57.)



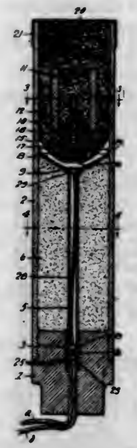
1. A shaker of the class described, comprising a container adapted to hold the material to be dispensed and provided with an open support at its upper end; a perforated top rotatably secured on the support; an agitator secured to the top and adapted to extend into the container and having flanges thereon; a cleaning block losely mounted on the agitator and adapted to rest on the support and being provided with cams, the block having projections thereon adapted to register with and to extend into the perforations in the top for the cleaning thereof, and the block having openings therein for the passage therethrough of the material in the container, the cams being adapted to engage the edges of the opening in the support for holding the block in a non-rotative position, and the flanges being adapted to engage the cams for raisin the block to the registering and cleaning position by a rotative movement of the top on said support.

1,687,156. VENTILATING APPARATUS. FREDERICK C. DUERK, Defiance, Ohio. Filed July 30, 1925. Serial No. 46,970. 8 Claims. (Cl. 98—9.)



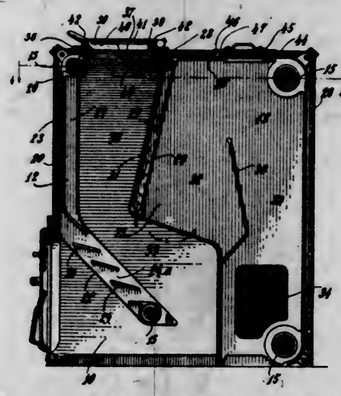
1. The combination with a railroad car having air passages in the end walls and communicating horizontal passages in the roof thereof, of air screening and purifying apparatus mounted in said vertical passages, air inlet ports at the lower end of said vertical passages, discharge ports at the upper end of said vertical passages, shut off valves for said discharge ports, and means operable by the running mechanism of the car for opening the discharge port at the rear end and for closing the discharge port at the front end thereof.

1,687,157. DUPLICATING MACHINE. JOHN J. FLANIGAN, Chicago, Ill. Original application filed Apr. 6, 1925, Serial No. 20,890. Divided and this application filed Nov. 30, 1925. Serial No. 72,088. 14 Claims. (Cl. 242—68.)



1. A spindle for a gelatin band comprising a tubular member, a hub permanently secured in one end thereof, a pawl pivoted on the inner end of said hub and spring pressed towards the center thereof, said hub having a bore therethrough, a journal having a stem inserted in said bore, said stem provided with a groove to receive said pawl.

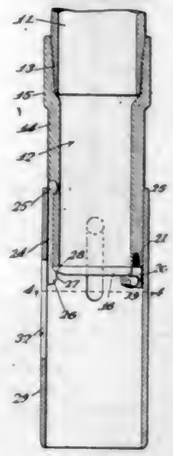
1,687,158. CREASE RETAINER. FRANK FOSTER, Kansas City, Mo. Filed July 19, 1926. Serial No. 123,567. 1 Claim. (Cl. 2—231.)



In combination with a pair of trousers, crease retaining cords extending longitudinally of the trouser legs and folded at their ends, said folded ends being sewed to the trousers and strips of suitable material for holding said cords in place and provided at their ends with enlargements for covering the folded ends of said cords.

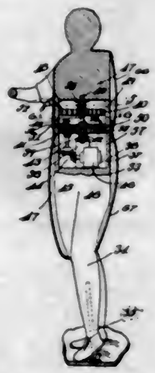
1,687,159. PYROTECHNIC ALARM AND SYSTEM INVOLVING THE SAME. HARRY C. GAMMETER, Cleveland Heights, Ohio. Filed Apr. 8, 1926. Serial No. 100,751. 6 Claims. (Cl. 102—24.)

1. A pyrotechnic alarm comprising a base, a barrel surmounting the base, a quantity of flare material within said barrel, an aerial projectile and its impelling charge within the barrel in advance of said flare material, an electric igniter in the base, and means for communicating fire therefrom to the impelling charge of the aerial projectile and to the adjacent end of the quantity of flare material.



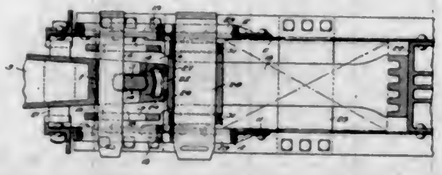
1,687,160. BOILER. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 31, 1920. Serial No. 434,262. 1 Claim. (Cl. 122—212.)

A boiler comprising end sections and a plurality of intermediate sections, each of said intermediate sections comprising a front member and a back member arranged in spaced relation relative to each other; said back members each having an intermediate forwardly-projecting angular portion and forming jointly with said front members a vertical tapering fuel magazine extending transversely of the boiler, said front members each having an inwardly and downwardly inclined grate portion extending below the projecting angular portion of its respective back



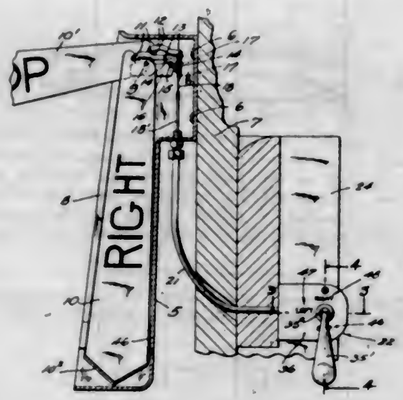
member and forming therew'th a downwardly flaring fuel receptacle and combustion chamber; a series of narrow vertical flues formed intermediate said back members to the rear of said fuel receptacle and extending longitudinally from said fuel receptacle towards the back of the boiler, and the upper portions of each of said back members having a pair of spaced ribs arranged along its front edge upon opposite sides thereof registering with corresponding ribs of the contiguous back members to form a series of relatively narrow flues for the introduction of secondary air between said fuel magazine and the flues disposed to the rear of and extending from said combustion chamber to the smoke outlet of the boiler, substantially as specified.

1,687,161. OIL-WELL CEMENT-DUMP BAILER. ARTHUR E. JOHNSON, Taft, Calif. Filed May 11, 1927. Serial No. 190,462. 8 Claims. Cl. 166—19.)



1. A well cementing device comprising in combination a bucket structure, a dumping trap pivotally mounted within said bucket, a latch shiftably mounted on the bucket structure to engage the trap, a sleeve slidably mounted on the bucket structure adapted in its lower position to hold the latch in locking relation to the trap, said sleeve releasing the latch in its upper position.

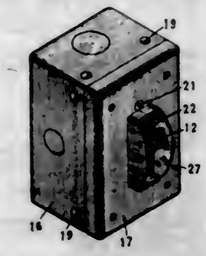
1,687,162. BASEBALL GAME. CHARLES JONES, Long Beach, Calif. Filed May 11, 1927. Serial No. 190,496. 4 Claims. (Cl. 273—89.)



1. In a baseball game a figure representing a batter, having a fixed lower body part and a rotatable upper body part mounted thereon, the upper part holding a bat, an electric motor mounted in the lower part, a gear driven by said motor, a trigger means interconnecting the gear and the upper part to rotate said upper part in one direction, means to release the trigger after a predetermined movement, and a spring means to return the upper body part to its initial position.

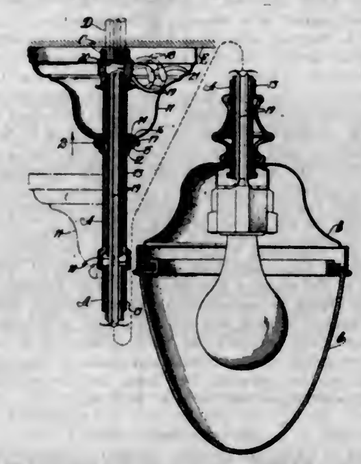
1,687,163. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Feb. 24, 1925. Serial No. 11,239. 19 Claims. (Cl. 213—69.)

1. In a railway draft rigging, the combination with a coupler, of a yoke, means pivotally connecting said coupler and yoke and serving to transmit draft forces therebetween, means extending at an angle to, intersecting and supporting said connecting means to aline said coupler and yoke, cushioning mechanism, a slotted follower between the rear of said coupler and said cushioning mechanism, and means supporting said follower.



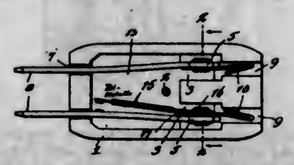
1,687,164. AUTOMOBILE DIRECTION SIGNAL. CARL O. LARSON, Seattle, Wash. Filed May 10, 1927. Serial No. 190,206. 5 Claims. (Cl. 116—53.)

1. In an automobile signal, the combination of stop and direction signs arranged to swing about a horizontal axis, controlling means connected with the respective signs, an actuating device, and two members movable in planes at right angles to each other and engageable indirectly by said actuating device whereby said controlling means are rendered operable to effect the swinging of either of the signs selectively from its inactive position into its display position.



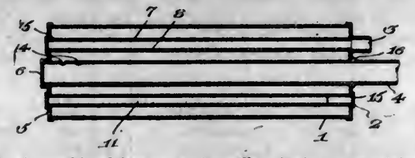
1,687,165. ELECTRIC-SWITCH BOX. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 11, 1925. Serial No. 42,935. 4 Claims. (Cl. 200—168.)

1. A snap switch having a sheet metal face plate, an operating lever extending through said face plate and a projecting channel-like sheet metal guard for said lever having lugs near each end of each side extending through said face plate and riveted thereto, said guard projecting from said



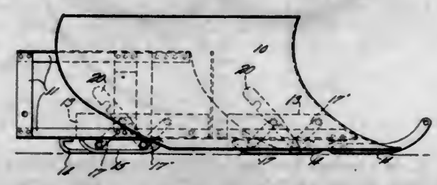
face plate around said lever and forming a finger guide channel only slightly wider than said lever and substantially housing said lever in all its operating positions.

1,687,166. CANOPY FOR CEILING FIXTURES. ROBERT L. LITTLE, Chicago, Ill., assignor to Lindsay Light Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1927. Serial No. 222,769. 4 Claims. (Cl. 240—85.)



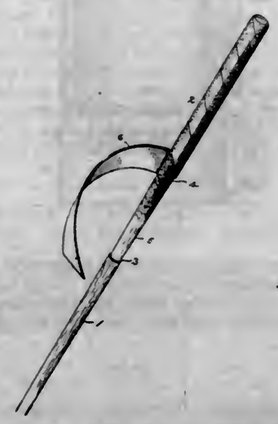
1. In a ceiling fixture, a tube, a sleeve slidable on the tube, a rim on the inside of said sleeve to prevent the withdrawal of said canopy, an enlargement on the tube below the sleeve, and a canopy having an opening adapted to fit over said sleeve and to pass over said enlargement.

1,687,167. CONNECTING PLUG. RANDOLPH M. MANN, Nyack, N. Y. Filed Mar. 18, 1926. Serial No. 95,538. 10 Claims. (Cl. 200—15.5.)



1. A connecting plug comprising co-operating chambered body portions recessed to form pairs of end slots, securing means, a contact blade member inserted in each of said slots and projecting in parallel relation at one end to fit plug slots, and having spring cotacts at the other end within the slots to receive plug blades, one of said blade members including a thermostatic switch within the chamber.

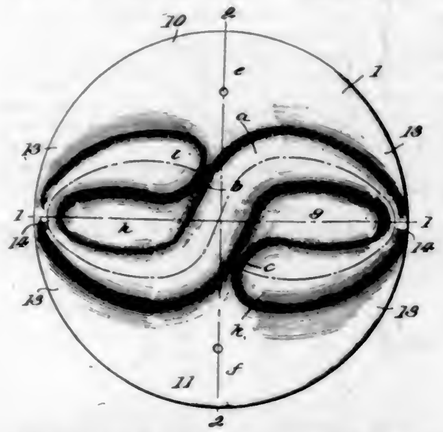
1,687,168. COMBINED HEATER AND MUFFLER DEVICE. WILVER F. MARK, Butler, Ind. Filed Aug. 22, 1927. Serial No. 214,573. 2 Claims. (Cl. 257—16.)



1. A combined heater and muffler device, comprising an outer muffler chamber, a fresh air chamber concentrically arranged within said outer muffler chamber, said fresh air chamber being subdivided by walls into four longitudinal inter-connecting passage-way compartments, inlet and outlet ports in said fresh air chamber, a second muffler chamber concentrically arranged within said fresh air chamber, thereby serving to heat said fresh air chamber internally, said muffler chambers in communication with each other for the reception of exhaust gas by means of a tubular passage-way housed in said fresh air chamber, one of said muffler chambers having an exhaust port, for the purposes set forth.

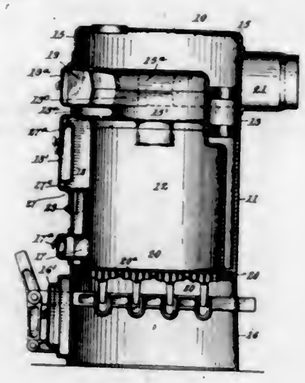
1,687,169. SNOWPLOW. VINCENT P. MARRAN, Holyoke, Mass. Filed Jan. 6, 1927. Serial No. 159,375. 5 Claims. (Cl. 37—44.)

1. An elevating device for a snowplow, comprising, in combination with the snowplow frame, a ground engaging shoe, spaced parallel links connecting the shoe to the frame and pivotally connected to each, and latching means for holding the links in elevated position comprising a bar pivoted to the shoe near one end for swinging movement independently of the frame and adapted to be swung into a position in which it extends upwardly and rearwardly and is detachably held by a latching engagement to the snowplow frame.



1,687,170. HANDLE GRIP. GEORGE W. MATTERN, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 24, 1925. Serial No. 71,099. 6 Claims. (Cl. 273—81.)

5. The combination with a handle shaft for a golf club, or the like having therein a peripheral indentation, of a

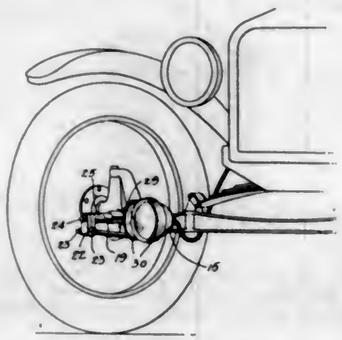


sheath overlapping and extending beyond the peripheral indentation, the material of which is of substantially uniform thickness enclosing a portion of the handle shaft of maximum diameter with the terminal portion of the sheath seated in said peripheral indentation, the surface of such enclosing sheath and the surface of the shaft beyond the indented portion merging uniformly one into the other.

1,687,171. VEGETABLE-PEELING MACHINE. CLAUDE B. MCCATHRON, Rochester, N. Y., assignor to Josiah Anstice & Co. Inc., Rochester, N. Y. Filed Dec. 15, 1927. Serial No. 240,203. 8 Claims. (Cl. 146—49.)

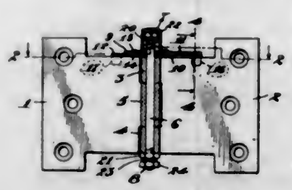
1. In a peeling machine, a rotary peeling and supporting member having an abradant surface, a portion of said surface raised, and said raised portion in the shape of a figure 8.

1,687,172. BOILER. ANDRÉ MANUEL MERTZANOFF, New York, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed May 15, 1925. Serial No. 30,410. 18 Claims. (Cl. 122—218.)



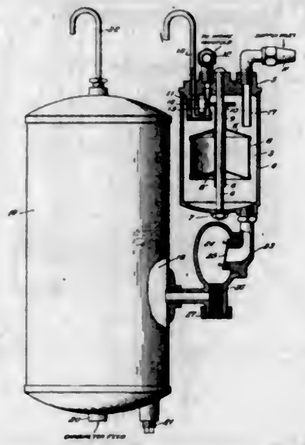
1. A boiler of the type described comprising a plurality of horizontal sections, certain of which jointly form the firepot and combustion chamber whose aggregate inner or heat absorbing surface in relation to grate area is in the proportion of about—

$$1+\frac{4}{r},$$



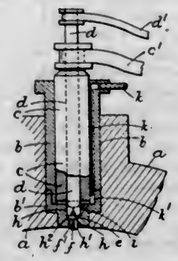
in which r represents the radius of the grate expressed in inches, substantially as specified.

1,687,173. DIRIGIBLE SPOTLIGHT. BOYD F. MILLER, Patton, Calif. Filed Apr. 14, 1925. Serial No. 23,079. 1 Claim. (Cl. 240—62.)



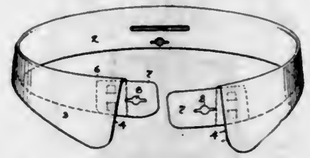
A dirigible spotlight for motor vehicles comprising an elongated supporting member having its opposite ends formed with threaded sockets into one of which the threaded shank of a steering arm extending through an ear of a steering knuckle is adapted to be threaded so as to rigidly secure the member to the steering knuckle in a horizontal forwardly extending position, an L-shaped arm having relatively long and short respectively horizontal and vertical portions exteriorly threaded at their ends, a clamping member comprising a pair of jaws constructed to receive the threaded end of the horizontal portion of the arm therebetween, nuts threaded on the horizontal portion at opposite sides of the clamp to rigidly secure the arm in a longitudinally adjusted position with respect to the clamp, a bolt extending through the jaws of the clamp and threaded into the other of said sockets of the supporting member so as to secure the clamp to the member and clamp the arm against rotation on the clamp in substantially right angular relation to the member, a lamp box provided with a horizontal ear through which extends the vertical portion of the arm, nuts threaded on the vertical portion at opposite sides of the ear for securing the lamp box in vertically adjusted position on the vertical portion.

1,687,174. HINGE. STANLEY F. MOUNTFORD and HOWARD S. MOUNTFORD, Los Angeles, Calif., assignors of one-half to James F. Hood, Los Angeles, Calif. Filed Mar. 16, 1926. Serial No. 95,065. 2 Claims. (Cl. 16—140.)



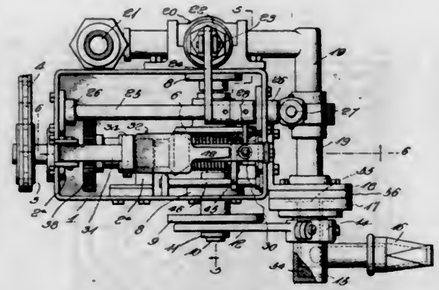
1. A control attachment for hinges comprising superimposed disks having a pair of peripherally disposed arms which normally extend in opposite directions; said arms having pairs of opposed flanges adapted to straddle the hinge leaves, beads formed on one of said disks, sockets provided on the other of said disks and adapted for the reception of said beads, and resilient means to press said disks toward each other to cause said beads and sockets to yieldingly resist relative rotation of said disks.

1,687,175. VACUUM FEED SYSTEM. GUSTAVE C. NELSON, Moline, Ill., assignor to The Borg & Beck Company, Moline, Ill., a Corporation of Illinois. Filed May 13, 1921. Serial No. 469,359. 6 Claims. (Cl. 103—236.)



1. In a vacuum feed system, two separate and independent tanks, one having a receiving chamber and the other a feed chamber, a vacuum producing connection to the receiving chamber and an air vent for said chamber, an air vent for the feed chamber, a slidably mounted float operating in said receiving tank, a cut-off disk vertically movable by said float and operating between the vacuum producing connection and the air vent of said receiving chamber to close the same alternately, a pipe connecting the receiving chamber with the feed chamber, a valve chamber in said pipe and intermediate said tanks, a valve in said valve chamber, and a removable screen between the valve chamber and the feed chamber.

1,687,176. MEANS FOR INJECTING LIQUID FUEL INTO INTERNAL-COMBUSTION ENGINES. SIMON DOKK OLSEN, London, England, assignor to The Olsen Engine Syndicate Limited, London, England, a British Company. Filed Mar. 18, 1925, Serial No. 16,457, and in Great Britain Apr. 30, 1924. 4 Claims. (Cl. 123—33.)

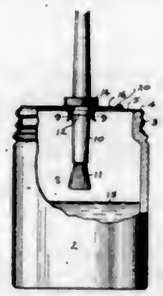


1. In a liquid fuel injector, the combination of an injector cylinder, a plunger working therein, means for supplying fuel to the space in front of said plunger, a by-pass through which air is admitted from the engine cylinder at a point near the fuel inlet for preliminary atomization of the fuel, and means carried by said plunger for restricting, during the actual injection, the passage leading into the engine cylinder, substantially as described.

1,687,177. NECKWEAR. ERNEST P. PARSONS, Cleveland, Ohio; W. M. Baldwin administrator of said Ernest P. Parsons, deceased, assignor to The Parsons & Parsons Company, Cleveland, Ohio. Filed Apr. 12, 1926. Serial No. 101,275. 6 Claims. (Cl. 2—135.)

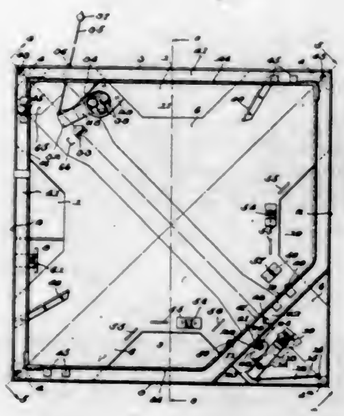
1. A collar of celluloid or similar material having a slotted neck band, button-hole tabs having slots adapted to register into the slots in the band, said tabs being cemented to said band and extending beyond the end edges thereof, and supplemental means uniting said band and tabs together at and by means of said slots, said means being cemented to said tabs.

1,687,178. SUGAR-SPRAYING APPARATUS. JOHN R. PETERSON, Sugar City, Idaho, assignor to Utah-Idaho Sugar Company, Salt Lake City, Utah, a Corporation of Utah. Filed Apr. 24, 1926. Serial No. 104,490. 14 Claims. (Cl. 210—67.)



1. A spraying apparatus for sugar machinery comprising a casing, a driving shaft journaled in said casing, an oscillating sprayer nozzle operated from said drive shaft, a pipe line for supplying liquid to said sprayer nozzle, a valve interposed in said pipe line, a timing screw journaled in said casing and driven from said shaft, an auxiliary shaft journaled in said casing and having a pair of oppositely extending crank members, one of said crank members controlling the operation of said valve and the other of said crank members, having means for engaging said timing screw for actuating said valve for controlling the flow of liquid through said pipe line to said oscillating nozzle.

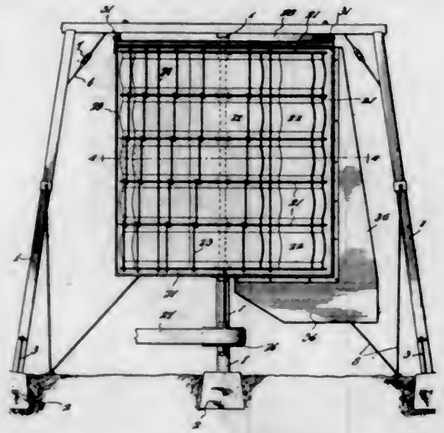
1,687,179. BOTTLE OR JAR COVER. OLE PETERSON, Cleveland, Ohio. Filed Feb. 20, 1926. Serial No. 89,526. 1 Claim. (Cl. 91—67.1.)



A bottle or jar, having a screw-threaded neck, and a screw-threaded cover detachably connected with said neck, comprising a relatively large round opening having a small recess extending laterally from the edge thereof, a flange of crescent-shape at one side of said large opening, tongues bent downwardly at the edge of said recess, said tongues having flaring extremities adapted to lead the handle of a brush from said large opening into said recess, and a cover plate pivotally secured to said cover having an edge portion corresponding to the edge of said cover and

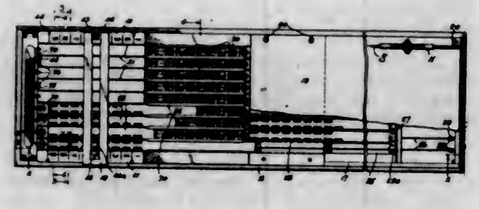
a lid portion of irregular curvature which provides a semi-circular recess adapted to register with said small recess in the cover, said cover plate being adapted to

engage the handle of a brush inserted within said small recess, and said lid portion being adapted to fit under said flange on the cover when the cover plate is closed.



1,687,180. BASEBALL GAME BOARD. HERBERT E. PICKETT, Baltimore, Md. Filed Apr. 14, 1927. Serial No. 183,698. 12 Claims. (Cl. 273—88.)

1. A game apparatus of the character described comprising a box-like structure having a bottom, sides and ends, a platform defining a baseball field arranged intermediate said bottom and the top edges of said sides and ends, said platform being provided with an opening at the catcher's box, and an opening intermediate adjacent bases, a pitching device in one corner of said structure and a batting device in the diagonally opposite corner, and means disposed below said platform for returning to the pitcher's corner the balls passing through said openings.

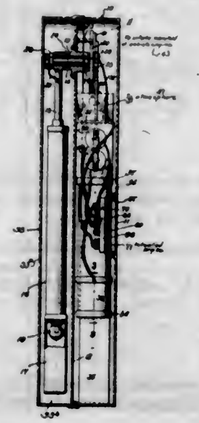


1,687,181. WIND MOTOR. THOMAS B. PREASE, Superior, Ariz. Filed Feb. 24, 1927. Serial No. 170,603. 3 Claims. (Cl. 170—15.)

1. In a wind motor, the combination of a supporting frame, a shaft mounted vertically in the frame, a wind wheel carried by the shaft, a shield of arcuate form disposed adjacent the wheel and movably supported on the frame, an arcuate rigid frame extending from one vertical side edge of the shield and having openings therethrough, the shield and the frame being concentric with and partly housing the wheel, and a steering vane fixed

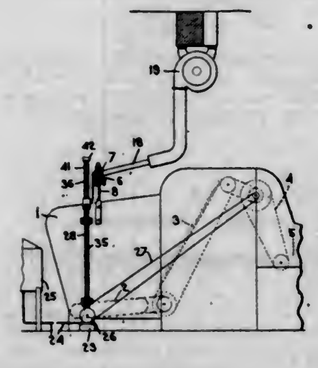
to and extending vertically the full height of said frame in the same diametrical plane of the wheel as the opposite edge of the shield.

1,687,182. MULTIPLICATION DEVICE. KURT SEIFERT, Los Angeles, Calif. Filed Mar. 27, 1924. Serial No. 702,378. 3 Claims. (Cl. 235—69.)



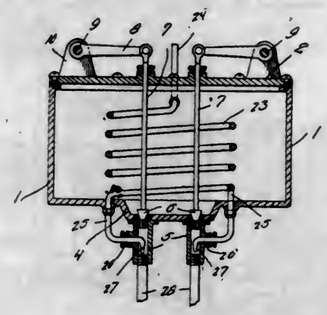
1. A multiplication device comprising a plurality of elements movable to occupy either of two extreme positions, each element bearing multiplicand numerals and other numerals which are multiples of the multiplicand numerals, the digits of each multiple numeral being distinguished from each other to permit combining certain of the digits with the digits of adjacent multiple numerals of adjacent elements, and stationary elements bearing multiplier numerals whereby when those elements are moved from one extreme position to the other and bearing the multiplicand numerals composing the multiplicand of an example, the transversally alined multiple numerals of the elements as determined by the desired multiplier numeral will give the correct product when one multiple digit of each element is considered as constituting one denomination of the product, while the remaining multiple digits of adjacent elements are added to constitute the remaining digits of the product.

1,687,183. TRAFFIC SIGNAL. BERT C. SMITH and THOMAS H. CHANDLER, Long Beach, Calif. Filed June 17, 1925. Serial No. 37,735. 6 Claims. (Cl. 177—329.)



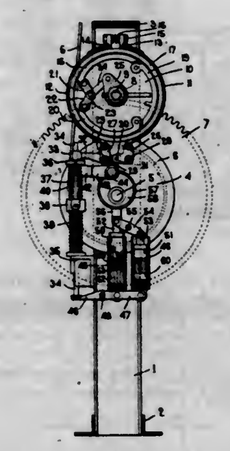
1. A traffic signal comprising a casing open at one side, a closure for the open side of said casing, a bearing secured to said closure adjacent its upper end and extending through the closure with a portion disposed within the casing and a portion projecting from the outer face of the

closure, a hood fitted upon the side portion of the casing closed by said closure and projecting therefrom and formed with a side opening, a shaft rotatable in said bearing and projecting from the inner and outer ends thereof, a signal arm carried by the outer end portion of said shaft and extending radially therefrom and swung into and out of the hood through the side opening formed therein when the



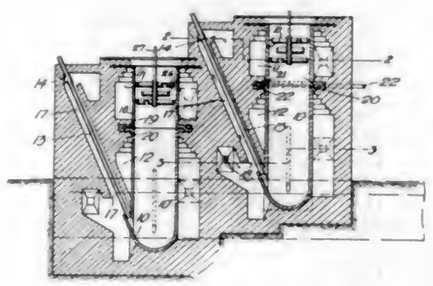
shaft is rotated, the weight of the signal arm normally retaining it within the hood, operating means in said casing connected with the inner end portion of said shaft to rotate the shaft and swing said signal arm out of the hood to a set position, and latch means in said casing to engage a portion of said operating means and releasably retain the arm in a set position.

1,687,184. PROCESS AND APPARATUS FOR CONDITIONING TEXTILE MATERIALS. ALBERT W. THOMPSON, Lowell, Mass., assignor to Parks-Cramer Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1925. Serial No. 60,371. 18 Claims. (Cl. 19—66.)



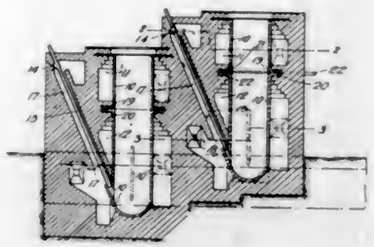
1. The process of delivering liquid to a liquid-distributing means at a predetermined uniform rate which comprises circulating a confined body of the liquid at a rate of flow greater than the desired rate of delivery thereof, maintaining thereby a column of said liquor of a uniform height and delivering the liquid from said column under a predetermined hydrostatic head and uniformly distributing the liquid thus delivered in the form of a spray.

1,687,185. TRACK AND FLANGE LUBRICATOR. MONROE L. TIPTON, Hyndman, Pa. Filed Apr. 8, 1927. Serial No. 182,126. 5 Claims. (Cl. 184—3.)



1. In combination, a track and wheel flange lubricator having a lubricant container, valve controlled feed pipes for supplying the lubricant in said container to the track and wheel flanges, means operated by the motion of a locomotive carrying the lubricator for opening and closing said valves in a predetermined manner, remotely controlled means for the last-named means operable to normally limit the opening movement of the valve and to retain the valves in closed position when operated in a predetermined manner and a combined lubricant heating element and feed pipe cleaner carried by the container.

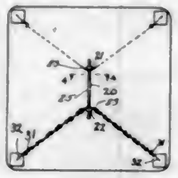
1,687,186. GOVERNING MECHANISM FOR LOAD-HOISTING MACHINES. NATHANIEL WARSHAW, Boston, Mass., assignor to Lewis-Shepard Company, Watertown, Mass., a Corporation of Massachusetts. Filed June 21, 1926. Serial No. 117,588. 9 Claims. (Cl. 188—82.)



5. Governing mechanism for winches comprising a fluid-containing cylinder, a piston movably mounted therein, means operable by the rotation of the winding drum to actuate said piston, means normally operable to transmit fluid from one side of the piston to the other without substantially increasing the fluid pressure in the cylinder, but operable upon increase in speed of reciprocation in excess of a predetermined speed to increase the fluid pressure in said cylinder, and means operable by such increased pressure to arrest the rotation of the winding drum.

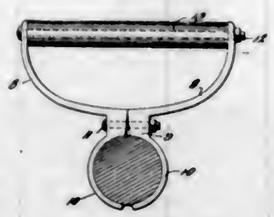
1,687,187. APPARATUS FOR USE IN REFINING OF LEAD BULLION AND SIMILAR OPERATIONS. GEORGE KENNETH WILLIAMS, Port Pirie, South Australia, Australia. Filed Feb. 9, 1927, Serial No. 166,987, and in Australia Mar. 6, 1926. 9 Claims. (Cl. 266—34.)

1. An apparatus for use in the refining of lead bullion and similar operations comprising a vessel within which a deep narrow column of molten material may be maintained having means whereby different temperatures may be applied at different portions thereof and means for independently withdrawing products from at or about the top and at or about the bottom thereof.



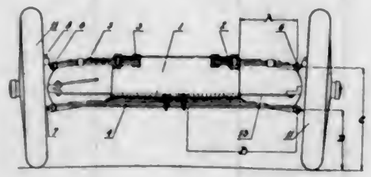
1,687,188. REFINING OF LEAD BULLION CONTAINING OTHER METALS. GEORGE KENNETH WILLIAMS, Port Pirie, South Australia, Australia. Filed Feb. 9, 1927, Serial No. 166,988, and in Australia Mar. 6, 1926. 9 Claims. (Cl. 75—59.)

1. A process for the refining of lead bullion containing alloying metals consisting of incorporating zinc with the said bullion in such quantity and subjecting the same to such differential temperatures that molten layers of conjugate solutions are formed the upper layer comprising an alloy rich in a certain alloying metal or metals and separating such alloy in liquid system.



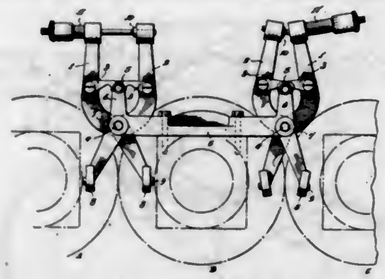
1,687,189. FURNITURE BRACE AND TENSIONING DEVICE. THEODORE H. WITTLIFF, Cleveland, Ohio. Filed Dec. 2, 1925. Serial No. 72,730. 6 Claims. (Cl. 155—197.)

6. A furniture bracing device comprising tension elements, an adjustable coupler member therefor comprising a coupler shank having its opposite end portions reversely threaded and having an intermediate portion for manipulating the same, nuts threaded to the shank end portions, connector members fitted to the shank inwardly of the nuts, said connector members being formed of stamped metal having a perforated central portion and end portions angularly disposed with relation thereto and said end portions having slots at their opposite sides to form key shoulders for engagement with the tension elements and



said tension elements consisting of flexible members having open terminal portions interlocked in assembled engagement with said key shoulders.

1,687,190. HANDLE. FRED WULFF, Vega, S. Dak. Filed Dec. 23, 1926. Serial No. 156,664. 1 Claim. (Cl. 294—58.)

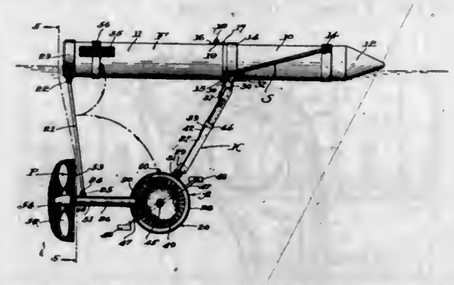


A detachable handle device comprising companion sections of curved formation, rockable companion blocks arranged at the opposite ends of the sections and a continuation thereof and having divergently arranged companion side walls defining a V-shaped opening between the blocks, a bolt arranged within said blocks, a handle clamped between the sections, and clamping jaws, a continuation of said blocks and projecting laterally therefrom.

1,687,191. SUSPENSION WITHOUT AXLES FOR MOTOR VEHICLES. ERNEST MAURICE BALLIOT, Paris, France. Filed Jan. 5, 1925, Serial No. 646, and in France Jan. 14, 1924. 2 Claims. (Cl. 280—106.5.)

1. A suspension without axles for vehicles comprising a chassis, a pair of wheels, a single spring having its ends pivoted to said wheels with its center secured to the center of said chassis, said spring being normally under tension, and a pair of springs each having one end pivoted to a wheel in vertical alignment with the pivot of said first spring and having its remaining end fixedly secured to the chassis adjacent the side thereof.

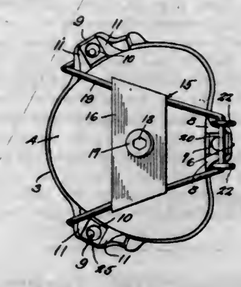
1,687,192. MICROMETER GAUGE FOR ROLLER MILLS. JAMES T. BARBER, Brooklyn, N. Y. Filed Aug. 31, 1927. Serial No. 216,735. 6 Claims. (Cl. 33—166.)



1. In a roller mill, the combination with coacting grinding rolls, of a gauge, means for mounting said gauge upon the mill adjacent said coacting rolls, said gauge comprising gauge members pivoted intermediate their ends, corresponding ends of the gauge members being disposed to come between coacting rolls and an indicating gauge in cooperative relation with the opposite ends of the said gauge members to designate the distance between the centers of the coacting rolls.

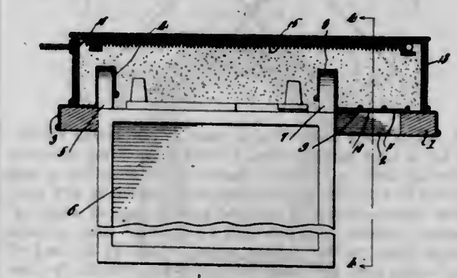
1,687,193. CINEMATOGRAPHIC PROJECTION APPARATUS WITH OPTICAL COMPENSATION. LUDWIG BERTELE, Dresden, Germany. Filed Nov. 19, 1927, Serial No. 234,529, and in Germany Oct. 16, 1926. 3 Claims. (Cl. 88—16.8.)

1. A cinematographic apparatus for optical compensation of the movement of a film picture comprising a rotatable disk having a plurality of reflecting surfaces disposed annularly thereof, and curved, prismatic refractors each having varying effective optical distances carried by the disk to render the effective path of rays of light passing through the film of constant length.



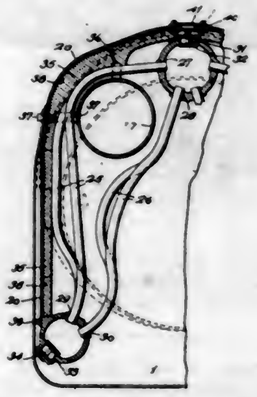
1,687,194. AQUATIC VEHICLE. JAMES F. CALDWELL, Watts, Calif. Filed Oct. 31, 1927. Serial No. 230,012. 14 Claims. (Cl. 9—18.)

1. An aquatic vehicle comprising a pair of floats, means for rigidly connecting the floats in side by side spaced relation and constituting a support on which an operator is adapted to rest, a foldable frame depending from and connected to the floats, propelling means carried by the



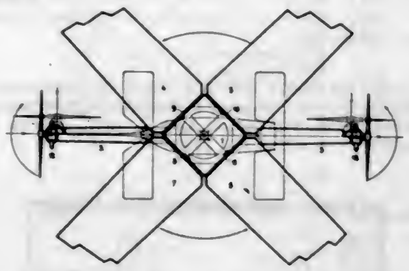
frame, and means carried by the frame for actuating the propelling means and adapted for operation by the feet of the operator when resting on said support.

1,687,195. FLASK CLAMP. HOUSTON M. CARROLL, Sr., San Antonio, Tex. Filed Nov. 29, 1927. Serial No. 236,499. 3 Claims. (Cl. 18—33.)



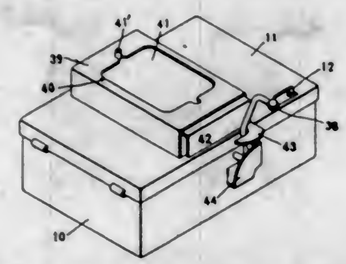
1. A clamp for molding flasks, comprising a main member provided at one end with angularly disposed fingers that are spaced apart transversely and provided with means for engaging the lugs on a flask, a lug-engaging latch pivoted to the opposite end of the main member, and a pressure device operating in the intermediate portion of the main member.

1,687,196. BATTERY HEATER. CARL R. DAELLENBACH, Ellwood City, Pa., assignor to Raymond E. Daellenbach, Ellwood City, Pa. Filed Apr. 1, 1927. Serial No. 180,302. 8 Claims. (Cl. 219—35.)



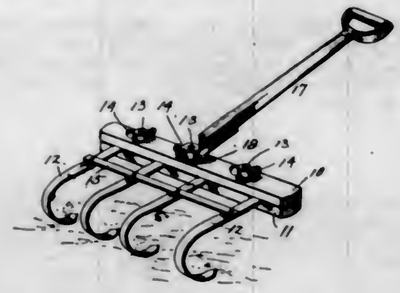
1. A battery heater comprising a base having an opening therein to accommodate a portion of the battery, means for clamping the base to the battery, a cover movably connected to the base to extend over the battery, and an electric heating unit supported by the cover in close proximity to the battery.

1,687,197. WATER-TUBE FIRE BOX FOR LOCOMOTIVE BOILERS. GEORGE H. EMERSON and OLIVER C. CROMWELL, Baltimore, Md. Filed Dec. 1, 1925. Serial No. 72,567. 9 Claims. (Cl. 122—94.)



1. In a boiler, a pair of drums arranged one above the other, inner and outer rows of water tubes extending vertically between said drums, the tubes of said inner and outer rows respectively having their upper ends fitted in holes in a side and in the bottom of the upper drum, and the tubes of both rows having their lower ends fitted in holes in the top of the lower drum at the inner side of its vertical center line, said upper drum being provided in its top with an opening lying in its central vertical plane and said lower drum being provided in its bottom with an opening on the outer side of its vertical center, said openings permitting access to the tube ends fitted in the drums, and a detachable closure for the opening in each drum.

1,687,198. AEROHELICOPTER. FRANTIŠEK FORMÁNEK, LADISLAV ZEMAN, and EDMUND ZEMAN, Bratislava, Czechoslovakia. Filed Apr. 18, 1927. Serial No. 184,448, and in Czechoslovakia Dec. 26, 1925. 4 Claims. (Cl. 44—19.)



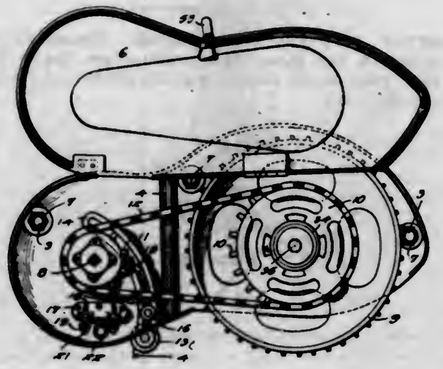
1. An aircraft comprising a fuselage containing a cockpit for a pilot and carrying a rudder, elevating fins and alighting gear, a central framework constituting a hub secured to said fuselage so as to be rotatable at will relatively thereto about an upright axis, a pair of arms extending radially from the hub at opposite sides of said upright axis, the air screws mounted, one at the end of each radial arm, and adapted to be rotated coaxially with said pair of arms or alternatively substantially in a vertical plane parallel with the axis of said arms, means for driving said air screws, and four supporting planes extending radially from the central framework or hub and so attached thereto as to be adjustable angularly at will, simultaneously in the same sense, each about its longitudinal axis, to the desired angle of incidence.

1,687,199. ELECTRIC SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Apr. 13, 1926. Serial No. 101,688. 13 Claims. (Cl. 200—5.)

1. An electric switch comprising an insulating switch base, posts carried thereby, blades hinged to said posts, a folding link connecting said blades, an insulating fuse carrying member supported from said posts and having fuse terminals electrically connected to said blades at all times, and means for operating said blades simultaneously.

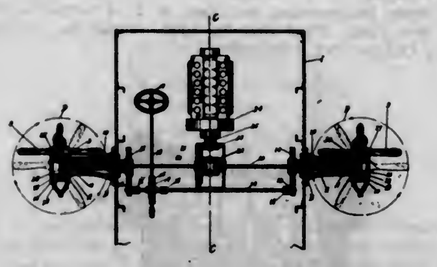
1,687,200. CULTIVATOR. ROBERT HARRISON GOODMAN, Romance, Ark. Filed June 15, 1925. Serial No. 37,327. Renewed Aug. 24, 1928. 1 Claim. (Cl. 97—64.)

An agricultural implement comprising a beam composed wholly of two bars substantially alike, one above the other, bolts passing vertically through said bars at different points along the length thereof, one being at midlength, and separably clamping the two bars together, ground-working members having shanks that extend between said bars and having holes in the portions lying between the bars, projections on one of said bars extending into said holes, and a rotatably adjustable handle mounted upon the bolt at midlength of the beam.



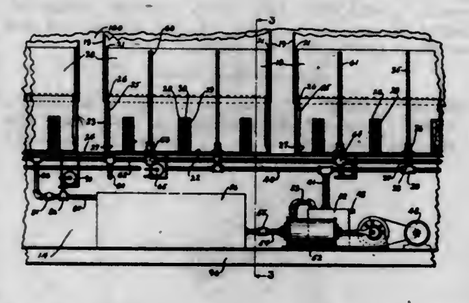
1,687,201. BRUSHING MACHINE. JOHN HAGEN, Bend, Oreg. Filed Feb. 10, 1927. Serial No. 167,311. Renewed Mar. 5, 1928. 6 Claims. (Cl. 15—77.)

1. A brushing machine comprising a frame, longitudinally moving conveyor means thereon, brushing means operatively supported in vertically spaced relation on the



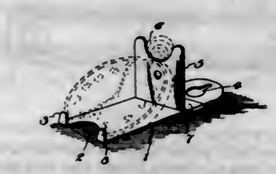
frame, longitudinally disposed guide strips on said frame, a plurality of vertically disposed supporting means on the frame, transversely arranged pressure bars slidably engaged with the supporting means, and guide aprons carried by said bars and overlying said guide strips.

1,687,202. LAWN MOWER. WILLIAM H. HAINES, Thompsontown, Pa. Filed Nov. 17, 1926. Serial No. 148,875. 8 Claims. (Cl. 56—252.)



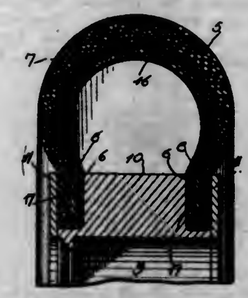
4. A lawn mower comprising a frame, a pair of ground wheels mounted on said frame for independent longitudinal adjustment with respect to said frame, a cutter reel carried by said frame in advance of said ground wheels, power transmitting means for driving said cutter reel from said ground wheels, said power transmitting means including a pair of removable ratchet blocks reversible in position to secure either a forward or reverse rotation of said cutter reel.

1,687,203. AIRCRAFT. CHARLES S. HALL, Los Angeles, Calif. Filed May 24, 1922. Serial No. 563,297. 2 Claims. (Cl. 244—25.)



1. In an aircraft, the combination of an aliformous body disposed parallel to the normal line of flight, wings outwardly arranged upon said body, revolvable frames arranged to project outwardly from said body and manually revolvable propellers operatively mounted upon said frames, drive-shafts extending in line across said body and having geared connections at their outer ends with said propellers, differential gearing at the inner ends of said shafts, operatively connected with a motor-shaft, a steering wheel, and geared connections between said wheel and said frames for revolving the latter.

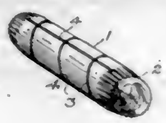
1,687,204. GAS-STORAGE SYSTEM FOR AIRCRAFT. CHARLES S. HALL, Oakland, Calif. Filed Feb. 2, 1926. Serial No. 85,430. 10 Claims. (Cl. 244—3.)



1. An aircraft having a rigid gas holding compartment therein, said compartment including a movable wall, a relief tank, a pipe connecting said compartment and said relief tank, a high pressure gas storage tank and means to withdraw gas from said relief tank and force it into high pressure tank when the pressure in said relief tank reaches a certain amount.

1,687,205. DISPLAY STAND. CHARLES R. HAMLIN, Chicago, Ill. Filed Dec. 5, 1927. Serial No. 237,890. 2 Claims. (Cl. 211—25.)

1. A display stand comprising a base having ears upon one end, an L-shaped supporting plate having guide grooves on one arm thereof slidably engaging the side edges of the base plate, and a recess in the other arm, and means carried by the said plate for frictionally engaging the base plate to hold the supporting plate in adjusted positions thereon.

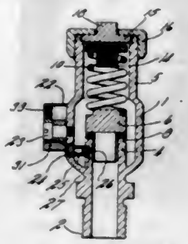


1,687,206. SPRING TIRE. GABRIEL HATVANI, Medina, Ohio. Filed Sept. 17, 1927. Serial No. 220,150. 2 Claims. (Cl. 152—8.)

1. A spring tire comprising a flexible resilient shoe divided circumferentially at its inner side to provide straight-side beads, radially disposed flat metal rings em-

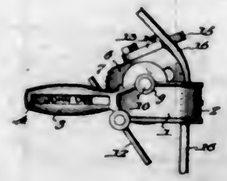
bedded in and extending circumferentially of the beads, and circumferetially spaced radially and transversely disposed substantially U-shaped leaf springs embedded in the side and tread portions of the shoe and having their ends secured to said rings, and smaller U-shaped springs embedded in the shoe between the first springs and also secured at their ends to the rings.

1,687,207. DOWEL PIN AND METHOD OF MANUFACTURE. WILSON S. HAWKER, Dayton, Ohio. Filed Jan. 26, 1926. Serial No. 83,842. 7 Claims. (Cl. 144—12.)



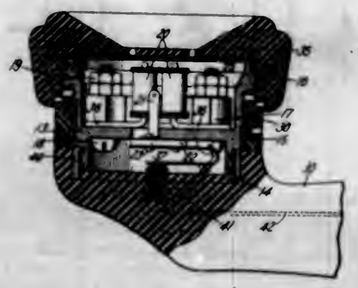
1. The herein described method of pointing dowel pins by simultaneously rolling the opposite ends of the pin under pressure in contact with a corrugated former to compress the ends to tapered corrugated form.

1,687,208. PAPER FINGER FOR TYPEWRITING MACHINES. FREDERIC W. HILLARD, Tottenville, N. Y. Filed Nov. 2, 1922. Serial No. 598,653. 8 Claims. (Cl. 197—139.)



1. In a typewriting machine, the combination with the platen, of a two part paper finger device, one part comprising the paper finger and its carrying arm and the other part being the support therefor, the carrying arm being hinged to the support in such manner that the paper finger may be swung on the support into and out of the work field, means for latching the two parts together in work holding position, such means comprising a spring latch and a banking stop on the support, the latch engaging that side only of the carrying arm whereon it can exert its spring pressure to latch the paper finger in its work holding position on the support and the banking stop engaging the opposite side of the said arm to arrest the arm when it has been brought into its work holding position.

1,687,209. TEMPERATURE AND PRESSURE RELIEF VALVE. FREDERICK M. HOLMES, Springfield, Mass., assignor to Tryco Products, Inc., Westfield, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1927. Serial No. 182,507. 8 Claims. (Cl. 137—53.)

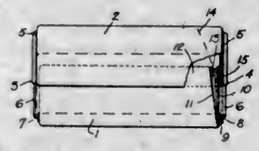


1. A safety valve comprising a valve casing provided with aligned openings and a drain opening, a valve seat between the latter and one of the former openings, a cap threaded on the casing to cover the other opening, a valve closure for said seat, a spring to press the closure to its seat and means to adjust the pressure of the spring comprising a stem, a disc threaded to the stem and having means cooperating with interior shoulders on the valve casing to prevent its turning, a second disc fast to the upper end of the stem and adapted to rest on a ledge of the valve casing in position to be bound to the casing against turning by the said cap, all of said parts being located within the valve casing below said cap, said cap having an opening through which an operating head of said stem is presented for turning to adjust said spring.

1,687,210. PIPE AND TUBE BENDER. WALTER ESTES HOLSCLAW and HARRY ELSTON HOLSCLAW, Evansville, Ind. Filed Dec. 6, 1927. Serial No. 238,157. 1 Claim. (Cl. 153—45.)

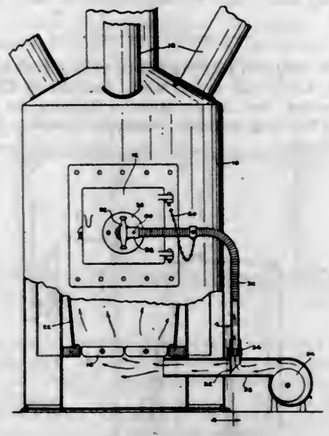
The hereindescribed portable pipe and tube bender, comprising a body having a pipe-engaging hook at one end and a handle at its other end to enable said bender to be held by the operator, a sheave having a grooved edge and journalled to the body, said sheave being provided with gear teeth, said sheave and hook lying in substantially the same plane, an elongated bending plate attached to the sheave and lying in the plane thereof, said plate having a hooked end projecting over the grooved edge of the sheave and adapted to grip the pipe or tube to be bent, the first-named hook serving as an abutment for the pipe or tube, a shaft mounted on the body and provided with a pinion which meshes with the gear teeth of the sheave, and a handle whereby said shaft may be turned.

1,687,211. TELEPHONE RECEIVER. WARREN C. JONES, Flushing, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 158,186. 6 Claims. (Cl. 179—119.)



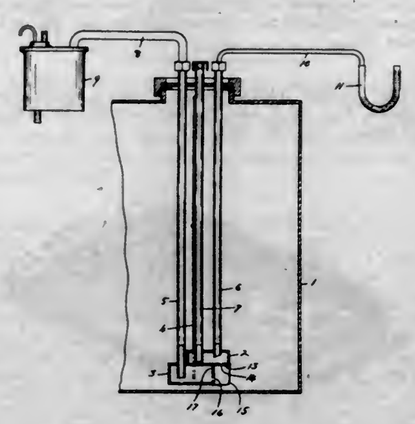
1. A telephone receiver comprising a permanent magnet of cobalt steel and pole pieces for said magnet composed of an alloy consisting chiefly of nickel and iron.

1,687,212. POWER-DRIVEN SCISSORS FOR BARBERS. CHARLES E. KELLIHER, New York, N. Y. Filed Aug. 12, 1927. Serial No. 212,454. 3 Claims. (Cl. 30—13.)



1. In a power driven scissors of the class described, adapted for use by barbers, a bevel pinion attached to a shaft, said bevel pinion meshing with a gear rotatively mounted on a pin, a lever attached to the said bevel gear, a link member pivotally attached to the free extremity of the said lever, said link member pivotally attached to a second lever pivotally attached to a pin, a movable scissor blade member pivotally attached to the said pin, said movable scissor blade member provided with a cutting edge, and provided with an extended element having formed therein a notch adapted to receive the extended member of the said second lever, so as to close the said movable scissor blade member in shearing contact with a fixed scissor blade member, as a means of cutting hair.

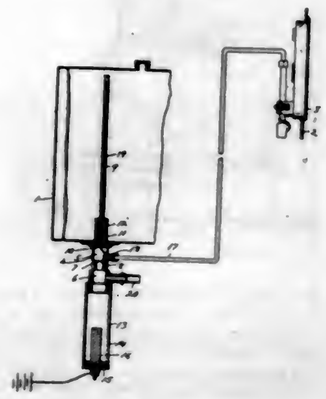
1,687,213. COLLAPSIBLE TRUNK, SUITCASE, AND THE LIKE. ERNEST NORBERT KENNEDY, London, England. Filed Apr. 17, 1925. Serial No. 23,767. 5 Claims. (Cl. 190—47.)



1. An expansible trunk, suitcase, or the like, comprising two telescopically arranged parts, respectively comprising a top wall and a bottom wall, and side and end walls connected thereto, extensible hinge devices connected at opposite ends thereof to the rear walls of said parts and non-extensible in the closed position of said parts, one of said parts having the front wall thereof movable to a limited extent sufficient to permit the upper or lid part to be swung about said hinge devices in any telescoped position of said parts, means between said movable front wall and the adjacent walls of the same part for closing the space between said walls in all positions of said front wall, and extensible fastening devices on the front wall of one of said parts adapted to coact with latching means on the front wall of the other part.

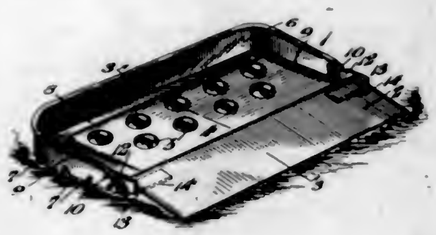
1,687,214. FURNACE ATTACHMENT. FREDERICK D. KENYON, Minneapolis, Minn., assignor of one-half to Harriet R. Root, Hennepin County, Minn. Filed Dec. 20, 1926. Serial No. 155,907. 1 Claim. (Cl. 110—75.)

A furnace attachment comprising a blower, a guide sleeve secured to the inner side of the charging door of the furnace, an air distributor tube slidably mounted in said sleeve, a flexible conduit leading from said blower, a detachable connection for attaching said conduit to the outer end of said tube, a ring detachably secured around the outer end of said tube, and a handle member connected with said ring.



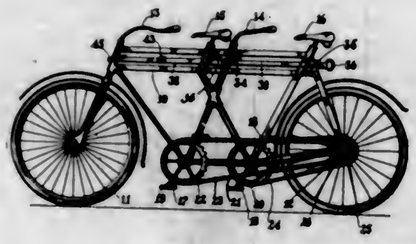
1,687,215. LIQUID-DEPTH-INDICATING DEVICE. HORACE W. KING and WILLIAM E. BANDEMER, Ann Arbor, Mich., assignors to King-Seeley Corporation, Ann Arbor, Mich., a Corporation of Michigan. Filed Nov. 5, 1923. Serial No. 673,002. 5 Claims. (Cl. 73—54.)

1. In a liquid depth indicating device, the combination of a pair of superposed chambers with an imperforate wall between the chambers for preventing direct communication therebetween, the chambers communicating with the liquid to be measured, the upper chamber having a portion laterally offset relative to the lower chamber, said offset portion



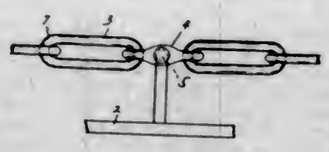
being provided with an opening for the passage of air and the lower chamber being provided with a passageway for air therefrom located with respect to the opening in the upper chamber so that some of the air may pass from the lower chamber through the opening, means for introducing air into the lower chamber, a pressure gauge and means for placing said gauge in communication with the upper chamber.

1,687,216. LIQUID-DEPTH-INDICATING DEVICE. HORACE W. KING, Ann Arbor, Mich., assignor to King-Seeley Corporation, Ann Arbor, Mich., a Corporation of Michigan. Filed Aug. 4, 1924. Serial No. 730,097. 6 Claims. (Cl. 73—54.)



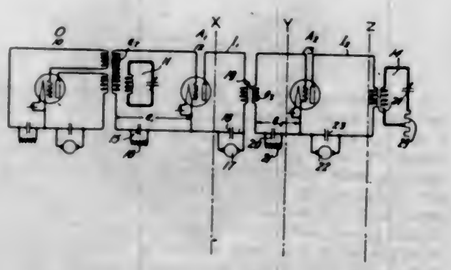
3. The combination with a pressure gage and a tank containing a liquid, of a fitting secured to the lower side of said tank and provided with an opening registering with an opening in the tank, an air chamber mounted upon said fitting and extending within said tank, said air chamber communicating with the liquid at the full depth to be measured and also communicating with said gage, and an electrolytic cell secured to and depending from said fitting and communicating with said air chamber through the opening in said fitting.

1,687,217. GOLF GAME BOARD. PHILIP KURTZ, Philadelphia, Pa. Filed Jan. 13, 1928. Serial No. 246,427. 5 Claims. (Cl. 273—36.)



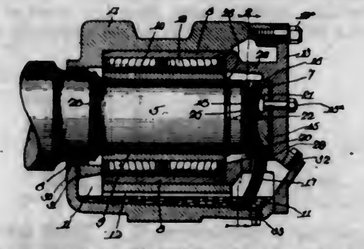
1. In a foldable golf game board, a putting green area having holes therein, a rear gutter therefor merging into side gutters, a guard rail surrounding said gutters, and a front inclined member hinged at its rear ends to the front ends of said guard rail.

1,687,218. TANDEM BICYCLE. JAKOB KUTARNA, Regina, Saskatchewan, Canada. Filed July 27, 1927. Serial No. 208,704. 3 Claims. (Cl. 208—108.)



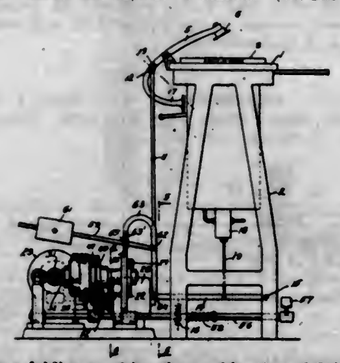
1. In a tandem bicycle, a slidable member provided with tapered portions adapted to engage the rear seat post and the rear handle bars of a tandem bicycle, as a means of raising and lowering the said rear handle bars and a rear seat attached to the said rear seat post.

1,687,219. BALING PRESS. GEORGE W. LANGFORD, Ann Arbor, Mich., assignor to Economy Baler Company, Ann Arbor, Mich., a Corporation of Michigan. Filed Apr. 5, 1923. Serial No. 630,079. 2 Claims. (Cl. 100—12.)



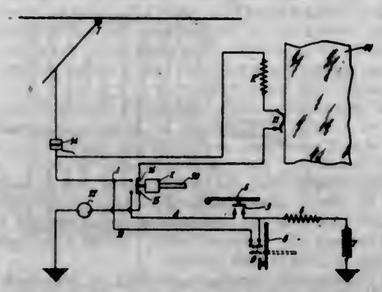
1. In a baling press, the combination with a baling chamber having an open end, of a plunger movable longitudinally within said chamber and transversely of its open end and adapted to remain in a substantially horizontal position at all times, and means for moving said plunger to its different positions.

1,687,220. ELECTRIC-WAVE PRODUCER. SAMUEL S. MACKEOWN, Ithaca, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1923. Serial No. 668,797. 11 Claims. (Cl. 179—171.)



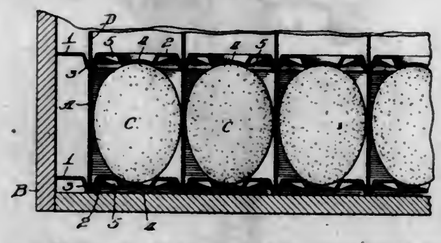
1. The method of amplifying a wave which comprises amplifying the peaks of one polarity only of the wave to be amplified and amplifying the peaks of one polarity only of the resulting wave.

1,687,221. CAR-AXLE BEARING. LEE W. MELCHER, West De Pere, Wis. Filed Dec. 4, 1926. Serial No. 152,547. 16 Claims. (Cl. 308—41.)



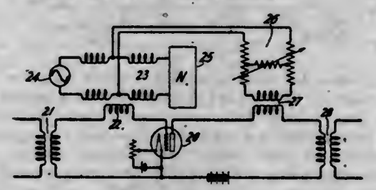
11. In a car axle bearing, the combination of a box having an oil well in its lower portion, an axle extending into the box, rollers around the axle and above the well, a wall in the box forming a completely cylindrical outer bearing for the rollers, means for feeding oil from the well to the outer end of the bearing so it will be applied to the rollers and confine the oil so it will pass to the inner end of the bearing, and means at the inner end of the bearing for returning the oil to the well.

1,687,222. FOLDING MACHINE. LOUIS H. MORIN, New York, N. Y., assignor to Phillips-Jones Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 2, 1925. Serial No. 54,035. 6 Claims. (Cl. 223—55.)



1. In a folding machine the combination of fluid-operated means for applying pressure to a folded fabric, means under the control of the operator for initiating the action of said fluid operated pressing means, and means for automatically releasing the pressure after a predetermined time interval.

1,687,223. CAR-DOOR CONTROL. GEORGE E. OAKLEY, Albany, N. Y., assignor, by mesne assignments, to Consolidated Car-Heating Company Inc., Albany, N. Y., a Corporation of New York. Filed June 17, 1925. Serial No. 37,792. 9 Claims. (Cl. 105—341.)

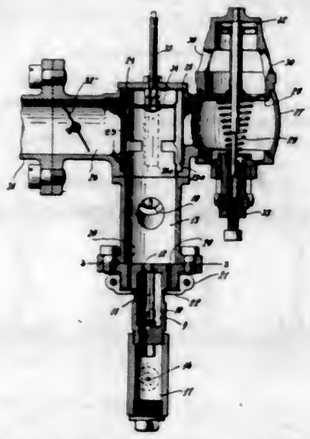


8. The combination with a car door motor of a control circuit for said motor, a switch controlling said circuit, the operation of said switch being controlled by the agency which actuates the motor, a circuit maintaining switch, a movably mounted floor treadle controlling said last mentioned switch, a motorman's signal, and means controlled by said treadle for automatically setting said signal.

1,687,224. FLAT FOR CELLULAR FILLERS. LEOPOLD OXHANDLER, Chicago, Ill., assignor, by mesne assignments to Meyer Dry, Chicago, Ill. Filed May 28, 1926. Serial No. 112,193. 4 Claims. (Cl. 17—26.)

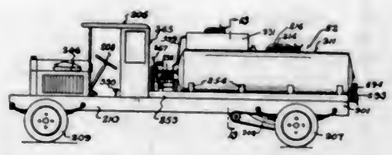
4. A flat of the character described, comprising a sheet of approximately uniform thickness having parts displaced out of the plane thereof and dividing it into raised squares separated from each other by troughs open on one face of the sheet, the sides of the troughs constituting the supporting walls for the raised squares, the material of the squares being displaced to produce trough-shaped cushioning ribs lying below the plane of said squares to reinforce the supporting side walls for said squares and form liquid retaining wells.

1,687,225. FREQUENCY-TRANSLATING CIRCUITS. EUGENE PETERSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, a Corporation of New York. Filed Jan. 29, 1927. Serial No. 164,413. 15 Claims. (Cl. 179—171.)



1. A frequency translating circuit comprising an electric discharge device, input and output circuits therefor tending to produce frequency tansiation due to current flow through said device in both of said cicuits, and means for effectively preventing frequency translation in one of said circuits.

1,687,226. APPARATUS FOR PRODUCING OIL VAPOR. ALEXANDER THOMAS PORTER, Elizabeth, N. J. Filed Sept. 23, 1920. Serial No. 412,301. 1 Claim. (Cl. 48—107.)

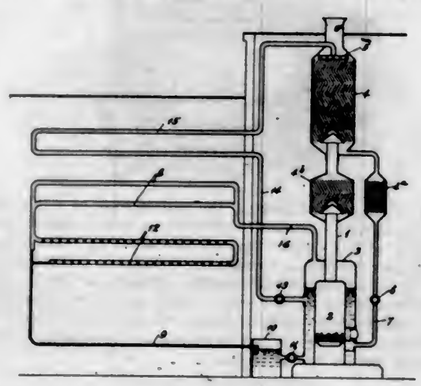


An apparatus for vaporizing oil comprising an oil vaporizing chamber having a vapor exit opening, means for supplying oil to said chamber, means for supplying a combustion supporting medium circumferentially to said atomized oil, means for igniting that portion of said oil to which the combustion supporting medium has been supplied by said last-named means to produce a tubular form flame adapted to transform the unignited portion of the atomized oil into vapor adapted to escape from said chamber through the exit opening thereof, means for controlling the supply of combustion supporting medium, means for extinguishing said flame at the exit opening of said chamber, means for supplying a combustion supporting medium to said vapor after the same has passed from said chamber, means for regulating the sup-

ply of combustion supporting medium admitted to said vapor, the last-named means being in the form of a valve having spring tension means coacting therewith for re-

tarding the operation thereof, and also a dash pot adapted to cooperate with the valve for further retarding its operation.

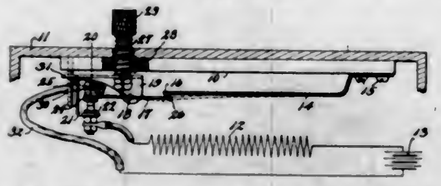
1,687,227. METHOD FOR CONCRETE MIXTURES. JOHN D. POWELL, Cincinnati, Ohio. Filed Oct. 25, 1926. Serial No. 144,044. 7 Claims. (Cl. 83—73.)



1. A method for concrete mixtures which comprise mixing the mixture with heated ingredients into a heated web mixture at a locality prior to transportation, then transporting said heated wet mixture in batches and agitating said batches of said heated wet mixture during such transportation while substantially excluding outside air from said batches of said heated wet mixture during such transportation and agitation, and heat insulating said heated wet mixture during such transportation.

1,687,228. PROCESS OF MAUFACTURING ACETALDEHYDE. HUGH S. REID and WALDO C. HOVEY, Shawinigan Falls, Quebec, Canada, assignors to Canadian Electro Products Company, Limited, Montreal, Quebec, Canada. Filed Dec. 21, 1922. Serial No. 608,335. 6 Claims. (Cl. 260—139.)

1. In a process of manufacturing acetaldehyde by interaction of acetylene and water, the feature of supplying the acetylene at a rate more than four times the rate of its absorption.

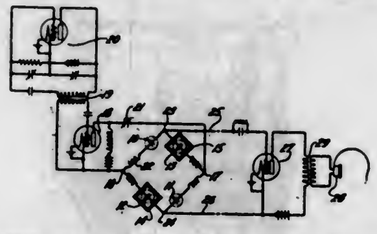


1,687,229. APPARATUS FOR UTILIZING IMPURE GASES OR EXHAUST GASES CONTAINING CARBON DIOXIDE. FRIEDRICH RIEDEL, Essen, Germany, assignor to Riedel Fertilizing Process Co., Inc., Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 8, 1922, Serial No. 542,149, and in Germany May 14, 1916. 8 Claims. (Cl. 47—17.)

1. An apparatus of the character described, comprising a heating plant heated by ignited carbonaceous fuel, a vessel adapted to be uniformly heated by said plant to cause a continuous evolution of gas and vapor from the liquid contents of said vessel, the vessel being further adapted to contain an alkaline solution, means for introducing products of combustion of the said fuel to the alkaline solution and a conduit leading from said vessel at a point above the level of said solution to the vicinity of growing

plants and there provided with a plurality of orifices, said conduit being unobstructed so as to discharge near such plants and solely under the relatively gentle expansive force of the gases and vapors produced by evaporation in said vessel, carbon dioxide produced in said vessel by the heating of said solution.

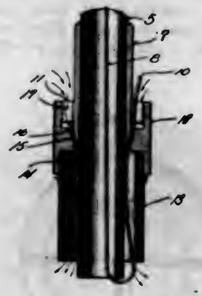
1,687,230. THERMOSTAT. WELLINGTON J. SMITH, Cleveland, Ohio. Filed Aug. 24, 1926. Serial No. 131,241. 2 Claims. (Cl. 200—139.)



1. In thermostatic controlled apparatus, the combination with a support, of a frame movably carried thereby, an arm outstanding from the frame and having a return portion substantially parallel to the frame, a lever pivoted to the frame and having a portion extending between the frame and return portion of the arm, a contact carried by the return portion of the arm, a contact carried by the lever in position to engage the first mentioned contact, and thermally controlled means for swinging the lever for breaking such contact.

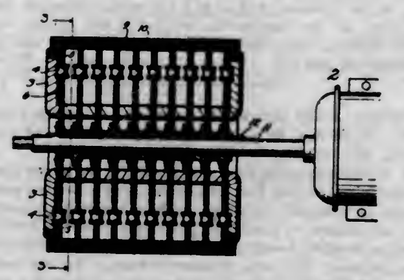
1,687,231. TRANSLATING DEVICE. JAMES BUCKNER SPEED, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1924. Serial No. 750,738. 7 Claims. (Cl. 179—171.)

1. A translating circuit comprising an air condenser, means to impress a difference of potential between the plates of said condenser and an output cuircuit connected to said condenser, the spaces between the plates being sufficiently small that the air pressure therein may be varied by sound waves impressed upon the air between the plates whereby the capacity of the condenser is varied to convert the impressed sound waves into electrical vibrations in said output circuit.



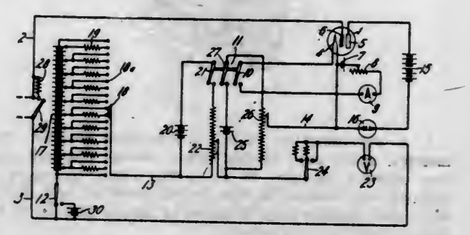
2. A translating circuit comprising an air condenser, means to impress high frequency electrical vibrations between the plates of said condenser and an output circuit

connected to said condenser, the spaces between the plates being sufficiently small that the air pressure therein may be varied by sound waves impressed upon the



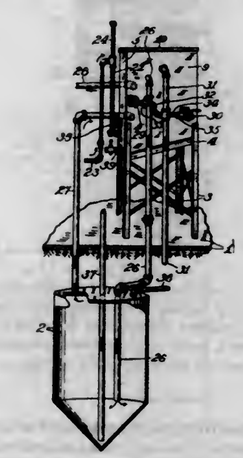
air between the plates whereby the capacity of the condenser is varied to modulate the electric vibrations in accordance with the impressed sound waves.

1,687,232. FUSE. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1927. Serial No. 214,122. 5 Claims. (Cl. 200—127.)



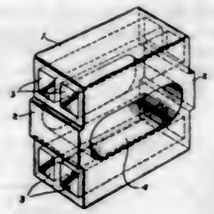
1. A fuse, comprising a tube, contact members, a fuse element connected with the contact members and having a part lying without the tube, a second tube surrounding the first tube whereby the portion of the fuse element without the first tube is substantially enclosed by the second tube, rupture of the fuse element expelling the gases generated within the first tube to create a suction adjacent the end of the second tube, and means whereby the gases generated within the second tube are drawn off by the suction created within the first tube.

1,687,233. DYNAMO-ELECTRIC MACHINE. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 8, 1923. Serial No. 644,071. 10 Claims. (Cl. 171—252.)



3. An inductor generator comprising two relatively movable elements each having a plurality of uniformly spaced teeth, the ratio of the tooth pitch for one element to the tooth pitch for the other element being as 3 to 2, and the slot widths of the element having the smaller tooth pitch being twice the corresponding tooth widths, and an armature coil on each tooth of the element having the larger tooth pitch.

1,687,234. THERMIONIC PEAK VOLTMETER. DONALD MERCER TERRY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 10, 1926. Serial No. 114,971. 3 Claims. (Cl. 175—183.)



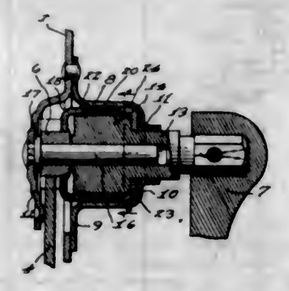
1. A peak voltmeter comprising an election discharge device having input and output circuits, a current indicating device in said output circuit, terminals for impressing upon said input circuit a voltage to be measured, a source of potential in said input circuit for maintaining the normal current in said output circuit at a definite operating value, a second source of potental in said input circuit for reducing the current in said output circuit to said operating value when the voltage to be measured is connected to said terminals, and means for directly indicating the value of the potential of said second source to give the value of the voltage to be measured.

1,687,235. WASHING-LIQUID CLARIFIER AND PURIFIER. FRANK E. BOWERS, Indianapolis, Ind. Filed June 24, 1926. Serial No. 118,343. 8 Claims. (Cl. 210—44.)

1. A washing-liquid clarifier and purifier having a water-wash chamber, a storage tank arranged lower than the water-wash chamber, a drying-chamber provided with drying means, a conduit connected with the water-wash chamber and the tank, and a conduit connected with the tank and the drying-chamber.

1,687,236. HEAT REGENERATOR. JOHN R. BUFFINGTON, New York, N. Y., assignor to Decarie Incinerator Corporation, New York, N. Y., a Corporation of New York. Filed July 28, 1926. Serial No. 125,563. 7 Claims. (Cl. 72—155.)

1. A substantially cubical regenerator element symmetrical about each central plane, tenons disposed upon two opposite surfaces in a central plane, passage-ways through said element in the central plane of said tenons, and other passage-ways disposed in planes parallel to the central plane of said tenons.



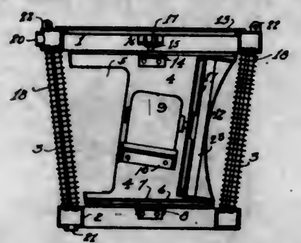
1,687,237. RESILIENT TRANSMISSION FOR VEHICLE WHEELS. ELBERT A. CORBIN, Jr., Swarthmore, Pa., assignor of one-third to William C. Biddle, Lansdowne, Pa., and one-third to William A. Brown, Philadelphia, Pa. Filed Sept. 10, 1927. Serial No. 218,604. 6 Claims (Cl. 152—45.)

1. The herein described power transmitting member in the form of a ring having projecting from opposite faces spaced driving elements distributed over substantially the entire areas of such faces to form rows of driving elements in spaced relationship longitudinally of the rows.

1,687,238. WINDOW-REGULATOR MECHANISM. WILLIAM F. COSTELLO, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 24, 1927. Serial No. 178,062. 9 Claims. (Cl. 192—8.)

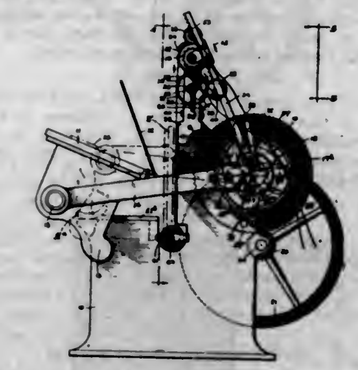
3. In a window regulator mechanism, the combination with a support including a cup, of a driving member journaled in said cup and having a portion within said cup provided with a recess, a pin upon said support and forming a bearing within said cup for said driving member, a driven member journaled upon said pin and having a projection extending into the recess of said driving member, and a coil spring within said cup and arranged to be

expanded thereagainst, said coil spring having inturned ends engaging in the recess in said driving member upon opposite sides of said projection.



1,687,239. EDUCATIONAL TOP. CHARLES S. CROSS, Brooklyn, N. Y.; Alexander B. Boyer administrator of said Charles S. Cross, deceased. Filed July 2, 1927. Serial No. 203,014. 5 Claims. (Cl. 46—32.)

1. A toy top comprising a hollow spherical body, a map depicted on the outer surface of said body, a spindle diametrically positioned through the body and having bearing at opposite ends through the diametrically opposed portions of the body, the bearing portion at one end of the spindle adapted to serve as a tip for supporting the body in one position when used as a top, a base member mounted on the other bearing portion of the spindle exteriorly of the body for supporting the latter in upright position upon a flat surface, said base member having a drum portion thereon adapted to receive a spinning cord for initiating the rotation of the spindle, and a balance wheel mounted within the body on the spindle for balancing the spindle in upright position when raised on the base member and when spinning on said tip.

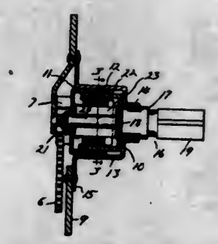


1,687,240. UNIT HEATER. CLAUDE M. GARLAND, Chicago, Ill. Filed Jan. 26, 1926. Serial No. 83,942. 14 Claims. (Cl. 257—154.)

4. In apparatus of the type described, an upper annular header, a connection for the admission of a heating medium to the said header, a lower annular header, a connection for the exhaust of the heating medium from the said lower annular header, heating elements establishing communication between the said headers whereby an inclosure is formed by the said heating elements, a cover for closing the opening in the upper header, means for closing the opening in the lower header, and means for causing a current of air to pass from without between a portion of said heating elements to the interior of the inclosure and out between a different portion of the said heating elements, and means for causing the said current of air to rotate about the

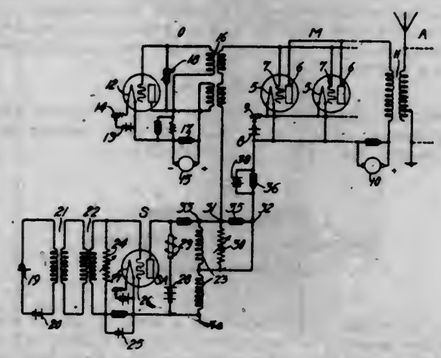
center of the said inclosure whereby the said current of air is caused to continuously pass between different portions of the said heating elements.

1,687,241. VARIABLE FEEDING MECHANISM. WILLIAM F. GRUPE, Lyndhurst, N. J., assignor to Peerless Roll Leaf Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 9, 1925. Serial No. 8,038. 14 Claims. (Cl. 41—7.)



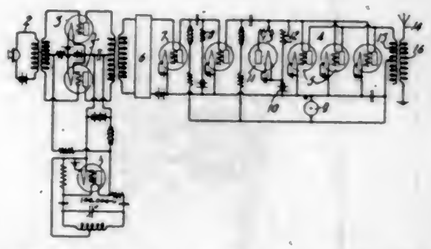
1. The combination with suitable die-holding means, suitable means for feeding an article to be impressed by the die and suitable means for actuating said feeding means, of a plurality of feeding rolls, means for supporting a plurality of strips of impression media to be fed by said feeding rolls respectively, a plurality of devices for individually actuating said feeding rolls by a movement including an initial stage of substantial period at a relatively low speed, and means for adjustably connecting said devices respectively with said actuating means in synchronism therewith and to regulate the extents of feeding of the respective strips of impression media fed by said feeding rolls relative to the die.

1,687,242. FOLDABLE MILKING-PAIL HOLDER. ESTHER OVERBO GULSETH, Yoman, Wash. Filed Mar. 1, 1927. Serial No. 171,871. 10 Claims. (Cl. 31—54.)



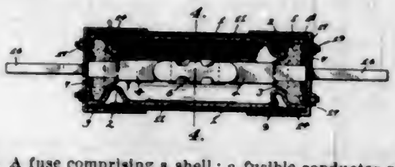
1. In a foldable milking pail holder, a ring strap, knee hooks attached to and diametrically positioned on said ring strap, and means to adjust the angle of inclination of said knee hooks.

1,687,243. LOCK FOR WINDOW REGULATORS. HOWARD B. HASKINS, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 1, 1926. Serial No. 145,504. 10 Claims. (Cl. 192—8.)



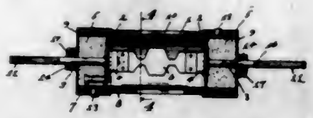
1. In a window regulator, the combination of a stationary sleeve, laterally adjacent driving and driven members journaled in said sleeve, said driven member being operatively connected to a window, pairs of diametrically opposite fingers extending transversely from said driving and driven members, said fingers inter-engaging, and a helical spring within and normally frictionally engaging said sleeve, said spring surrounding said fingers and having inturned ends located between a finger of said driven member and the fingers of said driving member, whereby rotation of said driving member in either direction contracts said spring and releases the same from frictional engagement with said sleeve and through said spring rotates said driven member but rotation of said driven member expands said spring into firmer frictional engagement with said sleeve and locks the driven member from rotation.

1,687,244. SIGNALING SYSTEM. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1920, Serial No. 432,444. Renewed Nov. 20, 1924. 21 Claims. (Cl. 179—171.)



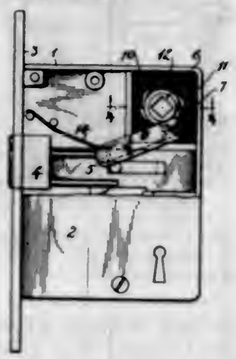
1. A thermionic vacuum tube, an impedance controlling element and a cathode for said tube, an input circuit comprising said impedance controlling element and said cathode, a source of signaling current adapted to impress a voltage on said input circuit which causes the impedance controlling element to become positive with respect to the cathode during operation, and an impedance connected across said input circuit of value substantially the same as that of the input impedance of said tube when said impedance controlling element is positive.

1,687,245. AMPLIFYING. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1922. Serial No. 609,932. 9 Claims. (Cl. 179—171.)



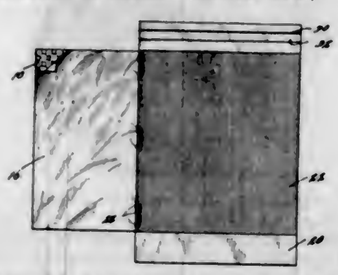
1. The method of repeating at high efficiency, as regards power consumption, a modulated wave by means of a space discharge repeater having a control element, which comprises supplying to the control element a negative voltage of such a value as to just allow the repetition of waves of small amplitude and automatically increasing this negative voltage in a ratio proportional to the magnitude of the waves when waves of large amplitude are to be repeated.

1,687,246. RENEWABLE FUSE. JOHN H. HICKEY, San Francisco. Calif. Filed Aug. 5, 1926. Serial No. 127,336. 8 Claims. (Cl. 200—131.)



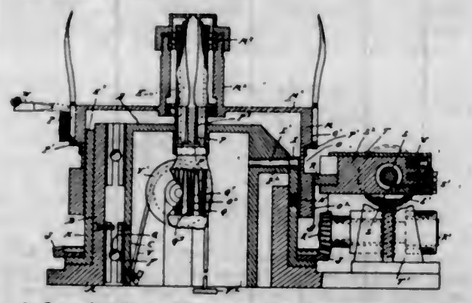
1. A fuse comprising a shell; a fusible conductor mounted within the shell and extending longitudinally therethrough; contact plates mounted within the ends of the shell in connection with the ends of the conductor; means for sealing the ends of the shell around the conductor and plates to permit the shell to be evacuated; a detachable cover enclosing the shell; and means for detachably retaining the cover upon the shell, said means being adapted to form electrical connection between the contact plates and a fuse block.

1,687,247. REFILLABLE FUSE. JOHN H. HICKEY, San Francisco, Calif. Filed Sept. 29, 1926. Serial No. 138,433. 12 Claims. (Cl. 200—128.)



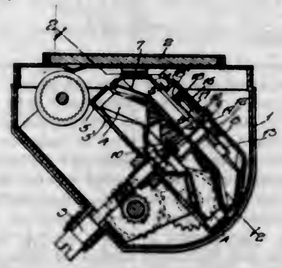
1. A refillable fuse comprising a shell; a pair of conductors mounted in longitudinally spaced relation within the shell, said conductors comprsing discs fitted into the shell in spaced relation to the ends thereof, stems extending outwardly from the ends of the shell, and lugs extending inwardly from the discs; a fusible conductor of predetermined current carrying capacity connected between the lugs; cement fillings set within the space between the discs and the adjacent ends of the shell to seal the same; conductive caps mounted upon the ends of the shell and arranged to engage the contacts of a fuse block; said caps being recessed to receive the outwardly extending ends of the stems; and means for detachably securing the caps in connection with the shell and in electrical contact with the stems.

1,687,248. HOSPITAL LATCH. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 28, 1927. Serial No. 222,587. 3 Claims. (Cl. 292—139.)



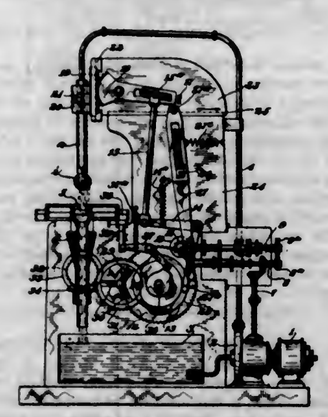
1. In a latch of the character described, a case, a bolt, a roll back, means of connection between the roll back and the bolt for reciprocating the latter as the roll back is turned, a shoulder on the roll back and a stop within the lock case to check the stop on the roll back, one of said parts being formed of sound deadening material.

1,687,249. PAD FOR PERMANENT WAVING OF HAIR. BENNO F. JANCKE, Brooklyn, N. Y., assignor to Townsend Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 4, 1928. Serial No. 244,428. 12 Claims. (Cl. 132—36.2.)



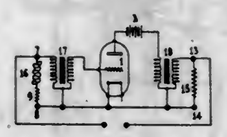
1. In a pad for permanent waving of hair, an absorbent body comprisng a sheet having portions of unequal absorbent properties whereby heat will initiate steaming in the portions of lesser absorptiveness.

1,687,250. WORK HOLDER FOR BRUSH MACHINES. CONRAD JOBST, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Apr. 1, 1924. Serial No. 703,375. 21 Claims. (Cl. 300—11.)



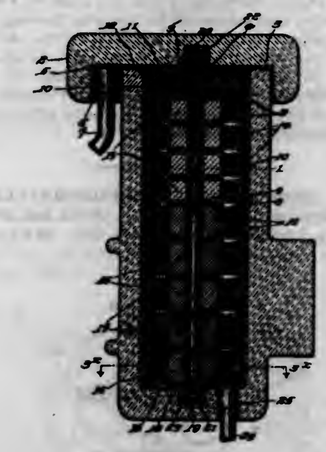
1. In a brush machine, a vertically adjustable journal bearing, a drum carrier mounted on said bearing for rotation about a fixed axis, a cam revolnble about the same axis provided with a series of parallel steps of exactly predetermined spacing comprising alternate series respectively ascending and descending, means for non-positively rotating said carrier, a cam follower connected to said bearing and engaging said cam, a series of parallel work holders on said drum carrier, a stop mounted independently of said carrier and guide means on said carrier cooperating with said stop for exactly predetermining the path of movement of the same during the ascending and descehding series of steps.

1,687,251. SPEEDOMETER CONSTRUCTION. ARTHUR H. JOSEPH, Detroit, Mich., assignor to The Mileometer Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 3, 1923. Serial No. 666,356. 3 Claims. (Cl. 264—13.)



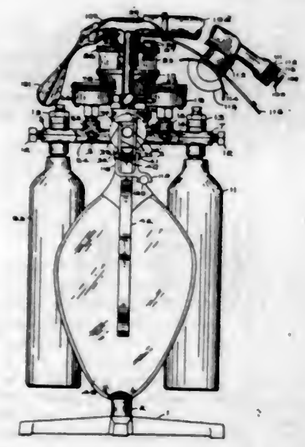
1. In combination, a movable indicator carrying a cam, means for driving said indicator, and means to prevent vibration of said indicator and retrieve it to its zero position, said last-mentioned means comprising a pair of springs, and anti-friction means carried at the end of one of said springs and engageable with said cam, the second spring engageable with said anti-friction means, at the side of said cam opposite to that upon which the first-mentioned spring is arranged, after an initial movement of the cam, to equalize the pressure on the anti-friction means.

1,687,252. MACHINE FOR FORMING INTERNAL GROOVES IN GEARS, ETC. JEAN LAESSKER, Arbon, Switzerland, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a Corporation of Switzerland. Filed Aug. 1, 1927. Serial No. 209,657. 1 Claim. (Cl. 51—50.)



In a machine for cutting grooves the combination of a work table, a rotary cutting tool above the table, a turbine for driving the cutting tool so arranged that impelling liquid discharged therefrom will contact with the cutting tool to cool it and will fall onto the table, a tank for the impelling liquid, means for withdrawing the impelling liquid from the tank and delivering it to the turbine, and means for conducting the impelling liquid discharged onto the table to the tank.

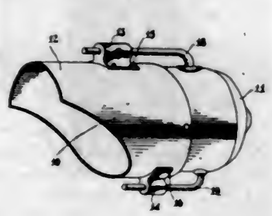
1,687,253. NEGATIVE IMPEDANCE DEVICE. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Nov. 20, 1923, Serial No. 675,833, and in France Dec. 5, 1922. 2 Claims. (Cl. 179—171.)



1. In apparatus for producing a negative impedance, a vacuum tube amplifier comprising an anode, a cathode and a control electrode, an impedance connected in circuit between said cathode and said control electrode, a transformer having its windings inserted in the control circuit of said amplifier, and a second transformer inserted in the output circuit of said amplifier.

1,687,254. MULTIGAP LIGHTNING ARRESTER. JOHN ROBERT MCFARLIN, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1922. Serial No. 528,491. 1 Claim. (Cl. 175—30.)

A lightning arrester comprising a plurality of pairs of contacting gap electrodes having oppositely projecting peripheral ridges, hollow spools within said ridges and each spacing an electrode of one pair from an electrode of an adjacent pair, said spools being of different resistivities, and an insulating rod passing through said spools and spaced from the inner surfaces, thereof, said rod having thereon means for clamping said spools and electrodes together.

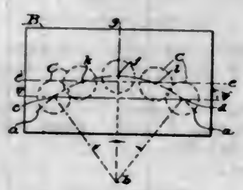


1,687,255. GAS-ADMINISTERING APPARATUS. ELMER I. MCKESSON, Toledo, Ohio. Filed Sept. 12, 1921. Serial No. 500,051. 8 Claims. (Cl. 128—203.)

2. A gas administering machine embodying a main support unit comprising a pair of yokes, a pair of valve mounting means, ducts from the yokes to the valve mounting means, an automatic valve for each mounting means, a chamber for each valve, and an additional duct exterior of said support unit and directly from a valve chamber at one mounting means to the valve chamber at the other mounting means for gas direct flow in one direction from one of said chambers to the other.

5. A gas administering machine embodying a main support, a pair of valves carried by the support, a housing for each valve, bags connected to the valve housings, valve controlling means between the bags and valves, and means carried by and extending between the valve housings and adjustable to modify the controlling means for simultaneously varying the control for both bags whereby there is pneumatic bag response for more closely approximating pressure equilibrium therebetween.

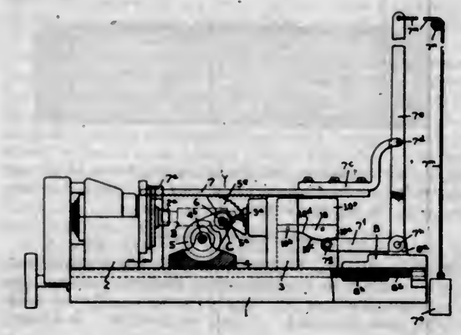
1,687,256. SHADE FOR AUTOMOBILE HEADLIGHTS. EMERY MOLNAR, Flemington, N. J. Filed Jan. 20, 1928. Serial No. 248,081. 4 Claims. (Cl. 240—48.4.)



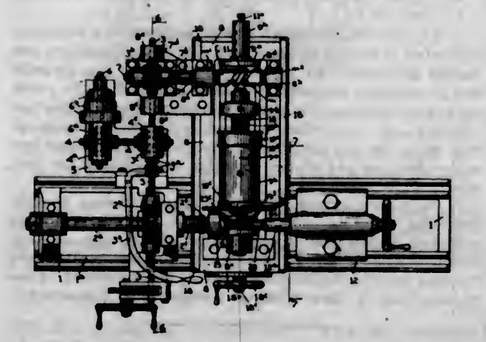
1. In a headlight comprising forwardly extended prongs, an extensible shade slidably mounted on said headlight, brackets on said shade having apertures therein through which said prongs extend, and a wedge shaped key in the aperture of each of said brackets between the inner side thereof and said prongs extending substantially the length of said brackets adapted to be driven rearwardly for frictionally holding said extensible shade on said headlight.

1,687,257. WIRE CABLE. ARTHUR MORTON, Seattle, Wash. Filed Jan. 27, 1927. Serial No. 164,037. 1 Claim. (Cl. 117—59.)

A cable composed of a central core of hemp strands and a plurality of adjacent subcables arranged around the hemp core, all in contact with each other and with the hemp core, each subcable comprising a central round core and intermediate round strands smaller in diameter than the diameter of the central round core and surrounding the central round core and outer strands greater in diameter than the diameter of the intermediate strands and surrounding the intermediate round strands, each of the outer strands being semi-circular in cross section upon their nether surfaces and the outer surface of each said outer strand being formed to represent an arc of a complete circle surrounding the central hemp core.



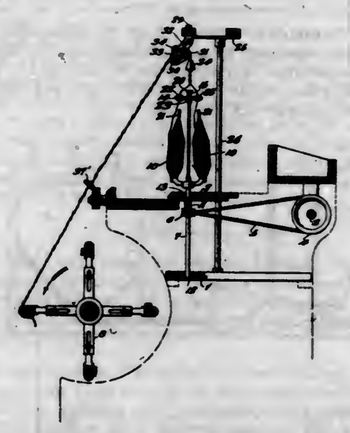
1,687,258. PROCESS OF MAKING STEERING-GEAR-ACTUATING MEMBERS HAVING VARYING SPIRAL GROOVES. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Dec. 31, 1923. Serial No. 683,679. 12 Claims. (Cl. 90—15.)



1. The herein described method of producing an actuating member having a varying spiral groove; consisting in (1) mounting a cylindrical blank for rotation on its longitudinal axis opposite a cutter whose axis is perpendicular to a plane containing the axis of the blank; (2) rotating the cutter to cut the blank; and (3) producing during this cutting operation such a variable ratio of relative movement between the cutter and the blank that the cutter operates on the blank on an arc which arc lies in a plane parallel to the plane containing the axis of the blank and traverses such arc with varying speed of lateral movement thereby producing a varying spiral groove in the blank.

1,687,259. MACHINE FOR MAKING ACTUATING MEMBERS FOR STEERING GEARS. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Mar. 26, 1924. Serial No. 702,067. 34 Claims. (Cl. 90—15.)

1. In a machine for cutting helical grooves; means for holding a blank; a rotatable cutter; and means for so relatively moving the cutter and blank that the cutter traverses with varying speed an arc extending longitudinally of the blank, whereby a groove is cut in the blank, said groove being of the greatest depth at points intermediate its central point and each end thereof and gradually lessening in depth from said points toward each end of the groove.

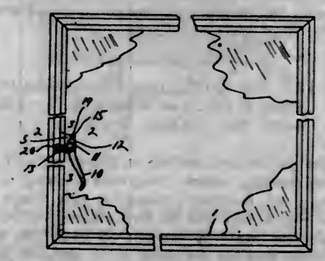


1,687,260. MACHINE FOR MAKING HELICALLY-GROOVED ACTUATING MEMBERS FOR STEERING GEARS. DAVID E. ROSS, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Mar. 26, 1924. Serial No. 702,068. 16 Claims. (Cl. 90—15.)

1. In a machine of the character specified, the combination of means for holding and rotating an actuating member blank, a rotatable cutter; means for relatively moving the cutter and blank to cause the cutter to enter or withdraw from the blank; and means including a master cam whereby the cutter is moved at variable speed laterally on an arc extending longitudinally of the blank, during the cutting operation, whereby a spiral groove is cut in the blank.

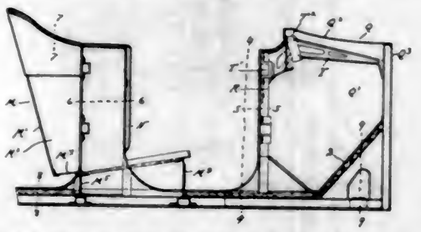
1,687,261. YARN-TWISTING DEVICE. WILLIAM SPINK, Manayunk, Pa. Filed May 2, 1927. Serial No. 188,098. 7 Claims. (Cl. 117—26.)

7. In a device of the character stated, means for supporting and rotating a plurality of cops, a tension device above said cops comprising a bracket, a support therefor, a pair of lower rollers carried by said bracket, a spring pressed arm pivotally mounted on said bracket, an upper roller carried by said arm and positioned between said lower rollers and a vertically slotted cone shaped guide intermediate said cops and bracket and supported from the latter.



1,687,262. BATTERY-TERMINAL ADAPTER. VERSAL V. VAUGHN, Los Angeles, Calif. Filed June 8, 1927. Serial No. 197,355. 5 Claims. (Cl. 173—259.1.)

1. A battery terminal bushing formed of soft metal and having an elongated tapered skirt provided with a longitudinal slit open at one end and a flange formed around the outer periphery of the skirt at its other end, and closing said slit.



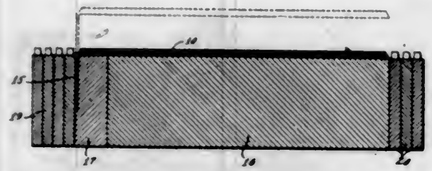
1,687,263. FASTENER FOR VENTILATORS. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit Steel Products Co., Detroit, Mich., a Corporation of Michigan. Filed May 26, 1924. Serial No. 716,040. 10 Claims. (Cl. 292—202.)

1. The combination of a support, a handle at one side of said support, a pivot for said handle extending through said handle and support and provided with a head at one

end and a threaded portion at the other end, and a resilient yoke embracing said handle and support and having a portion threadedly engaging said pivot threaded portion and another portion abutting said pivot head.

1,687,264. VEHICLE BODY. PAUL E. BRENNEMAN, Detroit, Mich., assignor, by mesne assignments, to Murray Body Corporation, a Corporation of Michigan. Filed Sept. 28, 1920, Serial No. 413,054. Renewed Aug. 7, 1926. 21 Claims. (Cl. 296—28.)

1. In a metallic body for vehicles, a base section, comprising side sills fashioned to lie in contact with the sills of the chassis and having their rear portions in a higher plane than the forward portions with inclined portions connecting the same, a cross member arranged above the forward lower plane portions of the sills adjacent to the inclined portions thereof and forming a part of the floor, a tonneau seat pan resting directly on the rear portions of said sills and having a depending heel board portion and a floor board arranged between said sills and between said heel board and cross member to lie flush with the latter.



1,687,265. PISTON. HAROLD CAMINEZ, Farmingdale, N. Y. Filed Apr. 2, 1927. Serial No. 180,497. 12 Claims. (Cl. 74—108.)

1. A piston construction of the class described comprising a piston body, a sleeve in said piston body, a piston pin oscillatably mounted in said sleeve, a roller bearing mounted in said piston on said sleeve, said piston having an integral bearing portion through which said sleeve may be inserted endwise and which locates the roller bearing in the center of the piston, and means at the ends of said piston pin for connection to adjacent pistons.

1,687,266. ART OF MOUNTING PHOTO-ENGRAVING PLATES. HARRY J. COLEMAN, Pelham, N. Y. Filed Aug. 20, 1926. Serial No. 130,440. 2 Claims. (Cl. 101—384.)

1. The herein-described method of preparing and mounting photo-engravings, which comprises etching a metal plate to form a cut, forming a relatively thin flange on the plate at the top of the cut in removing all other waste metal beyond the edges of the cut to leave the finished photo-engraving, bending the flange back, where it joins the cut, at right angles to the back of the cut, providing a base-block and a longitudinally rabbet-grooved strip-like piece of furniture of some height and length as the width of the base-block, fitting the ungrooved high side of the piece of furniture to the top edge of the base-block, setting up in the form the type and furniture which is to adjoin the base-block and said strip-like piece of furniture, thereby providing a groove between the set up matter and the strip-like piece of furniture, and inserting the flange of the cut into the groove by moving the cut directly toward and parallel with the set up matter.

1,687,267. SHOE. PERCY COX and FRANK MCPARTLAND, Johnson City, N. Y., assignors to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Aug. 26, 1927. Serial No. 215,738. 9 Claims. (Cl. 36—19.)

1. In a McKay shoe, a continuous calk welt stapled to the inner sole through the upper and extending around the sole and heel portions between the outer sole and upper.

1,687,268. EGG PRODUCT AND PROCESS FOR PRODUCING THE SAME. ALBERT K. EPSTEIN, Chicago, Ill. Filed Dec. 24, 1926. Serial No. 156,995. 8 Claims. (Cl. 99—14.)

1. The method of manufacturing a frozen egg substance consisting of adding to egg content an edible substance producing hydrogen ions when in contact with egg material and in sufficient proportion to materially modify the physical characteristic of the ultimate product after freezing and thawing and to substantially reduce bacterial decomposition when the egg content is at normal room temperature before freezing and during thawing, and freezing the final mixture.

5. As a new article of manufacture, a frozen product including egg yolk combined with an edible acid and in sufficient proportion to materially modify the physical characteristic of the ultimate product after freezing and thawing and to substantially reduce decomposition when the egg yolk is thawed out at normal room temperature.

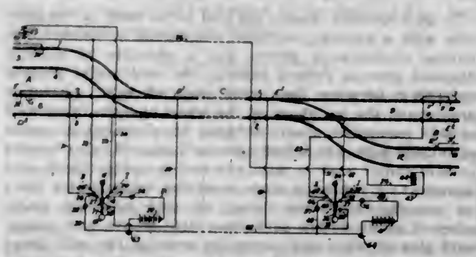
1,687,269. EGG PRODUCT AND PROCESS FOR PRODUCING THE SAME. ALBERT K. EPSTEIN, Chicago, Ill. Filed Dec. 24, 1926. Serial No. 156,997. 10 Claims. (Cl. 99—14.)

1. The method of producing an egg product consisting of adding to egg yolk an edible acid capable of and in sufficient quantity to reduce bacterial decomposition of the yolk substance at ordinary room temperatures; incorporating a sufficient proportion of a substantially neutral edible water soluble salt system to substantially modify to a desirable degree the viscosity and mobility of the acid treated yolk after freezing and thawing, and freezing the mixture.

2. As a new article of manufacture, a frozen product consisting of egg yolk combined with an edible acid capable of and in a proportion sufficient to reduce bacterial decomposition of yolk, and a sufficient proportion of a suitable substantially neutral edible salt system to substantially modify the product and to produce a viscosity and mobility thereof of a desirable degree after freezing and thawing.

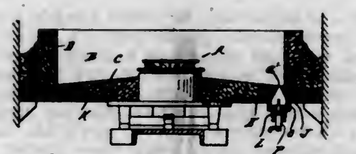
1,687,270. EGG PRODUCT AND PROCESS FOR PRODUCING THE SAME. ALBERT K. EPSTEIN, Chicago, Ill. Filed Dec. 24, 1926. Serial No. 156,998. 14 Claims. (Cl. 99—14.)

1. As a new article of manufacture, a frozen product including, essentially egg yolk combined with a substantial quantity of a suitable substantially neutral edible water soluble organic material containing at least one hydroxyl group and capable of lowering the freezing point of water, and a substantial quantity of a suitable edible substantially neutral salt system, the combined proportion of the latter two substances being in sufficient quantity to produce a viscosity of the ultimate mixture when thawed after being frozen which is substantially greater than that of an ultimate product when thawed after being frozen consisting of yolk combined with such soluble organic material if used alone in a proportion equal to the said sum of the soluble organic material and the salt system.



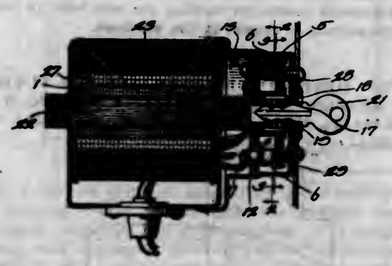
6. As a new article of manufacture, a frozen product including essentially egg yolk material treated with a suitable edible acid capable of and in sufficient proportion to reduce bacterial decomposition of the yolk substance, combined with sucrose and sodium chloride in sufficient quantity to substantially modify the physical consistency and produce an ultimate product when thawed after being frozen which has a viscosity substantially less than the acid treated yolk thawed after being frozen.

1,687,271. INVISIBLE HINGE. JOSEPH SOSS, Brooklyn, N. Y. Filed July 20, 1926. Serial No. 123,767. 2 Claims. (Cl. 16—164.)



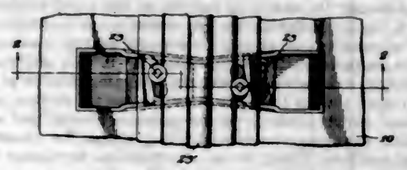
1. A hinge butt for mounting in a cylindrical socket in a support, comprising a substantially U-shaped sheet metal body, the crosshead of said body constituting the inner end of the butt, the side members of said butt forming the bearings of the butt, the outer ends of said side members having laterally extending flanges, the edges of said flanges being arc-shaped in form to fit within said cylindrical socket, and the side edges of said bearing members engaging the walls of the socket in mounting the butt therein.

1,687,272. CONTROL OF RAILWAY TRAINS. WALTER JOHN UNDERWOOD, Chelsea, London, England. Filed June 5, 1926, Serial No. 113,947, and in Great Britain Mar. 30, 1926. 5 Claims. (Cl. 246—26.)



1. For electrically controlling the traffic on a single track railway section, the combination with electrically continuous track rails of the section and a station at each end of the same, of a line conductor extending between the two stations, a traffic-controlling device and a source of current at each station, two alternative operating circuits, one including the traffic-controlling device and the source of current at one station, the other including the traffic-controlling device and the source of current at the other station, but each circuit including the line conductor, a controlling switch at each station having a normally neutral position, contacts on the switches and connections thereto enabling the switches to close one only of the operating circuits at a time to move a train from one station on to the section, an additional circuit auxiliary to the operating circuit, and an additional contact on each controlling switch for closing the said auxiliary circuit by the simultaneous movement of both switches from their neutral positions.

1,687,278. IGNITER FOR OIL BURNERS. CHARLES F. WARRICK, Detroit, Mich., assignor to Penberthy Injector Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 18, 1926. Serial No. 142,485. 6 Claims. (Cl. 158—4.)

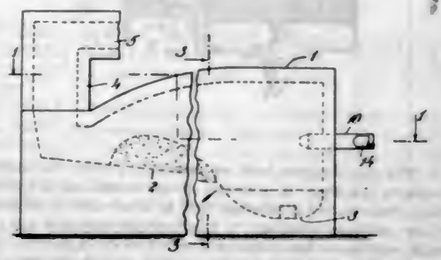


1. The combination with an oil burner and a fire-pot in which said burner is placed, of an igniter comprising a casing embedded in the bottom wall of the said fire-pot, said casing being provided with a narrow slotted nozzle opening upward into the pot and having a bottom closure removable from beneath said pot.

1,687,274. AUTOMOBILE VEHICLE IGNITION SYSTEM. FELIX J. WATTS, Bronson, Mich., assignor to Harry A. Douglas, Bronson, Mich. Filed Mar. 7, 1927. Serial No. 173,583. 20 Claims. (Cl. 175—361.)

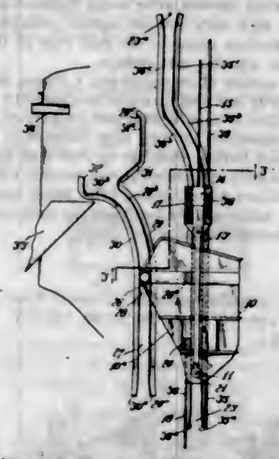
1. The combination with an inducing circuit containing a primary winding; of a second circuit containing a gas igniting element and a winding that is in secondary relation to said primary winding; a third circuit adapted for induced relation to the primary circuit and to impair the inducing relation of this circuit to the second circuit and thereby render said gas igniting element inoperative; and means for putting the third circuit into and out of such effective induced relation to the primary circuit.

1,687,275. RAIL SUPPORT. GEORGE WIEBLER, Fort Madison, Iowa; Harry B. Wiebler, Chicago, Ill.; and Walter T. Wiebler, Davenport, Iowa, assignors of fifty-five per cent to Byron M. Cheney, Chicago, Ill. Filed Sept. 10, 1927. Serial No. 218,613. 5 Claims. (Cl. 238—265.)



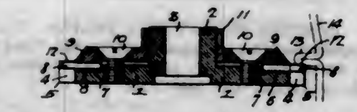
1. A support for a railway rail comprising a metal box having the side walls thereof tapered inwardly toward the transverse center line of said box, and a pair of wedge members arranged to enter the tapered portions of said box from opposite ends thereof.

1,687,276. INDICATOR. MOSES H. WINKLER, Meridian, Miss. Filed June 28, 1927. Serial No. 202,089. 5 Claims. (Cl. 40—96.)



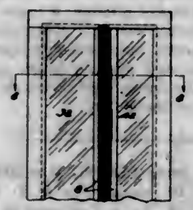
1. A portable indicator for foot-ball games comprising a casing having windows, a pair of endless belts within the casing having indicating numerals adapted to be exposed through the windows, said belts being so arranged that they overlap and press against each other at adjacent ends, and independent means for moving the said belts to cause selected numerals to appear in the windows.

1,687,277. METHOD AND APPARATUS FOR PURIFYING METALS. HARRY H. ALEXANDER, Westfield, N. J. Filed Oct. 28, 1925. Serial No. 65,309. 2 Claims. (Cl. 75—62.)



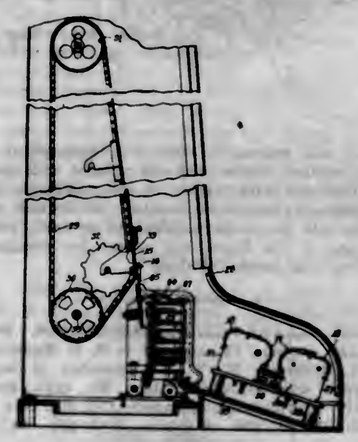
1. The method of melting and refining copper which comprises impinging hot combustion gases against the surface of a charge of copper and thereby progressively melting the copper while subjected to a purifying asmosphere, and controlling said purifying atmosphere by regulating the amount of air and fuel used in the formation of said combustion gases in accordance with the nature and composition of the impurities present in the charge, said regulation being effected in accordance with periodic determinations of the character and amount of impurities present in the molten copper.

1,687,278. OVERTURNING SKIP APPARATUS. ANDREWS ALLEN, Glencoe, Ill., assignor to Allen & Garcia Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 21, 1926. Serial No. 156,163. 15 Claims. (Cl. 214—120.)



1. In combination, a hoisting skip, a cross-head, pivotal connections between said cross-head and said skip, shaft guides adapted to be engaged by said cross-head and said skip during the travel of said skip in the shaft, tipple guides adapted to be engaged by said cross-head during the dumping operation of said skip, a plurality of tipp'e guides for said skip and means on said skip adapted to engage the said skip tipple guides to guide the skip after said skip is freed from engagement with said first mentioned guides, all of said tipple guides for said skip being curved outwardly from the shaft.

1,687,279. PATTERN WHEEL FOR KNITTING MACHINES. WILLIAM C. AUSTIN, Philadelphia, Pa., assignor to David P. Austin, Philadelphia, Pa. Filed May 22, 1926. Serial No. 111,005. 2 Claims. (Cl. 66—50.)

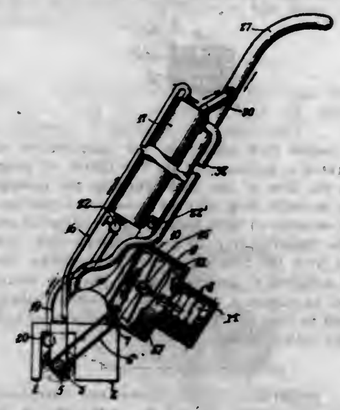


2. In a pattern wheel, adapted to be used in conjunction with a knitting machine, comprising a circular disc having a concentric groove and a plurality of radially disposed grooves formed therein, the said radial grooves extending between the outer wall of said concentric groove and the periphery of the wheel and the inner wall of said concentric groove forming an abutment in radial alignment with said radially disposed grooves; pins located in said radial grooves with one end in contact with said abutment; a retaining plate overlying said circular disc; an annular depending flange on said retaining plate, adapted to fit within said concentric groove and engage said pins therein; and means for pressing the said flange against said pins and thereby press the pins against the base of said concentric groove, for rigidly maintaining said pins in position.

1,687,280. SPEAKING PANEL FOR JAILS OR THE LIKE. BLUFORD W. BROCKETT, Cleveland Heights, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 17, 1927. Serial No. 161,599. 10 Claims. (Cl. 189—5.)

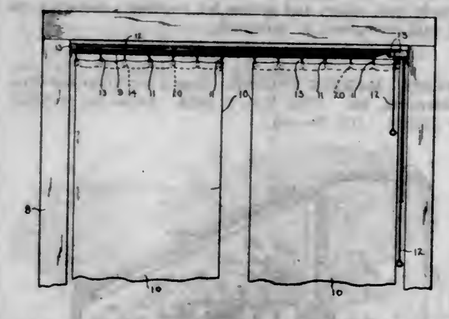
1. A speaking panel for jails or the like, comprising a plate provided with an opening, said opening being closed by foraminous material in sheet form with the sheets extending generally transversely to the plane of the plate and the edges of the sheets being presented to the opposed surfaces of the plate.

1,687,281. APPARATUS FOR MEASURING PRODUCTION. PETER A. COONEY, Chicago, Ill., assignor, by mesne assignments, to Electrecorder Corporation, Dover, Del., a Corporation of Delaware. Filed Mar. 17, 1926. Serial No. 95,248. 42 Claims. (Cl. 235—92.)



1. In apparatus of the character described, the combination of a movable member, means for driving said member at substantially constant speed, and control means including an electric circuit and switch adapted for control by a shop machine and operative thereunder to disconnect said member from its driving means when and only when the rate of production of the shop machine falls below a predetermined minimum.

1,687,282. DETACHING HOLLOW FLEXIBLE BODIES FROM THEIR MOLDS. EMIL CZAPEK and RICHARD WEINGAND, Bomlitz, near Walsrode, Germany. Filed Apr. 5, 1927, Serial No. 181,257, and in Germany May 30, 1925. 5 Claims. (Cl. 18—57.)



1. The method of detaching molded flexible, substantially cap shaped hollow bodies from their molds and removing them therefrom without manual operation of the bodies, which method consists in angularly directing a jet of liquid onto and against the mold carrying such hollow bodies, thereby filling said bodies with liquid and causing them to slip off the molds.

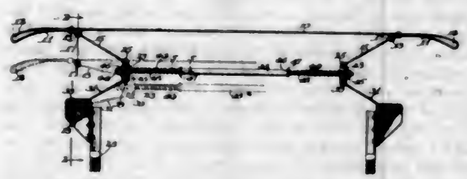
1,687,283. FLOOR CLEANER. WILLIAM DEUTSCHER, New York, N. Y. Filed June 18, 1926. Serial No. 116,873. 5 Claims. (Cl. 15—50.)

1. In a cleaning device, the combination of a movable casing having a vertical passage therein through which liquid can be drawn, a suction pipe having an inlet end communicating with the said passage, means adapted to lower the air pressure in the said suction pipe, said casing underneath the inlet end of the said suction pipe being provided with a trap for liquid, whereby when the operation of the said means is stopped, any liquid draining back from the said suction pipe is collected in the said trap, and a second suction pipe connected to the lower portion of said trap whereby it is adapted to drain the liquid collected therein, the first mentioned suction pipe and the second suction pipe being connected to the same suction means.

1,687,284. CURTAIN FASTENER. HULDA DUBOLD, Milwaukee, Wis. Filed Mar. 20, 1926. Serial No. 96,216. 4 Claims. (Cl. 156—20.)

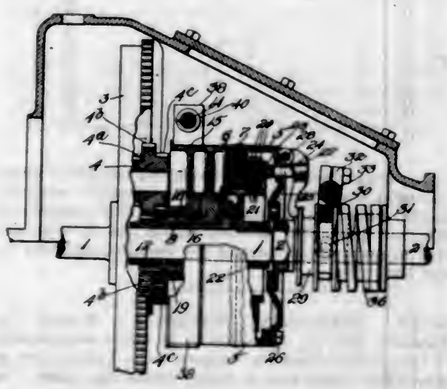
1. A curtain fastener, comprising two elongated strips of material, complementary fastening members easily detachably connecting the strips together at a plurality of points, and suspension members rigidly and directly connected to and forming part of the fastening members on one of the strips.

1,687,285. INSULATING MATERIAL. WARREN M. EMERSON, Chicago, Ill., assignor, by mesne assignments, to Certain-teed Products Corporation, a Corporation of Maryland. Filed Feb. 9, 1925. Serial No. 8,059. 14 Claims. (Cl. 106—20.)



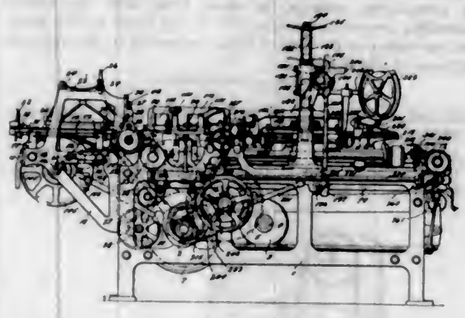
1. A dry mixture, comprising calcined gypsum as the major ingredient, a carbonate, aluminum sulphate, a colloid, and an acid retarder.

1,687,286. LIQUID-FLOW REGULATOR. PHELPS M. FEESE, Detroit, Mich. Filed Nov. 15, 1926. Serial No. 148,536. 4 Claims. (Cl. 251—127.)



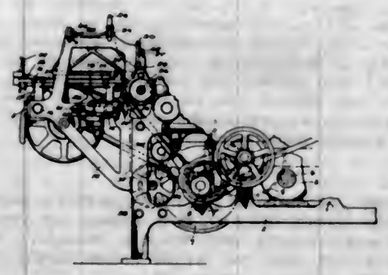
1. In a liquid flow regulator, the combination with a member having a passageway for the liquid, of means for controlling the flow of the liquid through the passageway, including a movable disk adapted to occupy a position relative to the member to form therewith a restricted passageway for the liquid partly on a face of the disk and communicating with the first mentioned passageway, the disk also being adapted to occupy another position relative to the member to expose a side of the restricted passageway to the liquid to free the restricted passageway of sediment which might collect therein.

1,687,287. BUMPER. CARL GOSSMAN, Glenwood, Ill. Filed Feb. 20, 1928. Serial No. 255,643. 9 Claims. (Cl. 293—55.)



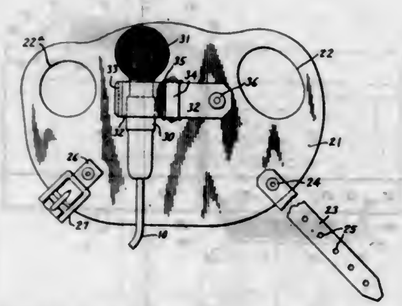
1. A bumper for vehicles including an impact bar extending in a direction across the vehicle, a pair of pads, links individual to the pads and pivotally connected by one end to the respective pads, means pivotally connecting one end of one of the links of each pad to the impact bar, means pivotally connecting the other link of the respective pads to the vehicle frame whereby when the impact bar is moved towards the vehicle the said pads will be moved towards each other, and means for yieldingly resisting the last said movement of said pads.

1,687,288. MARINE ENGINE. EARLE LINWOOD GRINDLE, Ellsworth, Me. Filed Nov. 2, 1926. Serial No. 145,780. 2 Claims. (Cl. 74—34.)



1. In a marine engine, the combination with a crank shaft, a fly wheel thereon and a propeller shaft, of a set of compound planetary pinions rotatably mounted on said fly wheel; a clutch including a driving member fast on said crank shaft and a driven member connected with said propeller shaft, said driven member being provided with a gear meshing with one member of each of said planetary pinions; a reverse drive drum loosely supported by said crank shaft and provided with a gear meshing with other members of said planetary pinions; a brake mechanism for said drum; an operating shaft for said clutch, a lever connected with said brake, mechanism to operate it, a cam arranged to be operated by said lever, and connections between said cam and clutch shaft whereby said lever controls the operation of the clutch.

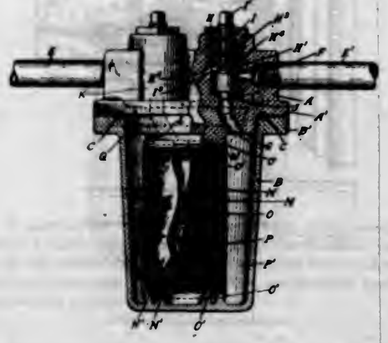
1,687,289. PAPER-BOX-MAKING MACHINE. FRANK G. FEELEY, Chicago, Ill., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed June 30, 1925. Serial No. 40,571. 38 Claims. (Cl. 93—41.)



31. A box staying machine comprising blank feeding means, breaker devices disposed parallel with and laterally adjustable with respect to the longitudinal axis of the machine to receive the blanks from the feed rolls and fold the side flanges of the blank to an acute angle with the plane of the blank, and means for simultaneously operating said breaker devices.

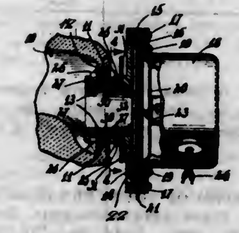
1,687,290. BLANK-FEEDING MECHANISM. FRANK G. FEELEY, Chicago, Ill., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Original application filed June 30, 1925, Serial No. 40,571. Divided and this application filed Nov. 2, 1926. Serial No. 145,804. 9 Claims. (Cl. 271—44.)

1. A blank feeding mechanism comprising a main drive shaft, a reciprocatory feed table, rocker arms supporting said table, feed rolls adjacent the discharge end of said table, drive mechanism connecting the main shaft and the table for retracting the latter, and spring means for effecting the working stroke of said table.



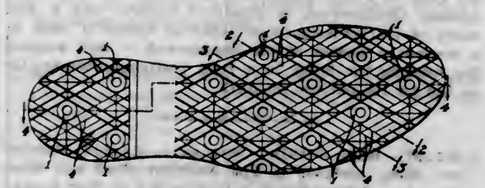
1,687,291. AUTOMOBILE SIGNAL. FRANK M. GRAHAM, Bellmore, N. Y. Filed Mar. 8, 1928. Serial No. 259,999. 3 Claims. (Cl. 177—329.)

1. An automobile signal comprising the combination of a signal light, means for attaching the said light to the driver's hand, an electrical cord in circuit with said light and with a source of current on the automobile, spring means for reeling up said cord, automatic circuit opening and closing means controlled by the reeling and unreeling operation for causing said light to be extinguished when the hand is on the wheel and to be lighted when the hand is used for signaling, and automatic means for restraining said reeling means so as to take strain off the driver's hand on the steering-wheel.



2. An automobile signal comprising a part of flexible sheet material adapted to be worn on the driver's hand, an electric light socket lying against the back of said part, an electrical cord connected with said socket, take-up means for said cord, a flexible strap connected to said part and looped tightly over said socket, and an electric light bulb in said socket, said bulb being larger than the socket so that it can not be pulled rearwardly through the strap by the tension of the cord.

1,687,292. OIL STRAINER. ALBERT E. GRANT, New York, N. Y. Filed June 10, 1927. Serial No. 197,835. 7 Claims. (Cl. 210—164.)

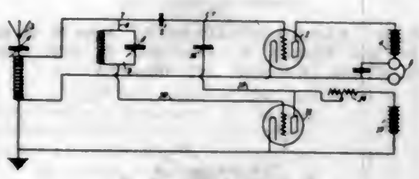


1. A strainer comprising an upper valve casing portion and a lower bowl portion, said upper portion having a depending part which extends into the upper end of the bowl to reduce the fluid capacity of the bowl; said upper portion having a valve controlled inlet passage and a valve controlled outlet passage, and a strainer in said bowl in the line of flow of a fluid passing therethru, and means for connecting the bowl to the upper portion in separable relation therewith.

1,687,293. RADIO LOUD SPEAKER. JOHN W. H. HANLEY, New York, N. Y. Filed Mar. 22, 1927. Serial No. 177,432. 6 Claims. (Cl. 181—27.)

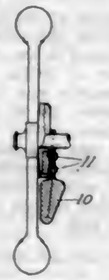
1. A radio loud speaking unit attachment for conch shells having a side aperture with a gasket forced on the edges thereof, comprising a loud speaking unit, a cylindrical member projecting therefrom, and engageable in the gasket, recesses formed in the outer side of the cylindrical member, a pair of latches hingedly mounted in each recess, and engageable with the sides of the gasket when in extended position, the latches being formed with elongated apertures, pins passing through the apertures, a disc supporting the pins, the said disc being rotatably mounted on the cylindrical member, the said cylindrical member being formed with cavities communicating with the recesses, and tension springs housed in the cavities, and engaged with the pins.

1,687,294. NONSLIP SOLE. WILLIAM B. HOPWOOD, College Point, N. Y., assignor to The Beacon Falls Rubber Shoe Company, Beacon Falls, Conn., a Corporation of Massachusetts. Filed July 31, 1926. Serial No. 126,107. 6 Claims. (Cl. 36—59.)



1. A sole provided with spaced rows of suction cups and ribs extending between the rows of cups, each rib having one substantially vertical wall, the vertical walls of different ribs facing in oposite directions.

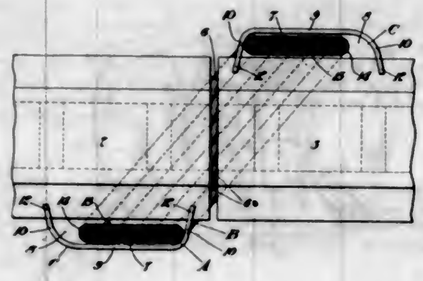
1,687,295. INTERFERENCE ELIMINATION. ALFRED HÜBNER, Berlin-Friedenau, Germany, assignor to Siemens & Halske, Berlin, Germany, a Corporation of Germany. Filed Dec. 8, 1926. Serial No. 153,227, and in Germany Oct. 31, 1925. 4 Claims. (Cl. 250—20.)



1. In combination, an antenna circuit, two electron emission tubes having control electrodes, one of said con-

trol electrodes being connected to said antenna through a condenser, the other of said control electrodes being connected to the antenna through a parallel resonant

circuit adapted to block the desired frequency, and capacitive means for directly coupling the anode circuit of the second tube to the control circuit of the first tube.

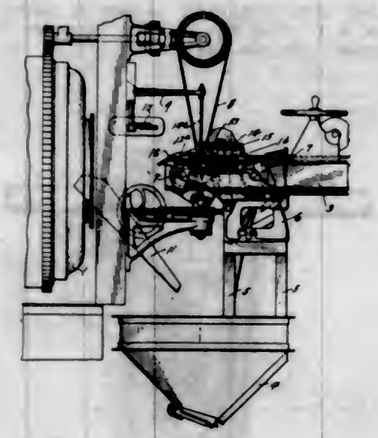


1,687,296. SYSTEM OF COUNTERBALANCES FOR MOTOR CARS. EINAR ARTHUR JOHNSON, Brooklyn, N. Y. Filed Aug. 27, 1927. Serial No. 215,770. 1 Claim. (Cl. 280—150.)

In a safety-device for automobiles, having for its purpose to lower the center of gravitation as described, a plurality of counterbalancing members suspended below the axles of a car, bands for supporting said weights, a member therebetween to eliminate friction, and a plurality of bracket-members attached by means of bolts to a stationary section of the chassis and to said weights for securing the latter in a rigid position, substantially as and for the purpose set forth.

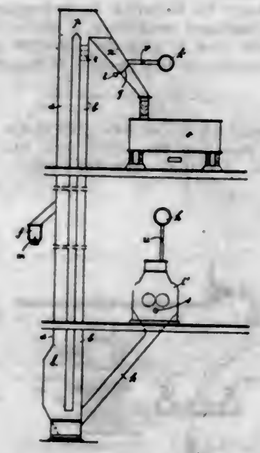
1,687,297. RAIL BOND. CHARLES L. LARSON, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 12, 1927. Serial No. 160,652. 3 Claims. (Cl. 173—278.)

1. A rail bond, comprising a flexible conductor portion composed of a plurality of individual lengths of flexible cable laid side by side forming a relatively wide flat conductor, rigid terminals mechanically secured on each end of said conductor, said terminals each comprising a body portion composed of a bottom wall and back wall extending at substantially right angles to each other, and end walls, all of said walls being formed integral, said bottom wall being apertured to receive the ends of the terminals, and said end walls being each provided with a supporting lug projecting beyond the forward edge of said bottom wall and adapted to overlie the top of the base flange of the rail being bonded so as to support the bond in bonding position, said bottom wall of said terminal being adapted to have its forward edge abut the side edge of the base flange of the rail so that said rail base flange and said bottom, back and end walls of said



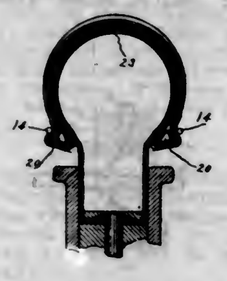
terminal will cooperate to form a pocket to receive the attaching metal deposited in welding the bond to the rail.

1,687,298. ELECTRIC COIL CONSTRUCTION. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed May 17, 1923, Serial No. 639,708, and in France June 14, 1922. 1 Claim. (Cl. 175—21.)



A composition of matter forming the magnetic circuit of an electrical device, comprising substantially 33.9 per cent nickel, 1.15 per cent manganese, and iron, whereby electrical losses are reduced to a minimum.

1,687,299. BACK-MOVEMENT LOCK FOR PAVER BUCKETS. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 7, 1926. Serial No. 114,313. 12 Claims. (Cl. 104—92.)



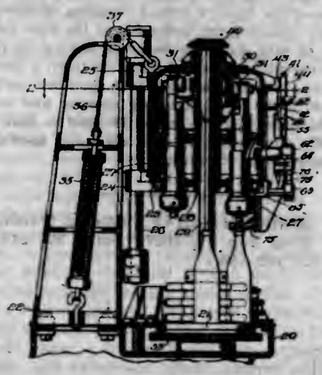
1. In a machine of the class described, a boom and bucket concrete distributing attachment comprising a boom, a bucket, a carriage to travel on the boom and supporting the bucket, clutch knock-out mechanism carried by said carriage, and locking means cooperative with said clutch knock-out mechanism to hold the carriage and its bucket in a predetermined position on the boom.

1,687,300. APPLICATION OF COLD TO THE MANUFACTURE OF FLOUR. JEAN JOSEPH BERNARD LOIZILLON, La Caubie, France. Filed Feb. 4, 1927, Serial No. 165,988, and in France Feb. 25, 1926. 8 Claims. (Cl. 83—42.)

1. An apparatus for the manufacture of flours which comprises an elevator having a large carrying surface, passages between the lower part of said elevator and the grinding apparatus, passages from the upper part of the elevator to the bolting apparatus and means to ensure the cooling of the products ascending in the elevator by a current of cold air ascending in the first part of the run and a cold air current descending in the second part.

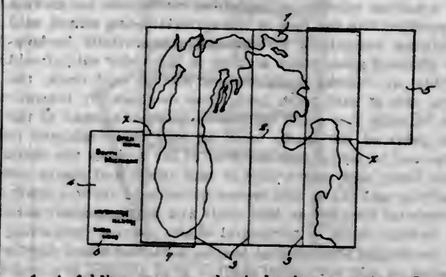
1,687,301. METHOD OF MAKING CLINCHER TIRES. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1926. Serial No. 89,477. 3 Claims. (Cl. 154—14.)

1. A method of making clincher tires which comprises forming a flat carcass band, locating inextensible anchorages in the clinch of the beads, expanding the band to tire form, and removing the inextensible anchorages from the clinch of the beads.



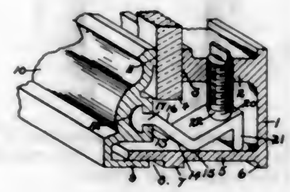
1,687,302. METHOD OF MAKING MULTIPLE-BEAD TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1926. Serial No. 99,161. 3 Claims. (Cl. 154—14.)

1. A method of building tire carcasses comprising forming a band of carcass material with its edges enclosing bead anchorages, forming a second band of narrower material enclosing anchorges of slightly greater diameter than those in the first band, superposing the two bands with



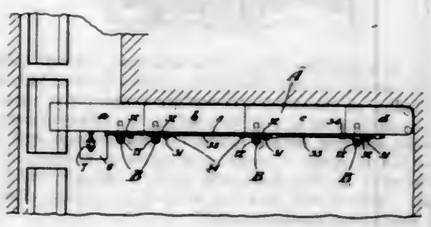
the second band outside, stretching the central portion of the bands, inverting the assembly, and forming the assembly into tire shape while inverted.

1,687,303. BOTTLE-CROWNING MACHINE. VALENTINE J. MOHLER, Wheaton, Ill., assignor, by mesne assignments, to the Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 15, 1924. Serial No. 692,960. 14 Claims. (Cl. 226—84.)



1. In a machine of the class described, a bottle carrier, a die carrier movable therewith, a series of vertically movable dies on the carrier, means for reciprocating each die as it arrives at a definite position, a vertically movable crown applying device, means for causing said device to descend to apply a crown to a bottle in advance of the descent of the die above said bottle, a plunger associated with each of said dies and adapted to engage a crown in said crown applying device.

1,687,304. FOLDING MAP OR CHART. AMOS R. MORRIS, Ann Arbor, Mich. Filed June 16, 1927. Serial No. 199,297. 6 Claims. (Cl. 281—5.)

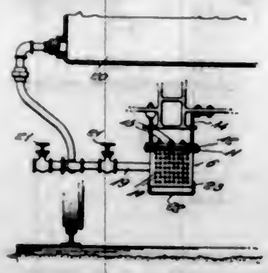


1. A folding map or chart, having a rectangular body portion adapted to be folded transversely and longitudinally, and stiffening extensions secured to diagonally opposite corners constructed and arranged to form the external pages when the whole is folded.

1,687,305. SASH CONSTRUCTION. CHARLES G. NELSON, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed Aug. 15, 1927. Serial No. 212,936. 9 Claims. (Cl. 20—56.4.)

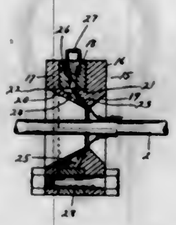
1. In a sash construction, a glass clamping member having a base flange extending in a plane perpendicular to the plane of the glass, a second clamping member having a base flange engaging the underside of the first mentioned flange, one of said clamping members having on its inner face a channel with an overhanging shoulder, a draw plate having a head engageable with said shoulder, and means connected with the other clamping member and co-operating with the draw plate to cause its head to bear against said shoulder and draw the two clamping members into clamping relation to the glass.

1,687,306. MINING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Aug. 11, 1927. Serial No. 212,285. 1 Claim. (Cl. 262—28.)



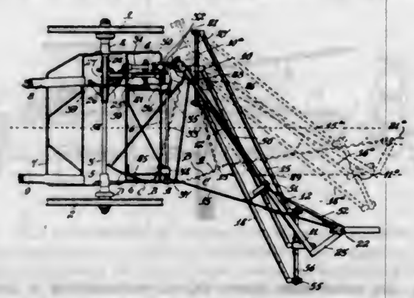
In a mining machine, a propelling mechanism for moving the machine into the face of the material being mined, said mechanism comprising a U-shaped substantially horizontally disposed guide track secured to the under side of said machine, an endless chain trained around said track, the return side of said track being bent downwardly intermediate its ends to a plane materially below the plane of the other parts of the track, teeth on said chain adapted to engage and be forced into the floor of the mine as the chain passes along said return side of said track, and means for propelling said chain, said means including a vertical shaft, a horizontal sprocket on said shaft and in engagement with said endless chain, a horizontal shaft, gearing connecting said horizontal and vertical shafts, a ratchet-wheel fixedly mounted on said horizontal shaft, a pawl adapted to engage and rotate said ratchet-wheel, a horizontal power shaft, a crank on said power shaft, a lever on which said pawl is pivotally mounted, and a connecting-rod connecting said lever and said crank on said power shaft.

1,687,307. BATTERY, ELECTRIC ACCUMULATOR, AND ELECTROLYZING APPARATUS. RENÉ OPPENHEIM, Levallois-Perret, France, assignor to Société Anonyme le Carbone, Levallois-Perret, France. Filed Sept. 30, 1925, Serial No. 59,729, and in France Dec. 10, 1924. 8 Claims. (Cl. 136—26.)



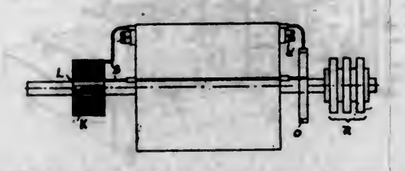
1. An electrode for batteries, electric accumulators and electrolytic apparatus comprising a mixture of granular active material and a granular material permeable to gases and substantially impermeable to liquids.

1,687,308. BOILER BLOW-OFF MUFFLER. THOMAS E. PARADISE, Hannibal, Mo. Filed Jan. 24, 1927. Serial No. 163,088. 4 Claims. (Cl. 137—160.)



1. A boiler blow-off muffler comprising a casing apertured for the discharge of water, a series of woven wide sheets disposed side to side and forming a muffling means reticulate in all directions and filling said casing, and a water blow-off pipe entering the casing, passing through a plurality of the sheets of said series and terminating between the ends of said series.

1,687,309. AIR DIE. WILLIAM S. PRITCHARD, Detroit, Mich., assignor, by mesne assignments, to Motor Products Corporation, a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,658. 4 Claims. (Cl. 91—59.4.)



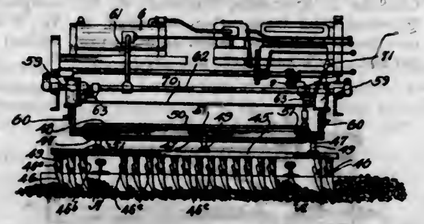
1. In an air die, the combination with laterally adjacent sections having substantially aligned openings for the passage of a tube and adjacent walls spaced from each other to form an annular chamber for fluid under pressure communicating with the openings for directing the fluid under pressure against and around the periphery of the tube, said adjacent wall being inclined to the axes of the openings, of a ring between said sections for spacing the same and closing the outer portion of the annular chamber, and means for clamping said sections and ring in fixed relation to each other.

1,687,310. SIDE-DELIVERY RAKE AND SWATH TURNER. PARKE RANDALL, Lille, France, assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 28, 1927, Serial No. 222,478, and in Germany Aug. 5, 1926. 4 Claims. (Cl. 56—366.)

2. In a combined side delivery rake and tedder, the combination of a laterally folding rake frame, an upright shaft about which this folding movement takes place, and a transverse shaft on which said frame may be tilted up or down, the axes of the upright and transverse shafts intersecting.

1,687,311. COMPENSATED ALTERNATE-CURRENT MACHINE. RUDOLF RICHTER, Durlach, and WILLY SARFERT, Dresden, Germany, assignors to the Firm of Sachsenwerk, Licht- und Kraft-Aktiengesellschaft, Niedersedlitz, near Dresden, Germany. Filed Apr. 1, 1925, Serial No. 20,007, and in Germany Apr. 4, 1924. 9 Claims. (Cl. 172—280.)

1. In an alternating current machine, a primary member including a commutator, and an auxiliary compensating winding connecter to the commutator and arranged as an open coil winding.



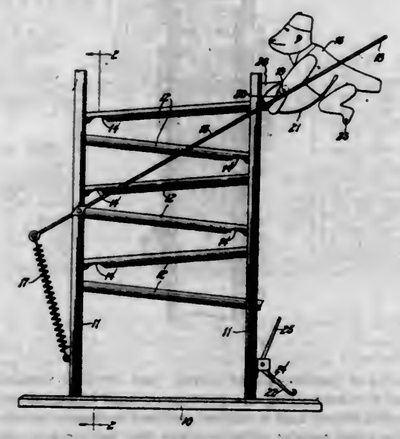
2. In an alternating current machine, a primary member including a commutator, a plurality of brushes bearing on the commutator, and an auxiliary compensating winding connected to the commutator and arranged as an open coil winding, the number of the said brushes being a multiple of the number of the phases of the main windings of the machine.

1,687,312. PROCESS FOR MANUFACTURING UREA-FORMALDEHYDE CONDENSATION PRODUCTS. KURT RIPPER, Vienna, Austria, assignor to Fritz Pollak, Vienna, Austria. Filed Mar. 20, 1924, Serial No. 700,736, and in Austria Mar. 31, 1923. 13 Claims. (Cl. 260—3.)

1. A process for the manufacture of clear, crystal-like condensation products from a urea and formaldehyde which process comprises forming water-soluble initial products in two stages by adjusting the C_H in the first stage, which is completed after applying heat for a short period of time, to a value not exceeding about 10^{-7} and in the second stage to a value upwards of 10^{-7} but not reaching 10^{-3} and then continuing the reaction by heating.

7. The process for manufacturing condensation products which consists in reacting on a urea with a solution of formaldehyde, the free formic acid content of which solution had been neutralized before starting the reaction, initiating the reaction by heating the mixture for a short period of time up to boiling, acidifying the reaction mixture, forming a hydrophile emulsion colloid by further heating and then continuing the reaction by heating to cause conversion of the first formed hydrophile emulsion colloid into a hydrophobe colloid.

1,687,313. RAILROAD-BALLAST-REMOVING MACHINE. JOHN F. ROBB, Cleveland Heights, Ohio. Original application filed Mar. 9, 1923, Serial No. 623,965. Divided and this application filed Nov. 11, 1925. Serial No. 68,387. 28 Claims. (Cl. 37—104.)



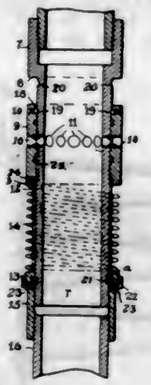
16. Apparatus for removing ballast from the road bed of a railway track comprising a car and means supported thereon for digging up the material between adjacent ties and removing the same from the space between said ties.

1,687,314. PROCESS FOR RESOLVING EMULSIONS OF TAR OR OIL. HERBERT WILLIAM ROBINSON, Birmingham, and DERIC WILLIAM PARKES, West Bromwich, England. Filed Feb. 23, 1927, Serial No. 170,413, and in Great Britain Mar. 30, 1926. 9 Claims. (Cl. 196—4.)

1. The method of resolving an emulsion containing an aqueous phase and an oleaginous phase which consists in adding to the emulsion a quantity of solid matter consisting of extremely finely divided sharp particles of air separated rock dust having a large surface area in proportion to their weight and being more easily wetted by water than by oil, said quantity being sufficient to form with said aqueous phase a relatively stiff mass capable of sinking through said oleaginous phase, and in settling out said stiff mass from said oleaginous phase.

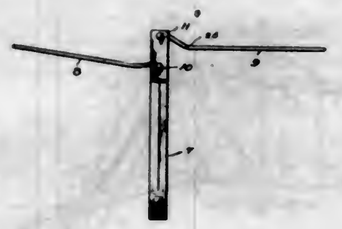
1,687,315. AUTOMATIC TOY. WILLIAM JANSON ROCHE, Cochranton, Pa. Filed Feb. 21, 1927. Serial No. 169,969. 4 Claims. (Cl. 46—37.)

1. A gravity toy comprising, in combination, a frame presenting an inclined track adapted to receive and guide a rolling toy from the entrance to the exit thereof, toy car-



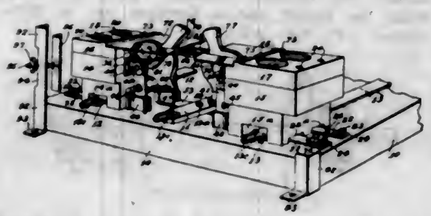
rying means releasably held in position at the exit end of said track to receive the rolling toy, trigger mechanism arranged to be tripped by said rolling toy to release said toy carrying means, pivotal arms on said means in which said rolling toy is lodged, a spring arm connected to raise said toy carrying means to the entrance end of said track, means normally holding said arms in toy carrying position, and means automatically to spill said rolling toy in the trackway.

1,687,316. POURING SPOUT FOR CONTAINERS. CHARLES H. ROLLASON, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed July 20, 1927. Serial No. 207,242. 2 Claims. (Cl. 221—27.)



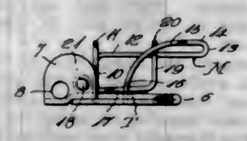
1. The combination with a container having a head provided with an opening which has permanently mounted therein a threaded neck, and a closure adapted to be removably mounted on said neck, of a pouring spout located interiorly of the container, and a yieldable one-piece support of approximately U-form upon which said spout is carried, said support being fixed to the underside of the container head at a point remote from said opening and being adapted, upon removal of said closure, to project said spout through said neck to pouring position and to permit depression of said spout within said container effected by the application of said closure.

1,687,317. GAS-LIFT PUMPING APPARATUS. MERTON T. ARCHER, Pittsburgh, Pa., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed June 13, 1927. Serial No. 198,448. Renewed Dec. 23, 1927. 14 Claims. (Cl. 103—232.)



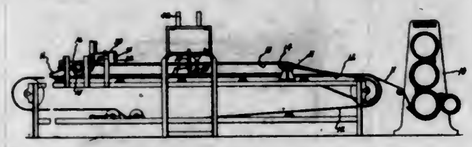
1. In a gas-lift liquid pump, two vertical conduits, a valve for controlling the passage of fluid from one conduit into the other, and a hollow resilient pressure member exerting force on the valve to close the valve when external pressure on the spring reaches a predetermined minimum and to open the valve when external pressure on the spring reaches a predetermined maximum.

1,687,318. AUTOMOBILE CHAIN TIGHTENER. HENRY E. BAHNSEN, Hammond, Ind. Filed Mar. 16, 1927. Serial No. 175,825. 3 Claims. (Cl. 254—78.)



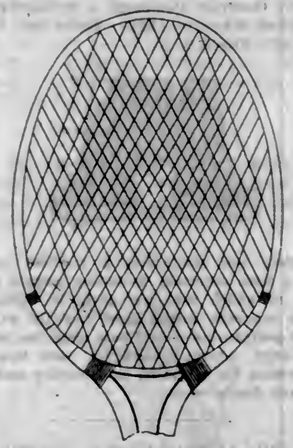
1. An automobile chain tightener comprising a hollow handle having indented inner socketed portions and spaced pivots, a pair of lever arms for engaging the chain adapted to collapse in superimposed position within said handle and to engage the inner socketed portions, and elongated loops on the lever arms to engage said pivots.

1,687,319. ELECTRICAL PANEL BOARD. FREDERICK L. BENZON, Plainville, Conn. Filed Jan. 20, 1923. Serial No. 614,049. 6 Claims. (Cl. 247—10.)



1. In a protective panelboard, a base, a pair of fuse holder and switch supports, a slotted frame extending between said supports, a knife switch pivoted to each of said switch supports, and a switch operating member pivoted to said frame and having a handle extending through the slot in said frame.

1,687,320. THREAD-TENSIONING MEANS FOR SHUTTLES. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed Aug. 11, 1927. Serial No. 212,254. 9 Claims. (Cl. 139—217.)



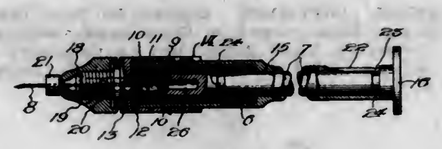
1. In combination with a shuttle threader having a base and a substantially horizontal portion above said base; a thread-tensioning arm disposed over the base, means pivotally mounting said arm for vertical swinging, and means carried by said arm and loosely engaged with said portion of said threader for guiding the vertical movement of the arm.

1,687,321. MARKER FOR CONTINUOUS-WEIGHING DEVICES. MARTIN CASTRICUM, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 30, 1925. Serial No. 5,699. 3 Claims. (Cl. 265—9.)

1. The combination of means for forming material in continuous length, means for determining the weight of the material per unit of length, and means automatically controlled by the weighing means for marking directly on the material to indicate such portions thereof as are outside a predetermined tolerance.

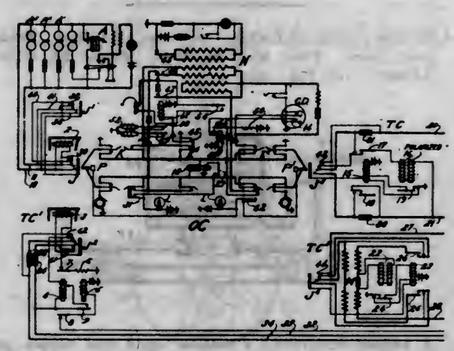
1,687,322. GAMES RACKET. CLAUDE ALBERT CLAREMONT, Rosslyn Hill, Hampstead, England. Filed Dec. 9, 1927, Serial No. 238,920, and in Great Britain Sept. 25, 1926. 4 Claims. (Cl. 273—73.)

1. A games racket characterized in that the rim is resiliently pliable in the plane of the racket, to afford the required resiliency when the blade is struck by a ball, and the stringing is arranged not to oppose the yielding of the rim to attain such resiliency, the required resiliency being afforded wholly by the resilient pliability of the rim, the strings being of comparatively non-stretchable material.



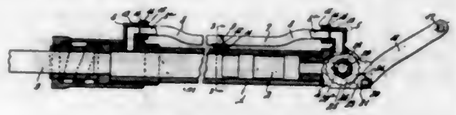
1,687,323. MEDICAMENT CARTRIDGE AND HYPODERMIC SYRINGE EMBODYING THE SAME. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 1, 1921. Serial No. 481,997. 17 Claims. (Cl. 128—218.)

1. A hypodermic syringe embodying a sealed medicament container, comprising a tube with a fore sealing stopper consisting of an axially recessed plug of resilient material arranged with its recess facing inwardly and adapted to be pierced by and seal around a hollow needle, and having a rear piston plug to be forced into or through the tube to eject the fluid contents through the needle; in combination with said needle, means for holding the needle to pierce the said axially recessed plug at its axial portion,



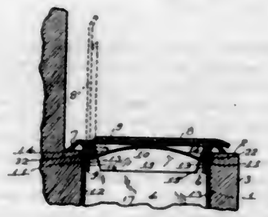
and an ejector to enter said tube to drive in the piston plug; the recess of the fore plug adapting it to be readily pierced.

1,687,324. HYPODERMIC SYRINGE. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 26, 1925. Serial No. 11,707. 8 Claims. (Cl. 128—218.)



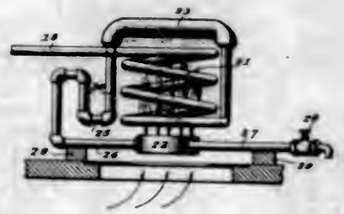
4. A hypodermic syringe comprising, in combination, a medicament package constructed and arranged to have its interior volume reduced for expelling of its contents; a barrel constructed and arranged to receive said package; needle securing means at one end of the barrel; a needle having an enlargement thereon; said medicament package having an opening; a resilient plug closing said opening and of reduced thickness axially to provide a cup-like recess facilitating axial piercing thereof by the needle; the needle enlargement positioning the inner point of the needle relative to the discharge end of the package.

1,687,325. TELEPHONE SYSTEM. THOMAS F. CROCKER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 16, 1925. Serial No. 2,744. 22 Claims. (Cl. 179—27.)



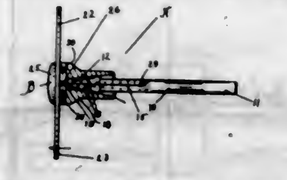
1. In a telephone system, a trunk extending from a manual jack to an automatic switchboard, said trunk comprising two inductively connected sections, a cord circuit for connecting with said jack, a calling device and means for bridging the same across the talkng strands of said cord circuit, and means responsive each time said calling device is operated for conductively connecting the two sections of said trunk line together to enable said calling device to control the switches at the said automatic switchboard over said trunk.

1,687,326. RIVET-CUTTING GUN. JOHN M. CROWE, Covington, Ky. Filed May 3, 1923. Serial No. 636,490. 4 Claims. (Cl. 121—21.)



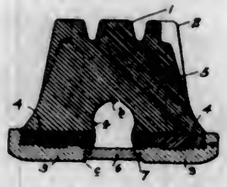
1. In a rivet cutting gun structure, the combination of a piston barrel and piston, a valve chamber and a valve for controlling the operation of said piston, a closure for said valve chamber, a handle for supporting said barrel, means for locking said closure in position, and a single means for securing said handle and said locking means to the gun structure.

1,687,327. CONTAINER. RUDOLPH DE BOER, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 21, 1927. Serial No. 234,695. 6 Claims. (Cl. 206—19.5.)



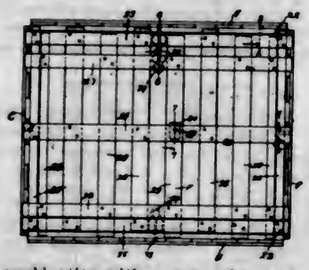
1. In a device of the character described: an open-top container having opposite lateral walls; a cover mounted on the container swingably to open and closed positions and having a downwardly extending arm; a spring mounted at its ends on said walls respectively, bowed upwardly between the same and engaging the arm to yieldingly hold the cover in swung position.

1,687,328. OIL BURNER. JOSEPH A. D'ELIA, Bridgeport, Conn. Filed Mar. 18, 1926. Serial No. 95,641. 1 Claim. (Cl. 158—54.)



A burner comprising a coil, a liquid fuel supply pipe connected with its upper portion, valves in said pipe line to control the supply of liquid fuel, means for providing a forced feed of the fuel through the feed pipe, a relatively large heat retort disposed across the top of the coil in the path of the flame from the jet orifices of a burner, the inlet end portion of said retort being connected with the lowermost part of the coil, a trap connected with the discharge end portion of said retort, a burner positioned below and central of the coil, a pipe connecting said trap and burner to supply fuel thereto, and a blow-out pipe directly connected with the burner.

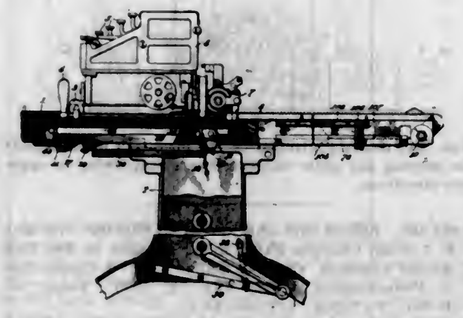
1,687,329. MANDREL. FOREST F. FILLOON, Minneapolis, Minn., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn., a Corporation of Minnesota. Filed June 10, 1925. Serial No. 36,168. 2 Claims. (Cl. 32—13.)



1. A dental mandrel consisting of a hollow rod, split jaws to form grippers, a tapered outer surface on said jaws converging toward the end of the rod upon which the jaws are placed, an annular shoulder on said rod, a collar having a hollow tapered core adapted to cooperate with the tapered surface of said jaws to compress the same, shoulders formed on said collar adapted to engage the annular shoulder on the rod for limiting the movement of said collar with relation to the jaws and a disk supporting tapered pin and head adapted to be locked or released by said collar operating to engage said jaws.

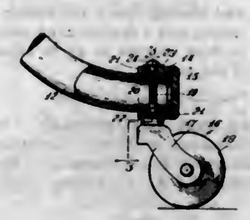
1,687,330. RESILIENT VEHICLE TIRE. EDWARD H. FITCH, Hudson, Ohio; Bessie McFarlin Fitch, executrix of said Edward H. Fitch, deceased, assignor to The B. F. Goodrich Company, a Corporation of New York. Filed May 10, 1922. Serial No. 559,771. 8 Claims. (Cl. 512—1.)

6. A vehicle tire comprising a resilient cushion tire body, and a base assembly including a pair of metallic base rings to which said tire body is vulcanized, and structurally separate means inset radially with relation to the inner peripheries of said base rings for locking them against relative lateral separation, said base assembly having provision for retaining said locking means against radial inward displacement.



1,687,331. COLLAPSIBLE CRATE. CORNELL FLAGSTAD, Minneapolis, Minn., assignor of ninety-five per cent to The Folding Crate and Box Co., a Corporation of Minnesota, and two and one-half per cent to Oscar A. Flagstad, Minneapolis, Minn. Filed Nov. 26, 1923. Serial No. 677,175. 4 Claims. (Cl. 217—56.)

1. The combination with a crate, of an extensible cover therefor, locking devices slidably and rotatably secured upon the cover for locking engagement with the crate.



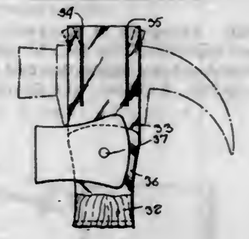
and means operated by extending the cover for preventing rotation of said devices when the cover is in secured position.

1,687,332. CONTINUOUS-FEED PLATEN. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 29, 1925. Serial No. 33,797. 29 Claims. (Cl. 197—126.)

1. The combination with a frame and platen, said platen being depressible at its rear end, a fixed clamp coacting with the rear end of the platen, movable clamps coacting with the front end of the platen and with the frame respectively, and means for depressing the platen and for operating the movable clamps.

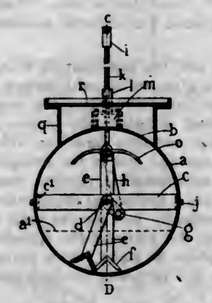
1,687,333. CHAIR CONSTRUCTION. FREDERICK HAGGER HEADLEY, Northfield, near Birmingham, England. Filed Aug. 7, 1924, Serial No. 730,576, and in Great Britain Jan. 12, 1924. 4 Claims. (Cl. 45—137.)

1. In a chair or the like having tubular metallic legs, in combination with one of the legs thereof, means providing a finishing member at and for closing the end of said leg, and a caster frame including a pintle, passing transversely through said chair leg end and a part of said finishing member which are secured together thereby and provide a bearing in which said pintle is journalled.



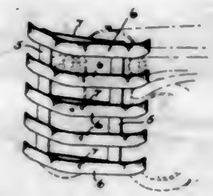
1,687,334. PEDAL-PROPELLED VEHICLE. FREDERICK HAGGER HEADLEY, Birmingham, England. Filed July 9, 1927, Serial No. 204,441, and in Great Britain Jan. 25, 1927. 8 Claims. (Cl. 208—88.)

1. A vehicle of the kind described embodying therein a rotative member, a one way clutch member thereon, a swingable pedal member pivoted at one end, a link pivoted at one end and having its other end operatively engaged with a part of said pedal member to be actuated thereby, means connecting said link and clutch member for actuating the same in one direction, and a spring arranged to move said clutch member and connecting means in the other direction, the pivoted ends of said pedal member and link being capable of a relative adjustment toward or



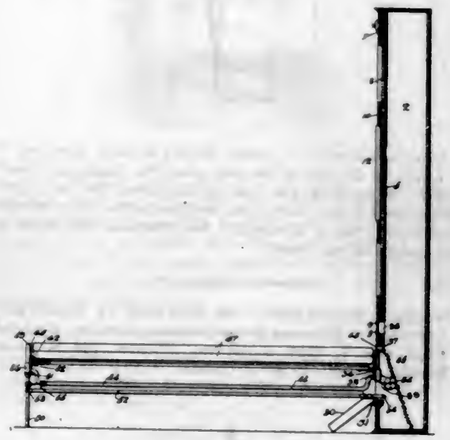
away from each other to vary the effective throw of said link without reducing the swingable movement of the pedal member.

1,687,335. TOOL HANDLE. MORLEY PYSON JACKLINE, Atchison, Kans. Filed May 26, 1925. Serial No. 33,003. 1 Claim. (Cl. 306—25.)



In a tool handle, a handle having a plate attached to it, a cam on the side of the said plate for engaging a head, means for pivoting the cam on the plate, the said plate having slots at its ends, those portions of the plate outside of the slots being distortable for retaining the plate of the handle on the head.

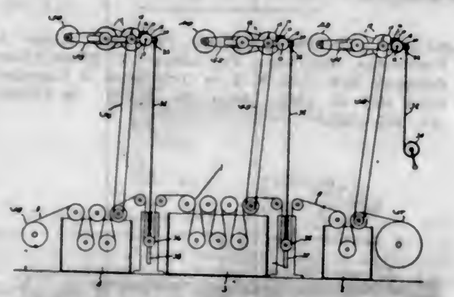
1,687,336. TREATMENT OF SEWAGE IN SANITARY CLOSETS. EPHRAIM LOUIS JACKSON, London, England. Filed Dec. 7, 1927, Serial No. 238,310, and in Great Britain Dec. 20, 1926. 5 Claims. (Cl. 4—115.)



1. An improved apparatus for treatment of sewage in sanitary closets having in combination a tank to contain disinfectant and provided with an aperture in the upper part thereof, a shield normally located beneath said aperture, an arm by which the shield is carried, a device for breaking up the sewage, an arm by which the said device is carried, a spindle by which the two arms are carried, and means for oscillating and rotating the said spindle to cause the shield and device for breaking up the sewage to enter the disinfectant.

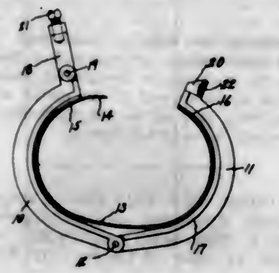
1,687,337. BUMPER FOR MOTOR VEHICLES. FRANK J. JAEGER, Toledo, Ohio. Filed Mar. 16, 1928. Serial No. 262,147. 4 Claims. (Cl. 293—55.)

1. A bumper for vehicles, comprising a plurality of uprights, curved front bars connecting said uprights, rectilinear struts connecting said uprights in rear of said front bars, and supporting brackets which are approximately V-shaped with their apexes secured to the vehicle and the ends of their arms secured to the uprights near the upper and lower ends thereof respectively.



1,687,338. BED. FREDERICK B. KAUFMAN, Philadelphia, Pa. Original application filed Dec. 30, 1925, Serial No. 78,451. Divided and this application filed July 29, 1927. Serial No. 209,260. 5 Claims. (Cl. 5—156.)

1. In a folding bed, the combination with head and foot frames, of springs attached to said frames, side bars having offset ends pivotally secured in the respective frames, said side bars being movable into planes paralleling the plane of the springs and into planes at right angles to the said plane of the springs, means for swinging the bed into an elevated or substantially vertical position and for lowering the bed into a horizontal or operative position, and means for automatically moving the said side bars from a plane paralleling the plane of the springs when the bed is elevated to a plane at right angles to the plane of the springs when the bed is swung to the horizontal position.



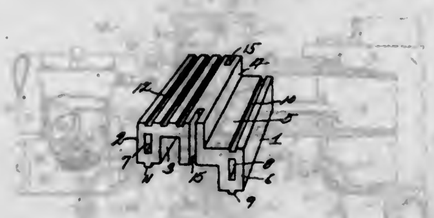
1,687,339. AUTOMATIC SPEED-CONTROLLING DEVICE. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Feb. 6, 1922. Serial No. 534,631. 41 Claims. (Cl. 271—2.3.)

1. The combination with an adjusting shaft of a variable speed transmission mechanism and an electrically driven motor for operating said shaft, of a pair of slidably mounted co-operating blocks, a pair of contact plates on one of said blocks, a contact mounted on the other block and having fingers for engagement with said plates, automatic means for moving the contact carrying block end-

wise, and means controlled by the operation of said shaft for moving the plate carrying block lengthwise in opposite directions.

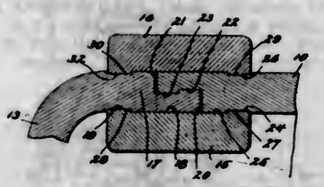
1,687,340. BEVELING AND SEALING CLAMP. THOMAS P. LITTLE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 12, 1925. Serial No. 49,691. 7 Claims. (Cl. 18—43.)

1. A beveling and sealing clamp for rubber tubes comprising an outer casing and a flexible band mounted in the casing but free to float thereon so as to adjust itself to the inequalities of the tube.



1,687,341. FUSE FOR PROJECTILES. WILLIAM L. LUKENS and RAYMOND R. CAREY, Bethlehem, Pa., assignors to Bethlehem Steel Company. Filed Feb. 3, 1926. Serial No. 85,638. 11 Claims. (Cl. 102—39.)

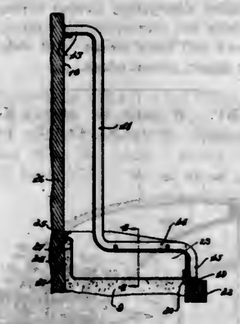
1. In a fuse for projectiles the combination with a fuse body, of a firing mechanism slidably mounted in said body,



means to move said mechanism relatively to said body during the flight of the projectile, and means to positively prevent the return movement of a portion of said mechanism.

1,687,342. BUILDING TILE. JOHN GERALD MACVEIGH and PAUL B. COLLINS, Omaha, Nebr. Filed May 12, 1926. Serial No. 108,524. 1 Claim. (Cl. 72—39.)

A building block comprising a body member having a plurality of chambers extending longitudinally therethrough and a plurality of grooves in the upper side thereof, a longitudinally disposed rib carried by the under side of the body member, an outwardly extending horizontally disposed flange carried by one side of the body member adjacent its lower side and having a longitudinally disposed channel therein, a chambered downwardly extending longitudinally disposed flange carried by the outer end of the horizontally disposed flange and disposed below the block, a longitudinally disposed rib carried by the lower side of the downwardly extending flange, the ends of the body member adjacent their inner sides being provided with vertically disposed chambers.

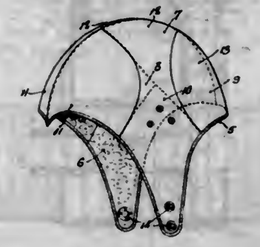


1,687,343. METAL-TANK-JOINT CONSTRUCTION. JAMES PATRICK MADDEN, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 6, 1922. Serial No. 599,411. 7 Claims. (Cl. 220—75.)

1. A metal tank comprising in combination adjacent tank sections continuous around the tank having a liquid-tight joint of great strength connecting them including contact surfaces formed from the metal of said sections closely fitting each other radially and longitudinally interlocked and continuous rings on the inner and outer sides lapping the joined ends if said sections having surfaces of contact so formed as to closely fit corresponding surfaces on said ends and longitudinally interlock therewith, the surfaces of contact being pressed together radially by the tension of the metal comprising said ends and the outer ring.

1,687,344. PLASTIC MATERIAL FORMING AND SMOOTHING DEVICE. WILLIAM G. MANSUY, Detroit, Mich. Filed Feb. 26, 1927. Serial No. 171,097. 5 Claims. (Cl. 72—131.)

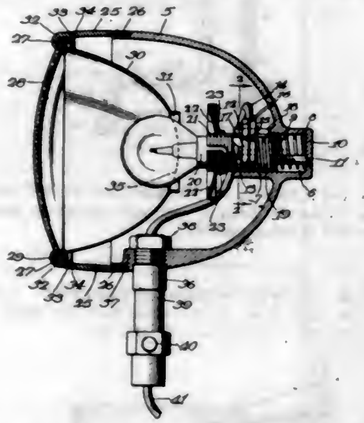
1. A device of the class described comprising: a frame having side rails; a block mounted on each of said side rails; an L shaped trowel forming member mounted on each of said blocks; a guide member carried by said



frame; and a nose on the rearward side of said block projecting outwardly from a vertically extending portion of said trowel forming member.

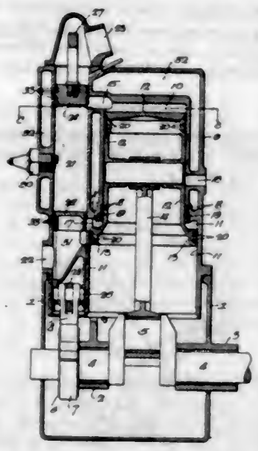
1,687,345. COFFEE-MAKING APPARATUS. ALBERT W. MEYER, New York, N. Y. Filed Nov. 28, 1927. Serial No. 236,291. 6 Claims. (Cl. 53—3.)

1. In a coffee making device, a container, a supporting member having a screw threaded liquid tight removable engagement therewith, and a percolator member supported upon said supporting member and removably held by the container.



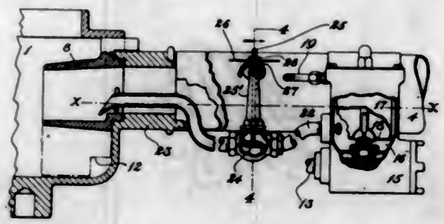
1,687,346. AVIATION CAP. ADOLPH MARTIN MONDL, Oshkosh, Wis. Filed Feb. 7, 1925. Serial No. 7,547. 2 Claims. (Cl. 2—6.)

1. A covering for the head having a closely-fitting portion formed of two front pieces, two side pieces and two rear pieces, the respective pairs being joined on a median



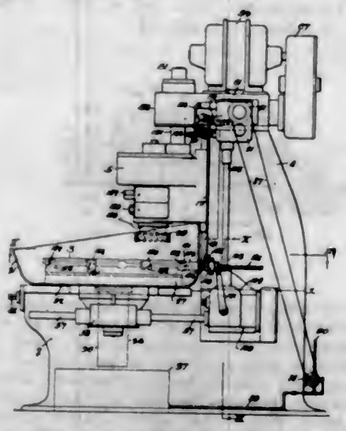
line running fore-and-aft of the helmet, said side pieces extending downwardly to cover the ears and having integrally-formed projections for overlapping and fastening under the chin, said side pieces having concave side-edges for engagement with the corresponding convex side-edges of the adjacent front and back pieces, said side pieces being widened at their upper, joined edges.

1,687,347. LAMP. WALTER W. MORU, Kenosha, Wis. Filed Aug. 12, 1925. Serial No. 49,693. 4 Claims. (Cl. 240—44.)



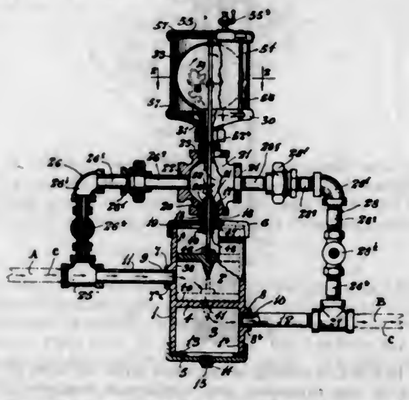
1. A lamp comprising a housing, a receptacle in said housing, an electric bulb socket slidably mounted in said receptacle, means for adjusting said socket to any desired position, a reflector mounted on said socket and movable to or from a source of light carried by said socket, a door mounted on said housing, a lens seated in said door and a reflector also mounted in said door and removable therewith without disturbing any of the aforesad elements of the lamp.

1,687,348. INTERNAL-COMBUSTION ENGINE. HAVILAND H. PLATT, Wallingford, Pa. Filed Feb. 20, 1925. Serial No. 10,547. 11 Claims. (Cl. 123—53.)



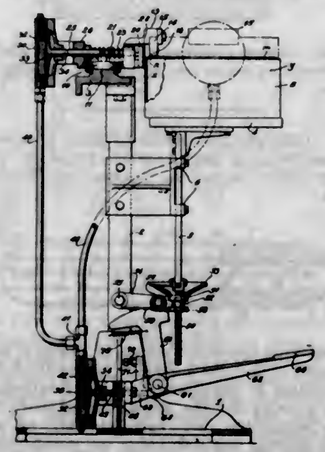
9. The combination, in an internal combustion engine, of a power cylinder having two portions of different diameters, a piston in said cylinder enclosing therein two chambers, a valve cylinder adjacent said power cylinder, a port connecting said valve cylinder with one of said chambers, a second port connecting said valve cylinder with the other chamber, two valves in said valve cylinder controlling said ports, and means external to the valve cylinder for rigidly connecting said valves.

1,687,349. OIL-BURNING APPARATUS. THURE A. QUART, Hartford, Conn. Filed Aug. 26, 1927. Serial No. 215,694. 7 Claims. (Cl. 158—42.2.)



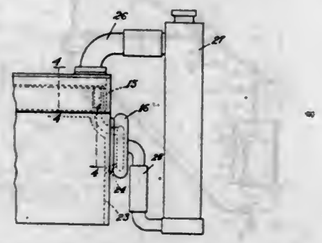
1. Apparatus of the class described including in combination with a gravity feed pipe line leading to a burner from a device for maintaining a constant level of fuel supply, a valve chamber in the pipe line below the predetermined fuel level, a valve seat in said chamber, a sleeve extending from the valve chamber to a point well above the predetermined fuel level, a valve having a stem freely movable in the sleeve and extended thereabove, means including a cam for lifting the valve, and a disk secured to the valve stem for engagement by the cam, the form of said disk being symmetrical so that the valve may rotate about its vertical axis without changing its balance.

1,687,350. CONTINUOUS MILLING MACHINE. ERNEST J. ROLLINGS, Philadelphia, Pa., assignor to Consolidated Machine Tool Corporation of America, Newton Machine Tool Works, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 29, 1923. Serial No. 671,418. 1 Claim. (Cl. 90—20.)



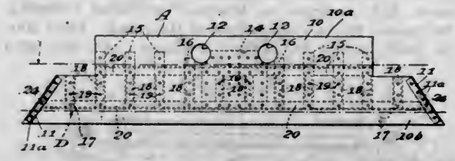
A machine comprising, in combination, a pair of cutters, a revolubly mounted table for carrying work to be machined, a driving shaft having an operative connection therewith for effecting the rotation thereof, a pair of gear-wheel mechanisms operatively associated with the said shaft, each of said mechanisms having an element loosely mounted on said shaft, said elements being spaced apart, a member mounted on said shaft intermediate said elements for axial motion, said member having opposite sides adapted to successively engage complementary arranged sides of said elements whereby a rigid connection may be effected between the element and the slidable member in engagement therewith, lever mechanism actuated at predetermined positions of said table to move said member into engagement with one of said elements, and compressible resilient means for forcing the said member into engagement with the said elements.

1,687,351. GAS SAFETY VALVE. FREDERICK E. SCHOOLFIELD, Covington, Ky. Filed June 17, 1927. Serial No. 199,539. 2 Claims. (Cl. 67—115.)



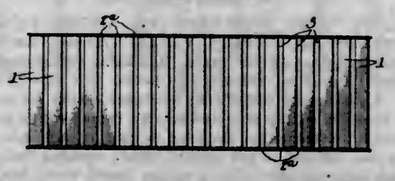
1. In an automatic gas shut-off valve, the combination of a cylinder divided into two chambers, an inlet supply pipe connected to one of said chambers, an outlet supply pipe connected to the other of said chambers, a partition between said chambers having an opening therein, a four-way fitting mounted upon said cylinder, a by-pass leading from said inlet supply pipe to said four-way fitting, a second by-pass leading from said outlet supply pipe to said four-way fitting, an expansible member located above said four-way fitting, a valve stem attached to said expansible member, and a valve on said stem whereby said valve is held in open position providing the gas flow or pressure is normal, substantially as set forth and for the purposes specified.

1,687,352. BOX-COVER-MARGIN TURN-IN MECHANISM AND METHOD. HARRY BRIDGMAN SMITH, New York, N. Y., assignor to Bridgman & Rubin, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 26, 1925. Serial No. 65,028. 4 Claims. (Cl. 93—54.)



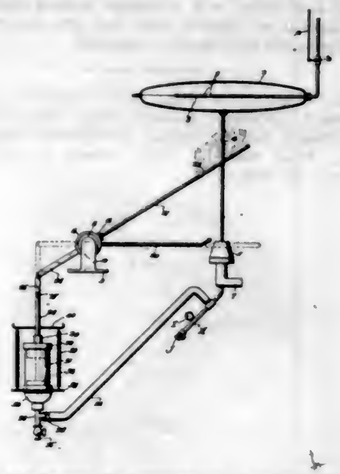
1. A method of turning and affixing cover margins employed in connection with box parts having cover margins projecting beyond the free edges of the side walls, comprising moving the box part in the plane of its bottom and during such movement turning the margin horizontally, then moving the box part substantially in the plane of a side wall and during such movement turning said margin inward against an adjacent inner face of a side wall, and then pressing the margin upon said wall.

1,687,353. CYLINDER HEAD AND COOLING SYSTEM. VERNER J. SWANSON, Quapaw, Okla., assignor to The A. L. Powell Power Company Incorporated, Miles City, Mont. Filed Mar. 30, 1925. Serial No. 19,269. 6 Claims. (Cl. 123—173.)



1. A cylinder head comprising a distributor and a water chamber, a spark plug boss extending thru said water chamber, a wall separating said distributor and chamber and provided with a port extending therethru adjacent said boss.

1,687,354. FREIGHT-CAR-DOOR PLATE. ERNEST W. SYSTROM, Detroit, Mich., assignor to Robert T. Romine, Mount Clemens, Mich. Filed Feb. 5, 1927. Serial No. 166,098. 3 Claims. (Cl. 14—72.)



1. A door plate for freight cars adapted to span the space between a car and a loading dock, said plate having an aperture adjacent one side adapted to register with a stud on the car floor adjacent the door opening when the plate is in operative position, guide means at opposite ends of the plate, and reinforcing means on the under side of the plate adapted to strengthen said plate at its point of bending moment.

1,687,355. ENAMELED SHEET-METAL TILE. WINGATE THOMAS, Chicago, Ill., assignor, by mesne assignments, to Porcelain Tile Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 6, 1926. Serial No. 130,806. 2 Claims. (Cl. 189—85.)

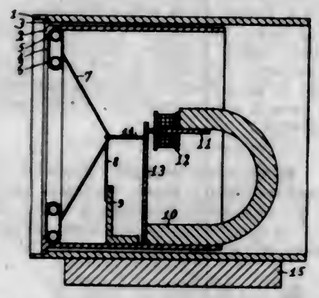
1. A connected set of fractional-length flanged enameled sheet-metal tiles, said set comprising a plurality of fractional-length tiles, and webs connecting the flanges of said tiles, said webs being narrower than the flanges.

1,687,356. GAS BURNER. SIDNEY C. VINCENT, Baltimore, Md. Filed Aug. 19, 1925. Serial No. 51,139. 8 Claims. (Cl. 236—26.)

1. In a gas burner, in combination, a stationary chambered key having a port therein, a sleeve surrounding said key and movable circumferentially of said key, said sleeve being also provided with a port adapted to register with the port in the key, means for supplying gas to said key, a burner carried by the sleeve and communicating with the port therein, means for automatically rocking the sleeve to open or close the ports to permit gas to be supplied to the burner or shut off therefrom.

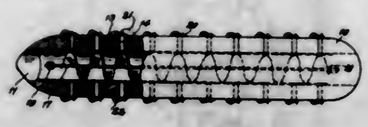
1,687,357. RHEOSTAT. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 23, 1925. Serial No. 17,628. 5 Claims. (Cl. 201—63.)

1. In a rheostat, a metal bar having a threaded insulating covering thereon adapted to receive a helix of resistance metal, said covering comprising opposed sections having threads on their outer edges, and said bar having stops offset from one another longitudinally of the bar for positioning said sections so that the threads on one section will be a definite distance in advance of the threads on an opposing section.



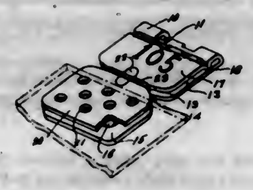
1,687,358. GAS BURNER WITH AUTOMATICALLY-CONTROLLED SAFETY VALVE. HENRIK BACH, Disiosanmartin, Transylvania, Rumania. Filed Apr. 29, 1927. Serial No. 187,610. 2 Claims. (Cl. 67—117.)

1. A gas burner comprising a tubular casing for connection to a gas supply pipe and having flame orifices and an air inlet, a combustion chamber formed in said casing behind the orifices, a gas supply nozzle opening into said casing adjacent the inlet, a spring urged valve having a stem and controlling the admission of gas to the nozzle, means to manually operate the valve, a thermostatic member fixed at one end in the casing and extending through the combustion chamber, a bell-crank lever pivoted in the casing having a short arm pivoted to the movable end of the thermostatic member and a long arm extending longitudinally of the casing adapted to be moved automatically



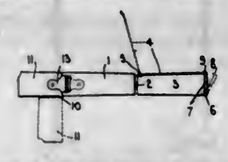
into and out of locking engagement with the stem of the valve by the expansion and contraction respectively of the thermostatic member.

1,687,359. LOUD SPEAKER. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed Oct. 9, 1926. Serial No. 140,621. 7 Claims. (Cl. 181—31.)



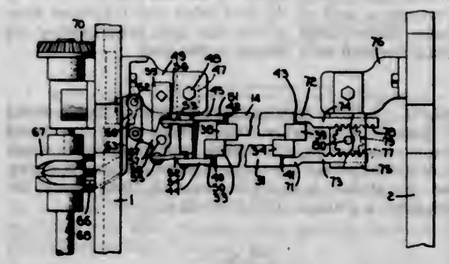
1. A loud speaker comprising a diaphragm and an annulus of stretched fabric contacting with the edge of said diaphragm.

1,687,360. PROPELLING MEANS. JOHN BOLGIANO, New York, and WILLIAM REILLY, White Plains, N. Y. Filed June 13, 1927. Serial No. 198,601. 2 Claims. (Cl. 115—16.)



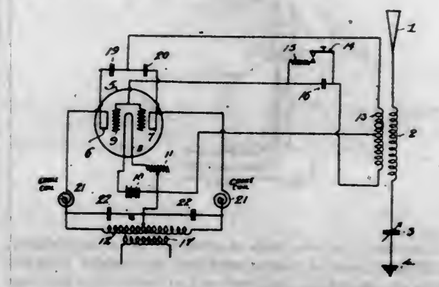
1. A propelling means for vessels by means of an Archimedean screw comprising a channel within the hull of the vessel extending in the direction of the longitudinal axis thereof, a housing for the screw, and a shaft therefor, means for supporting said shaft rotatably, an auxiliary engine for starting and continuing the revolutions of the screw and allowing an uncoupling and coupling of its shaft from and with said engine, and a means for allowing the waste water to be exhausted through openings in said hull.

1,687,361. LAUNDRY-MARKING TAG. EMIL J. CARROLL, Norwood, and GEORGE W. JOHNSON, Bond Hill, Ohio, assignors to The American Laundry Machinery Company, Norwood Station, Ohio, a Corporation of Ohio. Filed Apr. 29, 1927. Serial No. 187,560. 6 Claims. (Cl. 40—23.)



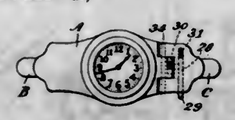
1. A laundry marker comprising a re-usable main portion having self-opening jaws, a destructible and removable clamping means embracing said jaws, and means for preventing jaw releasing movement of said clamping means.

1,687,362. RECEPTACLE FOR USE BY SMOKERS FOR TOBACCO ASH AND THE LIKE. JOHN JAMES BURKE COLE and AILLEEN CHARLOTTE COLE, Hungerford, England. Filed Jan. 7, 1927, Serial No. 159,664, and in Great Britain Jan. 25, 1926. 4 Claims. (Cl. 206—38.)



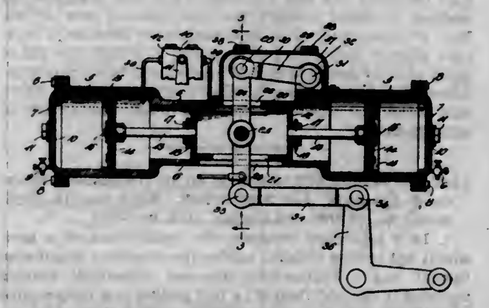
1. A receptacle for use by smokers, comprising an open-topped container for ash provided with a discharge opening, a match box provided with a lid and hinged to the ash container, said match box being foldable into the ash container, and a storage pocket for the ash hinged to the ash container and provided with an opening which communicates with the said discharge opening.

1,687,363. LENO MOTION FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 2, 1927. Serial No. 196,113. 8 Claims. (Cl. 139—53.)



1. In a leno loom comprising a pair of heddle frames having suitable means for controlling the warps, and provided with guideways extending longitudinally of the vertical ends of said frames, means for imparting vertical relative movements to said heddle frames, actuating means engaging the respective guideways at one end of said frames reciprocable in the planes of the respective frames and operable to impart relative transverse movements to said frames alternately in one direction and also to prevent said frames from displacement from their respective vertical planes, complementary guiding members movable horizontally in said vertical planes engaging the guideways at the opposite ends of said frames and means for transmitting the actuated movement of one of said complementary members to the other, but in the opposite direction.

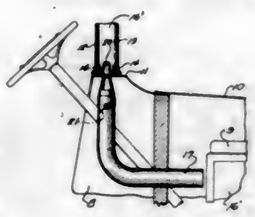
1,687,364. RADIO TRANSMITTING SYSTEM. LEE DE FOREST, New York, N. Y., assignor to De Forest Radio Telephone & Telegraph Company, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 18, 1919. Serial No. 277,826. 4 Claims. (Cl. 250—17.)



1. In a transmitting system, the combination with a vessel having a hot electrode, a pair of separated plate electrodes and a grid electrode interposed between each of said plate electrodes and said hot electrode, an oscillating circuit connecting said plate and grid electrodes, a source of alternating currents, means for associating said plate electrodes with said source, and a signaling device included in said oscillating circuit.

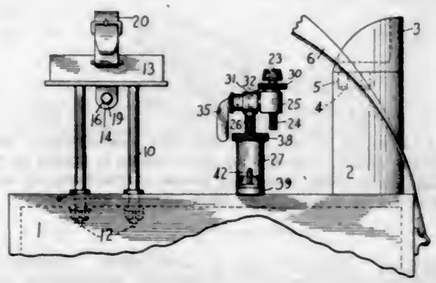
1,687,365. WRIST WATCH. GEORGE P. DIKE, Brookline, Mass. Filed Oct. 18, 1926. Serial No. 142,298. 11 Claims. (Cl. 224—4.)

1. A device of the class described, comprising a body portion, a pair of open arms one of which is hinged to the body portion, and unyielding means at the hinge to hold the arms in substantially fixed clasping position.



1,687,366. REVERSE-GEAR ACTUATOR. ROBERT L. DOOLITTLE and WILLIAM C. HUNTER, Montgomery, Ala. Filed July 1, 1926. Serial No. 119,915. 5 Claims. (Cl. 121—40.)

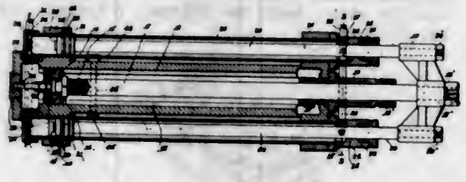
4. In a fluid-controlled mechanism, two opposed cylinders having openings in their outer ends and screw plugs normally closing said openings, rigidly connected pistons in



said cylinders, and two screws insertible through said openings into contact with both pistons, upon removal of said plugs, to lock said pistons against movement in either direction in case of emergency.

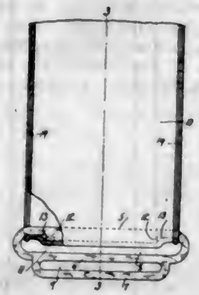
1,687,367. WINDSHIELD FOR VEHICLES. ERNEST E. HILLS, Oshkosh, Wis. Filed Nov. 29, 1926. Serial No. 151,561. 2 Claims. (Cl. 20—40.5.)

1. The combination with a vehicle, of a windshield, comprising a pair of glazed members interposed between portions of the vehicle and enclosed at their edge portions to form a compartment, one of said glazed members being fixed and the other being removable, an elongated hollow heat discharging member extending longitudinally along the bottom portion of the compartment, one wall of said member being provided with a plurality of discharge apertures, and means for conducting heated air to said heat discharging member.



1,687,368. APPARATUS FOR TREATING THE FEET. LESTER J. KARPF, Dayton, Ohio. Filed Apr. 7, 1922. Serial No. 550,528. 4 Claims. (Cl. 128—69.)

1. In a device of the character described, means to support the front and rear portions of the foot, a supporting member arranged beneath the intermediate part of the foot, a bracket carried by said supporting member, a pressure member comprising a head and a shank, the shank being slidably mounted in said bracket and held against rotation therein, and a nut threaded onto said shank above said bracket to adjust said pressure member relatively to said bracket.



1,687,369. HYDRAULIC BROACHING MACHINE. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Dec. 18, 1925. Serial No. 76,309. 39 Claims. (Cl. 60—52.)

1. In a broaching machine, the combination of a horizontal bed having integral guideways extending lengthwise thereof and a horizontally disposed cylindrical bearing mounted in one end thereof; a tool pulling ram reciprocable in said bearing; a tool supporting member detachably secured to one end of said ram and slidable on and between said guides; a member secured to and projecting laterally from the other end of said ram; hydraulic means for actuating said ram, said means including a piston enclosed in a cylinder parallel to and alongside said ram, said piston being connected to said projecting member; and means for

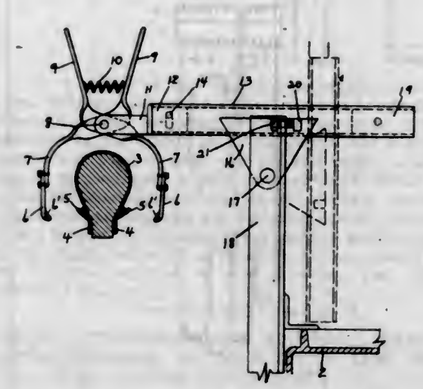
delivering liquid into said cylinder against the entire surface of one end of said piston during the pulling operation of said ram.

1,687,370. SUSPENDER-END LOOP. JEROME R. LA VIGNE, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed June 29, 1927. Serial No. 202,180. 1 Claim. (Cl. 24—265.)

A sheet-metal suspender-end loop having parallel upper and lower bars located in the same plane, a long narrow parallel slot between the said bars for the passage of the webbing, and a restraining-offset formed upon the lower edge of the upper bar, integral therewith, located in the plane of the said bars, having a straight lower edge projecting into the said slot and shorter than the same, the said offset being shaped at its ends to form angular retaining-shoulders projecting into the said slot, whereby the edges of the piece of webbing, passed through the said slot and looped over the said upper bar and the said restraining offset, are engaged by the angular shoulders at the respective ends of the said offset and prevented from sidewise displacement in the said slot, thus keeping the webbing centered with respect to the loop.

1,687,371. RADIO RECEPTION INSTRUMENT. JESSE C. LEEPER, Des Moines, Iowa, assignor, by direct and mesne assignments, of forty-five one-hundredths to Grant E. Brayton and ten one-hundredths to Clarence R. Townsan, Des Moines, Iowa. Filed June 13, 1927. Serial No. 198,433. 2 Claims. (Cl. 250—14.)

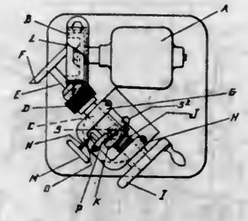
1. An instrument of the class described, comprising a metallic casing adapted to be in contact with the user of the instrument, a telephone receiver mounted in said casing,



a pair of terminal posts for said receiver, a detector crystal supported on one of said posts and a cat-whisker supported on the other of said posts to coact with the crystal, both of said posts being included in a radiant energy receiving circuit, one of which is connected to the metallic casing.

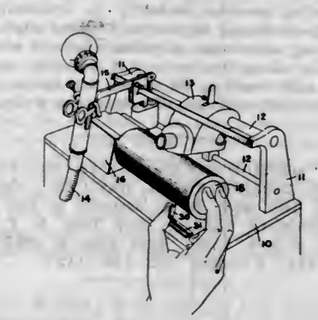
1,687,372. SHOE FASTENING. ROBERT C. LEGAT, New Britain, Conn., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 10, 1928. Serial No. 276,650. 7 Claims. (Cl. 24—163.)

1. A fastening of the class described comprising a buckle member adapted to be attached to a strap, and a hook member adapted to be attached to another strap, the hook member having a hook portion hooking edgewise over the first strap and having a slot behind the hook portion thereof adapted to receive the second strap, so that the two straps are connected by engaging the hook portion behind and beneath the buckle.



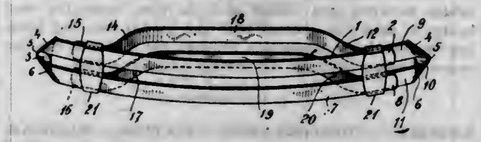
1,687,373. TIRE-BUILDING MACHINE. PAUL W. LEHMAN, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 4, 1926. Serial No. 113,705. 3 Claims. (Cl. 154—9.)

1. A device of the character described comprising a rotatable core adapted to support a tire carcass, a folding member in the form of a hook having a bead engaging edge, means to position said member adjacent the core with the point of the hook spaced radially inwardly from the edge of the carcass plies and means to move said member to insert the point of the hook between the core and the carcass plies and bring said bead engaging edge against the outer face of the bead portion of the carcass.



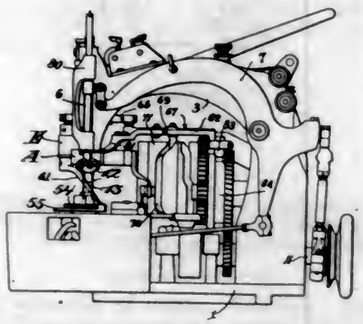
1,687,374. VALVE-RESURFACING MACHINE. FRANK E. LONGLEY, Lynn, Mass. Filed June 8, 1927. Serial No. 197,482. 2 Claims. (Cl. 51—131.)

1. The combination in a valve grinding mechanism, a grinding element, an adjustable support for the valve to be ground, means for holding said support in adjusted position at an angle with respect to the grinding element and to one side thereof, a shaft on the support and having a chuck thereon for gripping the valve stem, a collar on the shaft, a yoke on the support and engaging the shaft, a positively adjustable element acting upon the yoke to move the shaft and valve toward the grinding element, and a spring surrounding the shaft and engaging the collar and exerting



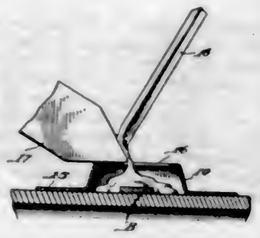
its pressure axially thereof to urge the valve against the adjustable means to normally cushion and resist the movement of the valve toward the grinding element.

1,687,375. EJECTOR. JOSEPH M. LUCARELLE, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Oct. 27, 1923. Serial No. 671,192. 11 Claims. (Cl. 274—17.)



1. In combination, a frame, a record-support mounted thereon, an ejector-head for engaging a record held on the support and adapted to move the record longitudinally of the support, and means mounted on the frame for operating the ejector-head including a finger-piece movable in a horizontal plane parallel to the horizontal plane in which the record moves when ejected, located adjacent the discharge end of the record-support and in a plane cutting the record between its ends so that an operator's finger may receive the record from the record-support while part of the same hand operates the finger-piece.

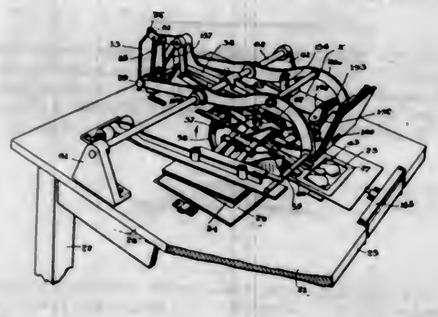
1,687,376. DUPLEX BUFFER CONSTRUCTION. GEORGE ALBERT LYON, Allenhurst, N. J., assignor, by mesne assignments, to American Chain Company, Inc., a Corporation of New York. Filed May 19, 1923, Serial No. 640,089. Renewed Aug. 20, 1926. 15 Claims. (Cl. 293—55.)



14. A horizontally resilient and vertically rigid automobile bumper comprising an impact receiving portion formed with duplex integral bars one above the other and extending approximately from end to end of the bumper.

1,687,377. SEWING AND EDGING MACHINE. KARL MAIER, Stuttgart, Germany, assignor to Union Special Maschinenfabrik G. m. b. H., Stuttgart, Germany. Filed Aug. 3, 1926, Serial No. 126,844, and in Germany Aug. 24, 1925. 8 Claims. (Cl. 112—64.)

1. A sewing machine including in combination, oscillating thread laying fingers for forming edging loops, stitch forming mechanism including a pair of needles for securing the edging lops to a body material, means for oscillating said thread laying fingers, and means for shifting the center of oscillation of said thread laying fingers.



1,687,378. METHOD OF AND APPARATUS FOR SOLDERING CABLE-BONDING DEVICES. ADOLPH Z. MAMPLE, Glen Rock, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed June 8, 1927. Serial No. 197,434. 6 Claims. (Cl. 113—112.)

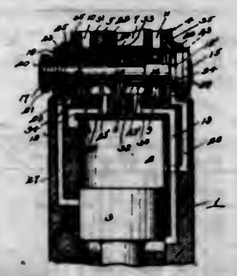
1. The method of soldering metals together without injury to the metals, which consists in positioning a heated soldering iron in spaced relation to the contacting metal articles, melting solder by the heat of the iron and directing the liquefied solder upon the metals at their point of contact, confining the melted solder until it forms a bridge between said metals and the iron, remelting said bridge of solder by contact with the heated iron and heating the metals by conduction through the solder to thereby cause a union between the metals and the solder.

1,687,379. PHOTOGRAPHIC-PRINTING MACHINE. MAURICE METZGER, Montreal, Quebec, Canada. Filed July 11, 1925. Serial No. 42,912. 13 Claims. (Cl. 95—73.)

1. In a photographic printing machine, a plurality of photographic printing paper holding means, a plurality of printing frames equipped with complementary negatives, mechanical means for operating the paper holding means to pass the printing paper over each frame and means for

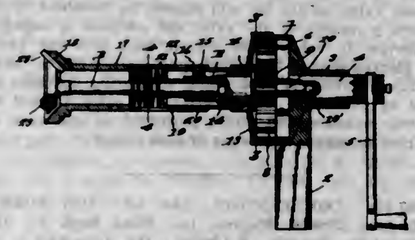
automatically guiding each holding means so that the printing paper will be subject to successive exposures from said frames in its passage through the machine.

1,687,380. GLOVE. WALLACE E. MEYERS, New York, N. Y. Filed Aug. 19, 1927. Serial No. 214,173. 1 Claim. (Cl. 2—162.)



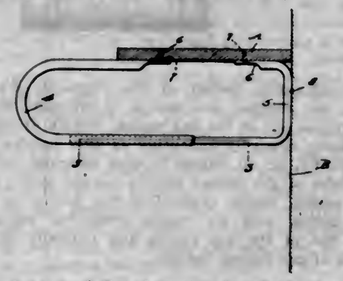
As a new article of manufacture, a glove and a cuff thereon, said cuff secured to the edge of the glove by a line of stitching located intermediate the edges of the cuff whereby the cuff may be reversed and folded to vary the appearance of the same.

1,687,381. VALVE FOR ROCK DRILLS. GUSTAVE M. NELL, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Sept. 24, 1923. Serial No. 664,438. 2 Claims. (Cl. 121—28.)



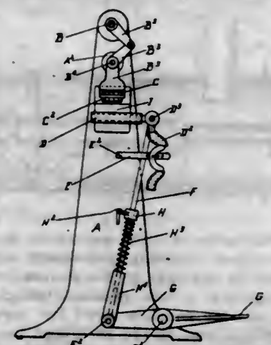
1. The combination with a cylinder, of a piston mounted therein, a valve chest for the cylinder, a rod fixed axially in the chest, said chest being connected with the cylinder through distributing and exhaust ports, a valve in the chest for slidably engaging the rod and controlling the distribution of fluid to and from the cylinder, said valve including a collar and end sleeves, said sleeves being each provided with a plurality of diverging webs defining annular end grooves and a central groove for controlling the distribution of fluid to and from the cylinder through

the distributing and exhaust ports, said valve also having end flanges, said chest having pressure chambers at each end, and means controlled by the piston for admitting



fluid under pressure alternately to the pressure chambers and against the flanges, and means for exhausting fluid from said chambers.

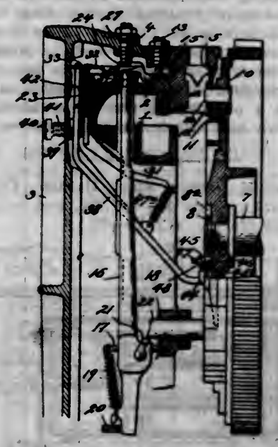
1,687,382. VALVE GRINDER. JOSEPH M. NORTH, Arnold, Kans. Filed Apr. 7, 1926. Serial No. 100,429. 2 Claims. (Cl. 82—1.)



1. In a device of the character described, a casing, a cap threaded on one end of the casing and including a tubular extension projecting centrally therefrom, a shaft journaled in the other end of the casing and having a longitudinal bore, a crank arm on said shaft, a pinion carried by said arm, a ring gear arranged within the casing and meshing with said pinion, a chuck journaled in said tubular extension and including a shaft journaled in said bore of the aforementioned shaft, a pinion carried by the chuck and meshing with the first mentioned pinion, a sleeve mounted on said extension, and cutters carried by said sleeve.

1,687,383. CLOTHES-HANGER SUPPORT. MINNIE B. O'NEIL, Pittsburgh, Pa. Filed July 17, 1926. Serial No. 123,152. 1 Claim. (Cl. 211—87.)

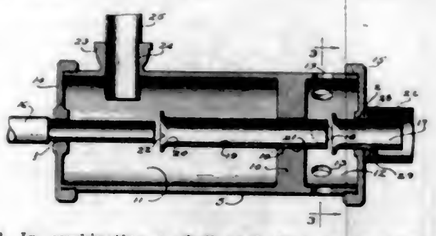
In a hanger of the character described adapted to be mounted upon the underside of a shelf projecting forwardly from the wall of a closet or the like, a pair of substantially U-shaped members secured beneath the shelf, one member having a relatively straight bight portion adapted to abut against the wall, said members each having its lower leg relatively long as compared with the upper, the lower legs being telescopically engaged and the upper legs being directed toward each other and terminating in spaced relation and secured to the under side of the shelf, said telescopic engagement permitting adjustment to fit the device beneath shelves of different sizes.



1,687,384. SHOE MACHINERY. GEORGE G. PERKINS, Lynn, Mass. Filed July 11, 1927. Serial No. 204,702. 10 Claims. (Cl. 12—78.)

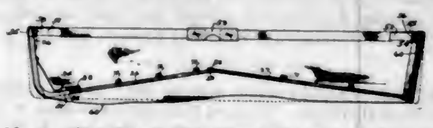
2. In a machine of the kind described, an edge iron formed of separate units adjustable with respect to each other, and each unit having a curved face adapted to provide in assembly a corrugated surface, means for oscillating said iron against material on which a finish is to be applied, and adjustable means for pressing said material against said iron, said means mounted for limited movement in two directions during the pressing operation.

3. In a machine of the kind described, an edge iron, means for oscillating said iron against material on which a finish is to be applied, and adjustable travelling means for pressing said material against said iron, said travelling means comprising a W shaped pressure arm.



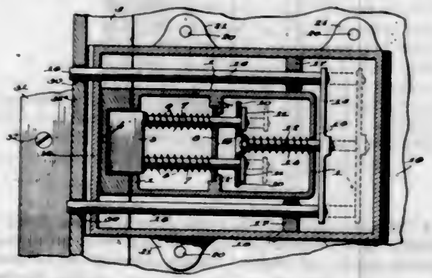
1,687,385. SAFETY STOP MEANS FOR TYPOGRAPHICAL MACHINES. WILLIAM PETERSON, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 23, 1927. Serial No. 242,187. 10 Claims. (Cl. 199—52.)

1. In a machine of the class described comprising an elevator for conducting lines of matrices to different casting levels and means capable of being set manually to stop the elevator at the different casting levels a mold adapted to cooperate with the elevator at one of said levels only, and means positioned by the bringing



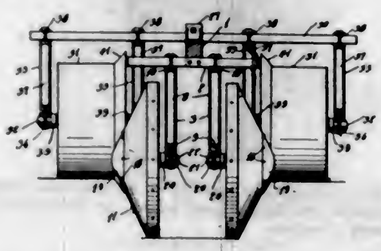
of said mold into casting position, to stop the elevator in the event the elevator stopping means is set to stop the elevator at a level other than that at which said mold is adapted to cooperate with it.

1,687,386. LIQUID-FUEL BURNER. JOHN H. REEVE, Portland, Oreg. Filed Jan. 4, 1928. Serial No. 244,450. 2 Claims. (Cl. 158—99.)



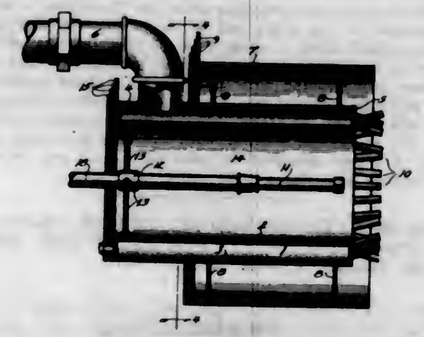
1. In combination a shell perforated for part of its length, a partition extending transversely within the shell and disposed to one side of the perforation and having a central opening, a tube passing through the opening and having one end flared, a liquid fuel supply pipe passing through one end of the shell and having its inner and disposed to one side of the perforations and having tube, an outlet pipe passing through the opposite end of the shell and having its inner end flared and disposed in close proximity to the adjacent end of the tube, and means for discharging steam in the shell in the vicinity of the liquid fuel supply pipe.

1,687,387. COLLAPSIBLE BOAT. NELSON M. RIEGER, Dayton, Ohio. Filed Jan. 17, 1927. Serial No. 161,573. 13 Claims. (Cl. 9—2.)



13. A collapsible boat having a frame and a skin in which the frame is enveloped; said frame comprising an articulated keel, a stem attached to one end of the keel and a transom-board attached to the other end of the keel, said keel serving as a toggle as its members are forced to a rectilineal position, whereby to press the stem one way and the transom-board the other way, to stretch the skin longitudinally; gunwales to which said skin is attached, and a plurality of ribs connected to the keel and having their ends attached to said gunwales.

1,687,388. LOCK. JORGE RIGO, Habana, Cuba. Filed July 23, 1927. Serial No. 207,990, and in Cuba July 30, 1926. 13 Claims. (Cl. 70—29.)

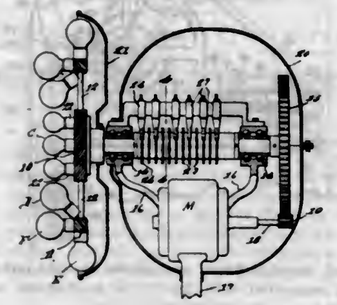


1. In a lock, two separate latch bolts, and means of connection between said bolts key-operable from the exterior of the door coincidently to retract both latch bolts and manually operable similarly and coincidently to retract from the inside of the door.

1,687,389. LAND ROLLER. EDWIN RINGEL, Alma, Kans. Filed Nov. 3, 1927. Serial No. 230,837. 1 Claim. (Cl. 55—6.)

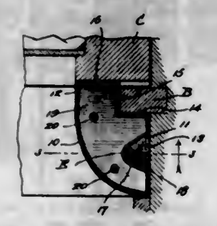
A land roller, comprising a draft tongue, a frame secured thereto, supporting members carried by said frame, axles carried by said supporting members, conical rollers journaled on the axles and adapted to engage in a furrow to break clods therein and pack the ground on planted seed, a beam loosely connected to the tongue, a frame carried by said beam, supporting members carried by the frame, axles carried by pairs of said supporting members, and rollers journaled on said axles and adapted to engage the ridges of said furrow.

1,687,390. COMBINATION GAS AND OIL BURNER. EUGENE RITTER, Monroe, La. Filed Sept. 27, 1927. Serial No. 222,342. 2 Claims. (Cl. 158—11.)



2. A combination burner of the character described, including an annular gas casing, a circular series of nozzles at one end of the gas casing, certain of said nozzles inclining inwardly and other of said nozzles inclining outwardly, an oil burner located centrally relatively to the series of gas burner nozzles, an air casing around the gas casing, means controlling the admission of air to said casing, said air casing projecting beyond the forward end of the gas casing and partially enclosing the series of gas burner nozzles.

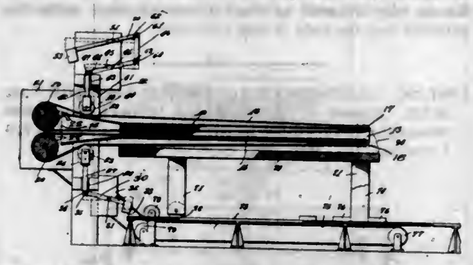
1,687,391. DISPLAY APPARATUS. ORESTE SAMMINIATELLI, East Toledo, Ohio. Filed Dec. 6, 1926. Serial No. 152,950. 1 Claim. (Cl. 240—9.)



In an electrically operated display device, a standard, an electric motor mounted thereon, a housing enclosing the motor, bearing arms extending from the motor and

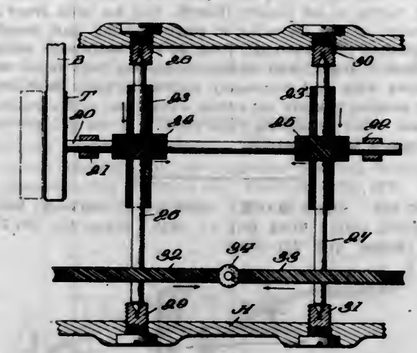
located within the housing, a shaft mounted in the bearing arms and extending through the housing, a display device mounted upon the outer end of the shaft, means located within the housing and operatively connecting the shaft of the motor and the bearing arm shaft to operate the latter and rotate the display device, electric

elements included in the display device, collector rings carried by the bearing arm shaft and electrically connected with the electric elements, a supporting arm carried by the bearing arms, and brushes secured to the supporting arm and engaging the collector rings for connection with a source of current.



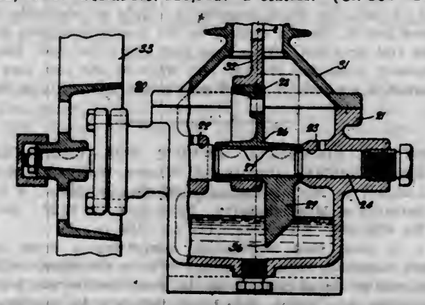
1,687,392. WEATHER SHIELD FOR WINDOWS. EVELYN OSTBERG SCHAFFERT, New York, N. Y. Filed Jan. 6, 1927. Serial No. 159,851. 1 Claim. (Cl. 20—52.4.)

A weather shield for windows, comprising a strip of material secured to the upper face of the end of the lower sash having yieldable edges engaging respectively with the surface of the window frame, the iner surface of the parting strip and the inner surface of the side rail of the upper sash, said shield having an aperture accommodating the sash cord of the lower sash and having a slit extending inwardly from the edge of the shield, communicating with the sash cord aperture to facilitate the mounting of the device the aperture inset from the edge and completely surrounding the cord, the said shield having a reinforcing piece of non-yieldable material overlying and of lesser area than the same, said reinforcing piece having a V-shaped notch coinciding with the apertured and slitted portion of the shield to allow for the flexing of the shield adjacent the aperture and slit when applying the same over the sash cord, and means extending through the reinforcing piece and the shield and anchored in the lower sash for retaining the device in place.



1,687,393. UPHOLSTERY MACHINE. HARRY MURPHY SCOTT, Chickasha, Okla., assignor to Oliver M. Burton, Chicago, Ill. Filed Jan. 16, 1928. Serial No. 247,192. 7 Claims. (Cl. 226—45.)

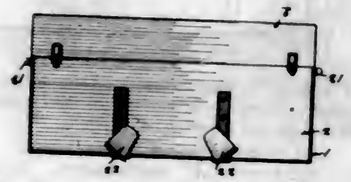
1. A device of the character described comprising a frame, a filler tube mounted on the frame and adapted to support a piping, endless belts trained through and around the tube, means for driving the belts, means for



feeding a filler to a portion of the belts moving into the tube, said belts carrying the filler to the opposite end of the tube and forcing the same into a piping.

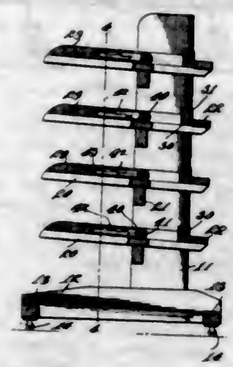
1,687,394. CENTRIFUGAL SEPARATOR. DAVID T. SHARPLES, West Chester, Pa., assignor to The Sharples Separator Company, West Chester, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1925. Serial No. 25,335. 13 Claims. (Cl. 233—23.)

1. In a centrifugal separator, a vertical stationary jacket, a centrifugal bowl disposed therein, a driving head having a bowl connection and mounted for pivotal movement with regard to said jacket, means to positively aline said bowl connection with said bowl, means to lock said head and said bowl in alinement and means to disengage said alining means following release of said locking means and to permit movement of said driving head to a position in which it allows the upward withdrawal of said bowl from said jacket.



1,687,395. REFRIGERATING APPARATUS. WALTER E. SHEW, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed July 21, 1926. Serial No. 123,921. 2 Claims. (Cl. 184—13.)

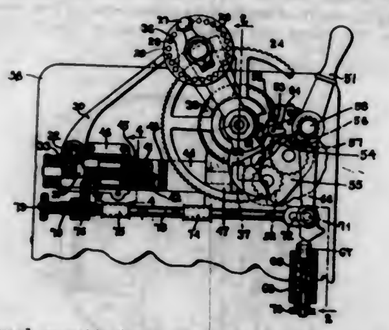
1. In a compressor for refrigerators, a crankcase adapted to contain a quantity of lubricant, and a crankshaft car-



rying a counterbalance adapted to be immersed within the lubricant, the outer periphery of said counterbalance having an edge adapted to effect a non-splashing wedge-like entrance into the body of said lubricant.

1,687,396. AUTOMOBILE TRUNK AND LUGGAGE CARRIER. ALBERT L. SHIDLER and HERMAN H. MOOTZ, Sioux City, Iowa. Filed Jan. 7, 1927. Serial No. 159,710. 7 Claims. (Cl. 224—29.)

4. A combined automobile trunk and luggage carrier comprising a stationary section adapted to be mounted on an automobile and having side walls, a bottom wall, a rear wall having a lid hinged thereto, and an open front; a movable section including a vertical front wall member adapted to close the open front of said stationary section to form a trunk, and means connecting said front wall member with said stationary section to allow said front wall member to move outwardly away from said stationary section while remaining constantly in a vertical position to form a luggage carrier.



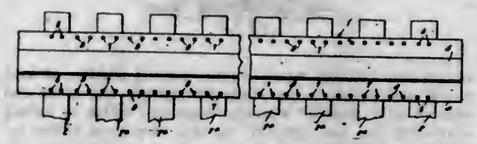
1,687,397. SHOE RACK. CHARLES E. SHIVELY, Portsmouth, Ohio. Filed July 11, 1928. Serial No. 291,754. 4 Claims. (Cl. 211—34.)

1. A rack for shoes comprising a pair of vertically disposed panels, shelves secured to the panels in spaced relation and provided with a heel rest and a toe rest, means pivotally mounting the toe rest whereby the rest may be located in a plurality of different positions on the shelves.

1,687,398. SIGNALING DEVICE FOR CROSS-FEED MECHANISMS. HERBERT A. SILVEN, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1923. Serial No. 633,183. 8 Claims. (Cl. 51—165.)

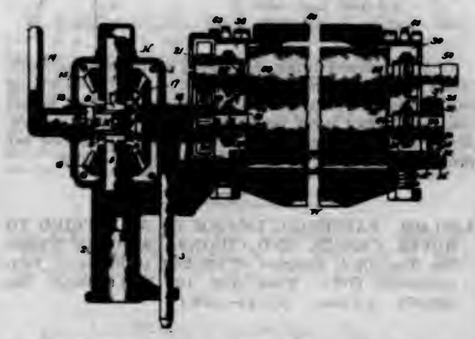
1. A cross feed mechanism comprising a cross feed screw, manually operative means to move the same, a screw operated in timed relation to the cross feed screw, a non-rotatable nut thereon moved longitudinally by rotation of the screw, a positive stop for checking the rotation of said screw, which is engaged by said nut and shifted from an inoperative to an operative position, a power driven shaft, a load and fire operated clutch mechanism to connect the power shaft with the cross feed screw, and an adjustably

positioned, movable finger engageable by said nut and operatively connected with the clutch mechanism to throw the clutch.



1,687,399. WELL-PUMPING APPARATUS. RICHARD P. SIMMONS, New York, N. Y. Filed Aug. 16, 1927. Serial No. 213,381. 3 Claims. (Cl. 103—5.)

1. In a well pumping apparatus, a plurality of pump units adapted to be arranged in spaced relation within a well, each of said pump units including a casing, driven rotatable screws within said casing, inlets in said casing at the outer ends of said screws, an outlet in said casing intermediate the ends of said screws, discharge piping connecting the outlet of one pump unit with the inlet of the next higher pump unit and with the outlet of the uppermost unit with the surface of a well, transmission means between the driven screws of the respective pumps for simultaneously operating all of said pumps in unison, and a compressed air line tapped into said discharge piping at suitable points therealong for assisting said screws in lifting the pumped fluid through said piping.

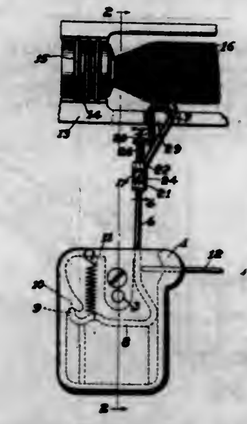


1,687,400. RAILWAY RAIL. CHARLEY H. SLOAN, Manning, Kans. Filed July 1, 1926. Serial No. 119,879. 1 Claim. (Cl. 238—125.)

A rail having a web of uniform thickness throughout its entire height and length and having a comparatively wide base provided with a comparatively thick central portion, the base being of uniform width throughout its entire length and provided with pairs of end openings, pairs of intermediate main openings and pairs of intermediate auxiliary openings all spaced a similar distance inwardly from the edges of the base, the intermediate auxiliary openings being arranged between the auxiliary main openings and between the end openings and the auxiliary main openings, the respective pairs of intermediate main and intermediate auxiliary openings being similarly

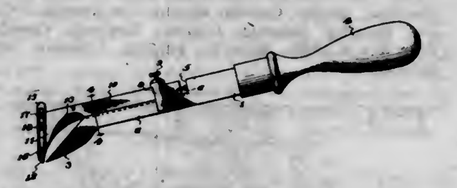
spaced and the units of the respective pairs of these openings being arranged three inches apart, the respective pairs of end openings being spaced from the adjacent intermediate auxiliary openings a greater distance than the space between the intermediate auxiliary and intermediate main openings, and the units of the respective pairs of end openings being spaced two inches apart.

1,687,401. WRINGER. HOWARD F. SNYDER, Newton, Iowa, assignor, by mesne assignments, to The Maytag Company, Newton, Iowa, a Corporation of Delaware. Filed Nov. 11, 1920. Serial No. 423,225. 12 Claims. (Cl. 68—32.)



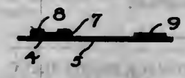
1. In a wringer, a gear casing having a bearing in one wall thereof, a shaft operable in said bearing, a gear on one end of said shaft within the casing and adapted to mesh with a driving gear, a gear at the other end of said shaft and adapted to drive a wringer roll, a wringer roll having a shaft, and a readily separable connection between said shafts.

3. In a wringer, a wringer roll having a shaft, a shiftable drain board below said roll, drain board actuating means frictionally engaging said wringer roll shaft, means for adjusting the frictional contact pressure, and connections between said drain board actuating means and said drain board so that the latter will be caused to shift upon reversal of direction of rotation of the wringer roll so as to draw the escaping water in the desired direction.



1,687,402. FEELER MECHANISM FOR LOOMS. ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 7, 1928. Serial No. 252,472. 5 Claims. (Cl. 139—278.)

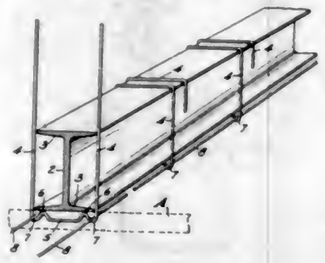
1. A feeler mechanism for looms having a side slipping feeler with a toothed engaging tip, in combination with a vertical standard extending from the feeler near its tip end and having an unthreaded aperture, a shuttle feeling finger having a threaded shank of less diameter than the diameter of the unthreaded aperture and provided with a rounded shuttle engaging head frontward of the toothed engaging tip adapted to be encountered by the slip laterally upon the front wall of the shuttle when the feeling tip does not make restraining contact with the filling, and adjusting nuts threaded upon the shank of the shuttle



feeling finger and having centering projections extending into the unthreaded aperture to maintain the feeling finger centered in the aperture.

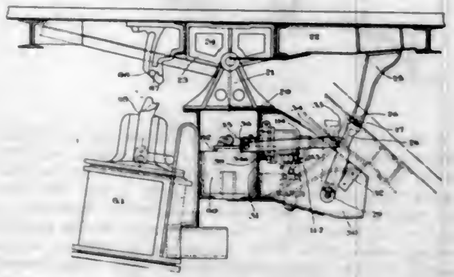
1,687,403. GAINING TOOL. MARTIN A. STAFFORD, deceased, Harvard, Ill., by Catherine Stafford McFarlin, administratrix, Harvard, Ill. Filed June 23, 1927. Serial No. 200,970. 1 Claim. (Cl. 145—1.)

A hand tool comprising a stem having an upstanding shoulder near its rear end and a downwardly and forwardly inclined routing bit as its front end, a second stem resting upon and slidable longitudinally on the first stem and having tongue and groove engagement therewith, a head at the front end of the second stem having parallel scoring points at its lower end to run in advance of the routing bit, the sides of said second stem being beveled downwardly immediately at the rear of the head, a yoke secured upon the first stem and spanning the second stem, a set screw in said yoke bearing against the second stem, and an abutment screw threaded in the rear end of the second stem and bearing against the upstanding shoulder on the first stem.



1,687,404. PAPER-HOLDING DEVICE. SAMUEL STOWELL, Vancouver, British Columbia, Canada. Filed Jan. 24, 1927. Serial No. 163,239. 1 Claim. (Cl. 101—408.)

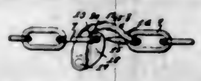
The combination with a printing press having a type supporting bed and a paper sheet carrying platen adapted to approach and recede from each other, and a pair of grippers adapted for movement to and from the platen, of a finger comprising a strip of sheet material having a pair



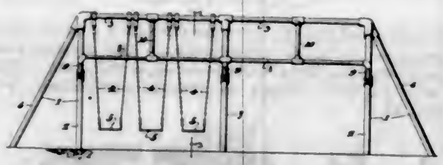
of opposed tongues adapted to embrace one of the grippers and a resilient non-metallic pad upon the finger which is adapted to be engaged by the bed or its type for exerting pressure therethrough to the paper sheet.

1,687,405. CONCRETE REENFORCEMENT. JAMES M. STRAUB, Pittsburgh, Pa., assignor to Electric Welding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1926. Serial No. 156,098. 2 Claims. (Cl. 72—109.)

1. A reenforcing clip for concrete construction consisting of a continuous single member rod bent to provide parallel side arms and acute angle inwardly open corner loop portions providing bearing abutments for contact against a structural member and open recesses for reenforcing members laid longitudinally of the structural member.



1,687,406. DIRECTION VALVE FOR OPERATING DUMP CARS. ERNEST R. VIDEAU and ALFONZ L. LINDENBLAD, Montreal, Quebec, Canada, assignors to Canadian Car and Foundry Company Limited, Montreal, Canada. Filed Nov. 6, 1926. Serial No. 146,703. 7 Claims. (Cl. 303—48.)



3. In a dump car, a direction valve comprising, a valve casing, a chamber formed in the side of the casing, an inlet port to said chamber, an exhaust port, a valve for closing said exhaust port, fluid operated means for simultaneously closing said exhaust port and opening said inlet port, both of which are in vertical alignment with one another, cushioning means between the exhaust valve and the fluid operated means, a spring for closing the inlet port valve, a sleeve valve mounted in the chamber and a disc valve also mounted in the chamber, said disc valve having an arm contacting with the end of the sleeve valve substantially as described.

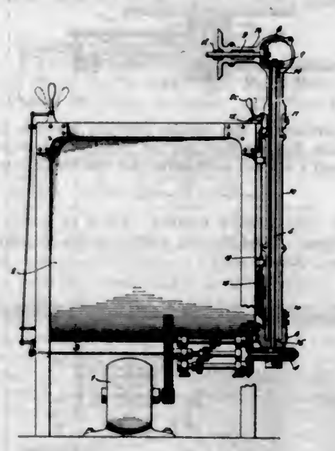
1,687,407. AUTOMOBILE SKID CHAIN. ELI E. WAGNER, Lewistown, Pa. Filed Nov. 22, 1927. Serial No. 235,000. 2 Claims. (Cl. 24—68.)

1. A coupling device for the ends of a side chain of an anti-skidding attachment comprising a hook element formed of a shank terminating at one end in a laterally disposed bill to engage one the end links of the side chain, said shank including an angularly disposed curved portion for extension through the other end link of the chain, and a shiftable curved member pivoted at its outer end to the outer end of said curved portion and further adapted to have its inner end pivotally connected to the last mentioned end link of the chain, the curved portion of said shank positioned against and shiftable on the inner end edge of said member whereby when the latter is swung outwardly the end links of the side chain are pulled together and secured in position with respect to the tire when the bill is in engagement with one of said end links.

1,687,408. PLAYGROUND SWING. WILLIAM O. T. WATKINS, Little Rock, Ark. Filed June 14, 1927. Serial No. 198,834. 4 Claims. (Cl. 155—64.)

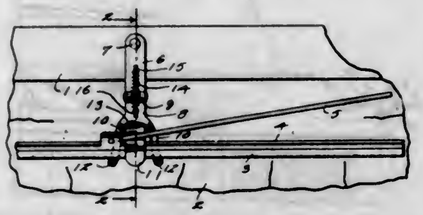
1. A playground swing, comprising an overhead support, cables suspended from said support, a safety-restraining bar positioned in the path of swing of the cables to one side thereof and lower than the overhead support and adjacent a medial line passing through the cables, said bar functioning to limit the forward swing of the cables.

1,687,409. FASTENING DEVICE TO BE APPLIED TO ROPES, CABLES, AND CHAINS. REINHOLD WEBER, San Toy, Ohio, assignor of one-half to Frank A. Ray, Columbus, Ohio. Filed Aug. 16, 1926. Serial No. 129,357. 1 Claim. (Cl. 24—129.)



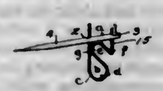
A fastening device for ropes, cables, or chains comprising an eye construction with a straight shank leading therefrom and forming an integral part thereof, a lateral curved portion forming an integral part of said shank, said curved portion being bent in the form of a spiral continuing more than one complete revolution, the free end portion of the spiral being suitably spaced from the first part of the spiral so as to receive the rope.

1,687,410. RUBBER-BONDED ABRASIVE ARTICLE AND METHOD OF MAKING THE SAME. DUANE E. WEBSTER, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 30, 1925. Serial No. 65,899. 5 Claims. (Cl. 51—280.)



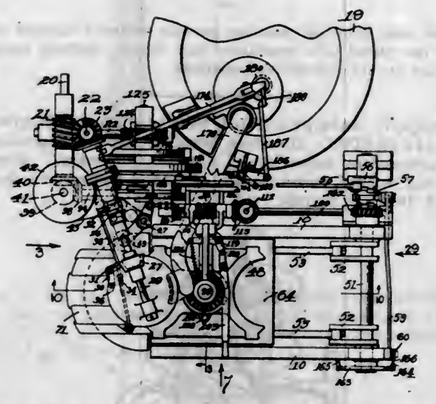
1. The improvement in the manufacture of rubber bonded abrasive articles comprising mixing rubber latex, a vulcanizing agent and an accelerator, and abrasive grains, coagulating the mixture thus obtained, and thereafter vulcanizing the coagulated mixture.

1,687,411. SWINGING WRINGER SUPPORT AND GEAR HOUSING. DAVID M. WENGER, Leola, Pa. Filed July 2, 1927. Serial No. 203,191. 1 Claim. (Cl. 68—32.)



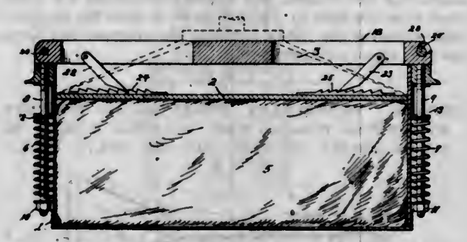
In a device of the character described, a main body portion, a wringer support mounted thereon consisting of one piece, right angular portions fastened together into a continuous member, one right angular portion having an attaching means for connection with a wringer, another right angular portion having means for allowing the wringer support to be locked against rotation, and means mounted on the main body portion and continuous member for locking the continuous member in fixed position.

1,687,412. HOLDER FOR WINDSHIELD WIPERS. HENRY WHITE, Jr., Buffalo, N. Y. Filed July 21, 1927. Serial No. 207,497. 3 Claims. (Cl. 15—255.)



1. In combination, an oscillating wiper for a windshield, a holder for the wiper when the latter is not in use, means supporting the holder for movement into and out of the path of the wiper, and means adapted to normally retain the holder out of the path of the wiper.

1,687,413. WALL HOOK. CARL J. WITT, Sao Paulo, Brazil. Filed Oct. 1, 1926. Serial No. 138,993. 5 Claims. (Cl. 40—145.)

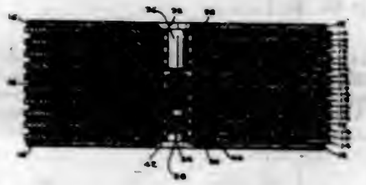


1. In a wall hook, a wall engaging member, an S-shaped member attached thereto and arranged in advance thereof and terminating in a vertical extension, the extension and wall engaging member having coinciding openings therein, and a pin passing through the openings and engageable with the wall and resting on one of the curves of the S-shaped member whereby to sustain the load placed on the pin.

1,687,414. AUTOMATIC MULTIPLE PLATE-CASTING MACHINE. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 9, 1922, Serial No. 599,745. Renewed Feb. 18, 1928. 39 Claims. (Cl. 22—3.)

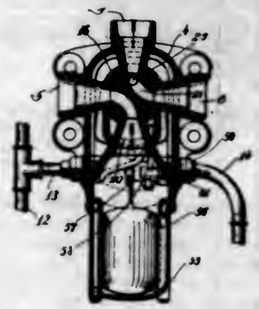
3. In a stereotype printing plate mold, the combination with a core, of a back co-operating therewith and having a length sufficient to receive two stereotype printing plate matrices therein in alignment, said back consisting of two parts in axial alignment, each rotatable independently of the other, means for rotating one part of the back independently of the other, and means for connecting the two rotating means to cause the two parts to rotate in unison.

1,687,415. MEAT COOKER. OSCAR MEYER WOLFF, Chicago, Ill. Filed July 25, 1927. Serial No. 208,358. 5 Claims. (Cl. 100—57.)



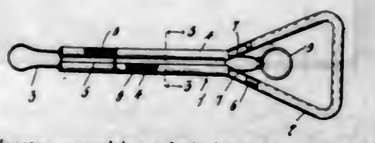
5. A cooker having a cover with brackets at either end of the cooker, bolts extending through the brackets, and spring means abutting the brackets for pressing the bolts downwardly, a bar connecting the upper end of the bolts, and pawls between the bar and cover and co-acting with the cover to hold it down.

1,687,416. STORAGE BATTERY. ALFRED P. WOOD, Minneapolis, Minn., assignor of forty-nine one-hundredths to Francis L. Murray, Minneapolis, Minn. Filed Apr. 30, 1927. Serial No. 187,843. 1 Claim. (Cl. 136—81.)



In a storage battery cell, the combination of positive and negative plates, separators for said plates, lead rings cast in place at the centers of the two outside plates, said rings

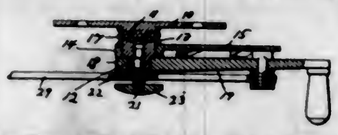
having outwardly inclined openings therein, and two cooperating bolt members of non-conducting material having screw-threaded engagement with each other at their adja-



cent ends, said bolt members passing centrally through all of the plates and separators and having inclined heads which fit into said inclined openings.

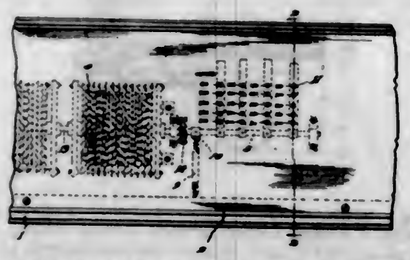
1,687,417. SAFETY DEVICE FOR LIQUID-MEASURING APPARATUS. HERMANN WYDLER, Bern, Switzerland, assignor to Sauser S. A., Soleure, Switzerland. Filed Aug. 4, 1925, Serial No. 48,147, and in Switzerland Aug. 6, 1924. 2 Claims. (Cl. 221—100.)

2. In a liquid measuring apparatus with two alternately filled and discharged gauged vessels and in combination, a safety device comprising a chamber intercalated into the discharge conduit, a float depending on the level of the liquid within said chamber, a liquid supply pump, a conduit for venting the suction pipe of the pump, an air relief cock controlling this conduit and means transferring the movement from the float to the cock so as to open the air relief cock whenever the rising liquid in the chamber has lifted the float above a certain level.



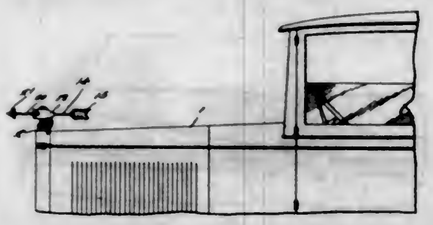
1,687,418. VETERINARY OBSTETRICAL FORCEPS. HUBERT ZINS, Wabasso, Minn. Filed Nov. 3, 1927. Serial No. 230,813. 3 Claims. (Cl. 128—324.)

1. A forceps comprising a body having an upwardly and forwardly inclined front end portion and provided with parallel passages, a handle secured to the rear end of the body, and a gripping loop having extended side members passing through the passages and connected at their rear ends.



1,687,419. DIRECTION INDICATOR. JOSEPH Y. AINSA, Morenci, Ariz. Filed Mar. 22, 1926. Serial No. 96,590. 2 Claims. (Cl. 74—39.)

1. A device of the character described comprising an attaching plate, a tubular portion carried thereby provided with cutout portions, a locking plate provided with spring fingers, a compression spring interposed therebetween, a collar carried by the locking plate mounted upon the tubular portion having cut-out portions registering with the



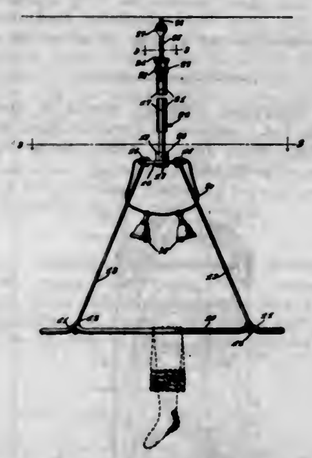
cut-out portions in the tubular portion, a crank arm journaled upon the tubular portion adapted to engage said fingers, and a release mechanism for the crank arm.

1,687,420. DIALLESS RADIO. DALE D. BAST, Braddyville, Iowa. Filed Feb. 11, 1927. Serial No. 167,519. 4 Claims. (Cl. 74—7.)

1. A radio mechanism including a controlling device having a shaft, a plurality of arms projecting from the shaft at different relative angles, a panel provided with rows of openings opposite the respective arms, and a pin adapted to be passed through a selected opening to engage an arm and move the control a predetermined distance.

1,687,421. DIRECTION INDICATOR. GUY LESTER BAUGHMAN, Burbank, Okla. Filed Apr. 10, 1928. Serial No. 268,838. 2 Claims. (Cl. 116—46.)

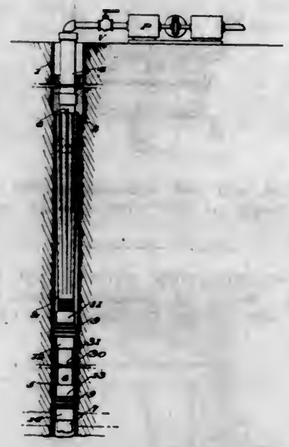
1. The combination of an automobile, of a direction signal arranged on the cap of the filler spout for the radiator thereof, and including a base having an upstanding ring flange, a headed pivot post removably secured to the base, and extending upwardly therefrom, a lamp house mounted on the pivot post, a drum on the under face of the lamp house received in the ring flange, a semaphore including a tail portion which is secured to the rear of the lamp house, and a front portion having an angle plate on the inner end thereof arranged vertically against the lens of the lamp house and secured thereto, a lamp in the lamp house for directing light through the lens along the opposite sides of the plate, an actuating cable having a coiled portion wound around the drum, flexible guides for the leads of the cable, directed into the automobile, a casing fixed in the instrument board of the automobile to which the ends of the guides are secured, said casing having its face plate formed with a longitudinal slot and having depending central and end passages communicating with said slot, a slide in the casing to which the ends of the flexible element are secured,



a shank on the slide movable through the slot and into any of the passages which communicate with the slot, a handle on the shank, in combination with means for latching the drum in the ring flange or holding the signal from movement when the same is turned to any of its signaling positions.

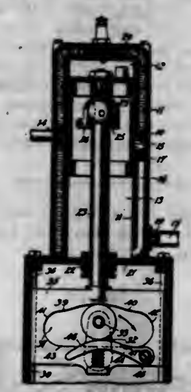
1,687,422. CULTIVATOR. WILHELM BENSIEN, Sibatin, Germany. Filed Apr. 8, 1927, Serial No. 182,037, and in Germany Aug. 30, 1926. 1 Claim. (Cl. 97—184.)

A cultivator comprising a wheeled horizontal frame, bell-cranks mounted pivotally in said frame, a tine secured to one arm of each bell-crank, and a spring supported at one end in the frame and acting on the other arm of the bell-crank so as to hold the tine against the ground, the connection between said spring and its bell-crank arm being adjustable for varying the leverage, said latter arm being curved about the supporting point of the spring in the frame to render the spring tension equal in different positions of adjustment.



1,687,423. DISPLAY HANGER. JIM ALEX BOATWRIGHT, Thomson, Ga. Filed Nov. 29, 1927. Serial No. 236,515. 1 Claim. (Cl. 211—115.)

A display hanger comprising a hoop having a multiplicity of crimped portions thereon, a plurality of guys having the lowermost ends thereof looped within the crimped portions of the hoop, a disk, the uppermost end of the guys terminating to provide hooked ends adapted for connection with the disk, a rod upstanding from the disk, a sleeve member adjustably mounted thereon to raise and lower said hoop, a thimble carried upon the uppermost end of the rod, a shaft extended within the thimble and having an enlarged head thereon adapted to provide a swivel connection therebetween to permit rotation of said hoop, a spring yoke carried by the disk, and bells suspended from the yoke.

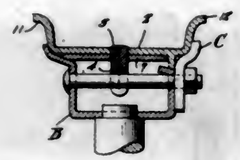


1,687,424. METHOD OF AND APPARATUS FOR CEMENTING OIL, GAS, AND WATER WELLS. ALEXANDER BOYNTON, San Antonio, Tex. Filed Sept. 25, 1925. Serial No. 58,584. 8 Claims. (Cl. 166—10.)

1. An apparatus for use in cementing oil, gas and water wells comprising in combination with the usual well casing, a perforated cement discharge nipple incorporated in the well casing, and a plurality of spaced packers also incorporated in the well casing, the upper packer being designed to shear off some of the material making up the

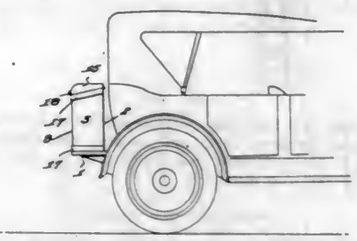
wall of the well hole, the packers confining the sheared off material between them and causing the sheared off material to be compacted into a dense mass, and a liner carried by the well casing.

1,687,425. INTERNAL-COMBUSTION MOTOR. HENRY BRIGGS, Hasbrouck Heights, N. J. Filed Aug. 12, 1927. Serial No. 212,554. 7 Claims. (Cl. 74—14.)



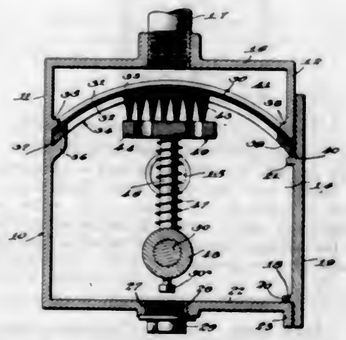
1. In an internal combustion motor, a cylinder, a piston movable therein, a crank shaft, and a connection between the piston and the crank shaft including a cam slotted block attached to the piston, a cam roller carried by the crank shaft, and a tensioned means carried by the cam block for maintaining the cam roller in engagement with the walls of the cam slot.

1,687,426. TIRE RIM. IVA M. CALDWELL, Maryville, Mo. Filed Aug. 17, 1927. Serial No. 213,647. 1 Claim. (Cl. 301—31.)



A rim of the character described comprising a plurality of sections arranged in end to end relation in rim formation, tongues formed on each of said sections and received in recesses also formed therein, tire bead flanges formed with the side edges of each section, a recessed

tongue extending centrally and inwardly from one of said sections, an annular band formed with a slot receiving said recessed tongue and securing said sections in rim

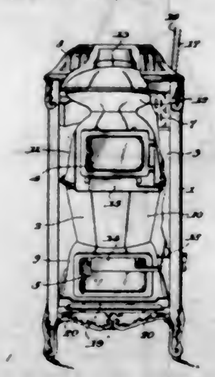


formation, and said last mentioned section and band respectively being provided with openings arranged in registration.

1,687,427. COMBINATION TRUNK AND LUGGAGE CARRIER. ROBERT M. CORMICAN, Casey, Ill. Filed Sept. 23, 1927. Serial No. 221,561. 1 Claim. (Cl. 224—29.)

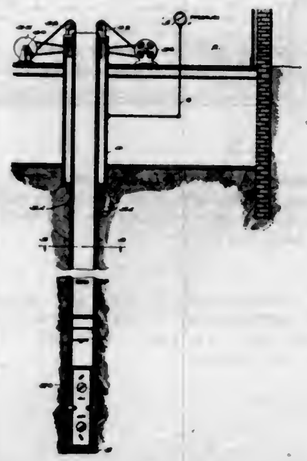
An attachment for motor vehicles, comprising a trunk including a rear wall, front wall, side walls and a bottom, a luggage carrier including side walls, a bottom and a front wall said front wall being recessed, a door for closing said recess, said luggage carrier being hingedly secured for movement in a vertical plane, and telescopically receiving said trunk when arranged in closed position, said luggage carrier being disposed in a horizontal position when open, and a cover for said trunk and capable of retaining said luggage carrier in its folded position.

1,687,428. SCREEN CLEANER. LEVIN OTIS CORKRAN, Rhodesdale, Md. Filed Jan. 12, 1927. Serial No. 160,745. 1 Claim. (Cl. 210—152.)



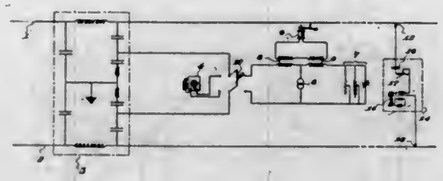
1. A device of the character described comprising a casing having an inlet opening and a discharge opening, said casing adapted to be normally filled with a liquid, a screen separating the casing into an upper and a lower chamber disposed between the inlet and discharge openings, and adjacent the discharge opening, a brush in contact with that side of the screen which is adjacent the inlet opening and adapted to be oscillated across the screen and through the liquid in the casing to cause the liquid to be surged in opposite directions in the lower chamber, oscillating rods in the casing, means for oscillating the rods, said brush being slidably mounted on said rods, means for resiliently maintainining the brush in contact with the screen, said screen being curved outwardly towards the discharge opening.

1,687,429. STENOGAUGE. ROY G. DATSON, Chichagoff, Territory of Alaska. Filed Apr. 28, 1925. Serial No. 25,428. 1 Claim. (Cl. 33—111.)



A typewriter gauge for determining the position of the typewriter carriage for centering a caption or the like upon a sheet of paper comprising a strip with a scale along one edge thereof comprising alternate blanks of distinguishable colors, each blank corresponding to the space the carriage of a typewriter moves when the spacer bar or character bar is operated, and two rows of numerals upon the scale, one row being placed under the other, the rows extending parallel to said scale, and one row comprising consecutive numbers arranged adjacent alternate blanks and representing divisions, each of which constitutes two space movements of a typewriter carriage, and the lower row comprising graduations constituting numbers having a value of ten or the multiple thereof.

1,687,430. HEATING STOVE. EDWIN F. DIEKMANN, Evansville, Ind., assignor to Crescent Stove Works, a Corporation. Filed Jan. 24, 1925. Serial No. 4,462. 2 Claims. (Cl. 126—67.)

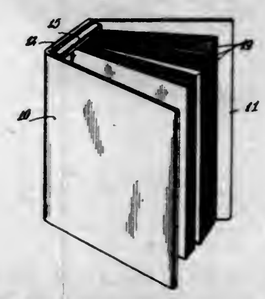


1. A stove or heater comprising a rectangular horizontally arranged base frame provided with internal, inwardly projecting pieces or brackets at its corners, an outer shell or cabinet of rectangular cross sectional shape supported by said base frame, an inner stove or heater whose base has feet at its corners, said feet being supported on the aforesaid brackets, said stove or heater being solely sustained within the shell by said brackets and being wholly contained within and completely surrounded by said shell and separated from it on all of its sides by an air space, detachable connections being provided between the brackets and the feet on the bottom of the stove or heater, and said shell having openings in the lower parts of its sides and in its upper part to permit the passage of air upwardly between the walls of the shell and the heater.

1,687,431. SAFETY DEPOSIT VAULT. CHARLES N. DILATUSH, Lebanon, Ohio, assignor of one-half to William H. Dilatush, Memphis, Tenn., and Frank A. Dilatush, Lebanon, Ohio. Filed Sept. 11, 1926. Serial No. 134,875. 3 Claims. (Cl. 109—1.)

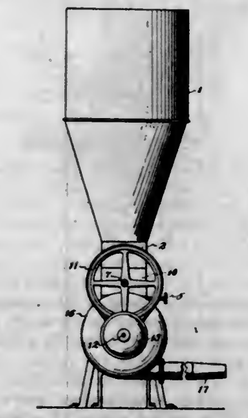
1. An apparatus of the character described comprising an elongated casing located for the major portion of its extent below the ground, locking mechanism having means cooperable with the lower portion of the casing for releasably securing it to the casing, means for raising the locking mechanism when it is disengaged from the casing and a number of containers positioned within the casing and above the locking mechanism, each container having an elastic washer projecting beyond its lower portion to retard its descent in the casing.

1,687,432. COMPOSITE SIGNALING SYSTEM. HERBERT W. DRAKE, East Orange, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1926. Serial No. 137,305. 5 Claims. (Cl. 179—4.)



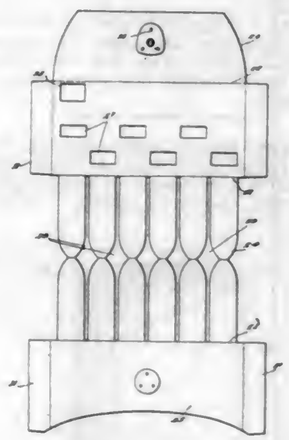
1. In a composite signaling system, a transmission line, a telephone apparatus, a local circuit comprising two sections, means to connect at will either said telephone apparatus or one of said sections to said transmission line, means included in said other section to compensate for the connection of said first section to line whereby neutral points are established between said sections, means to apply an alternating signaling current at said neutral points for transmission over said line, a transformer in said local circuit having primary coils disposed upon opposite sides of one of said neutral points, and an electro-responsive device responding to signaling frequency currents connected to the corresponding secondary coils of said transformer.

1,687,433. PURIFYING BRINE TO BE USED IN ELECTROLYTIC PROCESSES. JULIUS DRUCKER, Cologne, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 17, 1927, Serial No. 213,693, and in Germany Sept. 29, 1926. 2 Claims. (Cl. 23—45.)



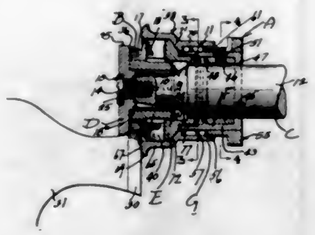
1. The process of purifying brine to be used in electrolytic processes from magnesium and calcium salts which consists in saturating the brine with an alkali metal fluoride and separating the precipitated magnesium and calcium fluorides.

1,687,434. MAGAZINE BINDER. MAX W. FEDERBUSH, JACOB D. FEDERBUSH, DOMINIC J. BAXTER, THOMAS R. BAXTER, and CHARLES FEDERBUSH, New York, N. Y. Filed Apr. 21, 1927. Serial No. 185,567. 2 Claims. (Cl. 129—38.)



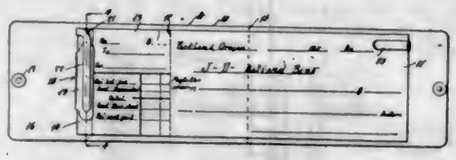
1. In a binder, the combination with spaced apart strip bars having a plurality of apertures for supporting rods engaged with groups of pages, of U-shaped members attached to the binder, and having inner arms, flanges integral with the ends of the said inner arms, other flanges integral with the said strip bars and positioned adjacent the flanges of the inner arms, and screws engaged in the flanges of the inner arms, and engaging the flanges of the strip bars, removably holding the strip bars.

1,687,435. FUEL FEEDER. CLAUDE AROUD FLEETWOOD and WILLIAM H. LYSINGER, Fort Dodge, Iowa, assignors to McLaughlin Coal Reduction Company, Decatur, Ill., a Corporation of South Dakota. Filed June 4, 1927. Serial No. 196,525. 5 Claims. (Cl. 302—37.)



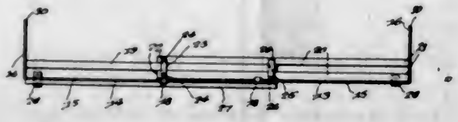
1. In a fuel feeder, a mixing chamber having a helically arranged opening in a side for the introduction of atomized coal into the mixing chamber, and means for circulating air through the mixing chamber to combine with the atomized coal to produce a fuel mixture.

1,687,436. ENVELOPE. PIERRE FORT, Kernan, Ill. Filed Mar. 29, 1924, Serial No. 702,917. Renewed Mar. 5, 1928. 1 Claim. (Cl. 229—73.)



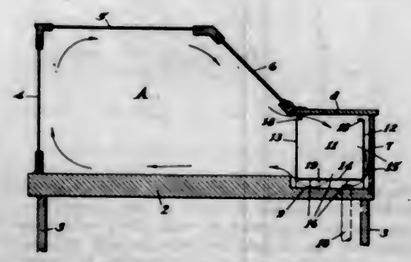
An envelope constructed from a single piece of material and including spaced sections constituting the front and rear walls, and an intermediate section comprising elongated strips projecting from the end sections and having their adjacent ends connected together, the strips of one intermediate section being adapted to be folded upon the strips of the other intermediate section, when said sections are arranged to form the envelope, side flaps projecting from one of the end sections, said end section constituting the front wall having a plurality of spaced openings, adapted to receive the adjacent strip when it is desired to present said strip to view, and a closure flap for said envelope.

1,687,437. SOLE AND HEEL TRIMMING MACHINE. JAMES H. GEORGELIS, Allston, Mass. Filed Feb. 1, 1926. Serial No. 85,353. 8 Claims. (Cl. 12—92.)



1. In a shoe trimming machine the combination of a shaft, a rotary trimming cutter on the shaft, a sleeve-like guard movable along the shaft including a sleeve-like portion forwardly open to receive the rotary cutter therein and providing a forward guide surface lying peripherally outwardly of the rotary cutter against which a shoe may rest during an edge cutting operation, spring means to urge the guide sleeve towards the rotary cutter to a predetermined guide position, and means for fixing the guide sleeve in a particular guiding and guarding relation with respect to the rotary cutter to prevent longitudinal movement of the sleeve with respect to the cutter.

1,687,438. CHECK-FOLD SPREADER. PHARES A. GETZ, Portland, Oreg. Filed Aug. 9, 1927. Serial No. 211,785. 9 Claims. (Cl. 281—42.)

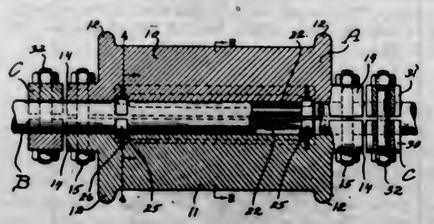


1. A device to hold a normally folded book back and leaves in unfolded position, comprising a body engaging said book back, and means extending from said body to engage said book back and leaves.

1,687,439. COMBINATION WINDOW GUARD AND DRAFT DEFLECTOR. STEVE M. GIRLICH, Chicago, Ill. Filed Mar. 22, 1927. Serial No. 177,391. 2 Claims. (Cl. 98—99.)

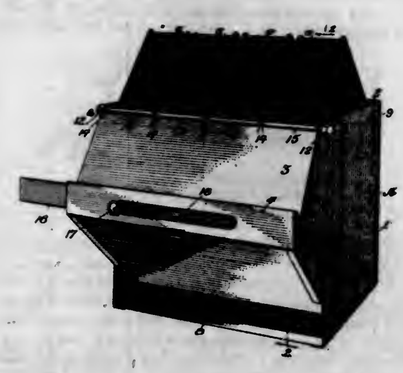
1. In a device of the class described, two substantially L-shaped members, means for connecting the stem portion of said members together in slidable relation, spaced apart bars extending parallel to the stem portions of one of said members and suitably secured to the base portion thereof, a bar extending parallel to the stem portion of the other of said members and disposed between said spaced apart bars, and means for connecting said members in slidable relation.

1,687,440. ICE CONTAINER FOR CABINET REFRIGERATORS. JOHN EDWARD GLOEKLER, Pittsburgh, Pa. Filed Aug. 17, 1926. Serial No. 129,747. 3 Claims. (Cl. 62—37.)



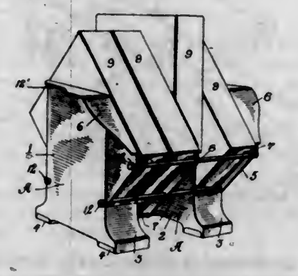
1. In a cabinet refrigerator of the kind disclosed, the combination with an upper casing enclosing a main receiving chamber and a laterally arranged ice-containing chamber in open communication therewith, of a main floor portion having an offset depressed circulation and collecting space at the bottom of the ice-containing chamber and a rear wall and an opening top in the rear of and over said space forming a portion of the casing, and an ice-holding box within the ice-containing chamber having an imperforate wall confronting the main chamber, a perforated bottom spaced inwardly above the depressed off-set bottom portion, a perforated rear wall confronting and spaced inwardly from the rear casing wall, and an open top spaced below the opening top of the ice-containing chamber.

1,687,441. TREAD MATERIAL AND METHOD OF MAKING THE SAME. JAMES E. GROSJEAN, Lima, Ohio. Filed June 26, 1924. Serial No. 722,552. 3 Claims. (Cl. 18—55.)



1. The method of making a tread surface which comprises subjecting a mass of uncured waste cord or fabric tire stock consisting wholly of uncured friction coated and impregnated cords extending promiscuously therein to a drawing action to rearrange the cords so that most of them are caused to extend in the same direction and to distribute the cords loosely and uniformly while maintaining the cords of substantial length, rolling the resulting product to form it into a smooth sided sheet having most of the cords extending longitudinally thereof, cutting such sheet transversely to form strips, assembling said strips side by side so that most of the cords therein extend in the same direction in all the strips and to form a tread wherein most of the cords are presented endwise to the tread surface, and vulcanizing the assembled strips to bond together elastically the friction coated and impregnated cords composing them and to unite the strips.

1,687,442. PULLEY. FRANK J. HARDLEY, Los Angeles, Calif. Filed Oct. 25, 1926. Serial No. 144,103. 5 Claims. (Cl. 192—45.)

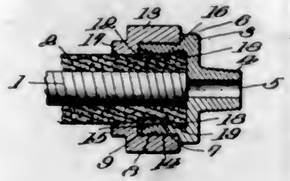


1. A pulley comprising longitudinally divided sections, having bearing forming extensions provided at each end thereof, bolts passing through the extensions of the companion sections for securing the sections in assembled relation about a shaft, gripping rollers arranged longitudinally of each pulley section for binding engagement with the shaft when the pulley is acted upon in one direction, said gripping rollers having their ends terminating inwardly of the extensions of the pulley sections, and means carried by each pulley section for retaining the respective rollers thereof against displacement when the sections are in non-assembled relation.

1,687,443. BOOKSTAND. WALTER EASTER HASKIN, New York, N. Y., assignor to Pressed and Welded Steel Products Company, Long Island City, N. Y., a Corporation of New York. Filed July 21, 1926. Serial No. 124,011. 7 Claims. (Cl. 312—34.)

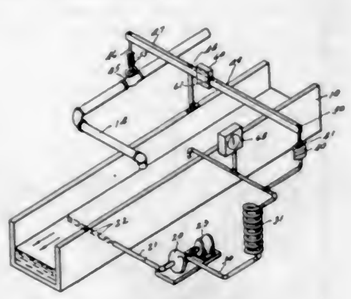
1. A device of the character described, including a casing, a rod secured to the casing, a plurality of binders, brackets fixed to the binders intermediate the ends of the backs of the binders and pivotally connected to the rod, an inclined front wall on the casing, and a laterally offset portion of said wall forming a ledge against which the binders are supported when swung out of the casing.

1,687,444. BOOKSTAND. WALTER EASTER HASKIN, New York, N. Y., assignor to Pressed & Welded Steel Products Company, Long Island City, N. Y., a Corporation of New York. Filed Jan. 12, 1927. Serial No. 160,681. 4 Claims. (Cl. 312—43.)



1. A bookstand, including a pair of hollow supporting members spaced apart, rods connecting said supporting members, a book holder normally having its back portion exposed and pivotally connected between its ends to one of said rods whereby a book supported by said holder when in normal position rests upon other of said rods, and a pivotal movement of said book holder moves the book supported thereby from a position between the supporting members and permits the book to be opened and supported upon its pivot and other parts of said bookstand.

1,687,445. HOSE COUPLING. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed June 18, 1925. Serial No. 37,939. 1 Claim. (Cl. 285—87.)

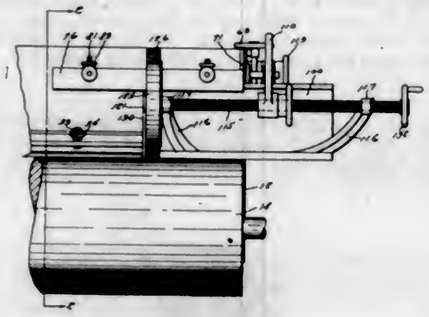


A hose coupling comprising a body member having an opening, a rubber hose passing through and fitting the said opening, the body member having an enlarged internally

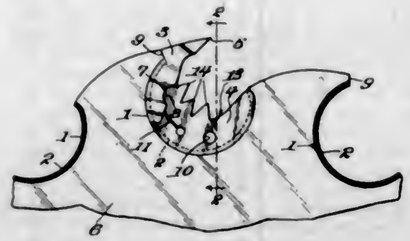
screw-threaded portion forming a space between it and the outer surface of the hose, the hose passing through the body member a distance greater than the length of the internally screw-threaded flange, a clamping member having an externally threaded portion fitting within the internally threaded flange portion, the externally threaded flange member having an opening substantially equal to the diameter of the hose portion, a metallic core for the hose, the

externally screw-threaded member having its outer end reduced and abutting against the hose, the outer end of the inner surface of the externally screw-threaded flange portion enlarged outwardly, a clamping ring engaging the said hose, whereby when the clamping member is forced inwardly the extremity of the hose is forced outwardly into the said inner enlarged portion of the externally threaded flange, substantially as described.

1,687,446. FLOW REGULATION. JAMES A. HEDGCOCK, Dayton, Ohio, assignor to The Management Engineering and Development Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 29, 1927. Serial No. 164,448. 15 Claims. (Cl. 92—46.)



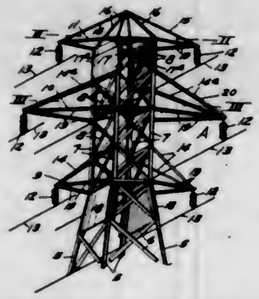
11. In the preparation of fibrous stock of controlled consistency, the method which comprises impressing a predetermined head upon fibrous stock within a flow passage, and controlling the supply of dilution liquid to the fibrous stock in accordance with the residual head effective at a predetermined point in the flow passage.



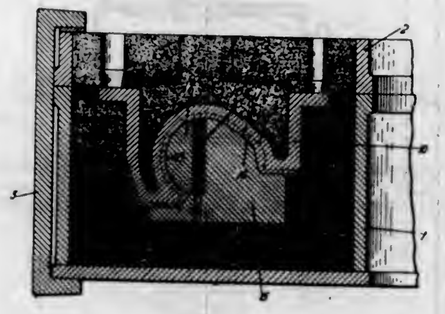
13. In apparatus of the character described for controlling the consistency of fibrous stock, a flow passage to which fibrous stock is supplied, means for impressing a predetermined head upon the stock within said passage, a dilution liquid supply means for the fibrous stock, and means responsive to the residual head effective at a predetermined point in said flow passage for controlling said dilution liquid supply means.

1,687,447. PAPER-MAKING MACHINERY. RALPH E. HEISEL, Chillicothe, Ohio, assignor to The Mead Pulp & Paper Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 12, 1925. Serial No. 15,018. 17 Claims. (Cl. 92—44.)

1. In apparatus of the character described comprising a paper forming part and a source of supply of paper making stock; inlet means for flowing a stream of the paper making stock of controlled thickness upon the paper forming part, and means for varying the effective width of the stream of flowing stock without movement of the parts of said inlet means which effect such thickness control.



1,687,448. CIRCULAR SAW. OSSION H. HILDRETH, Wilton, Me. Filed Apr. 30, 1927. Serial No. 187,880. 3 Claims. (Cl. 143—141.)



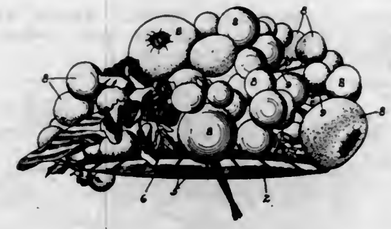
2. In an inserted tooth saw a replaceable tooth having an inner recessed locking section carrying a plurality of sharp teeth.

1,687,449. TOWER CONSTRUCTION. HAROLD O. HILL, Aspinwall, Pa., assignor to Riter-Conley Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 28, 1926. Serial No. 125,420. 3 Claims. (Cl. 189—33.)

1. In a structural tower, the combination with a suspended insulator string carrying a transmission wire, of an upper body portion formed of angular members, a cross-arm formed of angular members, a metallic protector plate on the body adjacent the cross-arm, and metallic protector elements for the cross-arm members having curved surfaces.

1,687,450. APPARATUS FOR CASTING MOLDS OR THE LIKE. ROBERT M. HINMAN, Akron, Ohio, assignor to The State Foundry and Pattern Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 21, 1926. Serial No. 103,521. 4 Claims. (Cl. 22—174.)

1. A chill for forming annular cavities in annular articles, comprising two annular portions, one of said portions being a solid chill and the other portion a sectional chill, and a layer of cushioning material between the two portions of the chill.



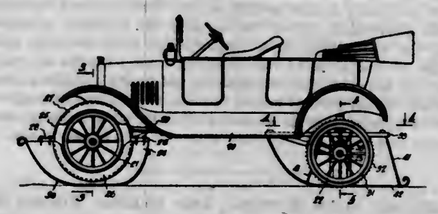
1,687,451. COMBINATION VANITY CASE AND POWDER PUFF. JOSEPH HOELLRIGL, Manchester, N. H. Filed Oct. 28, 1927. Serial No. 229,879. 3 Claims. (Cl. 132—78.5.)

1. A combined vanity case and powder puff comprising a cylindrical casing, a closure lid therefor, a handle member carried by the closure lid, a mirror positioned within the closure lid, a bottom for the casing being convexed and apertured, a false bottom slidably mounted upon the bottom and having openings therein registering with the apertures in the bottom, a puff carried by the false bottom, a partition member carried within the casing adapted to provide a compartment immediately above the bottom for loose powder which may be discharged when the puff is called into use, and containers for different toilet articles being supported upon the partition.

1,687,452. TRANSLUCENT DECORATION. ELSIE H. HORTON, Minneapolis, Minn. Filed Nov. 27, 1922. Serial No. 603,581. 1 Claim. (Cl. 240—10.)

The combination of a dome-shaped form to provide a recessed portion to receive a lamp, a translucent fabric covering for said form said covering being coated with a gelatinous substance which hardens on exposure to give the covering a glazed surface, a series of translucent form retaining structures made up each of an interior tinted fabric cover with a translucent coating shaped and colored to imitate fruit and vegetables said structures grouped upon said

dome-shaped structure whereby when said lamp is lighted, a combination of the colors upon the translucent fabric covering and the hollow structures will be brought out.

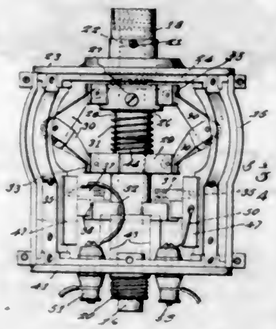


1,687,453. MANUFACTURE OF GLASS, SAND, OR FLINTPAPER, EMERY CLOTH, AND LIKE ABRASIVES. CARL ADOLPHE KLEIN, Brimsdown, and ROBERT SKIRVING BROWN, London, England. Filed Oct. 28, 1925, Serial No. 65,486, and in Great Britain Aug. 26, 1925. 4 Claims. (Cl. 51—278.)

1. A process for the manufacture of waterproof sheet abrasive material consisting in waterproofing the base by passing it through a bath of linseed oil containing a small proportion of a suitable wax and kept at a temperature of at least 100° C.; removing any surplus by means of pressure rollers also kept heated to 100° C. or over; applying the adhesive consisting of a mixture of a drying oil with a synthetic resin also at a temperature of over 100° C.; applying the abrasive material to the base thus prepared and baking at a temperature of over 100° C.; and applying a second coating of adhesive and rebaking also at a temperature of over 100° C.

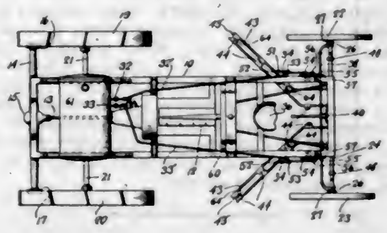
1,687,454. GLASS, SAND, OR FLINT PAPER, EMERY CLOTH, OR LIKE ABRASIVE. CARL ADOLPHE KLEIN, Brimsdown, and ROBERT SKIRVING BROWN, London, England. Filed Oct. 28, 1925, Serial No. 65,487, and in Great Britain Aug. 26, 1925. 7 Claims. (Cl. 51—279.)

1. A waterproof sheet abrasive material comprising a base, a waterproofing composition applied to such base as a preliminary treatment and consisting of linseed oil with a small proportion of paraffin wax, an adhesive composition subsequently applied and consisting of a drying oil with a gum, and an abrasive material.



1,687,455. AUTOSLEIGH. FRANCIS ALBERT KLEIN, Xenia, Ohio. Filed Dec. 26, 1922. Serial No. 608,982. 3 Claims. (Cl. 180—6.)

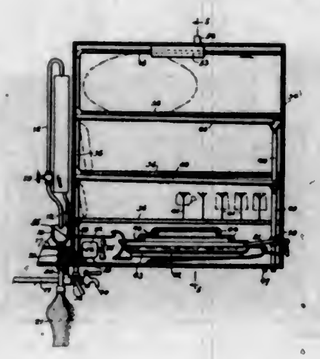
1. The combination with the axle of a vehicle, of grooved blocks on the axle, a frame, runners carried by the frame and each having portions working in the grooves of the blocks, housings on the blocks, plates movable in the



housings, springs in the housings and engaging the plates, said plates and spring serving to yieldingly support the runners, and screws mounted in the frame and engaging the said plates.

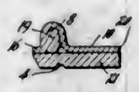
1,687,456. AUTOMOBILE SIGNAL. SAMUEL KLOOS, Alliance, Ohio. Filed Sept. 22, 1926. Serial No. 137,128. 3 Claims. (Cl. 200—80.)

1. In a speed responsive circuit closer, a plurality of fixed contacts, a rotatable shaft, a governor associated with said shaft and including a collar mounted for sliding movement thereon, said collar including a sleeve-like portion, horizontally disposed extensions projecting from the lower end of the sleeve, and a spring pressed laterally movable contact mounted on each extension, and adapted to singly engage the fixed contacts at relatively different speeds of rotation of the shaft.



1,687,457. TRACTOR CULTIVATOR. IRVIN K. KREIDER, Lancaster, Pa. Filed Oct. 28, 1925. Serial No. 65,419. 1 Claim. (Cl. 97—47.)

In a device of the class described, a main frame, ground wheels, means for driving some of said wheels, an arched front axle and a rear axle for mounting the ground wheels, and cultivator gangs including bars having their forward ends converging, clamp-like hangers for pivotally connecting the converging ends, respectively, with the base portions of the arch of the front axle, and means for separately changing the elevation of the gangs at points rearwardly of the pivotal points thereof, these means including levers pivoted on the frame and links controlled by the levers and having connection with the bars of the gangs.

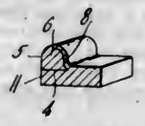


1,687,458. DISH WASHER AND DRIER. WILLIAM H. LANCELOT and JAMES A. STARRAK, Ames, Iowa. Filed June 15, 1927. Serial No. 199,008. 5 Claims. (Cl. 141—9.)

1. In an apparatus of the class described, a casing, a pan at the bottom of the casing interiorly thereof, a heater beneath the pan, means for conducting water to the pan, said heater serving for heating the water in the pan, said pan having a cover consisting of sections overlapping each

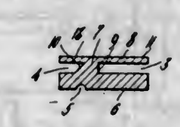
other in spaced relationship to allow steam to rise from the pan, and supporting means in the casing above the pan for supporting divers articles to be steamed.

1,687,459. WELT AND METHOD OF MAKING THE SAME. HARRY LYON, Brockton, Mass., assignor to John A. Barbour, Brookline, Mass., and Perley E. Barbour, Quincy, Mass., doing business as Barbour Welting Company, Brockton, Mass. Filed Feb. 25, 1924, Serial No. 694,814. Renewed Feb. 29, 1928. 5 Claims. (Cl. 36—78.)



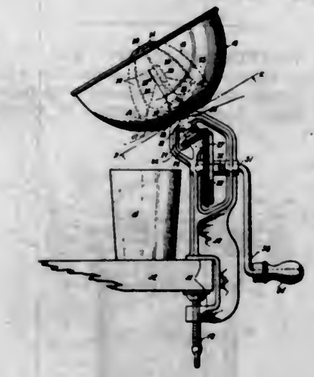
1. The method of making a welt which comprises severing a layer from the grain side of a leather strip, and fixing to the upper face of the body of the strip blank the said layer partly wrapped about a leather core strip of greater thickness than said layer, thereby to form a bead between its edges on one face of said body.

1,687,460. BEADED WELTING AND METHOD OF MAKING. HARRY LYON, Brockton, Mass., assignor to Barbour Welting Company, Brockton, Mass., a Copartnership of John A. Barbour, Brookline, Mass., and of Perley E. Barbour, Quincy, Mass. Filed June 26, 1924. Serial No. 722,553. 15 Claims. (Cl. 36—78.)



1. A welt comprising a body portion having an integral bead formed thereon on one face and showing the same surface as the unbeaded portion of said face at the outer side thereof, the exposed surface at the inner side of said bead being different from the surface at said outer side, the welt on opposite sides of the bead being of substantially the same thickness.

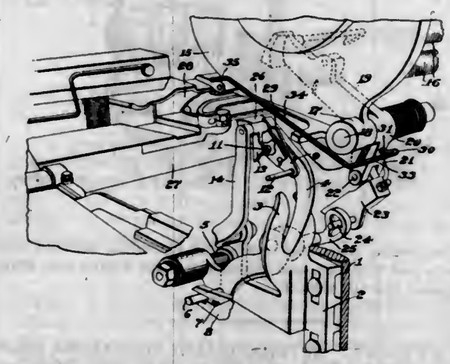
1,687,461. WELTING. HARRY LYON, Holbrook, Mass., assignor to Perley E. Barbour, Quincy, Mass. Filed Aug. 20, 1925. Serial No. 51,375. 8 Claims. (Cl. 36—78.)



1. A welt comprising a base strip having a bead projecting from one face of and flush with one edge of said base strip.

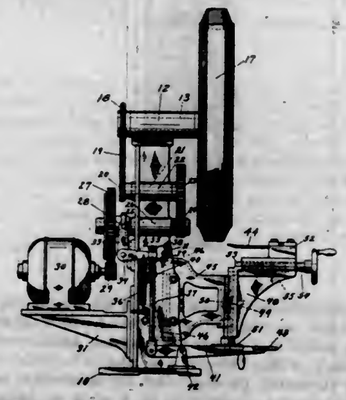
1,687,462. BEADED WELTING. HARRY LYON, Holbrook, Mass., assignor to Perley E. Barbour, Quincy, Mass. Filed Oct. 7, 1925. Serial No. 61,063. 10 Claims. (Cl. 36—78.)

1. The method of forming a welt which comprises removing portions inwardly from the edges from a blank strip between its side faces to leave a core strip portion between said edges and faces and fixing together the material on opposite sides of said removed portions to form a strip having thinned edge portions and an intermediate thickened rib.



1,687,463. JUICE EXTRACTOR. JOHN MOSCRIP, Tampa, Fla., assignor to Florida Citrus Exchange, Tampa, Fla., a Corporation of Florida. Filed Apr. 23, 1926. Serial No. 104,039. 2 Claims. (Cl. 146—3.)

2. An extractor head of the class described comprising an extracting section and a closure therefor, the closure being formed into an integral attaching means at its apex for engagement with operating mechanism, and the closure being substantially conical to form a guide for effecting engagement of said attaching means with operating mechanism.

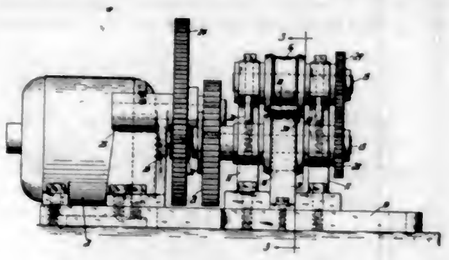


1,687,464. SHUTTLE-FEELER THREAD-PARTER-OPERATING MECHANISM. JAMES R. REECE, Salisbury, N. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 5, 1927. Serial No. 237,640. 4 Claims. (Cl. 139—207.)

1. In a filling replenishing loom, the combination of a hopper, a pivotally mounted transferrer having a downwardly projecting arm provided with an opening from front to rear thereof, a dog pivotally connected to said arm for operating the transferrer, a shuttle feeler having a thread parter, a parter closing member constituted as an arm having a backwardly extending securing end engaged

in said opening of the downwardly projecting arm and provided with a lateral bend terminating in a backward extension with its terminal end portion above the parter when in parting position to close the parter when filling replenishment is effected.

1,687,465. METHOD AND APPARATUS FOR RESURFACING SOLID TIRES. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 14, 1924. Serial No. 743,581. 3 Claims. (Cl. 164—48.)



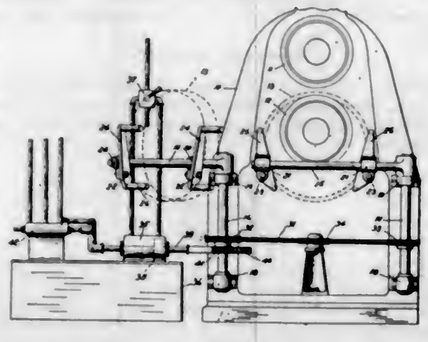
1. Apparatus for resurfacing solid rubber tires comprising means for supporting and rotating a tire, a movable knife, means for moving the knife from a remote position to a position adjacent the periphery of the tire, the blade of the knife being directed substantially transversely of the peripheral surface of a tire mounted on said supporting means, means for moving the knife radially of the tire in the last position and means for moving the knife transversely of the tire to cut a layer of stock from its outer surface.

1,687,466. DEVICE FOR TRIMMING RUBBER STRIPS. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 28, 1925. Serial No. 46,599. 3 Claims. (Cl. 164—60.)

1. Apparatus of the class described, comprising a pair of spaced brackets each formed with an inherently slightly

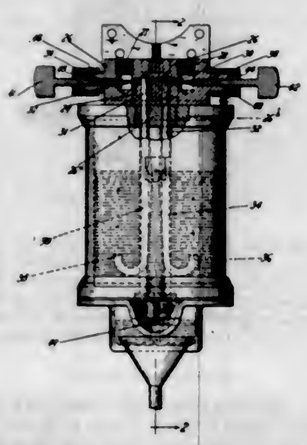
yieldable overhanging arm, a pair of rotatable knives journaled on said brackets, one knife being journaled on said

overhanging arms, and cap-screws extending through said arms and threaded into said brackets for urging said knife against the other knife.



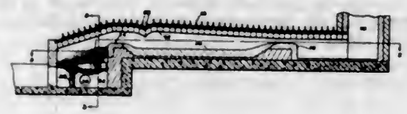
1,687,467. AUTOMATICALLY-THREADING LOOM SHUTTLE. WALLACE I. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 29, 1927. Serial No. 236,434. 1 Claim. (Cl. 139—213.)

An automatically threading loom shuttle having a bobbin chamber, the end and side walls of which adjacent the delivery end of the shuttle are provided with a continuous countersink, a side delivery eye, and a longitudinally extending threading passage, and an unwinding yarn engaging controller constituted as a strip of animal skin seated and secured in the continuous countersink of the end and side walls of the bobbin chamber and having loose individual fibres which extend from the countersunk skin inwardly of the bobbin chamber and bear upon the under portion of the conical winds of thread and the end of the bobbin and form an individual yielding fibrous seat in which the end of the bobbin rests during weaving.



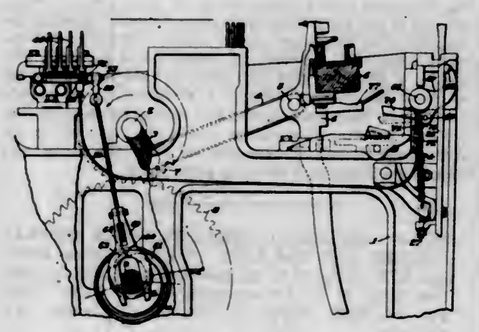
1,687,468. RIM-FEEDING DEVICE. WINFIELD SCOTT BRINK, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 6, 1926. Serial No. 146,597. 4 Claims. (Cl. 80—43.)

1. In combination with a machine having relatively movable rolls, a supporting arm attached to a vertical shaft mounted on said machine, said shaft being journaled to swing said arm into and out of alignment with said rolls to deliver a blank rim therebetween, a second supporting arm attached to a vertical shaft, said shaft being journaled to swing said second arm out of and into alignment with said rolls, successively and alternately with said first arm, to remove a rolled rim from said rolls, a large sprocket keyed to said first-mentioned shaft, a smaller sprocket keyed to said last-mentioned shaft, a chain connecting said sprockets, whereby said arms may be swung in definite angular relation to each other and the delivering



arm swung through a lesser angle than said removing arm, means for swinging said arms, comprising a double-acting air cylinder having attached to the piston rod thereof a gear rack meshing with a pinion keyed to said first-named shaft, a valve shiftable by said piston rod for controlling the relative movement of said rolls in timed relation to the rim-delivering operation, a manually operable valve for controlling said air cylinder, and a standard for ejecting a rolled rim from the second supporting arm as the latter is swung away from said rolls.

1,687,469. INSTRUMENT PUMP. ROY W. BROWN, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 20, 1925. Serial No. 10,526. 11 Claims. (Cl. 230—92.)

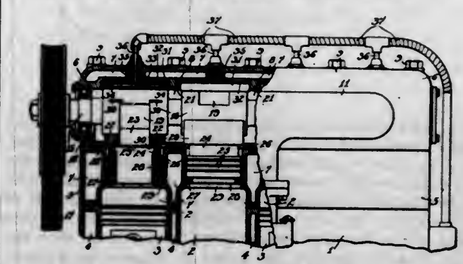


1. A constant flow pump comprising a vessel having a fluid inlet therein and means for evacuating the vessel, said evacuating means being adapted to maintain a constant head of a liquid in the vessel above said inlet.

1,687,470. METALLURGICAL FURNACE. HOWARD BUTT, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1925. Serial No. 18,157. 1 Claim. (Cl. 263—40.)

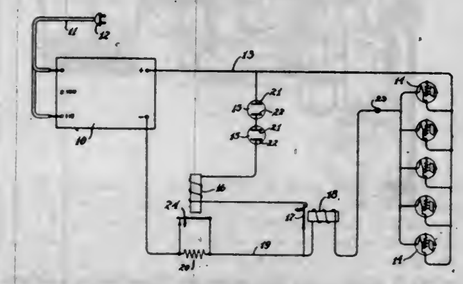
A metallurgical furnace comprising walls defining a heating chamber, and a combustion chamber connected by a narrow restricted passage over a bridge wall, an underfeed retort in the combustion chamber substantially parallel with and adjacent to the bridge wall, a fuel support laterally of the retort and arranged to receive fuel therefrom, means to feed fuel progressively to the retort and on to the support, means to feed air through the fuel bed on the support to cause combustion, and means to supply a limited amount of air to the fuel in the retort, whereby combustible gas is produced in large quantity, the roof of the furnace being located close to the fuel bed to restrict combustion thereover, and sloping to reflect heat from the burning fuel on the support to the fuel in the retort, and having a deflecting portion so arranged that the air and combustible material are projected towards the bottom of the heating chamber as they enter the latter and they are caused to mix thoroughly and burn as a long flame.

1,687,471. LOOM-STOPPING MECHANISM. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 26, 1927. Serial No. 208,495. 10 Claims. (Cl. 139—366.)



1. In a loom, the combination of the lay and shuttle boxes, a warp stop mechanism having a transversely movable toothed detector bar constructed so that its movement in either direction will effect loom stoppage upon detecting a displaced drop wire, means for imparting a transverse detecting movement to the bar only on alternate beat-up movements of the lay, a series of drop wires normally supported by the warp threads during weaving, a shipper knock-off dog at the front of the loom under control of the warp stop mechanism, a bunter carried by the lay to engage the dog on the occurrence of a warp fault upon an alternate frontward movement of the lay that the loom may be brought to rest with the shuttle always in the same box.

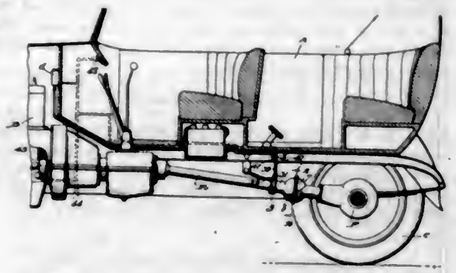
1,687,472. EMERGENCY APPLICATOR AND METHOD OF PRODUCING IT. WILLIAM ROWLAND DORMAN, WILLIARD V. SUYDAM, and DUANE RICE STONELEIGH, New Brunswick, N. J., assignors to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed July 22, 1927. Serial No. 207,713. 7 Claims. (Cl. 128—269.)



1. A surgical applicator embodying a swab formed of a cotton roll whereof the handle portion is impregnated with a stiffening and fluid repellant substance and whereof the tip is wetted with antiseptic, and a cylindrical shell telescoping and hermetically sealing the tip and from which the handle portion protrudes.

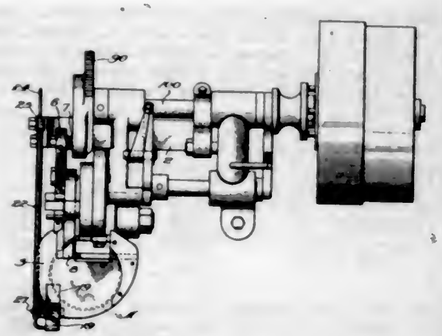
1,687,473. ROTARY VALVE FOR EXPLOSIVE ENGINES. OSCAR L. DUGGER and CHARLES M. DUGGER, Evansville, Ind., assignors to Rotary Valve Company, Evansville, Ind., a Corporation of Indiana. Filed July 31, 1926. Serial No. 126,165. 6 Claims. (Cl. 123—190.)

1. In an internal combustion engine the combination with a rotary valve, of a movably mounted ported packing seated against the face of said valve and having a ported neck connecting the packing with the engine cylinder, means for rigidly connecting one end of said packing to the engine cylinder, said neck having a flexible portion to permit relative movement between said packing and the cylinder and a hollow gland telescoping inside of said neck to prevent said neck from receiving the pressure of the exploded charge.



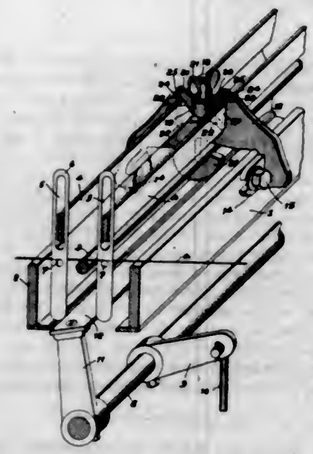
1,687,474. FILAMENT-VOLTAGE REGULATOR. EDGAR W. ENGLE, Lake Forest, and HAROLD L. OLESEN, Highland Park, Ill., assignors to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Sept. 17, 1926. Serial No. 136,170. 9 Claims. (Cl. 250—27.)

3. In an "A" current supply system for radio receivers a source of direct current supply, filaments of thermionic



tubes, connections between said filaments and said source, a series of electrolytic valve cells in parallel with said filaments and means including an electromagnet for inserting a resistance in said filament circuit when the current flowing through said cells exceeds a predetermined maximum.

1,687,475. AUTOMOBILE LOCK. FRANK M. GILLENWATERS, Leavenworth, Kans., assignor of forty one-hundredths to William R. Sweet, Independence, Kans., and twenty per cent to Arthur W. Stanley, Leavenworth, Kans. Filed Jan. 29, 1924, Serial No. 689,383. Renewed May 31, 1928. 3 Claims. (Cl. 70—127.)

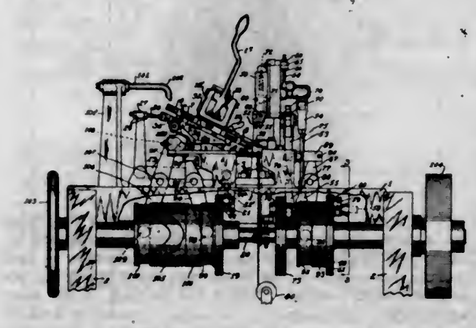


1. In a device of the character described in combination with a propelling shaft, of a pair of casings about said shaft, lugs carried by said casings at their abutting portions extending inwardly therefrom and having recesses therein at their abutting portions to form one large recess, a pair of pins carried by each lug which extend inwardly and into said recess, the pins upon one lug being aligned with the pins upon the opposite lug, a pair of locking arms adapted to be received in said recess and pivoted upon said aligned pins, and means upon said arms for engaging said propelling shaft for preventing rotation thereof.

1,687,476. MACHINE FOR TYING KNOTS IN SPIRAL SPRINGS. DARWIN HANAUER, La Grange, Ill., assignor to Kinney Rome Company, a Corporation of Illinois. Filed Sept. 18, 1926. Serial No. 136,282. 7 Claims. (Cl. 140—101.)

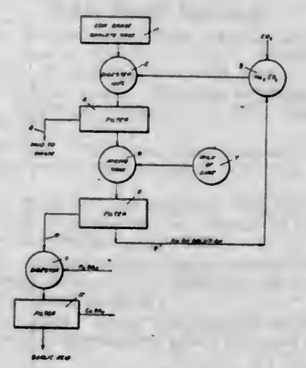
1. In a machine of the character described, a movable work-supporting table, an anvil mounted on the table for movements between a position in which it projects above the table and a position in which it is retracted below the table, and means controlled by movements of the table to shift the anvil from one of its positions to the other.

1,687,477. WARP-STOP MECHANISM FOR LOOMS. RUFUS C. HUNTER, Graham, N. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 16, 1928. Serial No. 254,840. 8 Claims. (Cl. 139—369.)



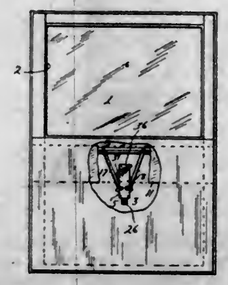
1. In a warp stop motion for looms, the combination of longitudinally extending warp rests, longitudinally extending drop wire guides intermediate the warp rests, a bridge secured to the warp rests and having a central opening, the side walls of which are spaced apart a distance substantially equal to the transverse separation of the drop wire guides, a threaded stud extending upwardly between the walls of the central opening, a clamping device loosely mounted on the threaded stud and having portions extending over the drop wire guides, and a nut threaded to the stud above the clamping device to force the latter into clamping relation with the drop wire guides.

1,687,478. ARTIFICIAL EYES FOR DOLLS, DISPLAY FIGURES, AND THE LIKE. SAMUEL MARCUS, Brooklyn, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 26, 1923. Serial No. 634,724. 2 Claims. (Cl. 46—40.)



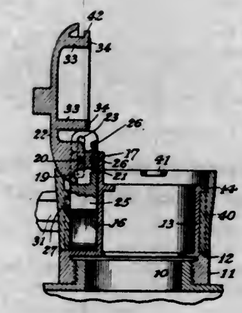
1. An eye-set for dolls and the like comprising eyes having segmental caps fixed upon their upper convex portions, said caps having front convex lower edges, and eyelashes held between the caps and the eyes and said lashes being secured by adhesive directly against the caps, at points removed from the lower edges of the caps, and projected forwardly along the lower convex edges of the caps and at an angle thereto, the lower front edges of the lashes extending on convex lines approximating the convexity of the edges of the caps.

1,687,479. BUCKLE-STRAP SEVERING AND ASSEMBLING MACHINE. EUGENE E. CLEMENTS, New Haven, Conn., assignor to L. Candee & Company, New Haven, Conn., a Corporation of Connecticut. Filed May 7, 1926. Serial No. 107,335. 19 Claims. (Cl. 12—1.)



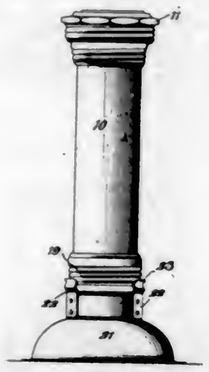
1. An assembling machine comprising presser means, reciprocable means for holding an article adjacent the presser means, means for inserting a strip of material into association with the article, and means for withdrawing the article through the presser means whereby the strap ends are folded.

1,687,480. METHOD OF RECOVERING OXALATES. GUY H. BUCHANAN, Westfield, N. J., and GEORGE BARSKY, New York, N. Y., assignors to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Sept. 4, 1924. Serial No. 735,757. 6 Claims. (Cl. 260—118.)



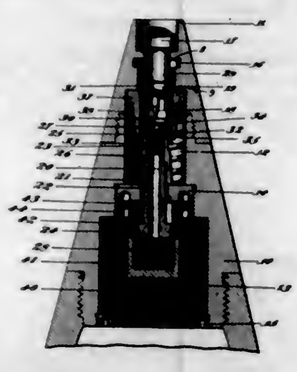
1. The method of converting calcium oxalate into an alkali metal oxalate which comprises reacting on calcium oxalate with an alkali metal carbonate in the presence of water above 40° C., said alkali metal carbonate being present in an excess of about 15% to 35% over the theoretical required, and recovering a solution of alkali metal oxalate.

1,687,481. WINDOW REGULATOR. BURTON S. FLORADAY and HOWARD B. HASKINS, Toledo, Ohio, assignors to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 25, 1927. Serial No. 178,203. 12 Claims. (Cl. 268—126.)



1. In a window regulator, the combination with a pair of angularly movable lifter arms, a gear segment connected to each lifter arm, said gear segments being laterally offset from each other, and a toothed member having laterally offset toothed portions meshing with said gear segments for actuating the same.

1,687,482. RACK-ACTION RADIATOR CAP. HARRY STIMPSON GILLETTE, New York, N. Y., assignor to Gillette Motor Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 7, 1926. Serial No. 134,000. 9 Claims. (Cl. 220—24.)



1. A radiator cap comprising a fixed base member, a member movable thereon, a cover carried in hinged relation by the fixed member said cover having a segmental gear, a gear block adapted to engage the segmental gear and having a projecting pin, and means engaging said pin when the movable part is turned for raising the gear block to swing the cover to the open position, and means for locking the parts in such position.

1,687,483. ELECTRIC LAMP AND SUPPORT THEREFOR.. HARRY M. KORETZKY, Hoboken, N. J. Filed Aug. 20, 1926. Serial No. 130,506. 2 Claims. (Cl. 240—10.5.)

1. A self-contained electric lamp having an external casing and a terminal threaded cap having means to control the lamp circuit by relative rotatory movements of said casing and cap; in combination with an empty bowl-shaped base having springs adapted to receive said cap between them with a firm gripping pressure, said springs being adapted to afford a stable support for the base when the latter is inverted.

1,687,484. SAFETY HIGH-EXPLOSIVE IMPACT FUSE. PIETER DANIEL VAN ESSEN, the Hague, Netherlands, assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,514. 47 Claims. (Cl. 102—39.)

1. In a fuse for a projectile, the combination of a firing pin, a detonator member, a spacing member interposed between the firing pin and the detonator member so that forward movement of the latter will move the firing pin to its forward position through the medium of the spacing member, and means for normally preventing forward movement of the spacing member and rendered ineffective upon discharge of the projectile from a gun.

Patents Nos. 1,687,485 to 1,688,317.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 375—No. 3. TUESDAY, OCTOBER 16, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Trade-Marks Canceled.

151,032. Certain named toilet preparations. Heinrich Chemical Company, Minneapolis, Minn. Registered January 10, 1922. Canceled September 28, 1928.

158,948. Work shirts. Feldman & Weinman, Baltimore, Md. Registered September 19, 1922. Canceled September 19, 1928.

160,128. Coal. The Apex Coal Company, Fort Smith, Ark. Registered October 17, 1922. Canceled September 19, 1928.

206,373. Sirup for food purposes. New Orleans Coffee Company Ltd., New Orleans, La. Registered December 1, 1925. Canceled September 28, 1928.

210,175. Steam-distilled pine-oil disinfectant. The Selig Company, Atlanta, Ga. Registered March 9, 1926. Canceled September 28, 1928.

220,439. Candy. United Confectionery Co., St. Louis, Mo. Registered November 9, 1926. Canceled September 28, 1928.

239,275. Certain named radio and phonograph apparatus. Newcombe-Hawley, Inc., St. Charles, Ill. Registered February 28, 1928. Canceled September 28, 1928.

243,148. Precious stones and jewelry. Powers & Mayer, Inc., New York, N. Y. Registered June 12, 1928. Canceled September 28, 1928.

Changes in Classification.

Order No. 3,082, September 28, 1928, directs:

In *class 206, Special Receptacles and Packages* (Division 40), establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 312, Supports, Cabinet Structures, subclass 78, Article-dispensing magazine type, Cylindrical article, Slender article, With ejector, Reciprocable ejector:

Receptacles
Pocket and personal use
Cigars and tobacco
41.4 With igniter.

41.4. RECEPTACLES, POCKET AND PERSONAL USE, CIGARS AND TOBACCO, WITH IGNITER. Devices coming under the definition of subclass 41 which include as a part of the organization an igniting element.

Note.—For receptacles of a similar kind not for pocket use see class 131, TOBACCO. For delivering devices generally see class 312, SUPPORTS, CABINET STRUCTURES, and for match boxes with igniters see this class (206), subclasses 33.5 and 34, if of pocket use, and class 312, SUPPORTS, CABINET STRUCTURES, subclasses 81, Article-dispensing magazine type, Cylindrical article, Slender article, With ejector, Reciprocable ejector, With automatic friction igniter; 82, Article-dispensing magazine type, Cylindrical article, Slender article, With ejector, With automatic friction igniter; 85, Article-dispensing magazine type, Cylindrical article, Slender article, With releaser; Peripheral pocket, With automatic friction igniter; and 86, Article-dispensing magazine type, Cylindrical article, Slender article, With igniter, if not of personal or pocket kind.

Patent Appeals in the Court of Appeals of the District of Columbia—No Call for November.

DEPARTMENT OF COMMERCE, U. S. PATENT OFFICE,
Washington, October 5, 1928.

The following letter received from the Clerk of the Court of Appeals of the District of Columbia is published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

OFFICE OF THE CLERK,
COURT OF APPEALS OF THE DISTRICT OF COLUMBIA,
Washington, October 4, 1928.

Commissioner of Patents, Patent Office, Washington, D. C.

Dear Sir: I am instructed by the court to advise you that there will be no call of cases on the patent appeals docket in November next.

Yours very truly,

HENRY W. HODGES,
Clerk.

Condition of Applications Under Examination at Close of Business October 5, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 112,980; Trade-Mark Division, 1,936. Oldest new case, Dec. 9, 1927; oldest amended, Dec. 6, 1927. The dates given are 1928 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

WAERN *v.* CARTER.

No. 2,036. Decided May 7, 1928.

INTERFERENCE—PRIORITY—ORIGINALITY.

Testimony *Held* to establish that the invention in issue originated with C. and that his disclosure to certain parties was in turn disclosed to W., who made the working drawings, and that any details which were supplied by W. were ancillary to C.'s main plan and originally belonged to him.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Geo. H. Mitchell and *Mr. Martin T. Fisher* for Waern.

Mr. D. L. Morris for Carter.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

Carter is the senior party, his application having been filed on July 8, 1922. Waern's application was filed on March 23, 1923. While the applications were copending a patent was issued to Carter. It is conceded that the burden of proof rests upon Waern to sustain his case by a preponderance of the evidence.

The invention relates to pasting machines, designed to paste sheets of paper, particularly lithographs, on the opposite sides of sheets of cardboard, such two-sided pasting having the effect of preventing a warping of the cardboard when drying. Suitable pieces of cardboard are fed through pasting rolls which cover both sides with a coating of paste; they are then carried forward by rolls having their axes diagonal to the direction of travel, whereby the boards are kept moving against a lateral guide. The boards next come to a timing finger which automatically opens at the proper instant to admit them to large sheet-applying rolls which press the pasted sheets upon them in proper longitudinal registry or alignment. The timing finger is operated by gears moving in corelation with the sheet-feeding rolls. As the finger releases the card, the rolls grip it for the pressing operation.

The issue is in 19 counts, of which counts 9, 10 and 16 to 19 relate to the mechanism for effecting the lateral registry of the boards when brought to the timing finger; while counts 1 to 8 and 11 to 15 relate to the mechanism for effecting front and rear registry of the boards with the sheets carried by the applying rolls. The Examiner of Interferences awarded priority of invention as to the first class, to wit, counts 9, 10 and 16 to 19, to Carter, and no appeal was taken from that decision. Priority as to the other counts was awarded by the Examiner to Waern. The latter part of the Examiner's decision was appealed, and was reversed by the Examiners in Chief; and their decision was affirmed by the Commissioner of Patents. This appeal accordingly relates to counts 1 to 8, and 11 to 15.

It appears that the W. F. Powers Co. was engaged in the lithographic business, but their finishing or mounting was done in outside shops. In the year 1919 they established a company called the Litho Finishing Service, Inc., to take over the latter line of work, and Carter, who was an experienced man in the business, was employed to take entire charge of the new factory. A mounting machine was secured but it proved unsatisfactory, and the machine here involved was invented to take its place. It is claimed on the one hand that Carter conceived the invention, and that Waern was employed as only a draftsman to produce the working drawings of Carter's invention. On the other hand it is claimed that the invention was first conceived by Waern. Both parties rely upon the same reduction to practice, and the question accordingly is one of originality.

The opinions written by the tribunals of the Patent Office fully present the evidence according to the opposing standpoints, and we do not think it necessary here to enter into a detailed discussion of the testimony. The Examiners in Chief conclude their opinion with the following statement, to wit:

> To sum up the case it is our opinion that Carter conceived the invention in issue in the counts under consideration, disclosed it to Powers, Ingham, and Bostwick and possibly others; that Ingham disclosed the main plan with sufficient clearness to Sawtelle and Waern to enable Waern, a skilled machine designer, to make the working drawings and that such details as were supplied by Waern were ancillary to Carter's main plan and rightfully belonged to him. Waern was clearly an employee of the W. F. Powers Co., assignees of Carter, and was paid for his work in designing the machine and making the working drawings.

This statement is quoted and adopted by the Commissioner of Patents in his opinion. Upon a consideration of the entire record we are convinced that the conclusion thus stated is correct.

The decision of the Commissioner of Patents is therefore affirmed.

Court of Appeals of the District of Columbia.

IN RE DELI.

No. 2,059. Decided June 4, 1928.

PATENTABILITY—PENCIL.

Claims for a pencil construction *Held* patentable since neither of the references discloses a plunger having a flanged head and provided with lateral displaced projections corresponding to threads.

APPEAL from Patent Office. Reversed in part.

Mr. J. H. Milans and *Mr. C. T. Milans* for Deli.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of the Patent Office rejecting the claims in appellant's application for a patent.

The invention relates to a mechanical pencil having a peculiar plunger construction. There is a needless multiplicity of claims in the application, as, out of the seven, claims 1, 5 and 7, here reproduced, sufficiently define the invention:

1. In a pencil the combination of a body, and lead-advancing mechanism including a plunger, said plunger having side projections that act as threads, said projections being formed of metal that has been displaced laterally from the body of the plunger.

5. A plunger for use in mechanical pencils, said plunger consisting of a length of wire having a plurality of lateral projections corresponding to threads, the metal in the lateral projections being composed of a portion of the metal of the body of the plunger that has been displaced laterally.

7. A lead propelling plunger composed of a length of wire, one end of which is flattened and the opposite end of which is provided with a plurality of separate, non-continuous lateral projections composed of metal displaced from the body of the wire by locally reducing the cross sectional area thereof.

In his specification appellant directs attention to the importance, in the commercial manufacture of mechanical pencils of the type in which a threaded plunger is utilized, of having the coacting threads on the tube and plunger sufficiently firm and rugged in construction as to withstand the hard usage to which such pencils usually are subjected. The applicant then says that in his invention the lead tube with which the plunger cooperates is provided with helical grooves corresponding to threads, and that—

the plunger for co-operation therewith consists of a wire having its head flattened, the threads for cooperation with the helical groove in the tube being formed by one stroke of a die in which the metal is flattened at diametrically opposite points and caused to flow outside of the normal contour of the wire. This results in the formation of lateral projections from the wire.

Appellant contends that he has thus produced a simpler and more efficient construction than is to be found in the prior art; that his pencil is easily disassembled and new lead installed.

The principal references cited by the Patent Office tribunals are the patents to Bergen and Most (No. 1,319,039, October 21, 1919; No. 1,325,570, December 23, 1919). In the Bergen patent there is no flattened head or end of the plunger, nor is it provided with laterally-displaced projections. The plunger of the Most patent has no flattened head, nor has it laterally-displaced projections, unless the two bends therein can be so considered; and, in our view, it would be a strained construction to rule that such bends constitute—

lateral projections corresponding to threads, the metal in the lateral projections being composed of a portion of the metal of the body of the plunger that has been displaced laterally.

It thus appears that the claims of the issue avoid the cited references. In other words, appellant has produced a pencil with novel elements and characteristics. The claims are carefully limited in scope so as to cover no more than what has been accomplished by him. The device is practical, marks an advance in the art, and we think its production involved the exercise of inventive faculties.

Decision reversed as to claims 1, 5 and 7. Affirmed as to other claims.

Reversed as to claims 1, 5 and 7.

Affirmed as to other claims.

Court of Appeals of the District of Columbia.

GROSSMAN AND LOWE *v.* GAMBLE.

No. 2,061. Decided June 4, 1928.

INTERFERENCE—PRIORITY.

Evidence reviewed and *Held* that priority was properly awarded to the party Gamble.

APPEAL from Patent Office. Affirmed.

Mr. Wm. G. Henderson for Grossman et al.

Mr. H. J. Lucke for Gamble.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Patent Office in an interference proceeding awarding priority of invention to the party, Gamble.

The first two of the three counts of interference relate to a collapsible bag, used principally in carrying ladies' hats. The third count relates to a bag "of the character described," with—

a handle comprising a strip secured at one end in the seam at one side of the bag and a tab secured to the free edge of the closure flap, and means on the free ends of said strip and tab for detachably securing them together.

The party, Gamble, was the first in the field, and all three tribunals, after a careful review of the evidence, awarded her priority as to counts 1 and 2. The Examiner of Interferences, being of the view that Mrs. Gamble was without sufficient corroboration as to the time when a bag embodying the elements in the third count was made, awarded that count to appellants. The Examiners in Chief and the Commissioner held that there was such corroboration, and awarded the count accordingly.

A review of the evidence convinces us of the correctness of the conclusion finally reached, and we therefore, for the reasons more fully stated in the opinions of the Board and the Commissioner, affirm the decision.

Affirmed.

Court of Appeals of the District of Columbia.

THE SHERWIN-WILLIAMS COMPANY *v.* THE STOCKTON PAINT COMPANY.

No. 2,064. Decided June 4, 1928.

TRADE-MARKS—SIMILARITY.

A mark consisting of colored horizontal bands with the words "Old Mission" on one and associated with a representation of an old mission *Held* not deceptively similar to a mark consisting of a plurality of horizontal bands, the representation of a globe over which paint is being poured, the initials "SWP," and the words "Cover The Earth," since the dominant features of one are the words "Old Mission" and the dominant features of the other the representation of the globe and its accessories.

APPEAL from Patent Office. Affirmed.

Mr. T. H. Fay for The Sherwin-Williams Company.

Mr. C. E. Riordon and *Mr. C. Russell Riordon* for The Stockton Paint Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

This is an appeal from a Patent Office decision dismissing appellant's opposition to the registration

by appellee, as a trade-mark for paints, of colored, horizontal bands, with the words "Old Mission" prominently shown in the upper band, and an equally-prominent pictorial representation of an old mission in approximately the center of the mark.

Appellant's mark comprises a plurality of varicolored, horizontal bands, and a pictorial representation of a globe, and a paint container from which paint is being poured upon the globe, the paint container bearing the initials "SWP" (Sherwin-Williams Paint), and on the globe are the words "Cover The Earth."

We agree with the Patent Office that the dominant characteristics of appellant's mark are the representation of the globe and its accessories, while the dominant characteristics of appellee's mark are the words "Old Mission" and the pictorial representation of an old mission, and, hence, that there is no likelihood of confusion in the concurrent use of the two marks.

The decision is affirmed.

Affirmed.

Re. 16,897. (See 1,496,537.)

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Design Pat. 65,187, C. J. Howel, Chicago, Ill., Design for a bottle. Decided July 31, 1928.

Pat. 1,512,294, E. H. Marcy, Hypodermic syringe. decided September 25, 1928, claims 1 and 2.

Pat. 1,516,757, H. M. Weber, Fuel mixture containing oxidized petroleum products, decided August 10, 1928, claims 1, 2, 3, 7, and 8.

Pat. 1,572,283, R. G. Griswold, Gas calorimeter, decided September 28, 1928, claims 1, 5, and 9.

Pat. 1,584,230, J. C. Knight, Perforating machine, decided September 6, 1928, claims 3, 4, 5, 6, 7, and 11.

Pat. 1,597,567, Baker and O'Neill, Boiler, decided August 3, 1928, claims 1, 2, and 3.

Pat. 1,605,299, Sweatt and Denison, Electrically-operated burner-controlling apparatus, decided September 25, 1928, claim 6.

Pat. 1,620,005, V. T. Brigham, Control for subvacuous condition of periodically-fired boilers, decided August 28, 1928, claims 1, 4, 5, 7, and 11.

Pat. 1,623,051, F. Fraser, Multiple-sheet-flowing apparatus, decided August 10, 1928, claims 4 and 17.

Pat. 1,625,212, L. L. Karas, Coil and support for same, decided September 4, 1928, claims 1 and 2.

Pat. 1,643,379, W. A. Hutchinson, Wheel structure, decided August 27, 1928, claim 1.

Final decision in interference has been rendered against the following trade-mark:

T. M. 224,482, Tubes containing artists' water colors and artists' paints and oils. Theodore Daniels, New York, N. Y. Registered March 1, 1927. Decided September 25, 1928.

Disclaimer.

1,562,119.—*Lewis C. Myers* and *George F. Handley*, of Freeport and Glendale, N. Y. TYPEWRITING MACHINE. Patent dated November 17, 1925. Disclaimer filed September 6, 1928, by the assignee, *Royal Typewriter Company, Inc.*

Hereby disclaim the following claims, to wit:

"1. In a typewriting machine embodying a main frame, a carriage, and pivoted type bars, the combination of a shift frame supporting said carriage for case shift movement, and means for mounting said shift frame for bodily adjustment as a unit relative to the main frame independent of the case shift movement to obtain proper relation between the carriage and the type bars.

"2. In a typewriting machine embodying a main frame, a carriage, and pivoted type bars, the combination of a shift frame supporting said carriage for case shift movement, and means for adjusting said shift frame bodily as a unit relative to the main frame independent of the case shift movement to obtain proper relation between the carriage and the type bars.

"3. In a typewriting machine embodying a main frame, a carriage, and type-bars having a limited movement to printing position, the combination of a shift frame supporting said carriage, and means for mounting said shift frame for bodily adjustment as a unit relative to the main frame and at right angles to the type bar at the end of its movement to printing position.

"4. In a typewriting machine embodying a main frame, a carriage, and type bars having a limited movement to printing position, the combination of a shift frame supporting said carriage, and means for adjusting said shift frame bodily as a unit relative to the main frame and at right angles to the type bar at the end of its movement to printing position.

"5. In a typewriting machine embodying a main frame and a carriage, the combination of a shift frame supporting said carriage for case shift movement, means for mounting said shift frame for adjustment as a unit relative to the main frame independent of the case shift movement, and means for retaining the shift frame in adjusted position.

"6. In a typewriting machine embodying a main frame and a carriage, the combination of a shift frame supporting said carriage for case shift movement, means for adjusting said shaft frame as a unit relative to the main frame independent of the case shift movement, and means for retaining the shift frame in adjusted position.

"7. In a typewriting machine embodying a main frame, a carriage, and type bars having a limited movement to printing position, the combination of a shift frame supporting said carriage, means for mounting said shift frame for adjustment as a unit relative to the main frame and at right angles to the type bar at the end of its movement to printing position, and means for retaining the shift frame in adjusted position.

"8. In a typewriting machine embodying a main frame, a carriage, and type bars having a limited movement to printing position, the combination of a shift frame supporting said carriage, means for adjusting said shift frame as a unit relative to the main frame and at right angles to the type bar at the end of its movement to printing position, and means for retaining the shift frame in adjusted position.

"9. In a typewriting machine embodying a main frame and a carriage, the combination of a pair of plates adjustably carried by the main frame, and a shift frame entirely carried by said plates and movable independently thereof.

"10. In a typewriting machine embodying a main frame and a carriage, the combination of a pair of plates slidably carried by the main frame, a shift frame entirely carried by said plates and movable independently thereof, and means for giving said plates a sliding movement relative to the main frame for adjusting the shift frame.

"11. In a typewriting machine embodying a main frame and a carriage, the combination of a pair of plates slidably carried by the main frame, a shift frame entirely carried by said plates and movable independently thereof, means for giving said plates a sliding movement relative to the main frame, and means for retaining the parts in adjusted position.

"12. In a typewriting machine embodying a main frame and a carriage, the combination of a pair of plates adjustably carried by the main frame, a shift frame comprising a rock shaft and parallel link motion, and means for supporting said shift frame as a unit on the plates.

"13. In a typewriting machine embodying a main frame and a carriage, the combination of a pair of plates adjustably carried by the main frame, a shift frame comprising a rock shaft and parallel link motion, means for supporting said shift frame as a unit on the plates, and means for moving said plates to adjust the position of the shift frame.

"14. In a typewriting machine embodying a main frame, a carriage, and type bars having a limited movement to printing position, the combination of a shift frame, a pair of members entirely supporting the shift frame, and means for mounting said members for slidable movement relative to the main frame and at right angles to the type bar at the end of its movement to printing position.

"15. In a typewriting machine embodying a main frame, a carriage, and type bars having a limited movement to printing position, the combination of a shift frame, a pair of members entirely supporting the shift frame, and means for sliding said members relative to the main frame and at right angles to the type bar at the end of its movement to printing position.

"16. In a typewriting machine embodying a main frame, a carriage, and type bars having a limited movement to printing position, the combination of a shift frame, a pair of members entirely supporting the shift frame, means for sliding said members relative to the main frame and at right angles to the type bar at the end of its movement to printing position, and means for retaining the parts in adjusted position."

"21. In a typewriting machine embodying type bars and an abutment for limiting the movement of the type bars to printing position, the combination of a carriage having case shift movement, supports therefor, a platen supported by said carriage and means for mounting said supports for adjustment as a unit in a direct line independent of the case shift movement to afford full impressions of the type bars on the platen.

"22. In a typewriting machine embodying type bars and an abutment for limiting the movement of the type bars to printing position, the combination of a carriage having case shift movement, supports therefor, a platen supported by said carriage, and means for adjusting said supports as a unit in a direct line independent of the case shift movement to afford full impressions of the type bars on the platen.

"25. In a typewriting machine, the combination of swinging type bars, a platen mounted for case shift movement, supports therefor, and means for mounting said supports on the main frame of the machine for adjustment as a unit in a direct line independent of the case shift movement to afford full impressions of the type bars.

"26. In a typewriting machine, the combination of swinging type bars, a platen mounted for case shift movement, supports therefor, and means for adjusting said supports on the main frame of the machine as a unit in a direct line independent of the case shift movement to afford full impressions of the type bars.

"27. In a typewriting machine, the combination of swinging type bars, a platen mounted for case shift movement, supports therefor, means for adjusting said supports on the main frame of the machine as a unit in a direct line independent of the case shift movement to afford full impressions of the type bars, and means for holding the supports in adjusted position."

Adjudicated Patents.

(D. C. and C. C. A. Ohio.) The Kerner patent, No. 1,108,164, for garbage and refuse incinerator, claims 1, 2, 3, 5, and 6 *Held* valid and infringed. *Kerner Incinerator Co. v. Townsend Estates*, 27 F. (2d) 599 and 606.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 16, 1928.

[VOL. 375. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 266,770. VELDOWN COMPANY, INC., New York. N. Y. Filed May 21, 1928.

VEL-VO-PAK

For Wadding, Stuffing or Packing Materials Composed of Paper and Card Board and Prepared Wood Pulp for Packing Containers.

Claims use since October, 1927.

Ser. No. 268,483. CLOVER MFG. CO., Norwalk, Conn. Filed June 22, 1928.

SIL-CARB

For Silicon Carbide.

Claims use since January, 1927.

Ser. No. 269,517. CLARENCE SHERMAN DODGE, also doing business as Dodge Plant Farms, Raymondville, Tex. Filed July 13, 1928.

FAMOUS

For Growing Plants, for Propagation Purposes—Namely, Onion Plants and Cabbage Plants.

Claims use since December, 1917.

Ser. No. 269,721. EASTERN COAL COMPANY, Chicago, Ill. Filed July 17, 1928.

For Coal.

Claims use since February, 1916.

Ser. No. 270,118. EASTERN COAL COMPANY, Chicago, Ill. Filed July 25, 1928.

For Coal.

Claims use since January, 1922.

Ser. No. 270,447. SOUTHERN COAL COMPANY, INCORPORATED, Memphis, Tenn. Filed Aug. 1, 1928.

The use of the words "Muhlenberg County's, Best," and "Coal" is disclaimed except in connection with the mark as shown.

For Coal.

Claims use since Sept. 15, 1927.

Ser. No. 270,803. RUDY-PATRICK SEED COMPANY, Kansas City, Mo. Filed Aug. 9, 1928.

DELTA 18

The drawing is lined to indicate shading.
For Alfalfa Seed.
Claims use since 1926.

Ser. No. 270,990. CLARKSVILLE COAL COMPANY, Clarksville, Ark. Filed Aug. 14, 1928.

SPAD-AR-K

For Coal.
Claims use since June, 1927.

Ser. No. 271,071. WM. H. MCMAHEN COMPANY, Philadelphia, Pa. Filed Aug. 15, 1928.

For Feathers in Bulk.
Claims use since August, 1889.

Ser. No. 271,077. JOHN HILDING OSTBERG, doing business as Consolidated Seed Co. (Not Inc.), Chicago, Ill. Filed Aug. 15, 1928.

AMERICAN PARK

For Lawn-Grass Seed.
Claims use since about May 1, 1924.

CLASS 2.

Receptacles.

Ser. No. 249,146. AMERICAN STEEL PIPE & TANK COMPANY, Los Angeles, Calif. Filed May 18, 1927.

No claim is made to the lining, which indicates blue and black on the drawing.
For Metal Underground Storage Tanks Made of Black Metal Plate.
Claims use since May 5, 1925.

Ser. No. 267,514. SCHULER-O'CONNELL GRAIN CO., Stockton, Calif. Filed June 5, 1928.

DELTA

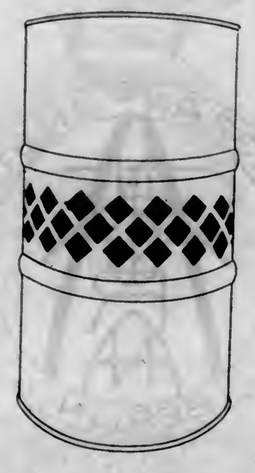
For Grain Bags.
Claims use since May 26, 1928.

Ser. No. 270,945. TAYLOR BROTHERS' MANUFACTURING CORPORATION, Elkhart, Ind. Filed Aug. 13, 1928.

CHAMPION

For Tool Boxes.
Claims use since June 1, 1928.

CLASS 4.



Abrasive, Detergent, and Polishing Materials.

Ser. No. 255,154. AMERICAN SHOE POLISH CO., Chicago, Ill. Filed Sept. 24, 1927.

No claim is made to the word "Brand" apart from the mark shown in the accompanying drawing.
For Paste for Cleaning Automobiles and the Like.
Claims use since May, 1927.

Ser. No. 262,084. HILLYARD CHEMICAL COMPANY, St. Joseph, Mo. Filed Feb. 23, 1928.

No claim is made to the form of container shown in the drawing.
For Furniture-Cleaning Compound With Incidental Polishing Properties.
Claims use since Oct. 5, 1927.

Ser. No. 262,680. L. M. SHEETZ, doing business as Washum Products Co., Billings, Mont. Filed Mar. 6, 1928.

Washum

For Hand Cleaner, Being a Compound for the Removal of Dirt, Paint, Stains, Grease, Etc., from the Hands.
Claims use since May 1, 1926.

Ser. No. 269,688. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed July 16, 1928.

No exclusive claim is made to the wording appearing on the drawing with the exception of the words "Crystal Blanco" and "Peets" apart from the mark as shown.
For Soap.
Claims use since Apr. 6, 1921.

Ser. No. 271,479. PAUL EDWARDS, doing business as Fan Tan Laboratories, Chicago, Ill. Filed Aug. 24, 1928.

FAN TAN

For Soap.
Claims use since May 1, 1928.

Ser. No. 271,854. JERMAN-GIESSNER CO., Chicago, Ill. Filed Sept. 1, 1928.

WATERSOL

For Powdered Preparation Soluble in Water to Impart Softening and Cleansing Properties to the Water for Washing Dishes, Clothes, Painted Walls, Woodwork, Bottles, Pots, Pans, Kitchen Ware, and Other Household Articles.
Claims use since Aug. 27, 1928.

Ser. No. 271,951. GEORGE E. TYLER, doing business as The Cleaning Products Company, Denver, Colo. Filed Sept. 5, 1928.

CAN-O-CLEAN

For Hand Soap.
Claims use since Apr. 25, 1928.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 257,873. THOMAS SAMUEL INGHAM, Carnarvon, North Wales. Filed Nov. 21, 1927.

VINCULIN

For Medicinal Preparation for Diabetes.
Claims use since on or about September, 1924.

Ser. No. 259,826. SUPERIOR CHEMICAL COMPANY, INC., Chicago, Ill. Filed Jan. 7, 1928.

Elanco

For Solutions, Compounds, and Elements Thereof for the Treatment of Milk and Milk Products to Purify and Sterilize the Same, to Remove Off Flavors and Odors Therefrom, and Reduce Acidity Thereof.
Claims use since Dec. 29, 1927.

Ser. No. 262,300. FIRM DEUTSCHE MILCHWERKE A.-G., Zwingenberg, Germany. Filed Feb. 27, 1928.

Fissan

For Medicated Plasters, Medicated Surgical Bandages; Medicated Dressings for Burns, Cuts, and Wounds; Preparations for Exterminating Animal and Plant Life, Insecticides, Preparations for Preserving Foods, Skin Lotions, Toilet Cream, Toilet Powder, Salve Base, Deodorizers, and Ethereal Oils and Perfumes.
Claims use since Nov. 10, 1925.

Ser. No. 264,584. HARRIE D. HUSSEY, doing business as Dayton Liniment Company, Dayton, Ohio. Filed Apr. 9, 1928.

UNCLE BEN'S

For Liniment to be Used for Affectations of the Skin and Muscles or the Like and as an Antiseptic.
Claims use since Sept. 1, 1924.

Ser. No. 265,121. ST. LOUIS SULPHUR & CHEMICAL CO., St. Louis, Mo. Filed Apr. 19, 1928.

PIONEER

For Sulphur.
Claims use since Oct. 15, 1927.

Ser. No. 265,279. DR. WALDEMAR LIMMER, Berlin, Germany. Filed Apr. 23, 1928.

ANTAGRAN-INSTITUT BERLIN

No claim is made to the word "Berlin" apart from the mark shown.
For Medicines and Pharmaceutical Chemicals for External Application in the Treatment of Gout, Rheumatism, Lumbago, Ischiagra, and Neuralgia.
Claims use since 1915.

Ser. No. 265,494. PARK & TILFORD, New York, N. Y. Filed Apr. 27, 1928.

No claim of exclusive right to the use of the words "Before" and "After" being made apart from the mark as shown in the accompanying drawing.
For preparation for Taking the Color Out of All Dyed Materials.
Claims use since February, 1928.

Ser. No. 266,461. GLOBE LABORATORIES, Fort Worth, Tex. Filed May 16, 1928.

BLUE RIBBON

The cross lining appearing on the drawing indicates shading only.
For Fly Spray.
Claims use since Apr. 10, 1928.

Ser. No. 266,547. THE GEORGE W. LUFT COMPANY, INC., Long Island City, N. Y. Filed May 17, 1928.

TANGEE

For Lip Stick, Creme Rouge, Compact Rouge, Cleansing Cream, Day Cream, Night Cream, Massage Cream, Face Lotion, Astringent, Face Powder, Powder Compacts; Cosmetics for Lashes, Brows, and Hair; Hair Pencils, Nail Polish, Perfumes, and Toilet Waters.
Claims use since about December, 1920.

Ser. No. 266,758. SÄCHSISCHES SERUMWERK A. G., Dresden, Germany. Filed May 21, 1928.

Moloid

For Drug for Sick Headaches, Exsudative Diathesis, and Cardiac Asthma.
Claims use since January, 1926.

Ser. No. 267,656. HEALTH PRODUCTS CORPORATION, Newark, N. J. Filed June 7, 1928.

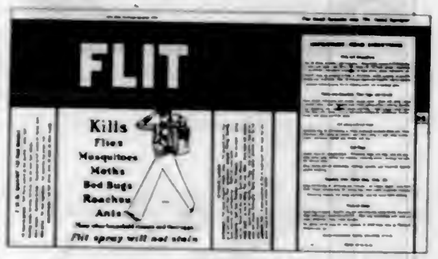
Feen-a-mint

For Laxative Chewing Tablets.
Claims use since December, 1922.

Ser. No. 268,641. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed June 25, 1928.

No claim is made to the representation of a carton per se, and no claim is made to the printed matter other than the words "Mistol" and "Stanco Incorporated." Applicant is the owner of registered Trade-Mark No. 153,389.
For Nose and Throat Spray.
Claims use since May 11, 1928.

Ser. No. 268,642. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed June 25, 1928.



No claim is made to the printed matter other than the words "Mistol" and "Stanco Incorporated."

For Nose and Throat Spray.

Claims use since May 11, 1928.

Ser. No. 268,643. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed June 25, 1928.

No claim is made to the printed matter appearing on the drawing with the exception of the words "Flit" and "Stanco Incorporated."

For Insecticides, Deodorants, and Disinfectants.

Claims use since May 25, 1928.

Ser. No. 269,261. SCHERING-KAHLBAUM A. G., Berlin, Germany. Filed July 7, 1928.

MERITOL

For Chemical Product for the Destruction of Parasites.

Claims use since about January, 1927.

Ser. No. 269,262. SCHERING-KAHLBAUM A. G., Berlin, Germany. Filed July 7, 1928.

Vasano

For Medicine for the Treatment of Seasickness.

Claims use since about May, 1927.

Ser. No. 269,264. SCHERING-KAHLBAUM A. G., Berlin, Germany. Filed July 7, 1928.

Solganal

For Medicine for the Treatment of Tuberculosis, Leprosy, and Streptococcal Infections.

Claims use since about May, 1926.

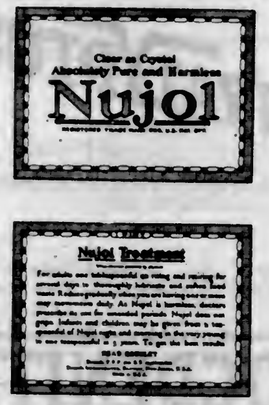
Ser. No. 269,574. BUR-MOODA REMEDY COMPANY, Kansas City, Kans. Filed July 14, 1928.

Bur-Mooda

The words "Trade-Mark" are disclaimed apart from the mark shown in the drawing.

For Tonic in Tablet Form Intended As an Aid to Weakened and Irritable Conditions of the Nervous System of Both Men and Women.

Claims use since early in December, 1927.



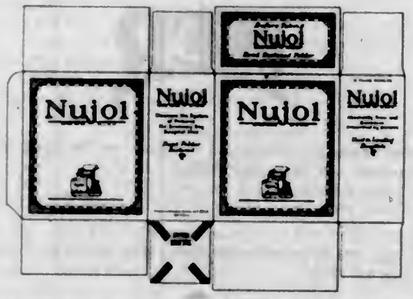
Ser. No. 269,680. THOMAS J. B. MCREDMOND, doing business as Nallay Products Company, Los Angeles, Calif. Filed July 16, 1928.

Rid-All

For Preparation for Exterminating Moths and Insects.

Claims use since Aug. 11, 1915.

Ser. No. 269,921. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed July 20, 1928.



The drawing is lined to show shading only. The mark shown on the drawing constitutes the obverse and reverse sides of the label. No claim is made to the printed matter appearing upon the label other than the words "Nujol" and "Stanco Incorporated."

For Mineral Oil for Chemical, Medicinal, and Pharmaceutical Purposes.

Claims use since May 11, 1928.

Ser. No. 269,922. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed July 20, 1928.

The representation of the containers shown on the carton are disclaimed in connection with the mark as a whole. The drawing is lined for the purpose of shading only. No claim is made to a carton per se or to the printed matter other than the words "Nujol" and "Stanco Incorporated."

For Mineral Oil for Chemical, Medicinal, and Pharmaceutical Purposes.

Claims use since May 11, 1928.

Ser. No. 270,297. PAT V. JAMES, Memphis, Tenn. Filed July 28, 1928.

Vicine

For Medicinal Preparation for Human Consumption for the Elimination of Worms, for the Treatment of Diarrhœa Colic, Indigestion, Blood Tonic and General Tonic, Ivy and Oak Poisoning; a Medicinal Preparation for Treating Minor Cuts, Burns, Scalds, Abrasions, and Bruises in General.

Claims use since June 28, 1926.

Ser. No. 270,394. MORRIS POTASHNIKOFF, doing business as Potash Pharmaproducts Company, Brooklyn, N. Y. Filed July 31, 1928.

TOOTHACHE—GON

The word "Toothache" is disclaimed apart from the mark as shown in the drawing.

For Pharmaceutical Preparation Compounded as a Liquid and Used in the Treatment of Toothache.

Claims use since 1916.

Ser. No. 270,395. MORRIS POTASHNIKOFF, doing business as Potash Pharmaproducts Company, Brooklyn, N. Y. Filed July 31, 1928.

BURN—GON

The word "Burn" is disclaimed apart from the mark as shown in the drawing.

For Pharmaceutical Preparation Compounded as a Salve and Used in the Treatment of Burns.

Claims use since 1916.

Ser. No. 270,538. DAMRELL CHEMICAL COMPANY, Modesto, Calif. Filed Aug. 3, 1928.

For Poisons for Rats, Mice, and Cockroaches.

Claims use since July 1, 1928.

Ser. No. 270,587. THE GLAZO COMPANY, Cincinnati, Ohio. Filed Aug. 4, 1928.

GALO

For Nail Enamel, Nail-Polish Remover—to wit, a Solvent for Collodian; Cuticle Oil, and Cuticle Cream.

Claims use since early in December, 1927.

Ser. No. 270,588. THE GLAZO COMPANY, Cincinnati, Ohio. Filed Aug. 4, 1928.

The color lining shown on the drawing is used for shading purposes only.

For Nail Enamel, Cuticle Cream, Cuticle Oil, and Liquid Polish Remover.

Claims use since January, 1928.

Ser. No. 270,778. OIL-O-RUST-O COMPANY, Albany, N. Y. Filed Aug. 8, 1928.

OIL-O-RUST

The representation of the goods is disclaimed apart from the other features of the mark shown on the drawings. The words "Rust Releaser, Squeak Eliminator, Lubricator" are disclaimed apart from the mark as shown.

For Rust Remover and Preventative in Liquid Form.

Claims use since July 1, 1928.

Ser. No. 270,875. HURRELL-DUGGER COMPANY, Indianapolis, Ind. Filed Aug. 11, 1928.

T.S.F.

The drawing is not lined to indicate the color blue, but for shading.

For Insecticide or Preparation to Kill Lice.

Claims use since February, 1924.

Ser. No. 270,968. JACK LENOX, doing business as Hargrove's Magic Hair Restorer Co., De Kalb, Tex. Filed Aug. 13, 1928.

Hargrove'S
MAGIC
HAIR
RESTORER

The words "Hair Restorer" are disclaimed apart from the other features of the mark appearing on the drawing.

For Hair Tonic for Gray and Faded Hair.

Claims use since Aug. 1, 1927.

Ser. No. 271,005. NYAL COMPANY, Detroit, Mich. Filed Aug. 14, 1928.

NYALYPTUS

For Compound for the Treatment of Coughs.

Claims use since June 24, 1927.

Ser. No. 271,026. HUGO FRIEDMAN, doing business as The Hu-Friedy Mfg. Co., Chicago, Ill. Filed Aug. 15, 1928.

"OGDENITE"

For Medical Preparation Used for Elimination of Pain after Extraction of Teeth.

Claims use since about Sept. 1, 1926.

Ser. No. 271,223. JOHN WILHELM, doing busines as Mer Cough Syrup Co, Chicago, Ill. Filed Aug. 17, 1928.

MER

For Medicinal Compound Designed to be Used in the Treatment of Coughs and Colds.

Claims use since about January, 1927.

Ser. No. 271,277. SPOONER, INC., New York, N. Y. Filed Aug. 18, 1928.

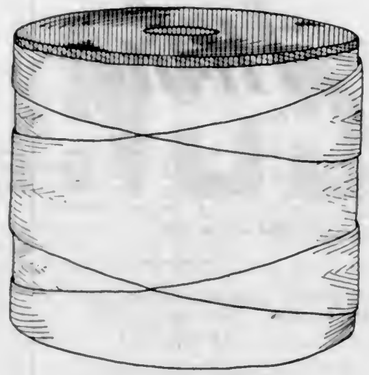
CHEKITA

For Face Powders, Talcum Powders, Perfumes, Toilet Water, Rouge, Lip Stick, Sachet Powders, Facial Creams, and Skin and Hair Lotions.

Claims use since about Jan. 15, 1928.

Ser. No. 271,440. OTTO KAESBACH, Berlin, Germany. Filed Aug. 23, 1928.

Okasa



For Medicinal Preparation for Strengthening Nerves.

Claims use since 1922.

CLASS 7.

Cordage.

Ser. No. 260,240. PLYMOUTH CORDAGE COMPANY, Plymouth, Mass. Filed Jan. 17, 1928.

The trade-mark being the representation of a disk seen at the top of the ball. The lines in the disk at the top of the figure indicate red. The trade-mark is applied or affixed to the goods by applying impregnating material to one end and a trifle of the adjacent cylindrical side of the ball or package, the shaded area in the drawing indicating the impregnated portion, no exclusive claim being made to the representation of the ball per se.

For Bidder Twine.

Claims use since Oct. 18, 1927.

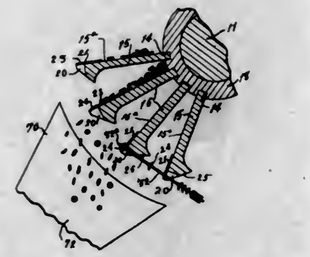
REISSUES

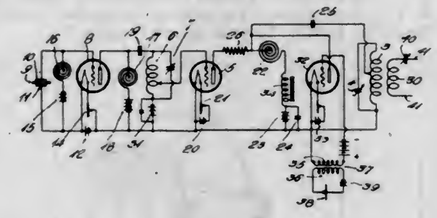
OCTOBER 16, 1928.

17,103. DOMINO AND ART OF MAKING THE SAME. TOM C. GRAHAM, Albany, N. Y., assignor to The Embossing Company, Albany, N. Y., a Corporation of New York. Filed Aug. 28, 1928. Serial No. 302,021. Original No. 1,675,891, dated July 3, 1928, Serial No. 147,234, filed Nov. 9, 1926. 7 Claims. (Cl. 273—137.)



1. In the art of making dominoes, the improvement comprising shaping the dominoes and providing each with pip-areas in numbers suitable for dominoes of high denominations and separated from each other by intervening spaces of the same color as but different elevation from the pip-areas themselves, and coloring different numbers of pip-areas on the several dominoes contrastively to the other pip-areas to provide the desired denominations, dominoes of lower denominations being left with one or more pip-areas of the same color as the intervening spaces.

6. A set of dominoes each having on its face recessed pip-areas in numbers suitable for dominoes of high denomination, bounded and separated from each other by intervening spaces of the same color, the areas of different dominoes being distinctively colored in different numbers to form pips of different denominational numbers, each domino of lower denomination having one or more pip-areas of the same color as the intervening spaces.



17,104. WASHER SORTING AND STRINGING MACHINE. ALOYS SCHONENBERGER, Springfield Township, Summit County, Ohio, assignor to himself and Floyd E. Shannon, Akron, Ohio. Filed July 7, 1928. Serial No. 291,094. Original No. 1,598,748, dated Sept. 7, 1926, Serial No. 752,075, filed Nov. 24, 1924. 26 Claims. (Cl. 209—72.)

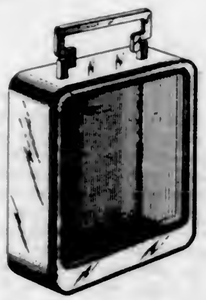
13. A washer stringing machine comprising a member having a surface adapted to receive a quantity of washers thereon, said member having a washer engaging seat on said surface, means to turn said member to move said washer engaging seat in an endless path, said member provided with a groove disposed in said path and means to support a wire with the free end thereof positioned in

said groove whereby a continued movement of said member will repeatedly bring said seat to the free end of said wire.

17,105. AMPLIFYING SYSTEM. ALFRED CROSSLEY, Washington, D. C.; assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 242,261. Original No. 1,651,810, dated Dec. 6, 1927, Serial No. 68,121, filed Nov. 10, 1925. 4 Claims. (Cl. 250—17.)

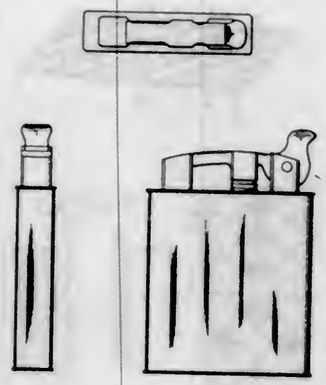
1. In a high frequency transmission system the combination of a plurality of electron tubes each having grid, filament and plate electrodes, input and output circuits interconnecting said electrodes, a piezo-electric crystal connected in the input circuit of one of said electron tubes for controlling the generation of oscillations in the circuit of said electron tube, another of said electron tubes having its input circuit coupled with the output circuit of said first mentioned electron tube, the output circuit of said last mentioned tube including parallel branch circuits, and a resistance connected in series with said parallel branch circuits and directly connected to the plate electrode of said last mentioned electron tube whereby said electron tube operates to generate oscillations of a frequency determined by said piezo-electric crystal without interference from undesired self-oscillatory current in the circuits thereof.

DESIGNS



OCTOBER 16, 1928.

76,594. LAMP SHADE. CHARLES APELT, Comfort, Tex. Filed June 28, 1928. Serial No. 27,308. Term of patent 7 years.

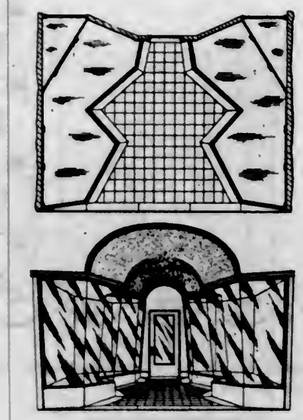


The ornamental design for a lamp shade, as shown.

76,595. CLOCK CASE. WERNER H. BALZER, New York, N. Y., assignor to The Ansonia Clock Company, New York, N. Y., a Corporation of Connecticut. Filed Dec. 17, 1927. Serial No. 24,515. Term of patent 14 years.

The ornamental design for a clock case, as shown.

76,596. CIGAR LIGHTER. ARTHUR BATES, Attleboro, Mass., assignor to Baer & Wilde Co., Attleboro, Mass. Filed June 18, 1928. Serial No. 27,175. Term of patent 14 years.

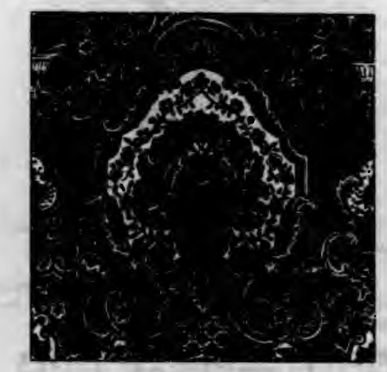


The ornamental design for a cigar lighter as shown.

76,597. PITCHER. OTTO BERGNER, Schonwald, Germany. Filed Apr. 27, 1928. Serial No. 26,483. Term of patent 3½ years.

The ornamental design for a pitcher, as shown.

76,598. STORE FRONT. JACOB B. BERLAND, St. Louis, Mo. Filed Aug. 9, 1928. Serial No. 27,760. Term of patent 14 years.

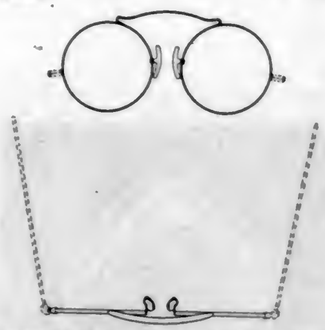


The ornamental design for a store-front substantially as shown.

76,599. TEXTILE FABRIC. LUCIEN BIVA, Brooklyn, N. Y., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed July 30, 1928. Serial No. 27,637. Term of patent 3½ years.

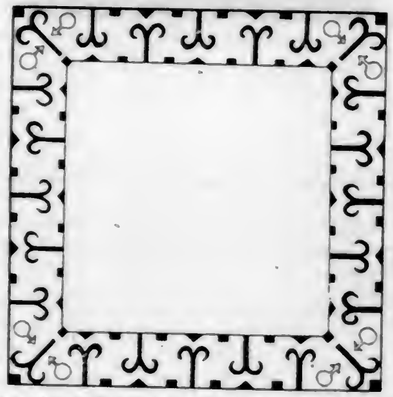
The ornamental design for a textile fabric substant'ally as shown.

76,600. TEXTILE FABRIC. LUCIEN BIVA, Brooklyn, N. Y., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed July 30, 1928. Serial No. 27,639. Term of patent 3½ years.



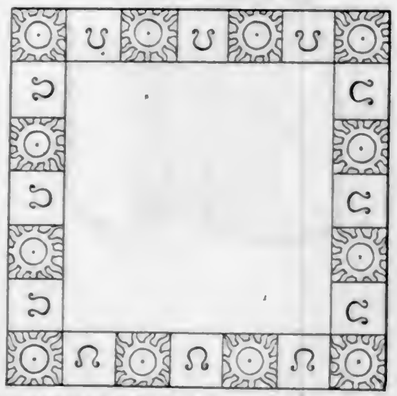
The ornamental design for a textile fabric substantially as shown.

76,601. SCORE CARD. KATHLEEN BOE, St. Louis, Mo. Filed Apr. 4, 1927. Serial No. 21,451. Term of patent 3½ years.



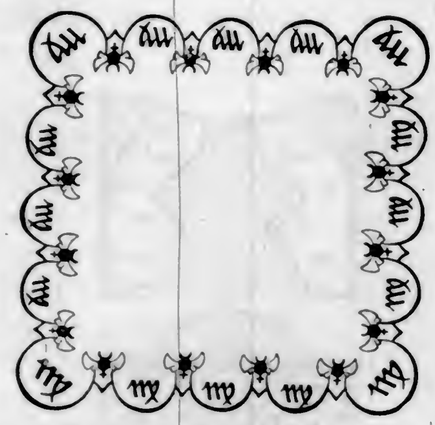
The ornamental design for a score card, as shown.

76,602. EYEGLASS FRAME. SAMUEL E. BOUCHARD, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 2, 1928. Serial No. 27,362. Term of patent 7 years.



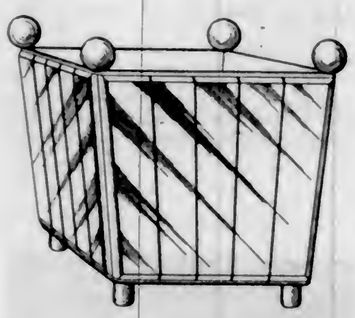
The ornamental design for an eyeglass frame substantially as shown.

76,603. HANDKERCHIEF OR THE LIKE. MARGARET BRIDGMAN, Canadensis, Pa. Filed May 3, 1927. Serial No. 21,828. Term of patent 7 years.



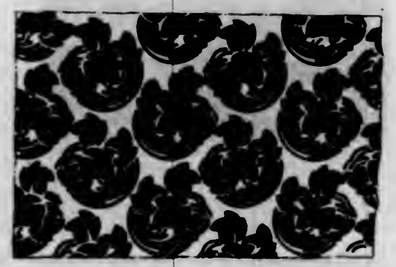
The ornamental design for a handkerchief or the like, substantially as shown and described.

76,604. HANDKERCHIEF OR THE LIKE. MARGARET BRIDGMAN, Canadensis, Pa. Filed May 3, 1927. Serial No. 21,832. Term of patent 7 years.



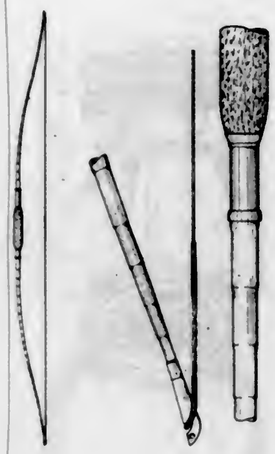
The ornamental design for a handkerchief or the like, substantially as shown and described.

76,605. HANDKERCHIEF OR THE LIKE. MARGARET BRIDGMAN, Canadensis, Pa. Filed May 3, 1927. Serial No. 21,833. Term of patent 7 years.



The ornamental design for a handkerchief or the like, substantially as shown and described.

76,606. FLOWERPOT OR SIMILAR ARTICLE. MARGUERITE A. BUCHWALTER, New York, N. Y. Filed June 14, 1928. Serial No. 27,123. Term of patent 7 years.



The ornamental design for a flowerpot or similar article substantially as shown.

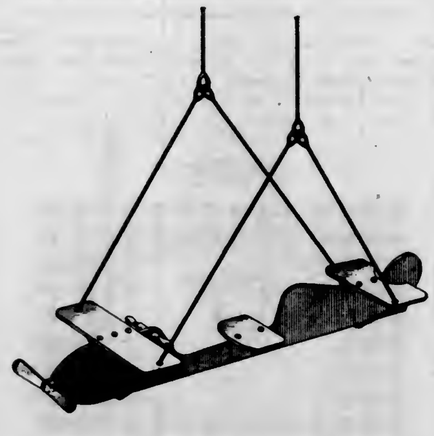
76,607. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed Aug. 9, 1928. Serial No. 27,755. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

76,608. BOW FOR ARCHERY. ROBERT H. COWDERY, Geneva, Ohio. Filed July 5, 1927. Serial No. 22,664. Term of patent 14 years.

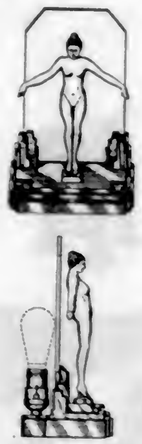
The ornamental design for a bow for archery, as shown.

76,609. WOVEN-WIRE FABRIC. MOISE H. DURAND, Attleboro, Mass., assignor to Charles D. Blaikie, doing business as Smith, Richardson Co., Attleboro, Mass. Filed June 20, 1928. Serial No. 27,208. Term of patent 14 years.



The ornamental design for a woven wire fabric substantially as shown and described.

76,610. TOY ANIMAL. RICHARD EVANS ELLETT, London, England. Filed Mar. 15, 1928, Serial No. 25,869, and in Great Britain Dec. 19, 1927. Term of patent 7 years.

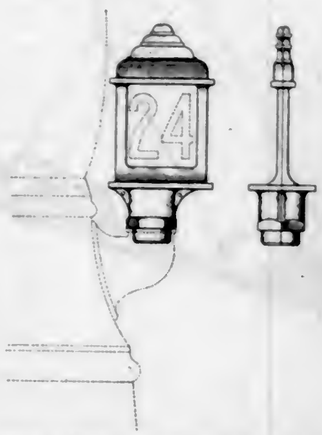


The ornamental design for a toy animal as shown.

76,611. AEROPLANE SWING. HOWARD J. FERRIS, Harvard, Ill. Filed Jan. 23, 1928. Serial No. 24,993. Term of patent 14 years.

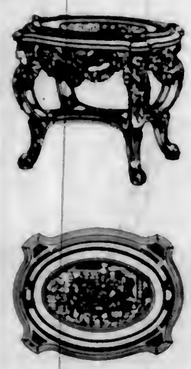
The ornamental design for an aeroplane swing as shown.

76,612. LAMP. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed June 30, 1928. Serial No. 27,340. Term of patent 7 years.



The ornamental design for a lamp as shown.

76,613. LIGHTING FIXTURE. HARRY J. GRUBER, New York, N. Y. Filed Aug. 17, 1928. Serial No. 27,855. Term of patent 7 years.

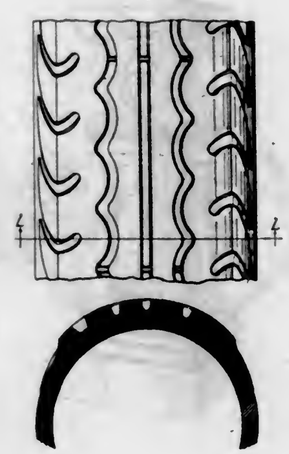


The ornamental design for a lighting fixture, as shown.

76,614. PRICE RACK. OKLA H. HERSHMAN, Indianapolis, Ind. Filed Apr. 9, 1928. Serial No. 26,197. Term of patent 7 years.

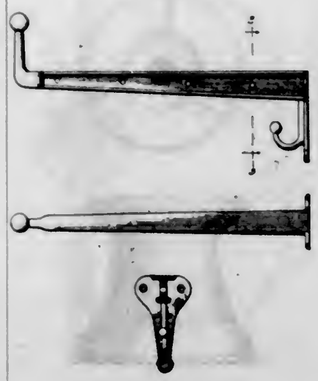
The ornamental design for a price rack, as shown.

76,615. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1928. Serial No. 26,353. Term of patent 3½ years.



The ornamental design for a table or similar article as shown.

76,616. OUTDOOR SIGNBOARD. WATHEN M. JAMES, Denver, Colo. Filed Jan. 21, 1928. Serial No. 24,968. Term of patent 7 years.

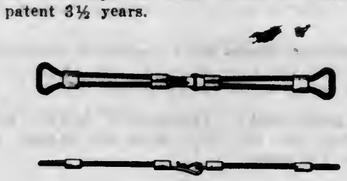


The ornamental design for an outdoor signboard as shown.

76,617. TIRE. JOHN H. KOHSIEK, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 30, 1927. Serial No. 22,615. Term of patent 14 years.

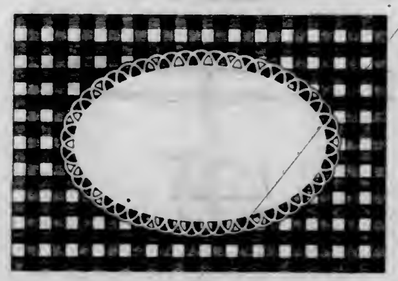
The ornamental design for a tire, as shown.

76,618. CLOTHES HANGER. MINNA BOBENE KRAFTHEFER, Chicago, Ill. Filed Oct. 24, 1927. Serial No. 23,867. Term of patent 14 years.



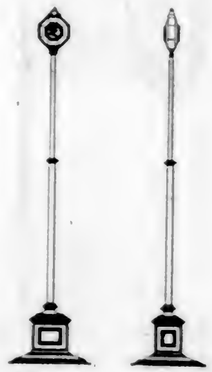
The ornamental design for a clothes hanger, as shown.

76,619. HAND MIRROR OR SIMILAR ARTICLE. FRANK H. LA PIERRE, East Orange, N. J., assignor to La Pierre Manufacturing Company, Newark, N. J., a Corporation. Filed June 29, 1928. Serial No. 27,322. Term of patent 7 years.



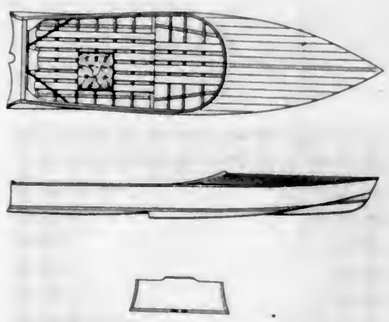
The ornamental design for a hand mirror or similar article as shown.

76,620. BRACELET. IRVING R. LEDERER, Providence, R. I. Filed Apr. 13, 1928. Serial No. 26,314. Term of patent 3½ years.



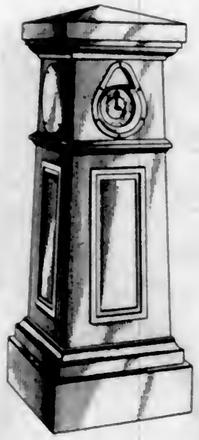
The ornamental design for a bracelet, substantially as shown.

76,621. LABEL BLANK. WILLIAM E. LONG, Chicago, Ill., assignor to The W. E. Long Co., Chicago, Ill., a Corporation of Illinois. Filed July 27, 1928. Serial No. 27,604. Term of patent 14 years.



The ornamental design for a label blank, substantially as shown.

76,622. TRANSMITTER MOUNTING. GEORGE R. LUM, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 26, 1928. Serial No. 27,287. Term of patent 14 years.

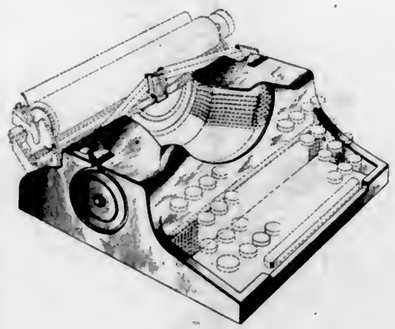


The ornamental design for a transmitter mounting as shown.

76,623. SPEED BOAT. FREDERICK C. MARTIN, Delphi, Ind. Filed Mar. 17, 1928. Serial No. 25,893. Term of patent 3½ years.

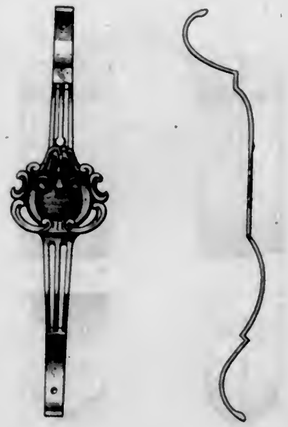
The ornamental design for a speed boat, as shown.

76,624. CABINET FOR FLUID-DISPENSING OUTFIT. WALTER E. MILESTONE, Lakewood, Ohio. Filed Dec. 23, 1927. Serial No. 24,609. Term of patent 3½ years.



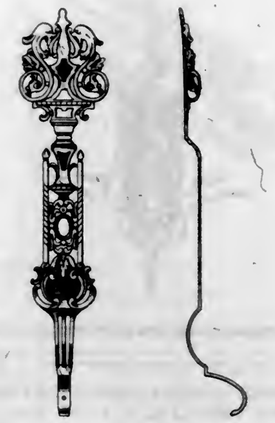
The ornamental design for a cabinet for fluid dispensing outfit as shown.

76,625. SMOKER'S ASH RECEPTACLE OR SIMILAR ARTICLE. ANGELO JOSEPH MORNAGHINI, Brooklyn, N. Y. Filed July 20, 1928. Serial No. 27,544. Term of patent 3½ years.



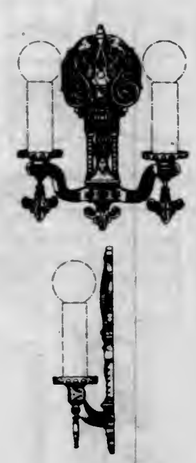
The ornamental design for a smoker's ash receptacle or similar article, as shown.

76,626. PORTABLE TYPEWRITING-MACHINE FRAME. LOUIS A. NEMCOVSKY, New York, N. Y., assignor, by mesne assignments, to Sun Typewriter Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1926. Serial No. 18,297. Term of patent 14 years.



The ornamental design for a portable typewriting machine frame as shown and described.

76,627. BODY PLATE. BARNET NEWLAND, New York, N. Y. Filed Aug. 17, 1928. Serial No. 27,856. Term of patent 7 years.



The ornamental design for a body plate as shown.

76,628. BODY PLATE. BARNET NEWLAND, New York, N. Y. Filed Aug. 17, 1928. Serial No. 27,857. Term of patent 7 years.

The ornamental design for a body plate as shown.

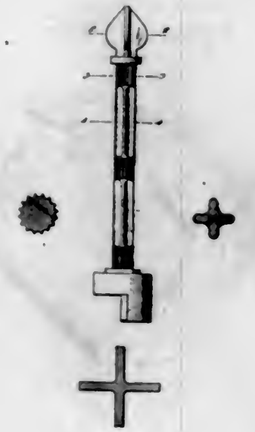
76,629. WALL BRACKET. BARNET NEWLAND, New York, N. Y. Filed Aug. 17, 1928. Serial No. 27,858. Term of patent 7 years.

The ornamental design for a wall bracket as shown.

76,630. CHANDELIER. BARNET NEWLAND, New York, N. Y. Filed Aug. 17, 1928. Serial No. 27,860. Term of patent 7 years.

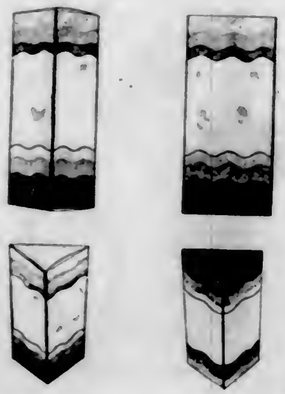
The ornamental design for a chandelier as shown.

76,631. DOLL. LAULIE S. NEWELL and CORA E. BROWN, Miami, Fla. Filed Feb. 2, 1928. Serial No. 25,138. Term of patent 14 years.



The ornamental design for a doll, as shown.

76,632. MANTEL CLAMP. JESSIE SMITH ORNES and LULU VERHOREN LAVELL, Minneapolis, Minn. Filed Mar. 16, 1928. Serial No. 25,884. Term of patent 14 years.



The ornamental design for a mantel clamp as shown.

76,633. SIGNAL STANDARD. HENRY C. PFAFF, Newark, N. J., assignor to Traffic and Street Sign Company, Newark, N. J., a Corporation of New Jersey. Filed June 27, 1928. Serial No. 27,294. Term of patent 14 years.

The ornamental design for a signal standard, as shown.

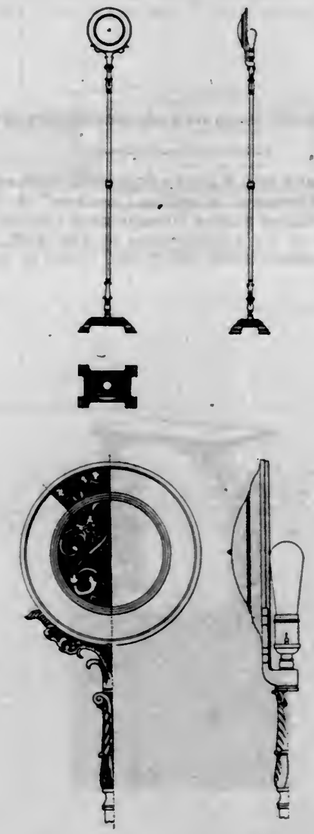
76,634. CARTON. GEORGE FREDERIC RIEGEL, New York, N. Y., assignor to Pinaud Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1928. Serial No. 26,606. Term of patent 14 years.

The ornamental design for a carton as shown.

76,635. ORNAMENT FOR AUTOMOBILE RADIATOR CAP OR SIMILAR ARTICLE. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed Dec. 15, 1927. Serial No. 24,499. Term of patent 14 years.

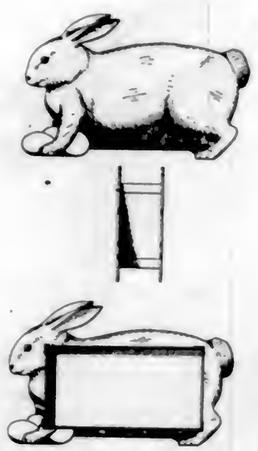
The ornamental design for an ornament for automobile radiator cap or similar article, substantially as shown.

76,636. LENS FOR VEHICLE LAMPS. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Dec. 27, 1926. Serial No. 20,161. Term of patent 14 years.



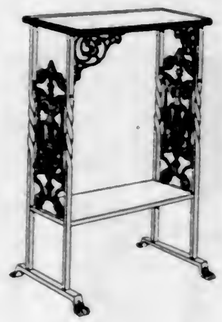
The ornamental design for a lens for vehicle lamps, as shown.

76,637. VANITY CASE. MAX E. SCHENKE, Jersey City, N. J. Filed June 19, 1928. Serial No. 27,200. Term of patent 3½ years.



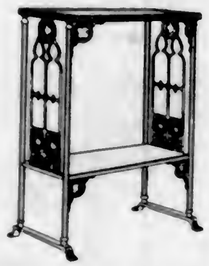
The ornamental design for a vanity case as shown.

76,638. FLOOR LAMP. HANS T. SCHEIDACKER, Brooklyn, N. Y., assignor to Hudson Brass Works, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 27, 1927. Serial No. 24,668. Term of patent 3½ years.



The ornamental design for a floor lamp, as shown.

76,639. BOX. FRANK J. SCHLEICHER, St. Louis, Mo. Filed Apr. 9, 1928. Serial No. 26,204. Term of patent 14 years.

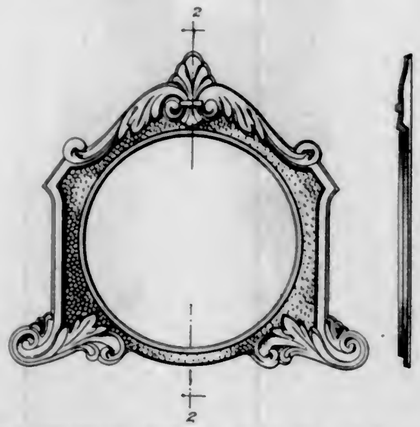


The ornamental design for a box, substantially as shown.

76,640. TABLE FOR RADIO RECEIVING SETS OR THE LIKE. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 29, 1928. Serial No. 27,328. Term of patent 7 years.

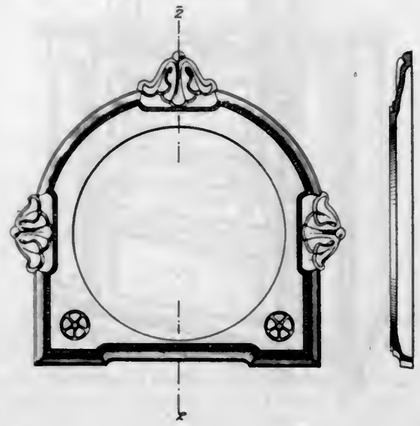
The ornamental design for a table for radio receiving sets or the like, as shown.

76,641. TABLE FOR RADIO RECEIVING SETS OR THE LIKE. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 29, 1928. Serial No. 27,329. Term of patent 7 years.



The ornamental design for a table for radio receiving sets or the like, as shown.

76,642. LAMP STAND. GEORGE SHROSBREE, Portland, Oreg. Filed Dec. 5, 1927. Serial No. 24,383. Term of patent 3½ years.

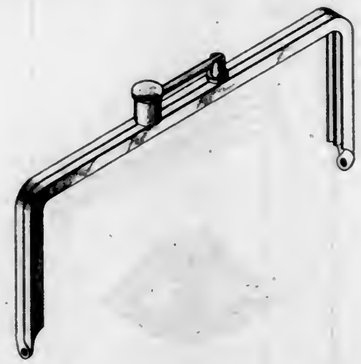


The ornamental design for a lamp stand, as shown.

76,643. ALARM-CLOCK FRAME. PAUL SIPTROTT, New York, N. Y. Filed May 3, 1928. Serial No. 26,556. Term of patent 3½ years.

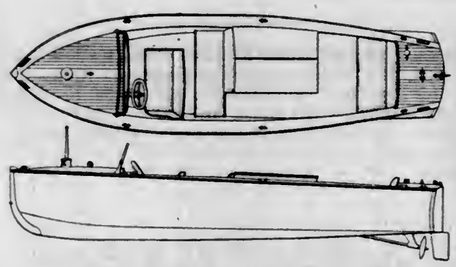
The ornamental design for an alarm clock frame, as shown.

76,644. ALARM-CLOCK FRAME. PAUL SIPTROTT, New York, N. Y. Filed May 3, 1928. Serial No. 26,557. Term of patent 3½ years.



The ornamental design for an alarm clock frame, as shown.

76,645. TEXTILE FABRIC. WILLIAM HARVEY SPOWERS, Essex Fells, N. J. Filed May 3, 1928. Serial No. 26,547. Term of patent 3½ years.

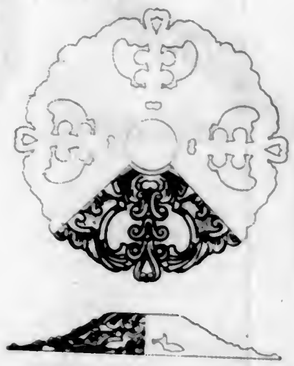


The ornamental design for textile fabric, as shown and described.

76,646. BAG FASTENER. BERNARD STEMBER, New York, N. Y. Filed Feb. 14, 1928. Serial No. 25,441. Term of patent 3½ years.

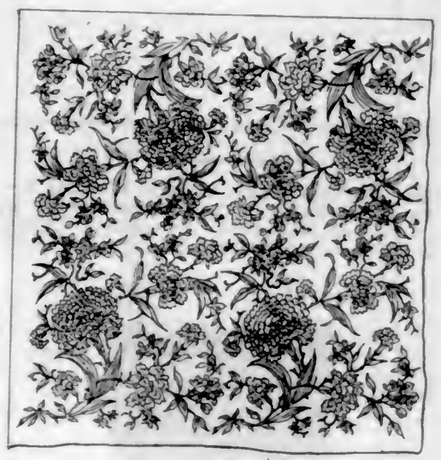
The ornamental design for a bag fastener as shown.

76,647. BOAT. LEON L. TRIPP, Albany, N. Y. Filed Apr. 2, 1928. Serial No. 26,099. Term of patent 14 years.



The ornamental design for a boat, as shown and described.

76,648. TEXTILE FABRIC. GABRIEL J. VIRGILE, Brooklyn, N. Y., assignor to Cheney Brothers, South Manchester, Conn., a Corporation of Connecticut. Filed May 29, 1928. Serial No. 26,906. Term of patent 14 years.



The ornamental design for a textile fabric as shown.

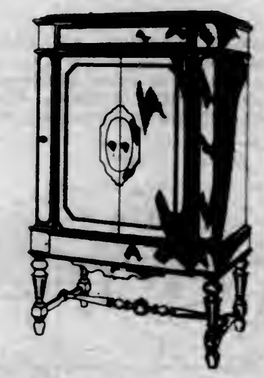
76,649. PLATE FOR LIGHTING FIXTURES. LESTER R. WELLMAN, Chicago, Ill. Filed May 24, 1928. Serial No. 26,835. Term of patent 3½ years.

The ornamental design for a plate for lighting fixtures, as shown and described.

76,650. EMBROIDERED FABRIC. JOHN WALDER, Union City, N. J., assignor to Monroe Embroidery Works, West New York, N. J. Filed Dec. 24, 1927. Serial No. 24,638. Term of patent 3½ years.

The ornamental design for an embroidered fabric as shown and described.

76,651. CABINET FOR SOUND-REPRODUCING MECHANISM. JOHN WHITSON, New York, N. Y. Filed July 14, 1928. Serial No. 27,489. Term of patent 14 years.



The ornamental design for a cabinet for sound reproducing mechanism as shown.

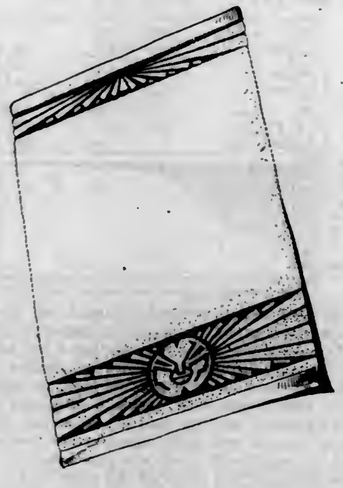
76,652. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Nov. 25, 1927. Serial No. 24,279. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

76,653. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Nov. 25, 1927. Serial No. 24,283. Term of patent 7 years.

The ornamental design for a radiocabinet, substantially as shown.

76,654. HEATING UNIT FOR ELECTRIC HEATERS. FRANK YOKEL, Cleveland, Ohio, assignor, by mesne assignments, to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Jan. 12, 1927. Serial No. 20,339. Term of patent 3½ years.



The ornamental design for a heating unit for electric heaters, as shown.

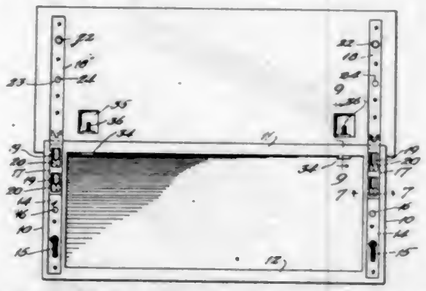
76,655. SIGNAL BOX. SOCRATES A. XIPPAS, Buffalo, N. Y. Filed Aug. 11, 1928. Serial No. 27,788. Term of patent 7 years.

The ornamental design for a signal box, as shown.

76,656. TOWEL. ROMAIN DE TIRTOFF, (ERTÉ), Paris, France, assignor to W. H. & A. E. Margerison & Co., Philadelphia, Pa., a Firm composed of William H. Margerison and Albert E. Margerison. Filed July 10, 1928. Serial No. 27,436. Term of patent 3½ years.

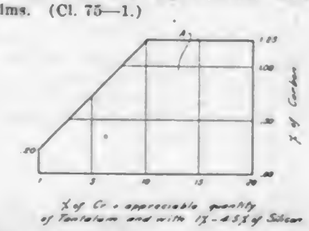
The ornamental design for a towel, as shown.

76,657. TOWEL. ROMAIN DE TIRTOFF, (ERTÉ), Paris, France, assignor to W. H. & A. E. Margerison & Co., Philadelphia, Pa., a Firm composed of William H. Margerison and Albert E. Margerison. Filed July 10, 1928. Serial No. 27,437. Term of patent 3½ years.



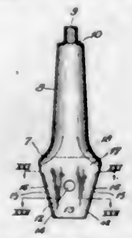
The ornamental design for a towel, as shown.

PATENTS



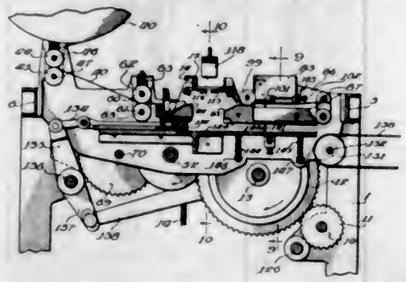
GRANTED OCTOBER 16, 1928.

1,687,485. CHEST LOCK. ANTHONY ARCADU, Peekskill, N. Y. Filed Dec. 6, 1927. Serial No. 238,185. 8 Claims. (Cl. 206—1.5.)



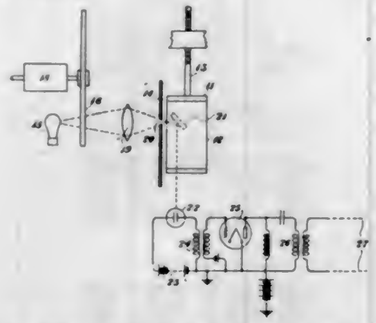
4. In combination, a chest having front, rear and end walls, a lid for said chest, a pair of plates mounted on the top of said end walls and each having a key hole slot adjacent its front end, a pair of hinges each having a short leaf slidably mounted on a respective plate at the rear end thereof, said hinges each having a long leaf secured to the underside of said lid, and a headed pin adjacent the free end of each long leaf and adapted to enter the wide end of the respective key hole slot and move into the narrow end by sliding of the hinge on the plate.

1,687,486. FERROUS ALLOY. PERCY A. E. ARMSTRONG, New York, N. Y. Filed Aug. 14, 1925. Serial No. 50,255. 8 Claims. (Cl. 75—1.)



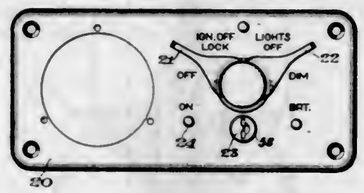
1. Ferrous alloy resistant to fluids at elevated temperatures containing approximately chromium 9%, carbon .50% silicon 3.5%, tantalum 3%, and the principal part of the remainder iron.

1,687,487. TUBULAR SPOKE AND METHOD OF MAKING IT. HERALD P. ARNT, Lakewood, and ERNEST JAMES ARNOLD, Cleveland, Ohio, assignors, by direct and mesne assignments, of one-fourth to Curt B. Muller, Cleveland, Ohio. Filed Apr. 15, 1924. Serial No. 706,679. 28 Claims. (Cl. 29—174.)



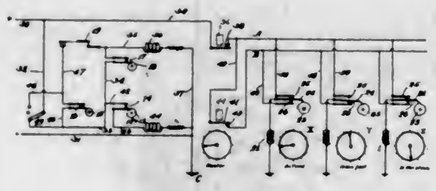
I. A tubular spoke composed of an integral piece of metal and having one end terminating as wings, some edge-bordering surfaces of wings being offset and in overlapped abutment with adjacent end surfaces of other of said wings.

1,687,488. PACKAGE WRAPPING AND BANDING MACHINE. HAZEN KIRKE BECKER and EMIL G. JURGENS, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 30, 1927. Serial No. 179,568. 6 Claims. (Cl. 93—93.)



1. In a machine of the class described, a pair of stationary folding members spaced to receive a package therebetween and having upper surfaces for receiving a strip of tape, intermittently operated mechanism for feeding strips of tape across the upper surfaces of said folding members, means for applying glue to one end of said tape strips, a pair of hinged supports located above said folding members for receiving a package to be wrapped, yielding means for normally holding said supports in position to carry the package thereon, intermittently operated mechanism for supplying packages to said supports, a vertically movable depressor for shifting the packages downwardly into contact with the tape strips and thereafter moving the package and tape strip between said folding members for folding the tape against opposite sides of the package, a horizontally disposed stationary seat for receiving the package when depressed, a horizontally movable member for folding the unglued end of said tape strip against the top side of the package, a stationary folding and sealing member positioned adjacent the top edge of the package when resting on said stationary seat, and a horizontally movable pusher for shifting the package horizontally into engagement with said folding and sealing member for pressing the glued end of said tape strip against the unglued end thereof.

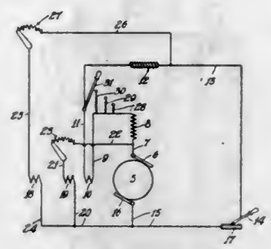
1,687,489. APPARATUS AND METHOD FOR ELECTRICAL TRANSMISSION OF PICTURES. DAVID E. BRANSON, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 15, 1923. Serial No. 681,004. 2 Claims. (Cl. 178—6.)



1. An electro-optical image producing system comprising a source of light for illuminating a picture or object an image of which is to be produced, means positioned intermediate said picture or object and said source of light for alternately transmitting and suppressing light from said source so as to interrupt the illumination of said picture or object, means for directing said light on to successive elemental areas in order of said picture or object, means for generating unidirectional current varying in amplitude in accordance with the intensity of the light received from the elemental areas of the picture or object, means for changing said unidirectional current into alternating current, and a transmission channel including an alternating current amplifying element for transmitting said alterating current to a distant station for controlling the production of an image of said picture or object.

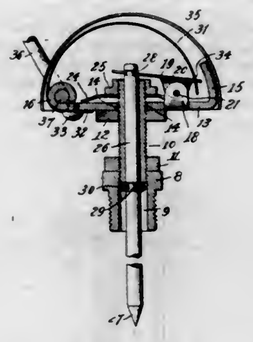
1,687,490. LATCH SWITCH. STEPHEN F. BRIGGS and EDWARD N. JACOBI, Milwaukee, Wis., assignors, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 15, 1920. Serial No. 417,078. 18 Claims. (Cl. 200—44.)

1. In an electrical switch, a pair of switch members having operative positions and one of them having a locking position, and means for locking both switch members automatically when the said switch member is moved to the locking position.



1,687,491. SYNCHRONIZING CLOCK. JAMES W. BRYCE, Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed June 26, 1924. Serial No. 722,439. 30 Claims. (Cl. 58—24.)

6. A secondary clock system including lines adapted to transmit normal impulses, fast impulses and for certain periods to omit the sending of impulses thereover, a secondary clock, an impulse magnet therein for driving the same, and means in said secondary clock controlled in its operation solely by the position of the said clock for selectively determining which form of impulses the said clock shall receive or whether said impulse magnet shall be placed in circuit with the line over which impulses are being omitted.

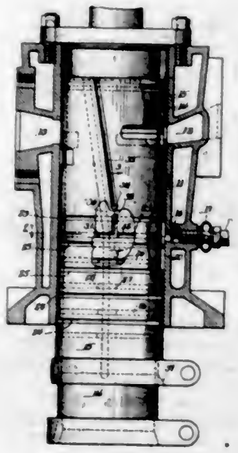


28. In combination, secondary clock driving mechanism, a plurality of conductors, each adapted to supply impulses for causing actuation of said driving mechanism, and switching means for alternately transferring the control of said driving mechanism from one to another of said conductors.

1,687,492. ELECTRIC WELDING APPARATUS. ALEXANDER CHURCHWARD, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc., a Corporation of New York. Filed Aug. 8, 1924. Serial No. 730,816. 8 Claims. (Cl. 171—223.)

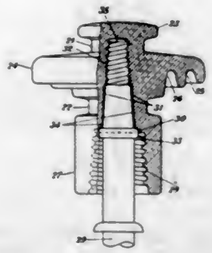
1. In a welding apparatus adapted to furnish current to a welding circuit, a self-excited generator having a series field winding constituting part of the welding circuit, electrodes located in said welding circuit, a shunt field, winding connected to the brushes of the generator, and a second shunt field winding connected to one brush of the generator and to the welding circuit between the series winding and one of said electrodes.

1,687,493. VALVE. CHARLES B. DRAKE, Norfolk, Va. Filed Jan. 28, 1926. Serial No. 84,517. 13 Claims. (Cl. 236—101.)



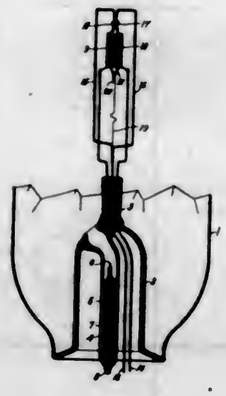
1. In combination with the intake manifold of an internal combustion engine, a valve for controlling the admission of the fuel mixture to the intake manifold, said valve including a body portion, a valve stem slidably mounted in the body portion, a lever pivotally connected to the body portion and engageable with the valve stem, a thermostatic member engageable directly with the lever, and means for conducting heat to the thermostatic member.

1,687,494. LUBRICATION OF SLEEVE-PRINCIPLE ENGINES. ROBERT B. FISHER, Detroit, Mich., assignor to Skinner Automotive Device Co., Inc., Detroit, Mich., a Corporation of California. Filed Dec. 23, 1926. Serial No. 156,542. 21 Claims. (Cl. 123—196.)



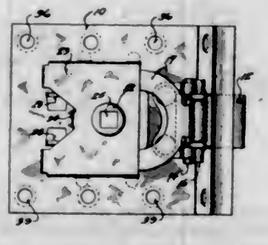
1. In an internal-combustion engine, an engine-cylinder having intake, exhaust and oil ports, means to apply suction at said oil-port, movable sleeves in said cylinder controlling said intake and exhaust ports, means to move said sleeves, means to contain a lubricant-supply, a conduit

connecting the sealing-head compartment of the engine with said lubricant-supply means opened and closed by the movement of at least one of said sleeves, and a con-



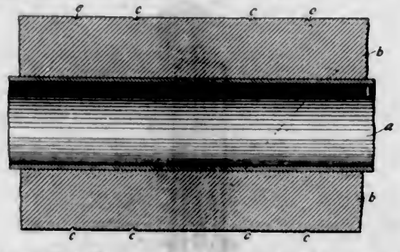
duit adapted to connect said sealing-head compartment with said oil-port opened and closed by the movement of at least one of said sleeves.

1,687,495. INSULATOR. CHESTER S. GORDON, Boonton, and JAMES T. LOWE, Newark, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 19, 1925. Serial No. 76,504. 3 Claims. (Cl. 173—28.)



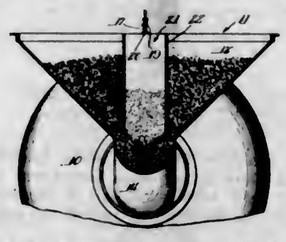
1. An insulator for transmission conductors comprising a unitary mass of dielectric material of a generally cylindrical form having a plurality of grooves in its outer surface for the accommodation of electrical conductors, and an interiorly screw-threaded opening for mounting the insulator upon a flanged pin, the diameter of said opening in the neighborhood of one of the external grooves being somewhat greater than the diameter of the supporting pin at that point, so as to provide an air-gap between the conductor mounted in the groove and the pin, the insulator being provided with a shoulder for co-operation with the corresponding flange upon the supporting pin, and the length of the interior opening above the shoulder being somewhat longer than the length of the pin above the flange, so that when the insulator is screwed upon the flange with the shoulder resting upon the flange, a small air-space will be provided between the upper part of the pin and the material of the insulator in the neighborhood of the upper groove.

1,687,496. INCANDESCENT LAMP. ERICH HENKEL, Treptow, Berlin, and HANS WOLFF, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Nov. 8, 1927, Serial No. 231,987, and in Germany Dec. 7, 1926. 4 Claims. (Cl. 176—16.)



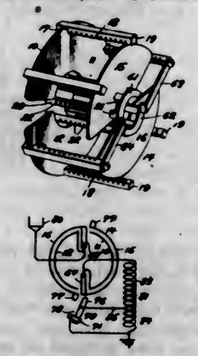
1. An electric lamp comprising a receptacle provided with a lighting body operable at incandescence, said receptacle containing a gaseous filling and in addition containing a halogen ammonium salt.

1,687,497. DOOR LATCH FOR AUTOMOBILES. EDWARD N. JACOBI, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed June 2, 1924. Serial No. 717,333. 12 Claims. (Cl. 292—224.)



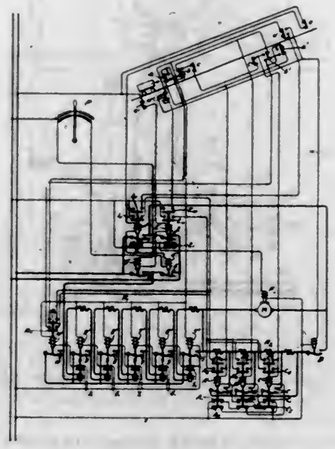
1. A door latch for automobiles and the like comprising a frame-plate bent to form an angular jamb-fitting flange having an opening therethrough, a bearing bracket separate from the frame-plate but attached to the back thereof, a bolt member pivotally mounted in the bracket near the angle between the flange and the frame plate and adapted to swing through the opening, a lug on the outer edge of the bolt to engage the edge of the opening, a pin through the bolt back of the flange, and a spring-pressed operating member pivotally mounted on said pin between the sides of the bolt.

1,687,498. PRINTING BLOCK OR CYLINDER. CARL JAEK, Bern, Switzerland, assignor of one-fourth to United Piece Dye Works, a Corporation of New Jersey. Filed May 7, 1924, Serial No. 711,542, and in Switzerland June 26, 1923. 7 Claims. (Cl. 101—395.)



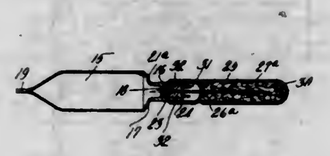
4. A printing block having a sand-blasted rubber face, and a metallic backing to which the rubber is vulcanized.

1,687,499. BATCH HOPPER. CHARLES S. JOHNSON, Champaign, Ill. Filed Mar. 12, 1926. Serial No. 94,157. 9 Claims. (Cl. 83—73.)



1. A batch hopper for concrete mixing machines comprising, in combination, a hopper for containing the aggregate having a tapering body portion and a discharge outlet, a gate arranged to control the flow of materials from said outlet, a cement hopper having a tapering body portion the lower end of which defines an opening narrower than said outlet, said cement hopper being mounted in said aggregate hopper and having its lower rear and lower side portions supported a substantial distance from the bottom and side portions of said aggregate hopper.

1,687,500. ELECTRICAL APPARATUS. RALPH H. LANGLEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 10, 1922. Serial No. 567,323. 5 Claims. (Cl. 250—40.)

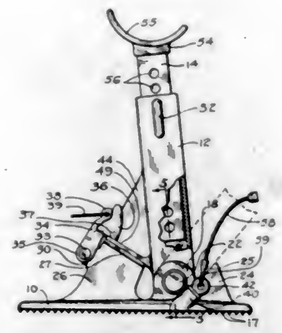


1. An electrical system comprising an adjustable condenser movable through successive ranges wherein its capacity changes from a minimum to a maximum, a reactance and means operably connected to said condenser for adjusting said reactance at the ends of said ranges.

1,687,501. CONTROL MECHANISM FOR HOISTS, LIFTS, AND THE LIKE. HUGH W. C. LIDDIARD, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Mar. 31, 1926, Serial No. 98,875, and in Great Britain Apr. 6, 1925. 4 Claims. (Cl. 172—152.)

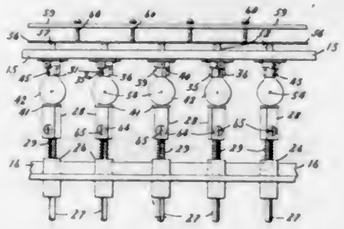
1. The method of controlling a motor driven device which consists in applying an acceleration effect to the device to effect acceleration thereof to substantially the normal running speed, continuing the running of the device at substantially said speed, and then before a limit of operation of the device is reached applying to the device a braking effect which is automatically varied in value in dependence on the extent of travel of the device during the accelerating period.

1,687,502. COLLAPSIBLE AMPUL SYRINGE. ERNEST H. MARCY, Belmont, Mass. Filed Apr. 17, 1924. Serial No. 707,295. 4 Claims. (Cl. 128—216.)



1. An ampul comprising an elongated collapsible shell having an integral penetrable closing wall at one end and being there adapted for connection with a hypodermic needle, and its walls at the other end being integrally joined together, said shell having between its ends a filling opening adapted to be integrally sealed after filling.

1,687,503. VEHICLE JACK. ROBERT G. MCKEE, Indianapolis, Ind. Filed Feb. 21, 1927. Serial No. 169,998. 5 Claims. (Cl. 254—94.)

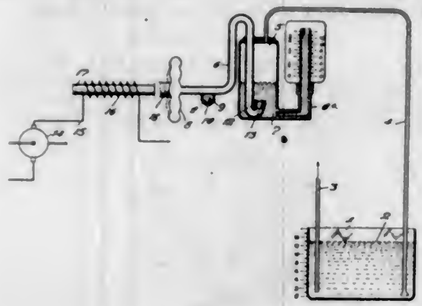


1. In a vehicle jack, comprising a lifting bar, journaled guide member for the bar, a base, a flexible tension member

adapted to attach to the base and to a wheel of the vehicle, said base provided with a pair of vertically disposed ribs,

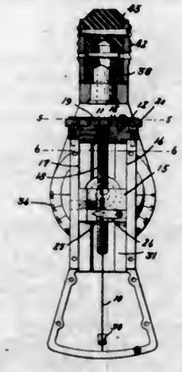
the upper extremity of which terminate in transversely disposed surfaces for contact with the guide member.

1,687,504. PRECISION-BASING MACHINE FOR INCANDESCENT LAMPS AND SIMILAR ARTICLES. THOMAS O. MOFFIT, Chicago, Ill., and REGINALD K. BRAUNSDORFF, Newark, N. J., assignors to General Electric Company, a Corporation of New York. Filed Feb. 19, 1926. Serial No. 89,488. Renewed Oct. 18, 1927. 17 Claims. (Cl. 176—3.)



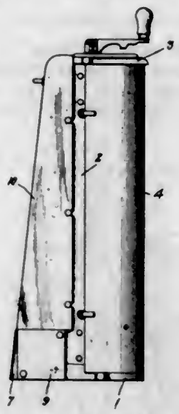
1. In a machine for basing electric incandescent lamps and other devices comprising a filament or other translating body, the combination of a holder for receiving an assembly comprising a base, and a bulb containing said translating body, means for uniting said base to said bulb, means for moving said holder to said base uniting means, and means for indicating the position of said translating body with reference to said base before said assembly reaches said uniting means.

1,687,505. ELECTRON-DISCHARGE DEVICE. HENRY J. NOLTE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,005. 12 Claims. (Cl. 250—27.5.)



1. A grid structure for an electron discharge device comprising a plurality of wires interwoven to form a screen all of said wires extending in directions at an acute angle to the longitudinal axis of the grid.

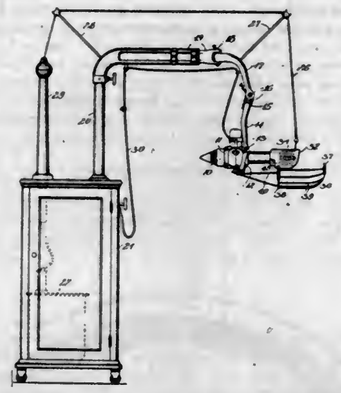
1,687,506. LIQUID-LEVEL GAUGE. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 8, 1926. Serial No. 86,736. 10 Claims. (Cl. 73—54.)



1. In a motor vehicle including an electric circuit and means producing casual variations of current flow therein, a device for indicating the depth of liquid in a tank, including a conduit extending into the tank and having a opening communicating with the liquid therein so as to be subject to the head of liquid on said opening and a gauge connected to be responsive to the pressure in the conduit, air pumping means for introducing air into the conduit to recalibrate the gauge, and means actuated by the casual variations of current flow in the electric circuit to operate said air pumping means.

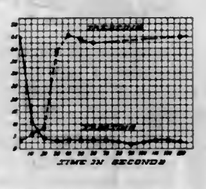
1,687,507. VIBRATION METER. FRANK C. PERKINS, South Euclid, Ohio, assignor to General Electric Company, a Corporation of New York. Filed July 25, 1927. Serial No. 208,104. 6 Claims. (Cl. 73—51.)

1. A vibrometer comprising a base, a bracket swivelled to said base, a casing pivotally mounted on said bracket and a reed carried by said casing.



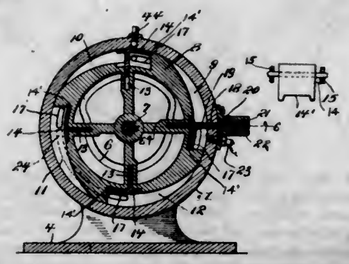
1,687,508. CONTROLLER. CHARLES L. PERRY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 18, 1926. Serial No. 89,248. 2 Claims. (Cl. 247—1.)

1. A controller comprising operable controller elements including terminals for the attachment of the ends of cables leading from outside of the controller, said terminals being located at the back of the controller, a frame in which said elements are mounted which comprises a base plate, a top plate and side bars, a separately installable member, located at the back and bottom of the controller adjacent the base and side bars thereof and having an opening for the passage of said cables, a cover cooperating with the top plate, base plate and side bars to form a casing for the front of the controller, a separately applicable back cooperating with the top plate, side bars and separately installable member to form a casing for the back of said controller over said terminals.



1,687,509. X-RAY APPLIANCE. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Nov. 21, 1924. Serial No. 751,219. 3 Claims. (Cl. 250—34.)

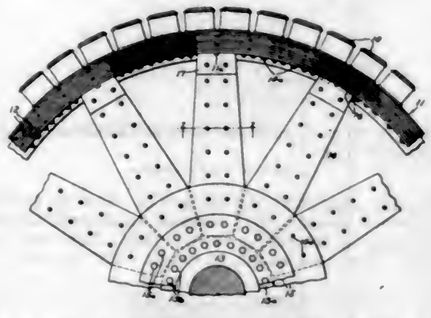
1. In X-ray appliances the combination of an X-ray tube, a support for said tube comprising spaced collars and tie rods connecting the same, and a metal guard frame provided with means for adjustably and detachably se-



curing the same to said rods for maintaining an air gap about said tube.

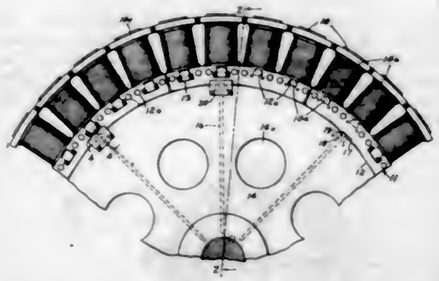
1,687,510. ELECTRIC-LAMP BULB. MARVIN PIPKIN, Cleveland Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed June 29, 1925. Serial No. 40,152. 2 Claims. (Cl. 176—34.)

1. A glass electric lamp bulb having its interior surface frosted by etching so that the maximum brightness of an ordinary incandescent lamp comprising such a bulb will be less than twenty-five per cent of that of said lamp with a clear bulb, said interior bulb surface being characterized by the presence of rounded as distinguished from sharp angular crevices to such an extent that the strength to resist breakage by impact is greater than twenty per cent of that of the clear bulb.



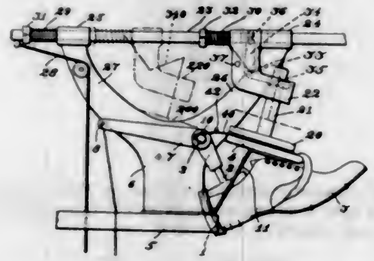
1,687,511. ROTARY INTERNAL-COMBUSTION ENGINE. ALVAH L. POWELL, Roundup, Mont., assignor, by mesne assignments, to The A. L. Powell Power Company, Incorporated, a Corporation of Montana. Filed Dec. 10, 1919. Serial No. 343,955. 3 Claims. (Cl. 123—14.)

3. A rotary explosive engine comprising a casing having an inlet and an outlet, a rotor arranged within the casing provided with a plurality of peripheral pockets,



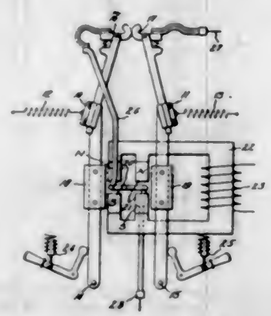
each of said pockets having a port leading thereinto adjacent the forward end thereof, a movable member arranged within each pocket and adapted to entrap therein the gaseous charge, said member provided with a ported area, means for moving said member at a predetermined point of travel of the rotor to force the charge to the opposite side of said member, an abutment arranged within the casing and adapted to coact with the movable member to hold the charge in the forward part of the pocket, and means to ignite the charge while entrapped within the pocket between the movable member and the abutment.

1,687,512. ROTOR. HENRY G. REIST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 13, 1928. Serial No. 246,629. 5 Claims. (Cl. 171—252.)



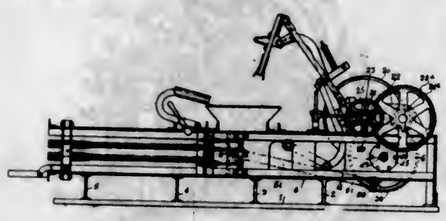
1. A rotor for dynamo-electric machines having a central supporting structure, a plurality of overlapping plates connected together to constitute a unitary annular body surrounding said central supporting structure, a plurality of pole pieces secured to said annular body and means for forming a driving connection between said central supporting structure and said annular body for guiding the latter in its movement away from and toward the former under the action of centrifugal force so that centrifugal force acting on said annular body will be resisted substantially altogether by tension stresses therein.

1,687,513. ROTOR. HENRY G. REIST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 13, 1928. Serial No. 246,630. 2 Claims. (Cl. 171—252.)



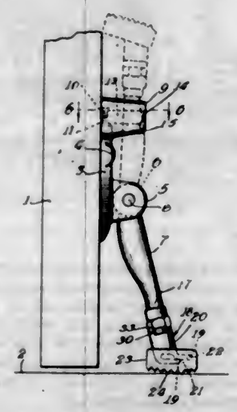
1. A rotor for dynamo-electric machines having a central supporting structure comprising a plurality of axially spaced annular plates and radially extending webs arranged between said plates, said webs being connected to said plates to form a rigid supporting structure, an annular body surrounding said central supporting structure, and means including keys carried by said webs for forming a driving connection between said central supporting structure and said annular body, said keys being arranged to provide for outward movement of said annular body relative to said central supporting structure independently thereof when they are subjected to centrifugal stresses, so that centrifugal forces acting on said annular body will be resisted substantially altogether by tension stresses therein.

1,687,514. MACHINE FOR INCORPORATING STIFFENERS IN BOOTS AND SHOES. FRED RICKS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 10, 1925, Serial No. 49 307, and in Great Britain Sept. 12, 1924. 14 Claims. (Cl. 12—52.)



1. A machine for incorporating a stiffener in the upper of a shoe having, in combination, upper supporting means for facilitating the insertion of the stiffener by the operator, and means for pressing the stiffener into place.

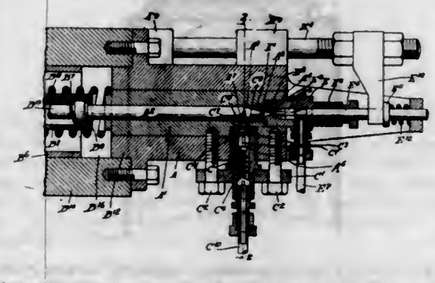
1,687,515. CIRCUIT INTERRUPTER. FRANK ROBERSON, Gary, Ind., assignor to General Electric Company, a Corporation of New York. Filed Apr. 9, 1926. Serial No. 100,976. 7 Claims. (Cl. 200—94.)



1. A high speed circuit interrupter for an electric circuit adapted to carry current in either direction comprising a pair of cooperating independently movable switch members operable together into circuit closing engagement and biased apart to interrupt the circuit jointly controlled thereby, electromagnetic means providing separate flux paths for holding each of said members in the circuit closing position, and means for providing additional flux paths for the holding flux of said electromagnetic means to release one of said switch members for operation to interrupt the circuit jointly controlled thereby in accordance with its bias upon a predetermined current flow in one direction in the circuit controlled by the interrupter and to release the other of said switch members for operation to interrupt the circuit jointly controlled thereby in accordance with its bias upon a predetermined current flow in the reverse direction in the circuit controlled by the interrupter.

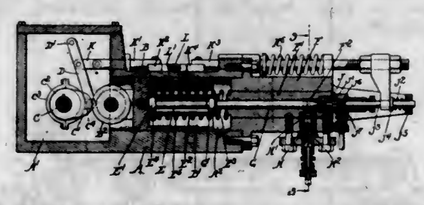
1,687,516. PRESS. BRUCE ROLLMAN, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Original application filed Nov. 16, 1925, Serial No. 69,392. Divided and this application filed May 3, 1926. Serial No. 106,337. 1 Claim. (Cl. 100—3.)

In a baler, a bed plate, side plates, upper and lower rails, said side plates extending above the upper rails, stud shafts carried in the lower portions of said side plates, and bearing members carried in the upper portions of said side plates for the driving and driven shafts which actuate gears carried on said stud shafts, gears, a thrust plate therebetween carried thereby and a pitman carried between said gears on said thrust plate at one end and on a reciprocating plunger at the other, adapted to reciprocate between said side plates.



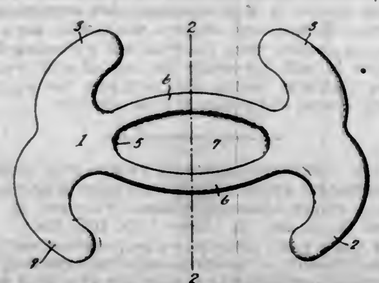
1,687,517. DOORSTOP. MICHAEL J. SASGEN, Chicago, Ill., assignor to Grand Specialties Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1926. Serial No. 89,977. 7 Claims. (Cl. 292—338.)

1. In a door stop, a strut member, a base, to which the strut member is pivotally mounted at one end to swing up and down, the strut member comprising a swinging lever and a shoe member mounted on the lever by means of a screw threaded connection, a nut for locking the shoe against rotation, a washer interposed between the nut and the shoe, means for preventing the rotation of the washer on the lever, the washer having a pair of oppositely extending projections at its circumference adapted to extend laterally from the lever to serve as lifting lugs.



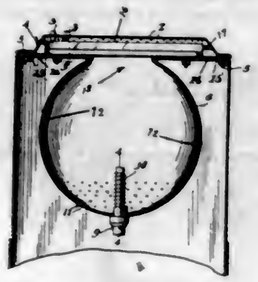
1,687,518. FUEL PUMP AND OIL-INJECTION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. PHILIP LANE SCOTT, Chicago, Ill., assignor to Super-Diesel Tractor Corporation, La Porte, Ind., a Corporation of New York. Filed Dec. 1, 1920. Serial No. 427,642. 14 Claims. (Cl. 123—140.)

1. A liquid atomizing system comprising a pump chamber, a liquid supply conduit, a suction valve therein, a spray nozzle, a conduit between it and the pump chamber, a discharge valve therein, a by-pass discharge passage leading from the pump chamber and a mechanically operated release valve controlling it, the conduit leading to the spray nozzle discharging from the pump chamber at a point appreciably below the highest point thereof, a pistop



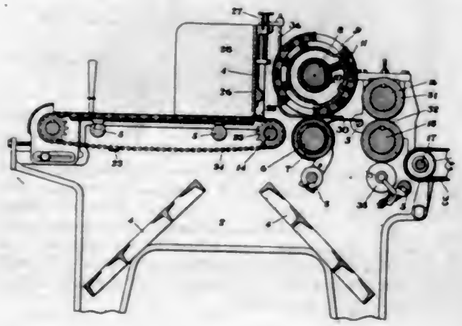
adapted to reciprocate in the pump chamber, having a pointed end, the pump chamber terminating in a conical portion substantially the same size and shape as the pointed end of the plunger, the by-pass discharge passage leading from the apex of such conical portion.

1,687,519. BY-PASS-VALVE CONSTRUCTION. PHILIP LANE SCOTT, Chicago, Ill., assignor to Super-Diesel Tractor Corporation, La Porte, Ind., a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,542. 7 Claims. (Cl. 123—140.)



1. In combination with a pressure chamber and means for intermittently building up pressure therein, a discharge passage therefrom and a by-pass discharge therefrom, a closure for the by-pass normally held against opening, opening in response to pressure in the chamber, and means for intermittently releasing said closure to permit by-pass discharge away from supply, and separate means for seating said by-pass valve.

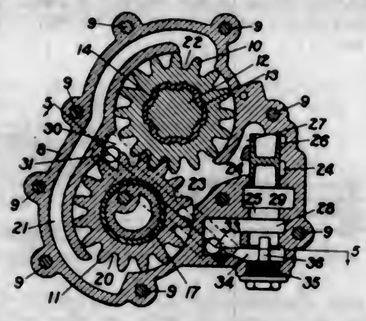
1,687,520. PICK-UP IRON. ERNEST J. SHAFFER, Tulsa, Okla. Filed Jan. 14, 1927. Serial No. 161,222. 4 Claims. (Cl. 24—230 5.)



1. A pick-up iron comprising a body portion from each end of which hooks extend in opposite directions, the hooks occurring on one side of the longitudinal axis of the body portion being spaced further apart than those occurring on the other side of said axis.

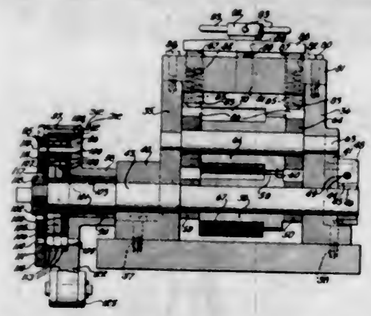
1,687,521. ELECTRIC HEATER. ELBERT STALLWORTH, Americus, Ga. Filed Dec. 19, 1927. Serial No. 241,104. 1 Claim. (Cl. 219—38.)

In an electric heater, a casing, a spherical heating chamber suspended from the top of said casing, a heating unit extending vertically into said heating chamber through a hole in the lowest portion thereof, perforations in the bottom of said heating chamber about said heating unit, a circular air passage through the upper portion of said heating chamber, a perforated top for said casing and a water receptacle supported under said perforated top to moisten the hot air which passes through said perforated top.



1,687,522. ATTACHMENT FOR PAPER-SLOTTING MACHINES. EDWIN G. STAUDE, Minneapolis, Minn. Filed Dec. 31, 1923. Serial No. 683,773. 17 Claims. (Cl. 164—68.)

1. A paper stock slotting machine comprising a revolving member having a peripheral slot provided with cutting edges, a second revolving member, a knife mounted thereon between which and the edges of said slot the paper stock is sheared to form a tongue, said knife having a transverse cutting edge, adapted to partially sever said tongue transversely from the stock and a cleaning device operating in said slot nearer the axis of said revolving member than said cutting edge to engage the tongue so partially severed and remove it from said slot.

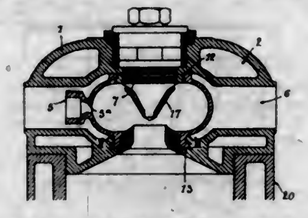


1,687,523. FLUID-PRESSURE PUMP FOR POWER-PROPELLED VEHICLE-CONTROLLING MEANS. EDWIN G. STAUDE, Minneapolis, Minn. Filed Feb. 15, 1926. Serial No. 88,422. 13 Claims. (Cl. 103—126.)

1. A rotary pump comprising a gear chamber and meshing gears therein, an intake passage communicating with the chamber and delivering to each gear at a point remote from the meshing zone of the gears, a bore having a valve reciprocable therein, an outlet passage communicating with the bore intermediately, passages communicating with the bore at opposite sides of said outlet passage and respectively with said gear chamber at opposite sides of and adjacent the meshing zone of the gears, the arrangement being such that fluid pressure set up adjacent one end of the bore will cause the valve to move toward the opposite

end, opening the pressure side of the pump to the outlet and closing the opposite side to said outlet, said intake passage, bore and one other passage being in the same plane with the gears.

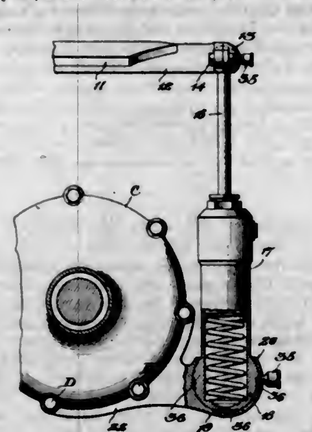
1,687,524. MATERIAL-FEEDING DEVICE. ANDREW BENJAMIN SMITH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,816. 9 Claims. (Cl. 271—2.4.)



1. In a material feeding apparatus, a plurality of feed rolls, a shaft, means for operatively connecting the rolls to the shaft, a plurality of ratchet wheels rigidly mounted in staggered relation upon the shaft, a plurality of ratchet-engaging means adjacent the ratchet wheels, and means for intermittently actuating the ratchet-engaging means for imparting rotary movement to the ratchet wheel and thereby advancing the feed rolls.

1,687,525. FLAMEPROOF ELECTRIC INSULATION AND METHOD OF PRODUCING THE SAME. EARL GROVER STURDEVANT, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1924. Serial No. 754,735. 2 Claims. (Cl. 106—13.)

1. Electrical insulation comprising substantially twenty parts of rubber, twenty-five parts of chlorinated naphthalene, two parts of a vulcanizing agent, ten parts of a substance for accelerating vulcanization, and thirty-three parts of silica.



1,687,526. CYLINDER HEAD FOR INTERNAL-COMBUSTION ENGINES. EUGÈNE HENRI TARTRAIS, Montmorency, France. Filed Jan. 14, 1926, Serial No. 81,142, and in France Jan. 21, 1925. 4 Claims. (Cl. 23—32.)

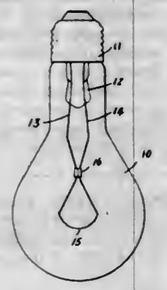
1. A cylinder head for internal combustion engine working with liquid fuel comprising in combination: a cooled outer casing, an inner wall limiting a central combustion chamber and having flanged edges at the upper and lower

parts, imbedded in said casing when casting the latter, and a fuel atomizer opening into said combustion chamber.

1,687,527. SHOCK ABSORBER. CLARANCE W. THOMPSON, Wilmington, Del., assignor to Thompson Spring Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 25, 1924. Serial No. 728,197. 2 Claims. (Cl. 267—8.)

1. A movement-restraining device for motor-vehicles comprising a casing having an end portion of substantially spherical contour arranged to be disposed in a socket of a fitting, said casing containing a chamber of substantially uniform transverse dimension extending throughout the major portion of its length and into said substantially spherical end portion, and a member reciprocable in said chamber arranged to be connected with another fitting.

1,687,528. SHOE AND METHOD OF SHOEMAKING. PERCY W. VALENTINE, Cambridge, Mass. Filed June 13, 1925. Serial No. 36,838. 11 Claims. Cl. 36—17.)

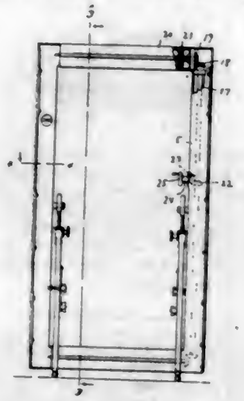


1. The method of making shoes which consists in separately securing an upper and a welt together, separately securing an inner sole and a second sole together, lasting said upper, securing said welt to said second sole, and securing an outer sole to said welt and second sole.

1,687,529. STITCHDOWN SHOE AND METHOD OF MAKING. PERCY W. VALENTINE, Cambridge, Mass. Filed Mar. 2, 1927. Serial No. 172,150. 6 Claims. Cl. 36—16.)

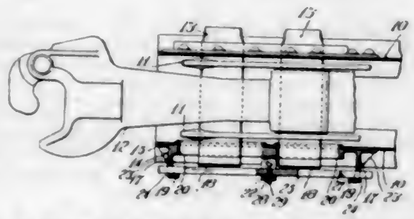
1. A stitchdown shoe comprising an innersole and a doubler independently united to one another with the edge part of the doubler projecting, an upper and its lining, the innersole having a channel in its edge in which the edge of the lining is confined, the upper being turned out at its lower edge and secured to the projecting edge part of the doubler, and an outer sole independently secured to the doubler and upper.

1,687,530. AUTOMATIC CUT-OUT FOR ELECTRIC INCANDESCENT LAMPS. IRVING H. VAN HORN and WILBUR A. PIPKIN, East Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,502. 3 Claims. (Cl. 176—24.)



1. In an electric incandescent lamp, the combination of a bulb containing a non-oxidizing atmosphere, a filament mounted within said bulb, a stem sealed within said bulb, a pair of conductive supports for said filament sealed in the inner end of said stem, and a member consisting of a conductive support having thereon a coating of insulation adapted to be broken down under abnormal conditions mounted between said supports and within said bulb, said member serving to hold the said conductive supports in close proximity to each other.

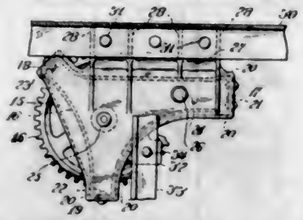
1,687,531. KNOB AND KNOBLIKE DEVICE. FRITZ EGON VERSE, Iserlohn, Germany, assignor to the Firm: Westfälische Metallwarenfabrik G. m. b. H., Iserlohn, Germany. Filed June 15, 1927. Serial No. 198,875. 5 Claims. (Cl. 292—347.)



1. In a door knob the combination comprising a knob having a plurality of indents at its bottom, a cup holding the aforesaid knob by its inwardly bent rim, a plurality of resilient sleeves frictionally held in nested arrangement in the lower part of aforesaid cup, and a plurality of teeth on the outer sleeve engaging the aforesaid indents in the bottom of the knob.

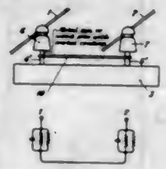
1,687,532. DOORFRAMING DEVICE. HENRY GEORGE WALTKE, Jersey City, N. J. Filed Aug. 19, 1927. Serial No. 214,123. 4 Claims. (Cl. 33—197.)

1. In a device of the class described, a sectional frame, each section including a vertically disposed frame member having upper and lower horizontally disposed frame members at each end thereof, means provding for the telescopic engagement of the horizontal members of each of said sections, means for adjusting said horizontal members with respect to each other, indicating means carried by one of said members adapted to determine the uniform adjustment for the upper and lower horizontal members and a carriage pivotally supporting each of said sections.



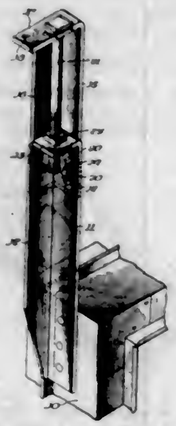
1,687,533. COMBINED CHEEK PLATE AND DRAFT-KEY ANCHOR. WILLIAM WRIGHT, Chicago, Ill., assignor to E. Payson Smith, Springfield, Ill. Filed Aug. 6, 1925. Serial No. 48,448. 5 Claims. (Cl. 213—54.)

1. A device of the character described, comprising a single piece metallic plate slotted longitudinally an adapted to be secured to the center sill of a railroad car, the ends of the plate being disposed laterally toward one side of the plate and having aligned openings therethrough, and a bar or rod insertible through said aligned openings lengthwise of the plate so as to be disposed across the slotted portion thereof.



1,687,534. BRAKE-GEAR MOUNTING. WILLIAM WRIGHT, Chicago, Ill., assignor to E. Payson Smith, Springfield, Ill. Filed Apr. 10, 1926. Serial No. 101,157. 2 Claims. (Cl. 74—121.)

1. In a brake gear mounting, the combination of a center sill member, and a bottom door slide-rail, with a gear housing composed of a three-sided top plate having depending legs at the junctures of the marginal edges, an integral center sill engaging portion disposed laterally from a marginal edge of the top plate and arranged in a horizontal plane thereabove, an extension disposed laterally from another marginal edge of the top plate for attachment to said slide-rail, and a Y-shaped bottom plate for supporting the gear elements, the ends of the arms of the bottom plate extending upwardly and secured to the depending legs of the top plate, one arm of the bottom plate having the driving



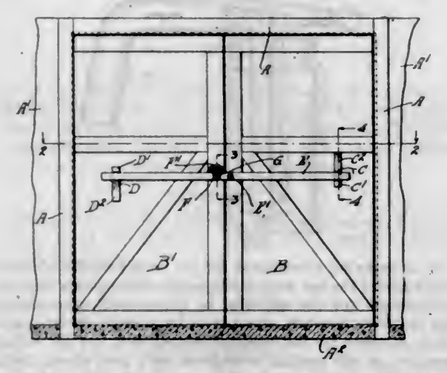
portion of the gearing journaled thereon while the driven portion of the gearing is journaled at the juncture of two arms of the bottom plate.

1,687,535. REDUCTION OF LOSSES IN INSULATORS, PINS, AND CROSS ARMS. HERMAN A. AFFEL, Maplewood, and ESTILL I. GREEN, East Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 1, 1925. Serial No. 40,934. 3 Claims. (Cl. 173—251.)

1. A pole line construction comprising conductors strung along a pole line in pairs, the conductors being mounted upon insulators supported by pins carried by cross-arms upon the poles, one conductor of each pair acting as a return for the other, and means to reduce the transmission loss over the conductors, said means comprising insulators the ratio of whose external diameter to pin diameter is not much less than 4, in combination with a non-magnetic conductor for substantially short-circuiting the conductance of the cross-arms and supporting pins.

1,687,536. CLAMP FOR FRAMES. ISAAC A. BAUM, Chicago, Ill. Filed Oct. 6, 1927. Serial No. 224,367. 8 Claims. (Cl. 189—46.)

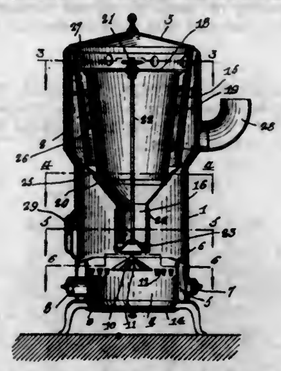
1. The combination with a frame for wall openings, of a member angular in cross-section, a second angular member loosely secured thereto and longitudinally slidable



thereon, abutments provided on said two members, and a screw member bearing on and acting between said abutments and adapted to exert a thrust tending to slide the two members in a longitudinal direction.

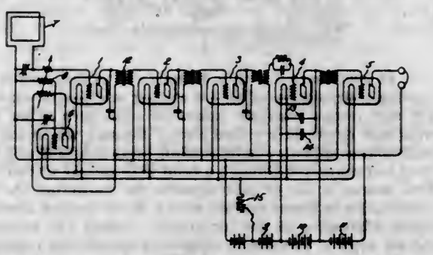
1,687,537. METAL DOOR. WILLIAM R. BRACE, Newark, N. J. Filed June 16, 1926. Serial No. 116,293. 3 Claims. (Cl. 189—46.)

1. In structural hollow sheet metal construction, the combination of opposite side walls one having an inturned edge portion provided at spaced parts of its length with moldings, panels secured to the edges of said moldings, a flange strip secured to the inside of said side wall back of its inturned edge in the space between said moldings and having with respect to the side walls a transverse portion and a parallel portion with an outwardly bent marginal flange, a spacer secured to said flange strip in engagement with said transverse and parallel portions thereof and the opposite wall, and a bar having a marginal flange forming a lock seam with said marginal flange of the flange strip.



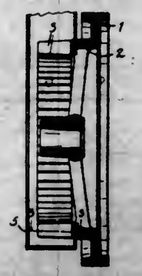
1,687,538. FASTENING. GEORGE E. BRADBURY, Chicago, Ill. Filed June 5, 1925. Serial No. 35,046. 3 Claims. (Cl. 292—259.)

1. As a means for fastening in closed position a pair of closures, a fastening bar movably mounted on one of said closures adapted to extend partially across it and the other, a bar engaging latch mounted on the second closure and adapted when the same is moved into the closed position to engage the bar, and a pair of wedge blocks mounted one on the inside of each of such closures, each adapted to engage one end of the fastening bar when the same is in the fastening position.



1,687,539. HEATER FOR SAWDUST OR COAL DUST. ARTHUR O. BRUNETTE, Kelowna, British Columbia, Canada. Filed May 11, 1925. Serial No. 29,533. 4 Claims. (Cl. 126—225.)

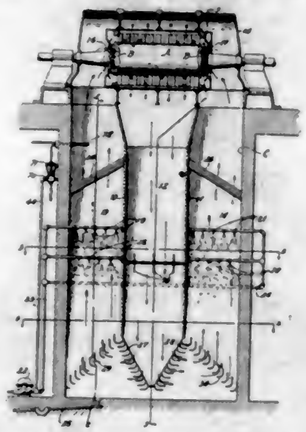
3. A heater comprising a casing, a grate supported within said casing, a shell supported from the top of the aforesaid casing within the same and having a convergent lower end, a tapered tubular member extending upwardly from the convergent lower portion of the shell forming a hopper spaced from the upper part of said shell, openings arranged in the convergent part of the shell at the outward side of the hopper, openings at the top of the shell communicating



with the interior of the main casing, and a flue leading from the main casing above the convergent lower end of the hopper.

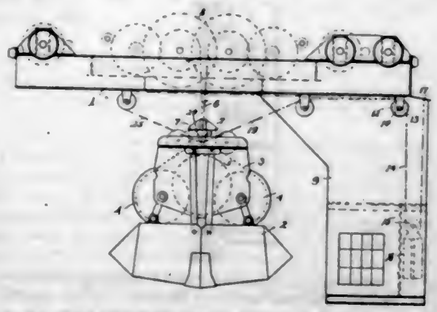
1,687,540. AMPLIFYING SYSTEM. WENDELL L. CARLSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1925. Serial No. 77,111. 2 Claims. (Cl. 179—171.)

1. The combination in a signal amplifying system of a plurality of electron discharge amplifiers connected in cascade for amplifying radio frequency currents, a detector connected to detect the amplified radio frequency currents, common batteries for supplying cathode heating currents and plate currents to all of said amplifiers and said detector in parallel, and a pair of capacities connected in shunt from the plate to opposite terminals of the cathode of said detector for preventing a feed-back to the input circuits of the amplifiers by reason of resistance coupling due to the use of common batteries.



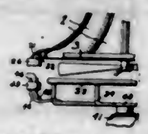
1,687,541. TURBINE-FAN STRUCTURE. WILLIAM F. CARMICHAEL, Lansing, Mich., assignor to New Way Motor Company, Lansing, Mich. Filed Oct. 22, 1925. Serial No. 64,160. 2 Claims. (Cl. 230—135.)

1. In a cooling fan structure for an internal combustion engine, the combination with the fly-wheel, of an auxiliary peripherally bladed fan rim cast thereon with integral



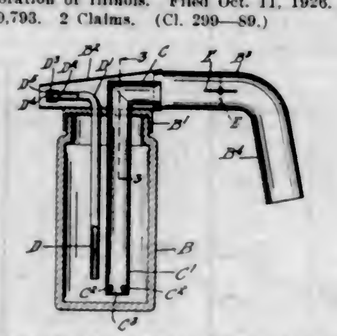
curved turbine peripheral fan blades free at their outer ends and tapered to permit of casting, and a volute open at both sides surrounding the same to provide intakes to deliver air to the fan blades at both sides of the fan, coacting as specified.

1,687,542. COOLING SYSTEM. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Buffalo Forge Company, Buffalo, N. Y. Filed July 28, 1921. Serial No. 488,116. 10 Claims. (Cl. 261—115.)



1. In combination with a device to be cooled, means for causing a circulation of air for cooling said device, air supply and return conduits connected with each other and with said device in a closed circuit through which the air recirculates, said air supply conduit being substantially vertical and connected through a bend with the air return conduit, means in one of said conduits for subjecting the circulating air to direct contact with a finely divided liquid, a liquid eliminator in the air supply conduit for receiving the air after it leaves said subjecting means and removing therefrom entrained unvaporized liquid, and partitions located in the connection between said conduits at the points of change of direction of travel of the air, for dividing the connection at those points into a plurality of sub-conduits for changing the direction of the air, as it passes from one conduit to the other, without the formation of eddies for an unequal distribution of the air throughout said other conduit, said eliminator being arranged at an inclination to the horizontal and obliquely to the direction of travel of the air along the air supply conduit.

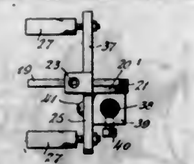
1,687,543. CABLE SUSPENSION FOR HOISTING BUCKETS. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 15, 1925. Serial No. 30,491. 6 Claims. (Cl. 214—115.)



1. In a device of the character described, a supporting structure, a load carrying member, hoisting means mounted on said structure and including a hoist cable connected to said member, a series of downwardly converging steadying cables extending from said structure to said load carrying member, drums upon which said cables are wound, and means independent of the hoisting means for simultaneously operating the drums to maintain said cables under tension.

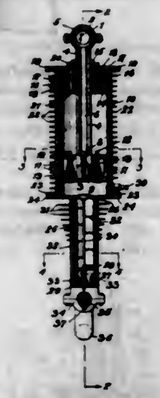
1,687,544. ELECTRIC FAN AND HEATER. JAMES E. CLARK and THOMAS E. CLARK, Detroit, Mich. Filed Nov. 16, 1925. Serial No. 69,550. 1 Claim. (Cl. 219—42.)

In an electric fan and heater, the combination of a bell shaped housing having apertures in its flaring portion, an electric motor mounted in the smaller portion of the bell, a fan mounted on the outer end of said motor, a bowl-shaped heater casing detachably connected to said bell at their edges, heating elements within said bowl, said bowl having a central discharge opening, conductor wires for said heating elements, and a separable two-part connector for said conductor wires, one part being attached to the bell and the other to the bowl to permit ready detachment and attachment of the bowl and heater.



1,687,545. SPRAYING DEVICE. WILLIAM J. CLEMENTS, Chicago, Ill., assignor to Clements Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1926. Serial No. 140,793. 2 Claims. (Cl. 299—89.)

2. A spraying attachment for use with portable blowers, and adapted for use with liquids and solids, which includes a container for the material to be sprayed, a removable cap or cover member, adapted to be secured thereto, said cover member having associated therewith an air nozzle member, an air conduit associated with said nozzle member, said conduit terminating at its opposite end in a portion adapted to receive the end of a flexible tube, such end portion being downwardly turned in relation to said nozzle, such downwardly turned portion being adapted to serve as a handle, a valve in said air conduit, an air inlet passage member having its inlet opening positioned within said nozzle and opening toward said handle member, and extending downwardly into said container to a level closely adjacent the bottom of said container, an outlet member extending downwardly from said nozzle into said container and terminating, at its upper end, within said nozzle, the cross sectional area of the air inlet passage being substantially greater than that of the outlet member.

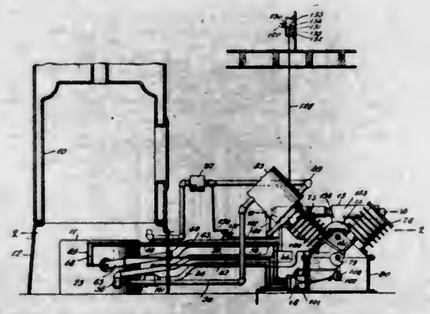


1,687,546. BRACKET FOR THREAD CLEANERS. PETER DAUGHET, Wilkes-Barre, HENRY FREY, Kingston, and JOHN J. DUNLEAVY, Plymouth, Pa. Filed June 30, 1927. Serial No. 202,505. 4 Claims. (Cl. 28—70.)

1. A bracket for thread cleaners including a cleaner plate-supporting portion having an opening therein for receiving cleaner plates, an extension projecting from said portion and having a surface in a plane with and forming a continuation of one wall of said opening and upon which said plates are supported when inserted through said opening, thread guide-supporting arms extending from

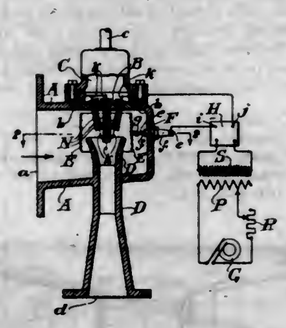
opposite sides of said portion and at the inner end of said extension, and a stop formed on said extension at the outer end thereof against which abut the adjacent ends of said cleaner plates.

1,687,547. INTERNAL-COMBUSTION ENGINE. JOHN E. DE BAUN, Saddle River, N. J. Filed June 21, 1927. Serial No. 200,410. 8 Claims. (Cl. 123—50.)



1. In an internal combustion engine, a fixed piston, a cylinder surrounding the same and adapted to reciprocate relative thereto, a crank shaft and an extension on said cylinder connected to said crank-shaft, said extension being tubular and constituting an exhaust passage.

1,687,548. VALVE. CHARLES BRITTAIN DRAKE, Norfolk, Va. Filed Oct. 11, 1926. Serial No. 140,929. 7 Claims. (Cl. 236—101.)

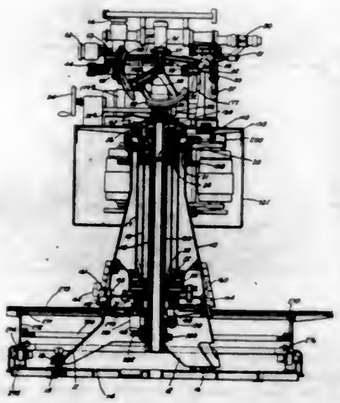


1. A valve of the character described including a sleeve having a flange formed thereon, a plate adapted to be received upon said flange, a valve stem slidable relative to the sleeve, and a thermostatic member connected to the plate and to the valve stem.

1,687,549. OIL-BURNING HEATING SYSTEM. WILLIAM BARTON EDDISON, Irvington, N. Y. Filed July 10, 1923. Serial No. 650,572. 10 Claims. (Cl. 158—1.)

1. The combination with a burner for supplying heat to heat-utilizing means, of a heat engine operable by a minor portion of the heat generated in full capacity operation of the burner, means for diverting from the heat-utilizing apparatus a portion of the heat generated in the burner sufficient to operate the engine, a positive pump operated by the engine for supplying liquid fuel to the burner, and a blower operated by the engine for forcing into the burner air sufficient to support the combustion of the fuel.

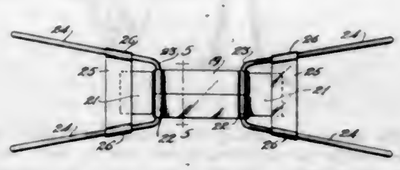
1,687,550. METHOD OF AND APPARATUS FOR COMPRESSING FLUID. CORNELIUS D. EHRET, Philadelphia, Pa. Filed Feb. 24, 1922, Serial No. 539,043. Renewed Feb. 15, 1926. 28 Claims. (Cl. 230—95.)



7. The method of raising the pressure of elastic fluid, which consists in expanding elastic motive fluid into a jet of high velocity, producing an electric field adjacent the jet, causing the fluid to be compressed to traverse said field to the jet, and converting the velocity of the fluid mixture into pressure.

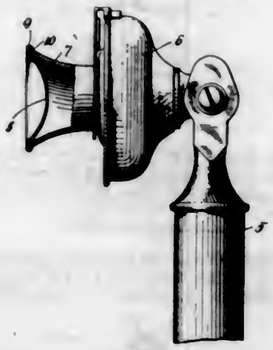
1,687,551. CONTROL OF ORDNANCE. ALVARADO L. R. ELLIS, Swampscott, and CHESTER W. GREENE, Lynn, Mass., assignors to General Electric Company, a Corporation of New York. Filed June 4, 1925. Serial No. 34,950. 36 Claims. (Cl. 33—49.)

1. Gun directing apparatus comprising a sighting device adjustable about train and elevation axes, means for transmitting the movements of said sighting device about said axes to a remote receiving station, means for moving said sighting device about said axes independently of



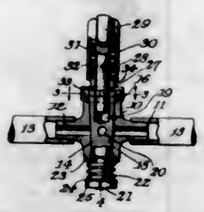
said transmitting means to introduce corrections for inclination of the trunnion axis of the gun, and means for readjusting said sighting device about said axes whereby said corrections are applied to said transmitting means.

8. Gun directing apparatus for ships comprising a sighting device mounted for movement about elevation and train axes, a gun pilot mounted for independent movement about elevation and train axes, a link forming a connection between said gun pilot and said sighting device, and means for maintaining said link in a predetermined angular position regardless of the rolling and pitching movements of the ship whereby corrections are introduced in train and elevation.



17. Gun directing apparatus comprising three members rotatable about a common axis, a sighting device mounted on one of said members, an operating connection betwen said member and a second of said members including means for introducing parallax corrections, and an operating connection between said second member and the third of said members including means for generating and introducing the train componets of the range and deflection corrections.

1,687,552. BOX LIFTER. HENRY FARSBENDER, Council, Idaho. Filed Apr. 29, 1927. Serial No. 187,640. 1 Claim. (Cl. 294—16.)

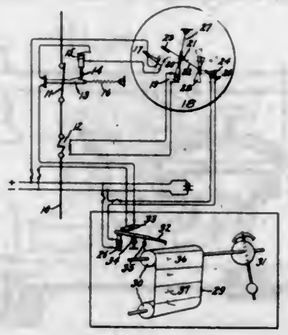


A lifter of the class described comprising a body having eyes at its upper end portions and having its ends projecting to form stops, tong members each consisting of a rod passing through a respective eye for pivotal connection to the body and each bent to provide a pair of legs having their extremities forming box gripping toes, and plates extending between the legs of a respective pair and cooperating with the extensions to engage the same and limit downward movement of the legs, said body consisting of a sheet metal tube and the extensions of the body consisting of continuations of the sheet metal of the bottom part of the tube doubled back upon each other for reenforcing the extensions.

1,687,553. SANITARY TELEPHONE MOUTHPIECE. SAMUEL FRIEDLANDER, Astoria, and THEODORE GEISMAR, Jamaica, N. Y. Filed Apr. 14, 1927. Serial No. 183,712. 1 Claim. (Cl. 179—184.)

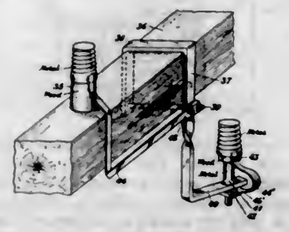
A sanitary cap for telephone mouthpieces comprising a circular disc of waxed paper presenting an unbroken concave face and having a flanged periphery adapted to engage over the rim of the mouthpiece.

1,687,554. LEAKAGEPROOF SPRING-SECURED SAFETY VALVE. EUGENE GANSFRIED, New Brunswick, N. J. Filed May 17, 1926. Serial No. 109,630. 6 Claims. (Cl. 251—165.)



1. In a safety valve having a body with openings to a service line, a rotatable plug in the body with a transverse bore therein adapted to communicate with said openings in the body and means to permit the rotation of said plug but to keep the same in fixed relative position laterally to the service line; a slidable stem with a handle thereon said stem being secured in an axial bore in the plug, a cross pin through said stem slidable therewith in a slot in said plug and adapted to be rotated in a groove in the body when in registering relation therewith, said groove having two diametrically opposed slots in the body communicating therewith and adapted to receive the ends of said pin, their position being such that the transverse bore in the plug will be out of alignment with the openings in the body when the pin is in said slots in the body; a resilient element interposed between a shoulder on said stem and the body of the valve to normally move said pins into said slots in the body and prevent the rotation of the plug.

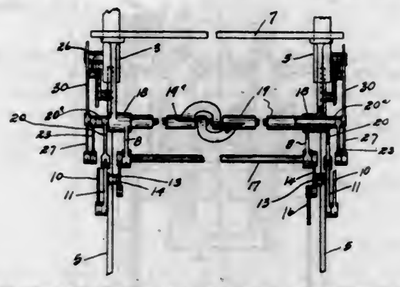
1,687,555. RECORDING APPARATUS FOR RELAYS. ERNST GAGIOROWSKI, Hermsdorf, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 28, 1926. Serial No. 144,883, and in Germany Feb. 2, 1926. 8 Claims. (Cl. 234—1.5.)



1. Recording apparatus comprising a continuously moving record sheet, a recording stylus cooperating therewith, means for normally holding said stylus out of recording position, means responsive to one condition to be recorded

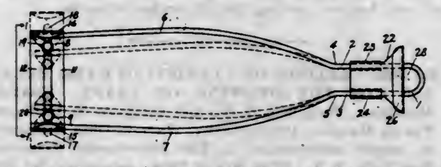
for releasing said stylus and allowing it to move into recording position, and means responsive to a different

condition to be recorded for moving said stylus in an angular direction with respect to the movement of said record sheet.



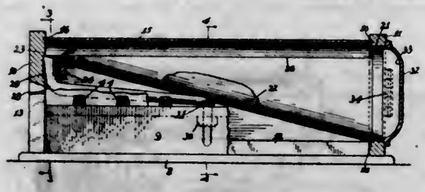
1,687,556. REDUCTION OF ATTENUATION DUE TO THE CONDUCTANCE LOSSES IN CROSS ARMS AND INSULATOR PINS. CHESTER S. GORDON, New York, N. Y., and JAMES T. LOWE, Newark, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 1, 1925. Serial No. 40,895. 6 Claims. (Cl. 173—251.)

1. In a pole line construction comprising a pair of conductors strung along on poles with cross-arms carrying insulators mounted upon pins, one of said conductors acting as a return for the other, means to short-circuit the conductance of the cross-arm and its insulator pins between the insulators of the two wires of the pair comprising conductive thimbles of non-magnetic material provided with screw threads to co-operate with the threads upon the pins, a conductive strip of non-magnetic material connected to each thimble for electrically connecting the thimble corresponding to one wire of the pair through a low resistance circuit to the thimble corresponding to the return wire of the pair, the insulators being screwed upon the screw threads of the thimbles.



1,687,557. VALVE GEAR. ADELBERT E. HALL, Bay City, Mich. Filed Sept. 27, 1919. Serial No. 326,762. 8 Claims. (Cl. 121—116.)

1. In combination with a locomotive engine, a valve gear including transverse coaxially arranged shafts adapted to extend across the engine and each consisting of a reduced section and a tubular section, of substantially uniform length having their adjacent ends spaced apart at the center of each shaft, the tubular section of each shaft being sleeved on the reduced section of the other shaft and the said shafts being provided with oppositely bowed portions rigidly connecting the reduced and tubular sections of each shaft with each other, means located at opposite sides of the engine for connecting the said shafts with the crossheads of the engine, combination levers located at opposite sides of the locomotive and connected

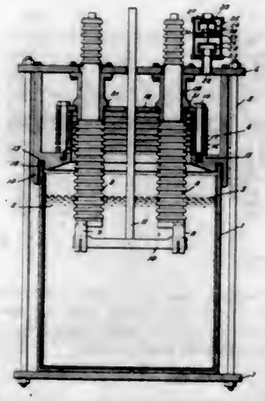


with the said shafts, and means for connecting the combination levers with the main rods of the locomotive and with the engine valves, said combination levers operating to supply lap and lead motion.

1,687,558. SHOE-TREE. FREDRICK HARROLD, Mansfield, Ohio. Filed June 30, 1927. Serial No. 202,644. 7 Claims. (Cl. 12—129.1.)

1. In a shoe straightener and shaper, a frame provided with resilient members, means secured to the frame to engage the tip of the sole of the shoe, clamping members secured to the resilient members of the frame and arranged to slide in overlapping relation to each other, means to hold the clamping members in position on and in close contact with the shank of the sole of the shoe during the stretching movement thereof.

1,687,559. CABINET. HENRY F. HERMAN, Chappaqua, N. Y., assignor to Straitline Radio Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1925. Serial No. 18,473. 12 Claims. (Cl. 274—2.)

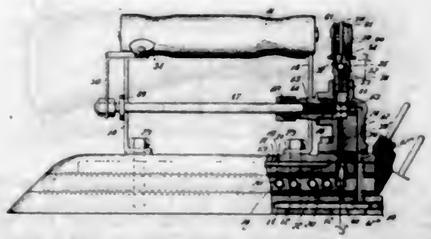


1. In a cabinet for radio receiving apparatus, a mounting base for the apparatus, and a removable top for the base comprising end members, rails to connect and maintain the end members in spaced relation, and a panel of concave form interposed between and connected at the marginal portions to the rails and ends to form a hood.

1,687,560. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 6, 1923. Serial No. 630,328. 4 Claims. (Cl. 200—150.)

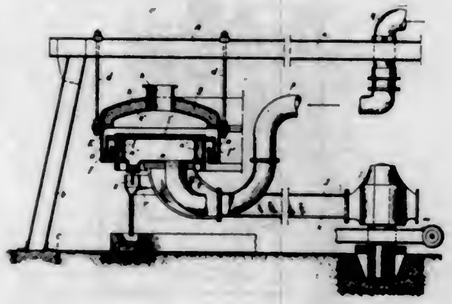
1. A switch of the fluid break type comprising a tank, relatively movable switch contacts mounted in said tank beneath the level of said fluid, a cover for said tank form-

ing an expansion chamber, and means comprising a plurality of superposed spaced plates carried by said cover above the level of the fluid for permitting the free escape



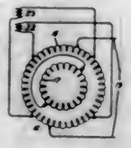
of the hot gases formed by the arc between said contacts and for cooling said gases below their ignition temperature before entering the expansion chamber.

1,687,561. METHOD OF CLARIFYING CANE MOLASSES FOR THE GROWING OF YEAST. CHARLES HOFFMAN, Tuckahoe, N. Y., and CHARLES N. FREY and FRANK MERRILL HILDEBRANDT, Warren, Ohio, assignors, by mesne assignments, to The Fleischmann Company, New York, N. Y. Filed May 8, 1923. Serial No. 637,586. 8 Claims. (Cl. 127—50.)



1. The process of clarifying cane molasses to render it suitable for yeast manufacture, which comprises in adding to a dilute solution of molasses a quantity of sodium silicate sufficient to render the resulting mixture alkaline with the limits represented by a pH value of from 7.7 to 12, then heating the mass and filtering while hot.

1,687,562. PRESSING IMPLEMENT. LOUIS HOFFMAN, St. Paul, Minn., assignor to Steam Pressing Iron Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 20, 1922, Serial No. 602,085. Renewed June 7, 1928. 15 Claims. (Cl. 68—26.)

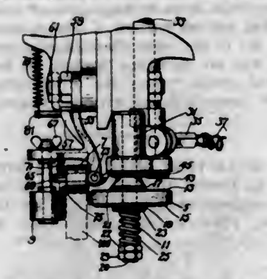


1. In combination with a body and perforated pressing face of a pressing implement of the moistening type, means providing a duct for vaporization of the water supplied to the implement, means constituting a superheating duct into which said vapor passes from the vaporizing duct before going to the perforated pressing face, means for heating the fluid in said ducts, a detachable valve casing formed with passages for connecting the vaporizing duct with the superheating duct, and the superheating duct with the perforated pressing face, and a valve for controlling the flow of steam through one of said passages.

1,687,563. REVOLVING-RING OVEN. LUDWIG HONIGMANN, Bad Tolz, and FRIEDRICH BARTLING, Munich, Germany. Filed June 2, 1926, Serial No. 113,289, and in Germany June 3, 1925. 5 Claims. (Cl. 263—7.)

2. In a rotary ring hearth oven, a supporting structure, a ring shaped muffle suspended therefrom and including a cover consisting of spaced metallic walls, a heat insulating medium between said walls, a rotating hearth supported for rotation below said muffle, and means for rotating said hearth.

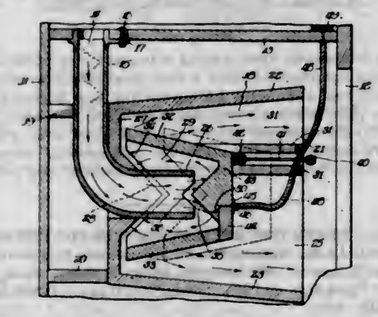
1,687,564. AUTOMATIC CONTROL OF DYNAMO-ELECTRIC MACHINES. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 15, 1926. Serial No. 122,725. 5 Claims. (Cl. 172—279.)



1. In combination with a single phase commutator motor, a source of supply therefor, an electric relay provided with a pair of energizing windings, one of said windings being electrically connected to said motor so that it is energized in proportion to the percentage of the synchronous operating speed of said motor, and the other winding being electrically connected to said motor so as to be energized in proportion to the slip plus the synchronous speed of said motor.

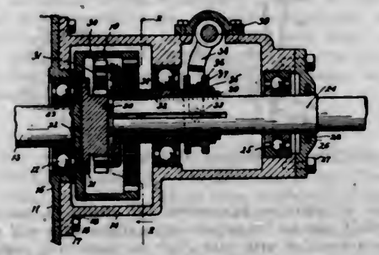
2. A single phase commutator motor of the repulsion type, adapted to have its primary winding energized along one axis and having its commutator short-circuited along a different axis, an electric relay provided with a pair of opposed solenoids, and connections for energizing said solenoids from the primary winding of said motor along axes which are substantially in quadrature relation to each other, one of said axes being that of the commutator short circuit.

1,687,565. MACHINE FOR APPLYING ADHESIVE STRIPS TO SOLES. CHESTER HUNT, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 18, 1922. Serial No. 544,952. 11 Claims. (Cl. 12—17.)



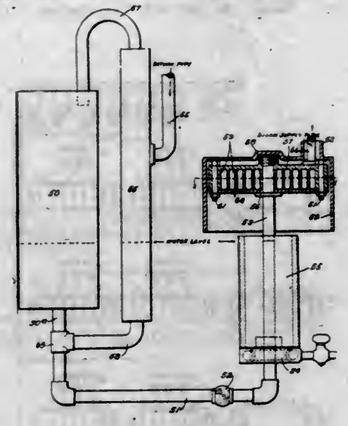
11. A machine for applying a strip of unvulcanized rubber over the corner at the junction of the edge and one face of a rubber sole having, in combination, a strip guide shaped to bend a strip passing through it in such manner that a portion of the strip will be applied to the edge of the sole and a second portion to the face of the sole, a roller arranged to press said second portion against the face of the sole, a driven, yieldingly mounted feed roller

arranged to engage the opposite face of the sole, an edge roller arranged to press the first-named portion of the



strip against the edge of the sole, a pivot about which the edge roller may swing, and a spring for urging the roller about the pivot.

1,687,566. SOUND-CONTROL CONSTRUCTION. LEIGH HUNT, Chicago, Ill., assignor to Oro-Tone Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1926. Serial No. 120,006. 7 Claims. (Cl. 181—27.)



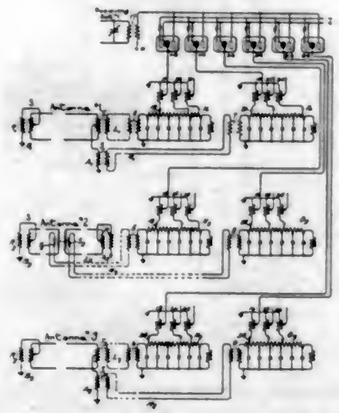
6. Sound control construction comprising an amplifying chamber having an open side, a throat passage entering the side opposite the open side, and a reflecting member positioned in the chamber opposite the throat, said reflecting member having a ridge extending across the face opposite the throat, said ridge serving to divide the sound, the throat member having notches in its edge whereby the ridge on the reflecting member may extend into the throat.

1,687,567. VARIABLE-SPEED GEARING. JAMES P. JOHNSON, Cleveland Heights, Ohio, assignor to The J. P. Johnson Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 25, 1927. Serial No. 170,785. 6 Claims. (Cl. 74—58.)

1. In gearing for the purpose specified, the combination of a housing, a pair of shafts, the axes of which are offset with respect to each other, an external and internal gear mounted upon one of said shafts, an internal and external gear slidably mounted upon the other of said shafts, and means for shifting said slidable gears into a position in which the internal slidable gear is in mesh with the external gear on the other shaft, or in which the external slidable gear is in mesh with the internal gear on the other shaft.

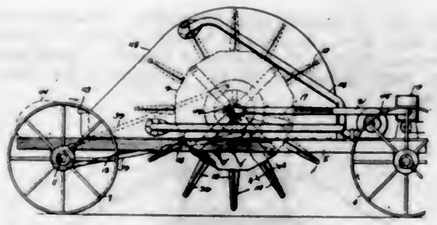
1,687,568. STEAM GENERATOR. RICHARD MARMADUKE JONES, Northampton, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 26, 1922, Serial No. 608,935, and in Great Britain Jan. 3, 1922. 2 Claims. (Cl. 122—460.)

1. A generator for superheated steam, having, in combination, a water reservoir open to atmospheric pressure, a source of heat, a steam generating portion in which only a limited quantity of water can be converted into steam at one time by heat supplied from said source, said conversion occurring at and slightly below the water level of the reservoir, a connection between the reservoir and the steam generating portion, a steam superheating portion containing a connected series of tortuous passages located above the steam generating portion, a connection between said portions, a cover common to all of said tortuous passages made of material of high heat conductivity and located on the underside of the superheating portion so as to be exposed to the source of heat, and an outlet for superheated steam at the end of the series of tortuous passages farthest removed from the connection to the steam generating portion.



1,687,569. TWO-WAY-SOCKET UNIT. WILLIAM ILE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed Dec. 12, 1925. Serial No. 75,119. 11 Claims. (Cl. 173—336.)

1. A socket unit of the class described including a hollow body of insulating material open at the upper end and provided at the lower portion with sockets for the recep-

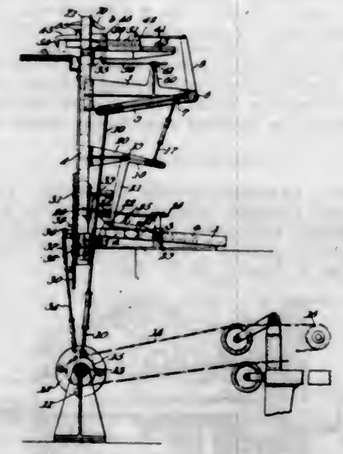


tion of electric light tubes, switch mechanism housed within the body for controlling the feed of current to the electric light tubes and provided with an operating shaft projecting beyond the top of the body, a fixed sleeve forming a bearing for the operating shaft and having exterior screw threads, and a clamping member having a threaded opening to receive the sleeve and engaging the threads thereof and of a size to cover the open top of the body.

1,687,570. RADIO RECEIVING SYSTEM. EDWARD W. KELLOGG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1922. Serial No. 602,453. 16 Claims. (Cl. 250—11.)

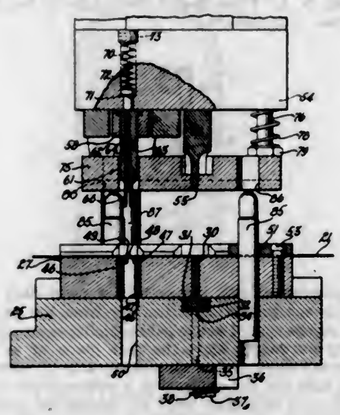
15. The combination in a radio receiving system of a plurality of directive receiving units, a receiving set, a pair of artificial lines associated with each receiving unit and means for impressing upon the receiving set currents derived from all of said artificial lines.

1,687,571. COTTON-PICKING MACHINE. ALLEN J. KIEFFER, Hot Springs, S. Dak. Filed Jan. 8, 1926. Serial No. 80,047. 4 Claims. (Cl. 56—13.)



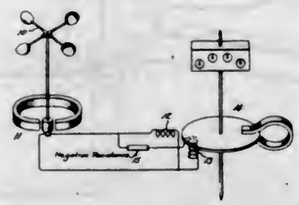
1. In a cotton picker, a carriage, a rotatable drum carried by the carriage, axially rotatable hollow picking fingers supported by and projecting radially from the drum, means for rotating the drum for causing the fingers to intrude into and withdraw from the plants as the carriage travels, means for causing suction through the fingers while they are at intruded position and for causing outward air discharge through them while they are at withdrawn position, and cotton boll engaging and detaching prongs carried by said fingers, and means to rotate the fingers upon rotation of the drums, said drum having a pair of chambers, means for producing suction in one of the chambers and compression of air in the other chamber, and means for causing suction and air discharge through the fingers embodying rotatable sleeve valves for alternately placing the chambers in communication with the fingers.

1,687,572. REAR-VIEW MIRROR FOR AUTOMOBILES. WILLIAM LA HODNY, Buffalo, N. Y., assignor to Standard Mirror Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Nov. 16, 1925. Serial No. 69,233. 2 Claims. (Cl. 45—97.)



1. An automobile visor having a top and side walls provided with longitudinal slots, a rear view mirror arranged below said top, and means for supporting said mirror comprising a plate which carries said mirror and which has its ends arranged adjacent to the inner sides of said walls, and bolts connected with said plate and passing through said slots and bearing against the outer sides of said walls.

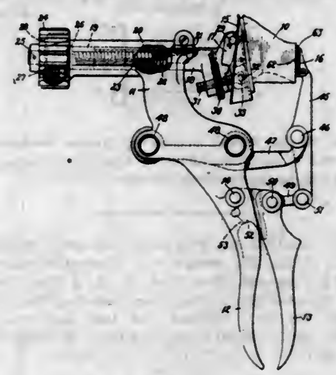
1,687,573. ELEVATOR MECHANISM FOR CONVEYERS. HARRY I. LAHR, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Feb. 2, 1925. Serial No. 6,434. 13 Claims. (Cl. 198—20).



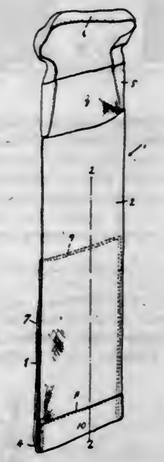
1. In an elevator mechanism for conveyers, an elevators shaft, means for introducing articles into said shaft, means associated with said shaft for imparting a step by step elevating movement to said articles, and means arranged in operative relation to said shaft for grasping said articles one by one as they are elevated and transferring them from said shaft to a position outside thereof and adjacent thereto and then releasing them.

1,687,574. ARTICLE-FORMING APPARATUS. AUGUST STANLEY LISS, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,643. 9 Claims. (Cl. 153—2.)

3. An article forming apparatus comprising a die, means for intermittently advancing material past the die, and a split punch designed to engage portions of the material to position the material and force it through the die.



1,687,575. ELECTRIC MEASURING SYSTEM. KURT LUBOWSKY, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 2, 1926, Serial No. 152,271, and in Germany Jan. 15, 1926. 5 Claims. (Cl. 171—34.)

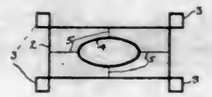


4. A measuring system comprising a source of variable voltage, a wattmeter having current and voltage coils, connections for supplying said coils from said source, and means included in said circuit connections for causing the wattmeter to give a measurement proportional to the third power of the variable voltage.

1,687,576. METHOD OF AND MEANS FOR TRIMMING UNATTACHED HEELS. LESTER S. MACDONALD, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 20, 1922. Serial No. 602,120. 16 Claims. (Cl. 12—42.)

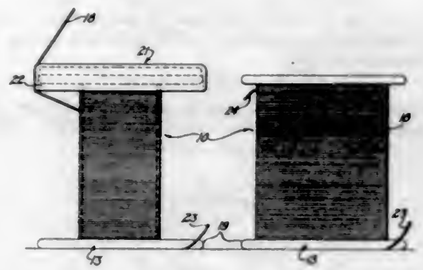
1. That improvement in methods of shaping unattached heels which consists in securing such a heel temporarily in fixed relation to form-controlling means, shaping the periphery of the heel by trimming it along a predetermined course controlled by said means while turning and rocking the heel in tangential relation to a cutter rotating about a fixed axis, and shaping the breast of the heel by trimming it along a course constrained by said means to bear a predetermined standardized relation to said course of peripheral trimming.

1,687,577. COTTON-PICKER'S SACK. CHRISTIAN E. MANNER, Homestead, Fla. Filed May 18, 1927. Serial No. 192,297. 1 Claim. (Cl. 150—2.)



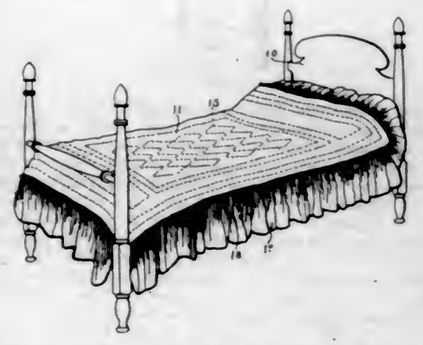
The combination with a cotton picker's sack; of a reinforcing flap of substantially the same width as the sack, the side edges of the flap being folded back upon the body portion of the flap and being stitched thereto, the upper edge of the flap being stitched to the intermediate portion of the bottom side of the sack, said flap extending downwardly beyond the closed lower end of the sack to completely cover the bottom side of the sack at the lower end portion thereof, the depending portion of the flap being folded back upon the front side of the sack and stitched at the free end portion thereof to the top side of the sack at a point adjacent the closed lower end thereof.

1,687,578. ORNAMENTAL INLAID WORK. OTTO S. MARCKWORTH, Columbus, Ohio. Filed July 30, 1926. Serial No. 126,082. 5 Claims. (Cl. 41—35.)



1. An article of the character described, consisting of a design-frame of wire-like formation, the thin bars thus formed constituting the tracery of the design, and a wood

veneer forming a body within which such design frame is embedded, the material of the veneer being removed at places over the tracery formed by such frame, and the

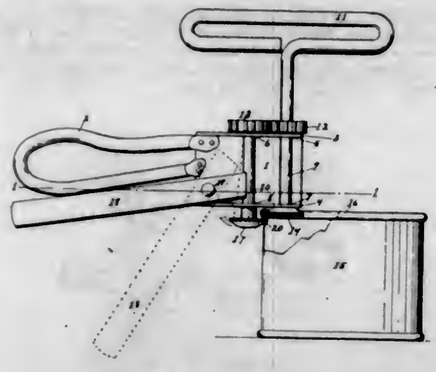


remainder of the veneer occupying spaces bordering the tracery, and a suitable adhesive applied between frame and veneer to maintain their union.

1,687,579. MATERIAL HOLDER. SAMUEL MCMULLAN, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Oct. 22, 1924, Serial No. 745,090. Divided and this application filed Jan. 28, 1927. Serial No. 164,185. 6 Claims. (Cl. 242—140.)

1. In a strand material holder, a body portion for receiving strand material, another portion of a character and size different from the body portion on which an auxiliary portion of the strand material is wound, and separating means for the strand supporting portion of the body having a slot to permit the strand material to pass therethrough from one portion to the other.

1,687,580. BED COMFORTABLE. RALPH H. MELCER, New London, Conn., assignor to The Palmer Brothers Company, New London, Conn. Filed July 2, 1926. Serial No. 120,199. 1 Claim. (Cl. 5—334.)

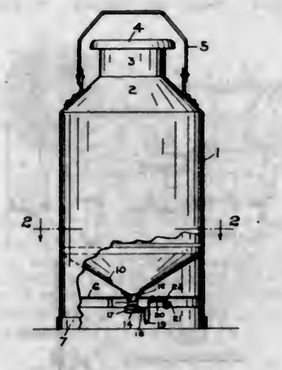


In a bed comfortable, a padded or quilted body portion, a gathered flounce attached to the edges thereof and designed to hang downwardly therefrom, and a gathered heading projecting upwardly from the flounce to a point at least as high as the upper face of the body portion, said flounce and heading extending entirely about the periphery of the body portion, said heading being of two-ply thickness of material and said flounce being of single thickness and said heading and flounce being formed integrally with each other.

1,687,581. SUSPENSION CLIP. JOSEPH H. MURPHY, Newark, N. J. Filed Nov. 4, 1927. Serial No. 230,081. 4 Claims. (Cl. 24—84.)

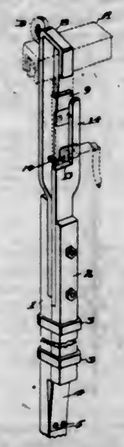
1. A suspension clip, comprising a main body having piercing means projecting outwardly from the face plane thereof, means spaced above said piercing means and also projecting outwardly from the face plane of said main body adapted to serve as a stop engageable by material inserted in said clip for suspension, a presser plate hingedly connected with said main body for disposition across said piercing means, said presser plate being cutaway to receive said piercing means, and a guard means on said presser plate outward'y off set and covering its cutaway portions.

1,687,582. CAN OPENER. ABRAHAM NOBLE, San Diego, Calif. Filed Aug. 2, 1923. Serial No. 655,271. 3 Claims. (Cl. 30—3.)



1. In can opener, a frame having manual holding means for one of the hands, manual torsional rotating means mounted on said frame for rotating cutting means with the other hand while the first named hand is manipulating said holding means, puncturing gear and self feeding toothed cutting means rotated and driven by said rotating means, and closing means for actuating and retaining said cutting means in closed relation pivotally mounted on said frame in close proximity to said said holding means.

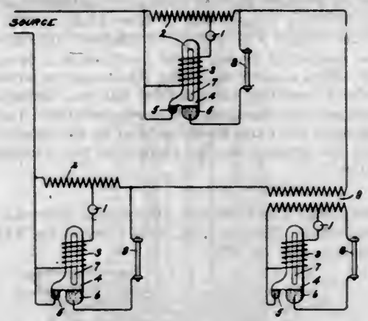
1,687,583. SELF-DRAINING OIL CAN. SWAN E. NORD, Seattle, Wash. Filed Sept. 18, 1926. Serial No. 136,326. 4 Claims. (Cl. 220—1.)



1. A self-draining oil can, comprising a container, a horizontal bottom member disposed above the base of the container, a central opening in said member, a second bottom member, disposed above the first-named member, in the form of a hollow, truncated and inverted cone, its smaller end

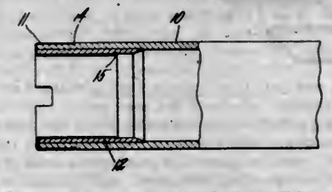
axially aligned with said opening, an auxiliary receptacle for oil extending through said opening and secured to said

end of the second-named member, and an oil-tight cap threadedly engaged with the free end of the receptacle.



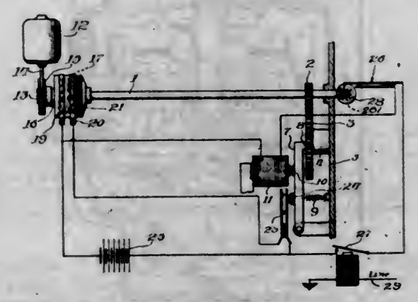
1,687,584. LINE-TAPPER-OPERATING DEVICE. EDWIN B. NORMINGTON, Sacramento, Calif. Filed Aug. 25, 1927. Serial No. 215,383. 2 Claims. (Cl. 81—3.)

1. In a device of the class described, the combination of a primary section, a plate fastened to one end of said primary section, said plate provided at its outer end with a hook adapted to hook over the top of a line tapper, said plate provided with a line-tapper-edge engaging lug, an auxiliary section slidably mounted upon said primary section, and said auxiliary section provided with a plate having a finger adapted to engage one side-edge of a line tapper opposite to the first mentioned edge engaged by said lug.



1,687,585. MEANS FOR SUPPRESSING HARMONICS. JAMES A. O'NEIL, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1924. Serial No. 713,867. 3 Claims. (Cl. 171—97.)

1. The combination of a series load circuit, a load device, a transformer comprising a primary circuit connected in series in said load circuit and a secondary circuit arranged to include said load device, and means for preventing the saturation of said transformer in case of the failure of the circuit of said load device whereby to avoid the production of harmonic currents including a resistance element having a negative temperature coefficient, and means operable to

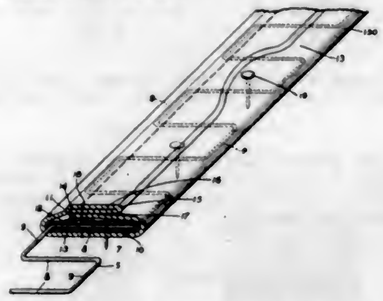


short circuit said primary circuit through said element in response to the failure of the circuit of said load device.

1,687,586. FIBER CORE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 16, 1927. Serial No. 184,419. 2 Claims. (Cl. 242—68.)

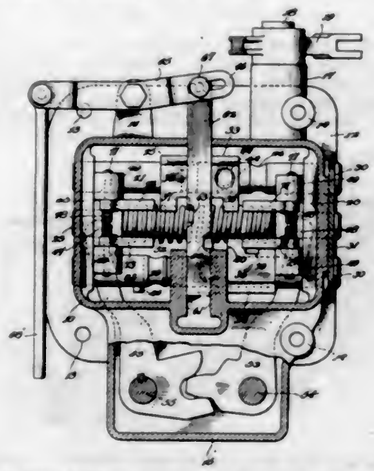
1. A fiber core comprising a relatively thin-walled fiber tube, a short tubular filler having an internal diameter substantially equal to that of a standard paper core fitted within each end portion of said tube, and annular metal end pieces fitted on the ends of the composite structure thus formed.

1,687,587. AUTOMATIC CLUTCH. FRANK D. PEARNE and LAWRENCE E. GOTSCH, Chicago, Ill., assignors, by mesne assignments, to Wire Transmitting Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 16, 1926. Serial No. 122,914. 2 Claims. (Cl. 178—35.)



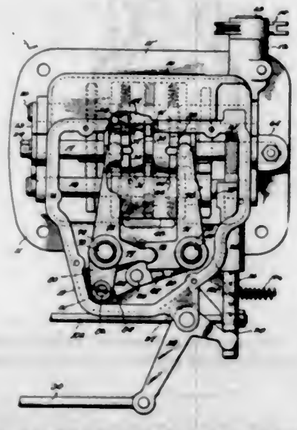
1. In combination, a rotary drive member, a rotatable shaft, a magnetic clutch for connecting the shaft to said member, a latch related with the shaft and yieldably moved into holding engagement therewith at the termination of predetermined rotational movements of the same, an electromagnet for retracting the latch, a switch for said clutch closed by the latch when the latch is in its retracted position, a normally closed switch opened by the driven shaft n rotating, and a line relay switch connected in series with the last mentioned switch for energizing the electromagnet.

1,687,588. METHOD OF DRYING CORRODIBLE MATERIALS. ALBERT PEARSON, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1926. Serial No. 138,345. 3 Claims. (Cl. 34—24.)



1. The method of drying moist particles of a corrodible material, which consists in adding a non-aqueous solvent to the particles, agitating the resulting mixture, withdrawing the liquid portion, repeating the above operations until the moisture upon the particles is replaced by the solvent, and removing the solvent on the surface of the particles by evaporation.

1,687,589. WEATHER STRIP. HOWARD D. RANDALL, Cincinnati, Ohio. Filed Oct. 23, 1926. Serial No. 143,612. 6 Claims. (Cl. 20—69.)



1. As a new article of manufacture a weather strip comprising a resilient relatively flat wire core, a paper covering for the core, a strip of felt extending about the paper covering and having a free end inturned and means extending through the felt and paper and overlapping ends of the felt and paper for securing the parts together and retaining them against relative displacement.

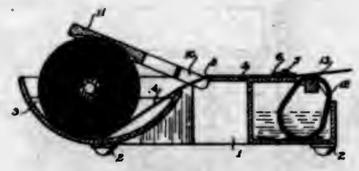
1,687,590. GEAR-SHIFTING MECHANISM. GLENN T. RANDOL, Muncie, Ind. Filed July 17, 1924. Serial No. 726,565. 21 Claims. (Cl. 74—58.)

1. A gear shifting mechanism including gear shifters, opposed elements spring pressed apart, coacting levers to engage the lower end portions of said elements for shifting said elements toward each other and returning said shifters to neutral position, means carried by the upper end portions of said elements for selectively coupling said shifters with said elements to travel therewith when moved away from each other, and selecting means to coact with said coupling means.

1,687,591. GEAR-SHIFTING MECHANISM. GLENN T. RANDOL, Marmaduke, Ark., and ROBERT S. PLEXICO, Muncie, Ind., said Plexico assignor to said Randol. Filed Oct. 30, 1924. Serial No. 746,822. 31 Claims. (Cl. 74—58.)

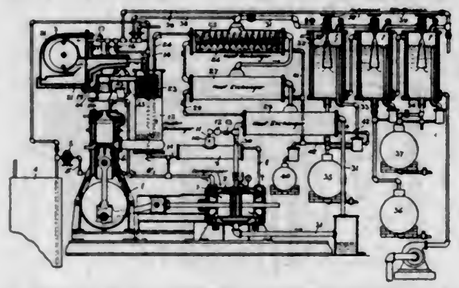
1. A gear shifting mechanism including gear shifting means, means including associated levers having a cycle of movement in opposite directions for operating said shifting means, actuating means, and toggle mechanism operable by said actuating means when moved in one direction for moving the levers through said cycle.

1,687,592. SHOULDER STRAP. ANNA ROTHSTEIN, Chicago, Ill. Filed Apr. 1, 1927. Serial No. 180,210. 1 Claim. (Cl. 241—12.)



A detachable shoulder strap comprising a single band, one end of said band being folded to provide a double portion, and an elastic portion disposed within the double portion, said double portion being shirred to provide a covering for the elastic portion and to permit an elongation of the latter, one end of the folded portion being disposed between the elastic portion and the shoulder strap and secured to the shoulder strap, the other end of said folded portion comprising an attaching portion extending beyond the elastic portion and provided with a buttonhole.

1,687,593. METHOD OF PREPARING COLOR PLATES. FRED SASS, Detroit, Mich., assignor, by direct and mesne assignments, to Bo-Zar Engraving Studios, Inc., a Corporation of Michigan. Filed July 5, 1927. Serial No. 203,687. 10 Claims. Cl. 41—43.)

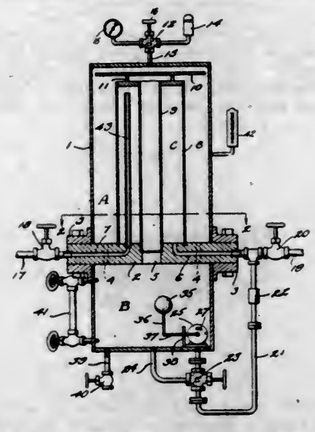


1. The method of preparing printing plates, which comprises tracing the outlines and transferring them to a separate surface, filling with a shading material, etching the surface after treating with the filling or shading material, then transferring each drawing for each color from such etched surface to a final printing surface and etching the same upon such final surface in relief.

1,687,594. TAPE-MOISTENING DEVICE. JOSEPH C. SCHNEBLE, Oakwood, Ohio. Filed Mar. 23, 1926. Serial No. 96,846. 2 Claims. (Cl. 91—14.5.)

2. In a device of the type described, the combination with an elongated channel member having a tape-roll receiving compartment in one end thereof, a knife at the other end of said channel member and under which the tape is adapted to be drawn, and a gravity plate pivotally secured to the top portion of the channel member between the knife and the tape-roll to rest upon the latter to tension it.

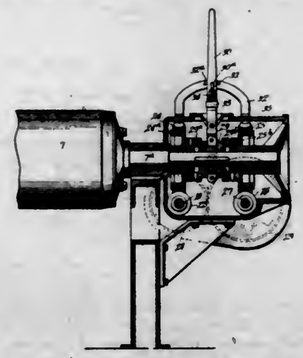
1,687,595. PROCESS FOR THE CONSTRUCTIVE CONVERSION OF HEAVY TO LIGHT HYDROCARBONS. WILLIAM E. SHORE, New York, N. Y. Filed Dec. 26, 1923. Serial No. 682,602. 12 Claims. (Cl. 196—62.)



1. A process for converting heavy hydrocarbons to light hydrocarbons, comprising directing the oil through the jacket of a compressor, then introducing same in the presence of hydrogen bearing gases to a mechanically operating atomizer, then conducting the produced vapour to the compressor cylinder and raising its temperature under compression, then passing the highly heated vapour to expansion condensers.

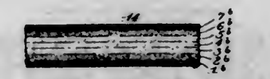
1,687,596. MANUFACTURE OF AROMATIC AMINO SULPHOCYANO DERIVATIVES. OSKAR SPENGLER, Dessau in Anhalt, and WERNER MÜLLER, Leipzig, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Sept. 2, 1925, Serial No. 54,131, and in Germany Sept. 24, 1924. Divided and this application filed Apr. 28, 1926. Serial No. 105,260. 1 Claim. (Cl. 260—128.)

The herein described manufacture of sulphocyano derivatives by causing a solution containing a product of the reaction between a halide of sulphuric acid and a sulphocyanide to react with aromatic amino compounds.



1,678,597. AIR AND FOUL-GAS EJECTOR FOR GAS SYSTEMS. DANIEL C. SPRINGER, Donora, Pa. Filed Apr. 26, 1926. Serial No. 104,860. 1 Claim. (Cl. 62—115.)

An air and gas ejector for a gas system of a refrigerating apparatus using ammonia or carbon dioxide comprising a casing, a partition therein dividing the same into upper and lower chambers, a cylinder supported on the partition and arranged in the upper chamber, means for introducing a cooling medium into the cylinder, means for connecting the interior of the cylinder with the compressor of the refrigerating apparatus, a poppet valve connected with the upper chamber, means for introducing a mixture of non-condensible gas and vaporized refrigerant into the



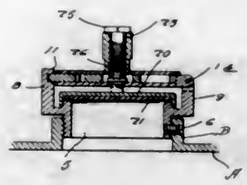
lower chamber, means permitting the mixture to pass into the upper chamber; a float controlled rotary valve in the lower chamber for controlling the discharge of the liquids of condensation and means for connecting the discharge of the valve with the interior of the cylinder.

1,687,598. ROTARY BIAS CUTTER. CHARLES W. STEELE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 3, 1927. Serial No. 230,789. 2 Claims. (Cl. 164—34.)

1. In a machine of the class described, a platen roll, an endless chain having spaced apart cutters arranged to travel longitudinally of the platen roll, means for driving said chain at a uniform rate of speed, and means for selectively driving said roll at different rates of speed.

1,687,599. FIBER BOARD AND METHOD OF MAKING SAME. CHARLES A. UPSON, Lockport, N. Y., assignor of one-half to W. Harrison Upson, Lockport, N. Y. Filed Oct. 4, 1922. Serial No. 592,424. 3 Claims. (Cl. 92—42.)

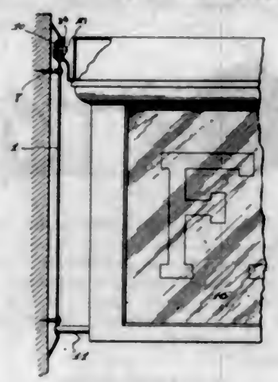
1. A method of making a fire resisting fiber sheet which embodies simultaneously forming a saturated web of vegetable fiber pulp possessing a relatively high degree of tensile



strength and a similar saturated web of mineral fiber pulp of low tensile strength, and then immediately bringing the surface of one web against that of the other to felt and interlace the fibers of both.

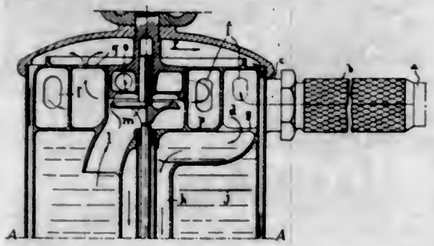
1,687,600. STAIR NOSING. HAROLD A. WELCOME, Lowell, Mass., assignor to American Mason Safety Tread Company, Lowell, Mass., a Corporation. Continuation of application Serial No. 697,357, filed Mar. 5, 1924. This application filed Nov. 20, 1924. Serial No. 751,013. 2 Claims. (Cl. 20—79.)

2. In a stair tread, the combination of a rigid base plate from which a plurality of integral ribs extend upwardly, there being proximate the front edge, a plurality of parallel diagonally disposed ribs, the ends of which are exposed; with a non-slipping artificial stone composition which extends between and flush with the top faces of the ribs and teeth.



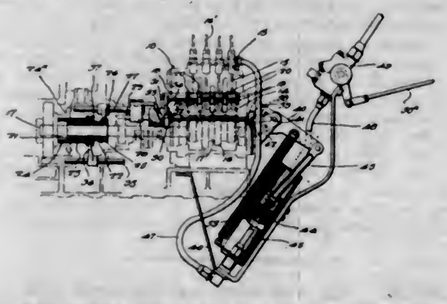
1,687,601. LOCKING CAP FOR FUEL TANKS. JAMES E. WHITLEY, Hemet, Calif. Filed June 13, 1927. Serial No. 198,586. 2 Claims. (Cl. 220—57.)

1. In a latch for tank closures wherein the closure is formed with an internal shoulder, a cap for said closure for disposition against said shoulder, an upstanding member on said cap, a hollow bar hingedly connected at one end to the closure, a bolt slidable within the bar, the outer end of the bolt being engageable within a socket formed in the closure, means within the hollow bar for effecting a tension against the upstanding member of the cap, said bolt being formed with an intermediate opening and having an offset notch, a rotatable member projecting within the hollow bar and having its inner end disposed within the opening of the bolt, said member being provided with a lug engageable with the notch whereby the rotary movement thereof will cause the inward movement of the bolt within the hollow bar.



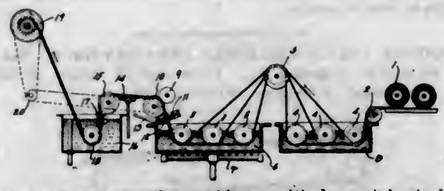
1,687,602. SIGN AND MEANS FOR MOUNTING THE SAME. CLAUDE S. WILLEY, Detroit, Mich. Filed Apr. 1, 1927. Serial No. 180,146. 4 Claims. (Cl. 40—125.)

1. In a sign, the combination of a sign structure having a moulding extending around all of its sides, of a sign support provided with means for securing the moulding thereto, means projecting from the support and equal to the width of the moulding and abutting against the sign



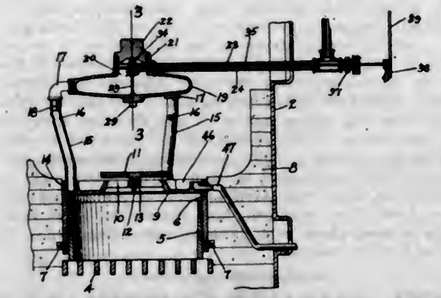
at a point other than at the moulding, whereby a sign may be secured to the support at any one of its sides.

1,687,603. SEPARATOR. PIERRE AMET, Paris, France. Filed July 16, 1926, Serial No. 122,996, and in France July 30, 1925. 8 Claims. (Cl. 210—51.)



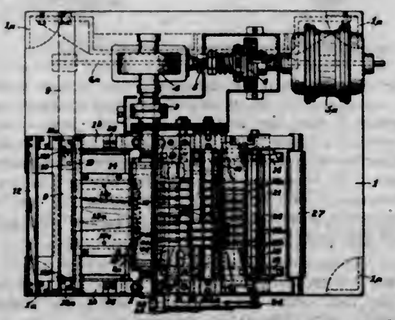
1. A gasoline separator, comprising a casing having an inlet and an outlet for the gasoline; and concentric outer and inner annular settling chambers within the casing in communication with each other, and also in communication, respectively, with said inlet and outlet, each chamber having a plurality of internal radial baffles formed with apertures.

1,687,604. PUMP CONTROL. ANDRÉ C. ATTENDU, Montreal, Quebec, Canada. Filed Jan. 17, 1925. Serial No. 3,135. 8 Claims. (Cl. 123—139.)



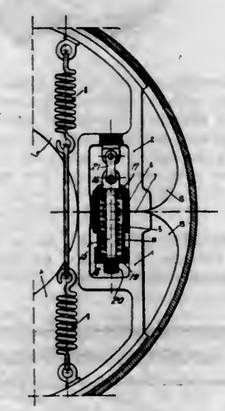
1. Fuel feeding apparatus comprising a pump including a plunger, a movable shaft, plunger stroke regulating means controlled by movement of said shaft, a pressure responsive device, a drive connection between the pressure responsive device and said shaft and means other than the plunger for applying operating pressure to said pressure responsive device.

1,687,605. APPARATUS FOR MAKING MULTIPLY STRIP STOCK. HARRY W. BUNDY, Detroit, Mich. Filed Nov. 11, 1927. Serial No. 232,576. 6 Claims. (Cl. 113—59.)



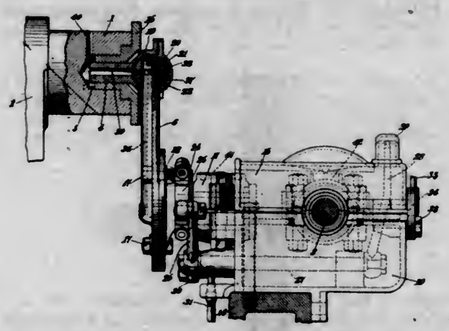
1. An apparatus for making multi-ply metal stock, comprising in combination means for drawing a plurality of plies of metal stock from supplies thereof, a bath of molten sealing metal, means for guiding the plies through the bath while the plies are held separated, and means for bringing the plies together to be secured by the said sealing metal to form multi-ply metal stock.

1,687,606. OIL BURNER. CLYDE M. CLEFTON, Austin, Minn., assignor to Florence K. Clefton, Austin, Minn. Filed Jan. 21, 1924. Serial No. 687,544. 5 Claims. (Cl. 158—63.)



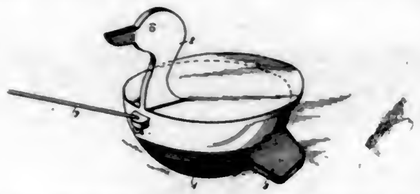
1. In a liquid fuel burner, a retort having discharge ports of different size in its bottom wall and corresponding valves for said ports, a rotating rod and a crank disk thereon whereto said valves are connected, the rotation of said rod opening and closing said valves alternately to increase or decrease the flow of fuel to the burner, a base having a priming pan and standards upon said base supporting said retort.

1,687,607. SLITTING MACHINE. ARTHUR E. COLLINS, Cuyahoga Falls, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 14, 1926. Serial No. 154,748. 9 Claims. (Cl. 164—61.)



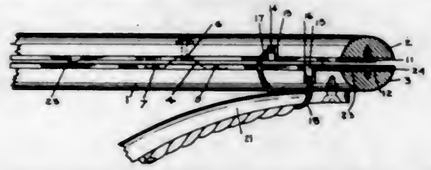
6. In a slitting machine, a main frame, a platen roll journaled therein, a cutter carrier insertible in and removable from said frame, cutter bars fulcrumed on said carrier and having cutters adjacent one end to cooperate with said platen roll and springs on the other end for detachably engaging a fixed bar on said frame, and means for raising and lowering the fulcrum of said cutter bars.

1,687,608. EXPANDING-SHOE BRAKE. GUIDO FORNACA, Turin, Italy. Filed Sept. 20, 1926, Serial No. 136,593, and in Italy Sept. 28, 1925. 3 Claims. (Cl. 188—78.)



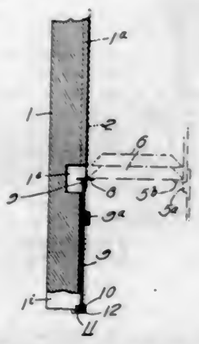
1. A vehicle brake having a brake drum, a pair of brake shoes for co-action therewith, and a fixed support for said shoes; in combination with co-acting cam surfaces on the mutual contacting faces of the shoes adjacent the support and forming a shifting pivot for the shoes as they move bodily from the support and means to draw the shoes together when released.

1,687,609. DRIVING MECHANISM FOR ENGINE ACCESSORIES. HEWITT A. GEHRES, Mount Vernon, Ohio. Filed Aug. 2, 1922. Serial No. 579,107. 3 Claims. (Cl. 64—89.)



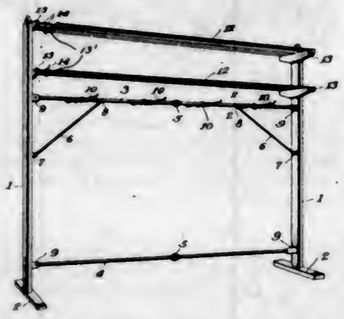
1. A driving mechanism for engine accessories, comprising a crank pin engaging member, a ball and socket joint associated with said member, a drag crank slidably connected to one element of said ball joint, and a cross shaft substantially concentric with the circle of rotation of the crank pin, said cross shaft being fixedly connected to said drag crank.

1,687,610. TOY. THOMAS E. GRIFFIN, West Haven, Conn. Filed Aug. 16, 1926. Serial No. 129,552. 10 Claims. (Cl. 46—40.)



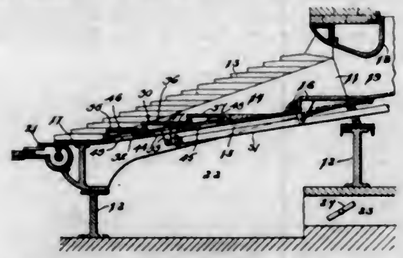
1. A toy comprising a body having a floor engaging surface rounded to permit substantially universal rocking movement and a plurality of laterally extending members secured to the lower portion of said body and adapted for engagement with the floor when said body is rocked laterally and means for advancing the toy over the floor.

1,687,611. ELECTRIC SWITCH. LOUIS HAMER, Montreal, Quebec, Canada. Filed Jan. 10, 1924. Serial No. 685,378. 2 Claims. (Cl. 200—59.)



1. An electric switch, comprising a steering wheel rim forming two annular electric contacts, arcual flat springs separating said annular electric contacts and centrally secured apart from said contacts and spreading on either side of their fasteners and diametrically arranged in pairs and supplemental means straddling and holding said annular contacts apart following the initial pressure on said separating springs adapted to contribute to the spacing of the annular contacts under normal steering pressure, and to form a support for one annular contact prior to the act of sounding the horn.

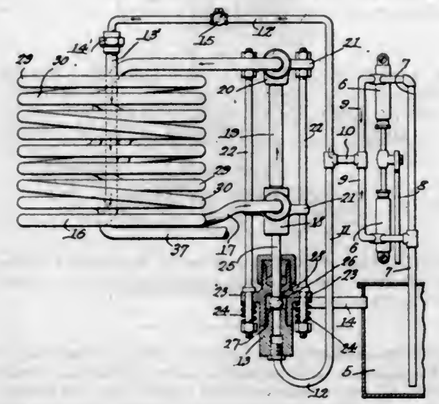
1,687,612. CHECK-CONTROLLED ARTICLE-DELIVERY APPARATUS. EDWARD B. HERMAN, Watertown, Mass. Filed Mar. 30, 1927. Serial No. 179,517. 3 Claims. (Cl. 194—22.)



1. In a coin controlled article delivery apparatus a storage chamber of substantially triangular shape in cross section to receive wafers of corresponding shape, said chamber having a wafer supporting abutment in one corner, and means for releasably supporting the opposite edge of the wafer comprising a pair of spaced rotary members having wings adapted to successively project into the path of the wafers, yieldably supported U-shaped member having its arms adapted to engage the wings of said members, and means for causing a coin to actuate said U-shaped member.

1,687,613. COLLAPSIBLE HAT AND COAT RACK. JOHN HERNACKI, Chicago, Ill. Filed Sept. 7, 1926. Serial No 133,964 3 Claims. (Cl. 211—178.)

1. A collapsible garment rack comprising a pair of vertically disposed standards, each of said standards having a pair of braces hinged at one end thereto in spaced relation, one of said braces being attached adjacent the top of its standard and the other adjacent the bottom thereof, means for rigidly joining end to end the free ends of the top and bottom braces of one standard with the top and bottom braces respectively of the other of said standards to form a rigid rectangular frame-work, garment supporting means on said upper braces, and a flexible hat supporting shelf secured to the upper ends of said standards and held taut thereby, said hat shelf being located above said garment supporting means in spaced relation thereto.



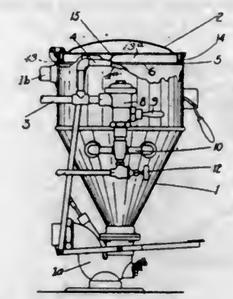
1,687,614. AUXILIARY RAM FOR STOKERS. DUNCAN C. HESS, Chester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1922. Serial No. 572,903. 3 Claims. (Cl. 110—44.)

1. In combination in an underfed stoker, a fuel feeding retort, an auxiliary ram in the retort, said auxiliary ram comprising a plurality of hollow, step-like pusher members, each of said pusher members having a port disposed to deliver air into the fuel bed, said retort and said pusher members each being provided with a series of openings, the openings of said retort registering with the openings of said pusher member, the openings of at least one series being of graduated size.

1,687,615. STEAM GENERATOR. ADRA M. HUBBARD, Dallas, Tex. Filed Oct. 30, 1924. Serial No. 746,860. 3 Claims. (Cl. 122—41.)

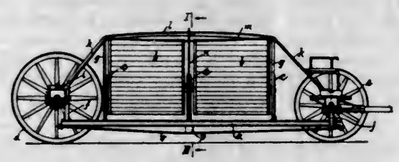
1. A steam generator including generator coils and a feed water coil, a source of water supply, a pipe establishing communication between the source of water supply and feed water coil, a thermo-responsive tube establishing communication between the feed water coil and the generator coils whereby water may flow from the feed water coil

to the generator coils, and a valve operated by the thermo-responsive tube for controlling the passage of water from the source of water supply to the feed water coil.



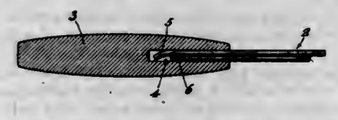
1,687,616. DISPLAY STAND. JOSEPH G. HUYE, New Orleans, La. Filed Aug. 24, 1925. Serial No. 52,060. 3 Claims. (Cl. 211—157.)

1. A collapsible set-up display device comprising a tubular member having a plurality of overlapping plates having their opposed side faces in sliding engagement with each other at all times, and elastic bands fitting about parts of the end portions of said plates to pull them edgewise toward each other into normal full overlapping relation to expand the tubular member to full set-up condition.



1,687,617. WATER SEAL FOR CLEANING DEVICES. RAYMOND L. JEWELL, Millcreek Township, Erie County, Pa., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1924. Serial No. 743,849. 2 Claims. (Cl. 141—1.)

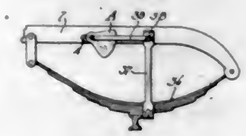
1. In a cleaning device, the combination of an open-topped cleaning chamber; a valve controlled conduit for introducing cleaning fluid into said chamber; a trough arranged in said chamber about its upper edge; a cover for said chamber having a flange adapted to enter said



trough; and means for conducting fluid from said valve controlled conduit to said trough.

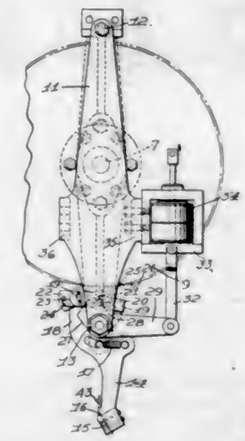
1,687,618. AGRICULTURAL CARRIAGE. GEORG JOHANN WILHELM LAUENSTEIN, Barnstedt, near Luneburg, Germany. Filed Aug. 8, 1927, Serial No. 211,492, and in Germany May 28, 1926. 3 Claims. (Cl. 298—8.)

1. A frame for dumping cars of the type having side dumping buckets arranged in tandem comprising a truss construction including lower longitudinal members, cradles mounted on said lower longitudinal members for carrying said buckets, upwardly diverging supports carried by said lower longitudinal members arranged beyond said buckets in an endwise direction at each end of said frame and extending upwardly to a horizontal plane above said buckets, and an upwardly arched longitudinal member connecting the upper ends of said supports on each side of said buckets.



1,687,619. HANDLE CONSTRUCTION. JOHN G. LE PERE, Decatur, Ill., assignor to U. S. Manufacturing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Jan. 6, 1925. Serial No. 823. 2 Claims. (Cl. 306—1.)

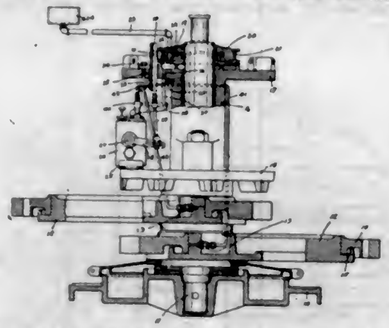
1. In combination, a handle member and a gripping member, the handle member being composed of two straight parallel parts of wire arranged in contact throughout the entire length of one of the parts to provide a solid shank within the gripping member, one part being longer than the other and extended at an angle across the end of the shorter part to prevent an inclined entering surface forming a wedge, said gripping member being formed with a socket less in diameter than the combined diameters of the two wire parts, said two parts being forced into and wedged within said socket, the extended end of the longer part ter-



minating short of the opposite side of the shorter part and arranged out of contact with the wall engaged by the said shorter part so as not to interfere with the insertion of the handle member within the gripping member.

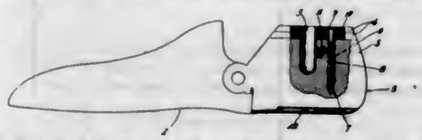
1,687,620. SHOCK ABSORBER. HENRY H. LOGAN, Chicago, Ill. Filed Sept. 10, 1926. Serial No. 134,742. 11 Claims. (Cl. 188—89.)

1. In a shock absorber, a casing, a pivot shaft, a vane carried by said pivot shaft, and having a central opening, a valve carried by the vane for controlling the central opening, said valve being movable by fluid pressure when the vane is moving in one direction, and an auxiliary valve carried by the vane and also controlling said central opening and adapted to be operated by an abnormal fluid pressure when the vane is moving in the opposite direction.



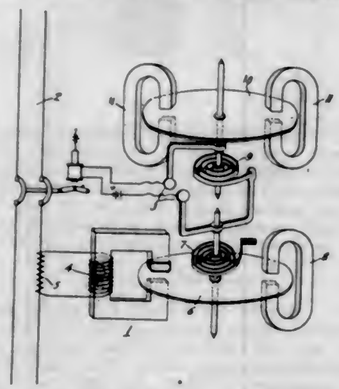
1,687,621. AUTOMATIC BRAKE OPERATOR FOR INCLINE HOISTS. HENRY H. LOGAN, Chicago, Ill. Filed Sept. 10, 1926. Serial No. 134,743. 8 Claims. (Cl. 192—116.5.)

3. The combination with a hoist having a cable drum, a brake mechanism for stopping the rotation of said drum, a lever for actuating said brake mechanism when released, a hoist control having a shaft, of a toothed disc removably secured to said shaft, a latch arm for holding said lever in set position, and means cooperating with said toothed disc for automatically releasing said brake lever.



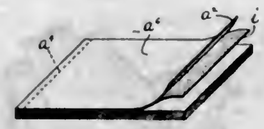
1,687,622. OILING MECHANISM FOR BAND-WHEEL POWER. ALBERT H. LOUCKS, Marion, Ind., assignor to Marion Machine, Foundry & Supply Co., Marion, Ind., a Corporation. Filed Jan. 18, 1927. Serial No. 161,783. 4 Claims. (Cl. 308—122.)

1. In a lubricating system for a power including an eccentric ring, an eccentric for reciprocating the same and a power hub for rotating the eccentric, the combination of a lubricator carried by one of the aforesaid rotating parts, and means continuously associated with said lubricator for



automatically actuating the same in the rotation thereof for supplying under pressure a measured quantity of lubricant to the rotating parts.

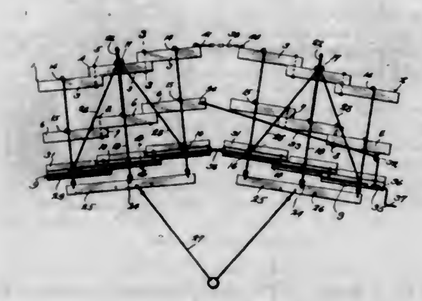
1,687,623. LAST. CHARLES E. LURCOTT, Philadelphia, Pa., assignor to Philadelphia Last & Pattern Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 27, 1926. Serial No. 111,930. 4 Claims. (Cl. 12—139.)



1. In combination, a shoe last having a heel part or portion provided with a comb or narrow portion, a jack pin thimble extending into said comb or narrow portion from the top thereof and means for reinforcing and drawing the material of the comb or narrow portion of the last together, said means being located in the rear of the jack pin thimble and extending into the material of the heel part or portion of the last for a considerable distance, said means including an elongated element screw threaded on a steep pitch and having an exposed head so that blows in operation result in a turning movement of the element in the material of the last so as to bind the grain of the material thereto.

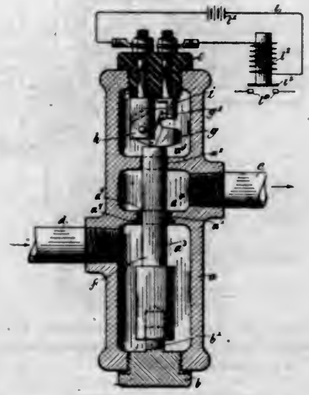
1,687,624. RELAY. PAUL MACGAHAN, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 10, 1925. Serial No. 36,109. 3 Claims. (Cl. 200—97.)

1. In combination with an electric circuit, a relay comprising a rotatable armature having a contact secured thereto, inductive means for effecting the rotation thereof responsive to load conditions in said circuit, a second rotatable armature having a contact secured thereto in the path of movement of said first contact, a resilient driving connection between said armatures, and means whereby said contacts are maintained in spaced relation during normal variations in load on said circuit and are moved into contacting relation responsive to an abnormal increase in load.



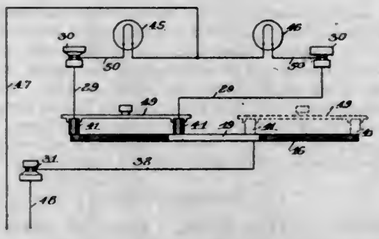
1,687,625. TOILET PREPARATION. KATHERINE M. MACKENZIE, New York, N. Y., assignor to Jacob S. Berliner, New York, N. Y. Filed Mar. 12, 1926. Serial No. 94,236. 5 Claims. (Cl. 167—9.)

1. The method of manufacturing a homogeneous article of paper and a cold cream which consists in evenly distributing the cold cream from a substantially solidified brick of predetermined characteristics maintained at a predetermined temperature over one surface of a sheet of fibrous material simultaneously with the application of pressure, and in a film of such thinness it may be held practically absorbed therein so that no substantial cream appears as such free on the surface of the paper, seasoning the sheet to effect substantially perfect assimilation of the cream by the sheet, and pressing it.



2. The method of manufacturing a homogeneous article of fibrous material and a plastic medium which consists in evenly distributing the medium from a substantially solidified brick of predetermined characteristics maintained at a predetermined temperature over one surface of a sheet of fibrous material simultaneously with the application of pressure, forming a stack of the sheets, enveloping the stack in an impervious wrapping, seasoning the stack to effect substantially perfect assimilation of the cream by the sheet, and pressing it.

1,687,626. ROAD GRADER. BENJAMIN H. MANSKER, Pinckneyville, Ill. Filed Apr. 23, 1927. Serial No. 186,079. 2 Claims. (Cl. 37—151.)

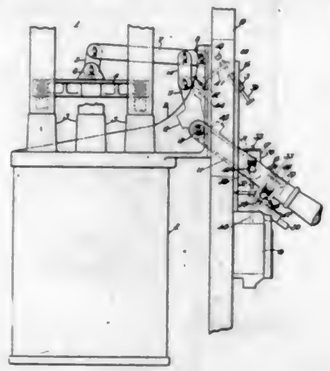


1. A grader of the class described, comprising oppositely disposed gangs, a draw member connected to one gang and extended transversely of the draft line to the other gang, means on said other gang for winding up the draw member thereby to pull the gangs toward each other and to dispose the gangs at different angles with respect to the draft line, flexible connections between the front and rear ends of the gangs and located at the inner ends of the gangs, and means for varying the length of one of the connections.

1,687,627. DEVICE FOR INDICATING VARIATION IN FLOW OF LIQUIDS. WILLIAM L. MARDEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 24, 1926. Serial No. 104,435. 6 Claims. (Cl. 200—82.)

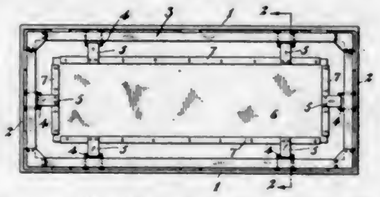
1. A device for indicating variation in flow of moving liquids comprising a shell with an inlet chamber and an outlet chamber, a constant measured aperture connecting the two through which the liquid flows continuously, a connection from the source of liquid supply to the inlet chamber, a discharge connection from the outlet chamber, and a plunger movable in the shell under the influence of a differential of hydrostatic pressure between the two chambers.

1,687,628. RHEOSTAT. ALLAN F. MARTIN, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed May 10, 1924. Serial No. 712,245. 7 Claims. (Cl. 201—48.)



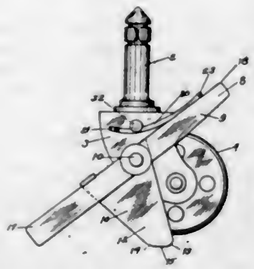
3. A rheostat comprising a resistance element wound progressively upon itself substantially in a plane, a conducting member adjacent the center of said windings and electrically connected with an end of said element, a pair of contacts movable over said plane in electrical contact, successively, with the windings of said element and with said member, and means for connecting said member and said contacts in an external circuit.

1,687,629. CIRCUIT INTERRUPTER. WALTER E. MCCOY, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 14, 1920. Serial No. 373,907. 7 Claims. (Cl. 200—109.)



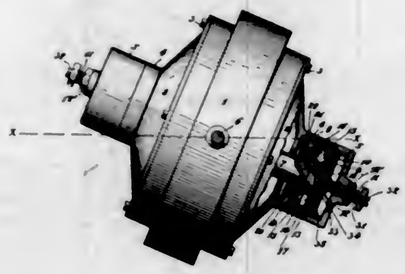
1. The combination with two members relatively movable in parallel planes, of a latching device comprising a cam member and a latching element carried by one of said members the latching element being adapted to be moved into the path of travel of the other of said members, and an

actuating member for the latching device adapted to operate the cam member to move the latching element into



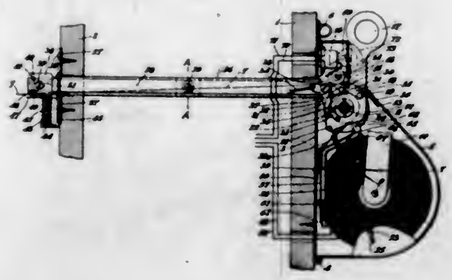
engagement with the second movable member, which second movable member may be rendered inoperative upon withdrawal of the actuating member.

1,687,630. TRANSPORTING CRATE FOR LUMINOUS TUBES OR OTHER FRAGILE ARTICLES. RANDOLPH J. MCRAE, New York, N. Y., assignor to Charles V. Bob, New York, N. Y. Filed July 11, 1927. Serial No. 204,793. 2 Claims. (Cl. 17—252.)



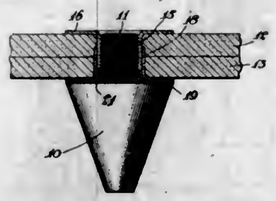
1. An improved crate for transporting luminous signs or similar articles composed of glass tubing fashioned into words or symbols, comprising an outer casing, a frame mounted therein and of substantially less width than the casing, a flat panel within the frame to which the luminous sign is secured, and a plurality of elastic straps connecting the panel to the frame so that the former will be elastically supported to thereby protect the sign carried by the panel from shocks applied to the outer casing.

1,687,631. CASTER LOCK. ALFRED R. OBERWEGNER, Toledo, Ohio. Filed May 28, 1927. Serial No. 194,882. 2 Claims. (Cl. 16—35.)



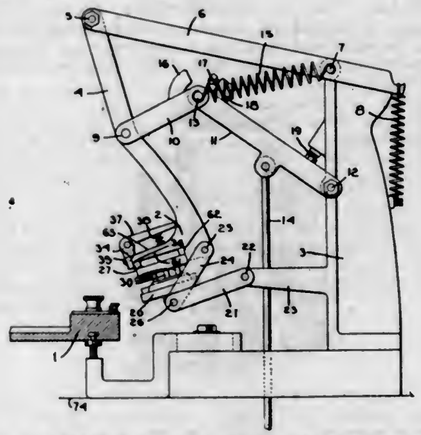
2. In a caster lock, a frame pivotally connected to the yoke of the caster, the pivotal axis of the frame being located substantially horizontally and in the plane of the vertical axis of the caster, the frame having two projecting parts for engaging the surface on which the caster is located, a spring for normally holding the said parts away from the said surface, and means for locating the points of contact of the said parts of the frame on opposite sides of the vertical axis of the caster and at a point below the horizontal level of the lower point of the wheel of the caster.

1,687,632. LUBRICATING SYSTEM FOR GYROSCOPES AND OTHER APPARATUS. CLIFFORD M. PAXTON, Brooklyn, N. Y., assignor to Paxton Gyroscope Corporation, a Corporation of New York. Filed Nov. 12, 1920, Serial No. 423,641. Renewed Nov. 5, 1925. 10 Claims. (Cl. 308—187.)



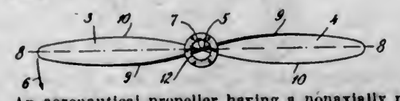
1. A gyro unit comprising gyro rotor, shaft and bearings, in combination with an enclosing support for the bearings affording, with said bearings, an interior circular lubricating cavity having an exterior opening of lesser diameter through which the shaft extends, and a pump rotor on said shaft, rotating in close proximity to peripheral as well as radial walls of said cavity to pump oil radially away from the shaft opening and laterally into the bearing when said shaft is running.

1,687,633. CALL REGISTER. ARTHUR PENTECOST, Upper Montclair, N. J. Filed Dec. 7, 1925. Serial No. 73,672. 4 Claims. (Cl. 234—1.)



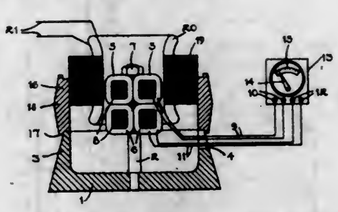
1. In a device of the class described, a member attached to the side of a wall and having a supply of record tape therein, said member having an opening to permit access to said tape for inscribing messages thereon, means for conveying the record tape from said member through the wall, recording means in operative relation to said record tape, a ratchet mechanism for feeding the tape through the conveying means in the wall, a lever for operating said ratchet mechanism, and means controlled by the lever for operating said recording means to make records on the tape spaced in correspondence with the amounts of manipulations of said lever.

1,687,634. CLEAT FOR SPORT SHOES. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1926. Serial No. 147,898. 6 Claims. (Cl. 36—59.)



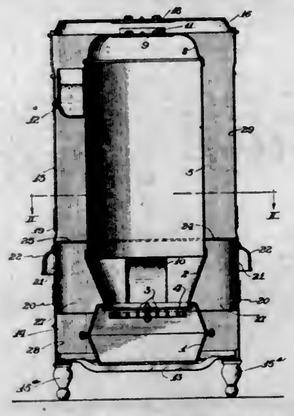
1. In a cleat for sport shoes, a sole member, an aperture formed in the sole member, a pair of bushings secured in the aperture, and a cleat member having a threaded stem engaging one of the bushings, the other bushing being formed to prevent accidental unscrewing of the cleat member.

1,687,635. MARKING MACHINE. FRED A. PUTNAM, Keene, N. H., assignor to Markem Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed July 3, 1924. Serial No. 723,974. 11 Claims. (Cl. 101—301.)



1. In a marking machine, the combination with a work support, of a printing head situated above the work support and movable toward and from the latter, said printing head having type-holding means constructed so that individual type may be inserted therein or removed therefrom from the side opposite that which faces the work support and while the printing head is in operative position in the machine, and means for locking the type in the printing head during the operative movement of the latter, said means forming a backing member for the type through which pressure is applied thereto for making the printed impression.

1,687,636. AERONAUTICAL PROPELLER. SYLVANUS A. REED, New York, N. Y., assignor to The Reed Propeller Co. Inc., New York, N. Y., a Corporation of New York. Filed May 12, 1924. Serial No. 712,646. 17 Claims. (Cl. 170—173.)

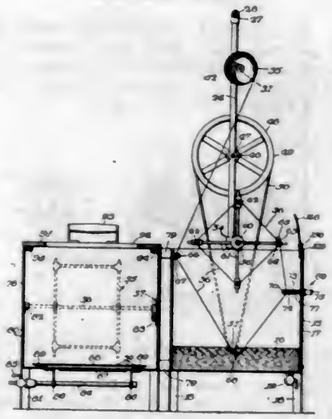


1. An aeronautical propeller having a nonaxially perforated central part and oppositely extending blades connected therewith and crossing the driving-axis so that said axis is parallel with the wide dimenison of said central part and said propeller twisted so that the trend of the twist is substantially continuous from end to end to equal resultant pitch-angles for each blade with the convex faces of both blades disposed on the same side of the propeller.

1,687,637. ELECTRICAL CENTERING DEVICE. ARTHUR B. REYNDERS, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 10, 1922. Serial No. 600,149. 4 Claims. (Cl. 175—183.)

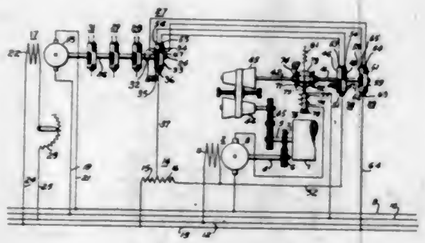
1. In combination, in a device for relatively longitudinally centering two annular members to be telescopically related, indicating means and actuating means for said indicating means comprising a pair of elements, one of said members to be positioned with its radial center coinciding with a center between said elements, said elements being differentially related and to be inductively affected by the other member during the centering thereof to actuate said indicating means in accordance with the relative positions of said members.

1,687,638. DOWNDRAFT HEATER. HENRY J. RUPP, Quincy, Ill., assignor to Gem City Stove Manufacturing Co., a Corporation of Illinois. Filed Nov. 2, 1927. Serial No. 230,560. 11 Claims. (Cl. 126—67.)



1. A heat circulating device comprising a casing having air-escape openings therein, a stove mounted in said casing, baffle means between said casing and stove, dividing the interior of said casing into upper and lower chambers, and aprons formed on said baffle means.

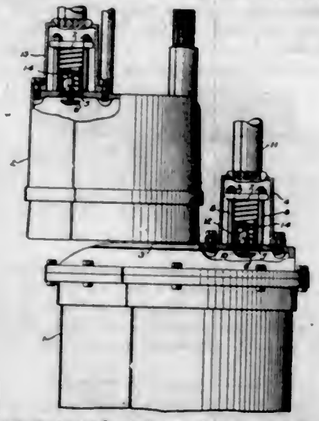
1,687,639. TAPE SPONGING AND SHRINKING MACHINE. JOSEPH SALTZMAN and FRITZ HERMAN LANGE, Chicago, Ill.; said Lange assignor to said Saltzman. Filed Apr. 16, 1927. Serial No. 184,205. 8 Claims. (Cl. 26—46.)



1. In a tape sponging and shrinking machine, a tank for containing water, a frame on the tank for rotatably

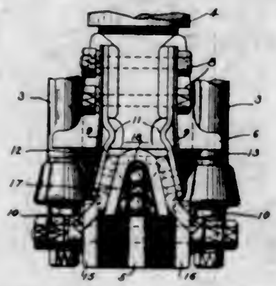
supporting a spool of tape above and over the tank, means for supporting a reel in a position over and partly extending into the tank, means for guiding the tape from the

spool into the tank for passing the same through the water therein and over the reel for winding the tape on the latter, and means for driving said parts.



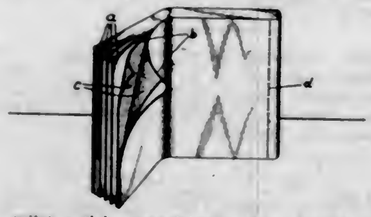
1,687,640. REGULATOR SYSTEM. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1925. Serial No. 29,409. 10 Claims. (Cl. 172—293.)

1. In a regulator system, a dynamo-electric machine, means for varying the excitation of said dynamo-electric machine comprising rotary-contactor means actuated in accordance with the speed of said machine, and means for varying the phase relation between said machine and said rotary-contactor means in accordance with the load on said machine.



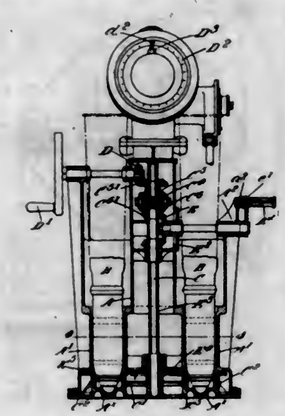
1,687,641. FLUID-PRESSURE TANK. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1921. Serial No. 448,239. 4 Claims. (Cl. 200—150.)

2. A fluid-filled electrical device provided with a two part venting device one part of which is provided with closure means for confining the fluid in the device during the time that the pressure of such fluid exceeds a predetermined limit, and the other part of which is provided



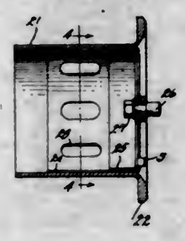
with closure means adapted to release the fluid from the device when the pressure of such fluid exceeds a predetermined further limit.

1,687,642. CIRCUIT INTERRUPTER. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1921. Serial No. 448,272. 2 Claims. (Cl. 200—144.)



1. The combination with a contact member, of a relatively movable brush member comprising a plurality of laminæ arranged in edgewise relation to the face of the contact member and clamping means for the laminæ disposed at a distance from the ends of the laminæ, the portions of the laminæ beyond the clamping means being divided into oppositely flared groups whereby the lengths of the flexible portions of the individual laminæ are substantially equal.

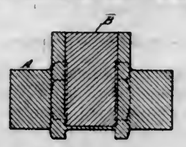
1,687,643. TOILET PREPARATION. JACOB S. BERLINER, New York, N. Y. Filed Oct. 8, 1927. Serial No. 225,010. 5 Claims. (Cl. 132—78.5.)



4. A toilet article comprising a sheet formed of two leaves having cold cream therebetween and whereof the external surfaces of the sheet are normally free from cold cream, but which cold cream is exposed for use by separating the sheet into the two leaves.

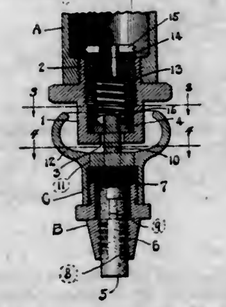
1,687,644. FUSE-SETTING DEVICE FOR PROJECTILES. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, England, a British Company. Filed July 26, 1927, Serial No. 208,477, and in Great Britain June 17, 1926. 5 Claims. (Cl. 86—23.)

1. A fuse setting device for projectiles, comprising a container for the reception of a projectile, a member carried by said casing and adapted to engage with part of the fuse body, a member carried by said casing and adapted to engage with part of the adjustable portion of the fuse, an actuating device for each of said members, mechanism between each device and its particular member and a differential gear associated with said devices and said mechanisms.



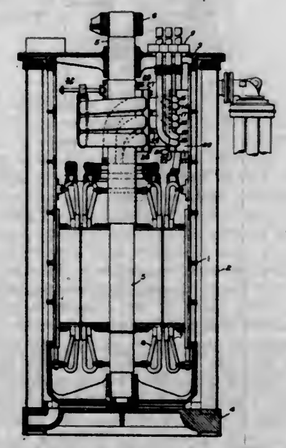
1,687,645. HOT-AIR REGISTER. PAUL E. DIEDERICH, Detroit, Mich., assignor to American Injector Company, Detroit, Mich., a Corporation of Michigan. Filed May 23, 1927. Serial No. 193,521. 2 Claims. (Cl. 98—2.)

1. A hot air register for heaters comprising a plate having segment shaped perforations therein occupying a circular area, the area of the perforations totaling more than 50 percent of the said circular area, and a perforated slidable shutter adapted in one position to close substantially one half of the area of said perforations and in another position to allow full opening of the perforations on a second perforated slidable shutter adapted in one position to close the other half of said area and in another position to allow full opening thereof.



1,687,646. VALVE AND COCK. THOMAS SMITH DUNCAN, Westminster, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Feb. 16, 1927, Serial No. 168,581, and in Great Britain Feb. 18, 1926. 1 Claim. (Cl. 29—157.)

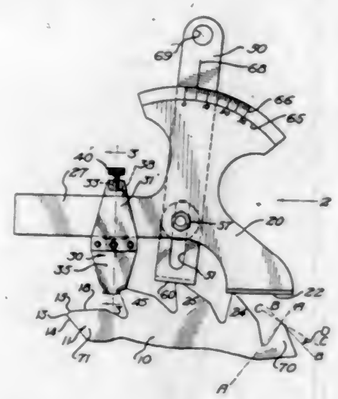
A method of making the bodies of cocks and valves mainly composed of light metal, comprising inserting in a body blank an element consisting of a different metal suitable for constituting a valve seat, forging the body



blank together with the inserted element into shape, and forming a valve seat in the material of said element by a suitable operation such as boring.

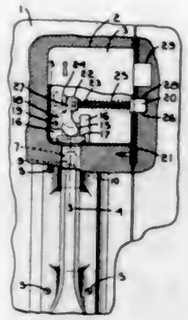
1,687,647. INSCRIBING INSTRUMENT. CHRISTOPHER A. GARVEY, Clayton, Mo.; Jennie Sinclair Garvey executrix of said C. A. Garvey, deceased. Filed Dec. 2, 1926. Serial No. 152,142. 7 Claims. (Cl. 15—133.)

1. An inscribing instrument comprising a reservoir for the inscribing fluid, a valve to control the discharge of fluid from said reservoir, a flexible inscribing tip, a rigid holder in which said tip is mounted, said holder being rigidly secured to said valve, said tip, holder and valve being tiltable in different directions relative to said reservoir so as to regulate the delivery of fluid to the tip, and a spring whereby the tiltable parts are restored.



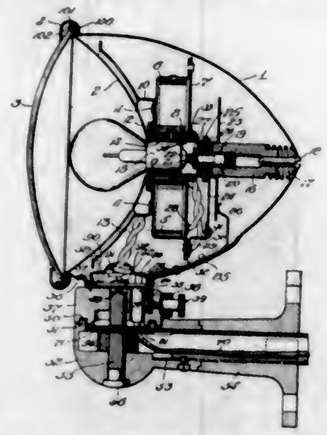
1,687,648. INDUCTION REGULATOR. MORRIS GELMAN and FRANK URSCHLER, Sr., Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,037. 9 Claims. (Cl. 171—119.)

1. In an induction regulator, the combination with a frame, a stator winding and a rotor winding within said frame, and a shaft for supporting said rotor winding,



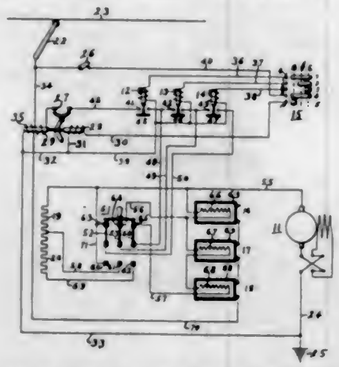
of leads connected to said rotor winding, and means carried by said shaft for supporting said leads in the form of a flat spiral about said shaft.

1,687,649. CUTTER CLEARANCE GAUGE. FRANK L. GILLETT, Los Angeles, Calif. Filed Sept. 8, 1927. Serial No. 218,131. 17 Claims. (Cl. 33—185.)



1. In a gauge adapted to measure an angle of a cutter tooth, the combination of: a frame adapted to simultaneously contact the cutting edges of a preceding and a succeeding tooth; and means pivoted to said frame for measuring an angle of said cutter tooth.

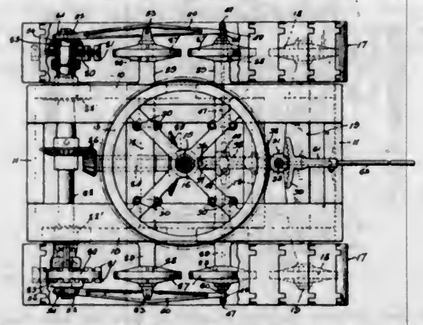
1,687,650. LATCH. BEDROS GIRAGOSIAN, Watertown, Mass. Filed Jan. 3, 1928. Serial No. 244,201. 4 Claims. (Cl. 292—166.)



1. A latch mechanism adapted to be mounted on a door or like support comprising a push button having motion transverse to the plane of the support, a lever pivoted upon the support engaged at one end by said push button, a slide mounted in the support and capable of linear motion therein at right angles to the motion of said push button and engaged by the other end of the lever, a shoulder on said slide, a latch having a head on its inner end, a latch actuating lever pivoted upon the support engaged at one end by said shoulder and engaging the latch head at its other end, a guideway rigid with the support adapted to guide the latch and a spring tending normally to project the latch.

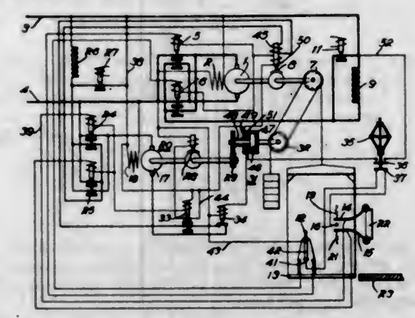
1,687,651. DEMOUNTABLE SPOTLAMP WITH EXTENSION CORD. ERNST G. K. ANDERSON, Chicago, Ill., assignor to Appleton Electric Company, a Corporation of Illinois. Filed Feb. 10, 1926. Serial No. 87,287. 10 Claims. (Cl. 240—8.18.)

1. In a spot lamp, a support, a lamp structure detachably connected to said support and provided with an extension cord, and means for placing a shunt around said cord when the lamp structure is on said support.



1,687,652. ELECTRIC HEATING SYSTEM FOR CARS. BASCOM O. AUSTIN, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1927. Serial No. 211,685. 6 Claims. (Cl. 219—20.)

2. In an electric-car-heating system, the combination with an electric motor for propelling the car, a motor circuit for supplying current to the motor, a line switch for the motor circuit, a resistor disposed outside the car, an electric heater disposed within the car, a switch for connecting either the heater or the resistor in the motor circuit, of a casing for the heater, a grounding circuit for the casing, and means connected in the grounding circuit for opening the line switch when current traverses the grounding circuit.

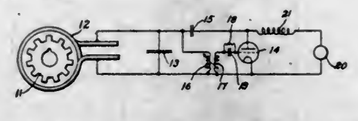


1,687,653. STEERING MECHANISM. SVANTE R. W. M. BAGER, South Milwaukee, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a Corporation of Delaware. Filed May 2, 1923. Serial No. 636,137. 13 Claims. (Cl. 180—9.2.)

1. In a machine of the character described the combination of a base frame, a creeping traction mechanism at each side of said frame, a head frame rotatable on said base frame, a drive shaft operated from said head frame, a clutch between each traction mechanism and said shaft, said clutches being disposed at the outer sides of said traction mechanisms, and a line of control for said clutches

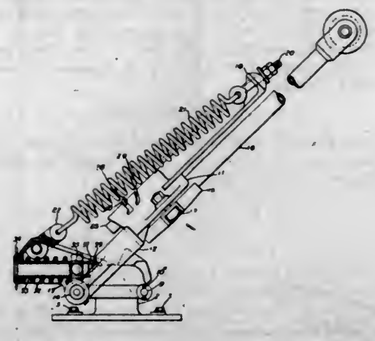
extending from the head frame to a point in the base frame intermediate the two creeping traction mechanisms, thence branching and extending through axle members of the creeping traction mechanism to said clutches, for controlling said clutches to steer the machine.

1,687,654. ELEVATOR CONTROL SYSTEM. EDGAR M. BOUTON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 16, 1922. Serial No. 536,872. 2 Claims. (Cl. 172—152.)



1. The combination with an elevator and a main hoisting motor therefor, of leveling means for said elevator comprising an auxiliary motor and braking means for variably loading said auxiliary motor to secure uniform leveling operations of said elevator.

1,687,655. CARTON AND METHOD OF WRAPPING MOPS. PETER BROWN, Chicago, Ill., assignor to O-Cedar Corp'n, a Corporation of Illinois. Filed July 29, 1926. Serial No. 125,625. 3 Claims. (Cl. 206—46.)

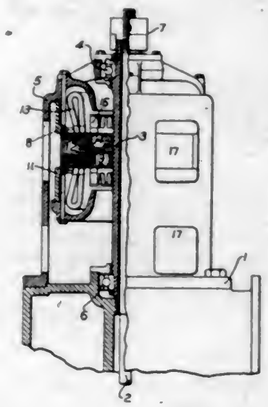


1. The combination with an implement having a head and a handle socket thereon, said handle socket having a shoulder thereon, of a sheet having an aperture adjacent each end thereof, said sheet being adapted to be wrapped about said head with its ends overlapping and positioned over said socket, the latter extending through said apertures with the outer overlapped end in locking engagement with said shoulder.

1,687,656. HEAT-TREATING METHOD. WALTER JOHN BROWN, Davenport Park, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 17, 1926, Serial No. 123,189, and in Great Britain July 23, 1925. 3 Claims. (Cl. 148—4.)

1. The method of heat-treating an object consisting of electrically conducting material which comprises raising the surrounding temperature nearly to that to which it is desired to heat the surface of the object, subjecting the object to an alternating electro-magnetic field of such frequency that heat is developed substantially at the surface only of the object, and quenching the object before the interior thereof has reached an undesirably high temperature.

1,687,657. TROLLEY BASE. LELAND F. BURNHAM, Pittsburgh, Pa., LESTER H. KEIM, Los Angeles, Calif., and CARL SCHAFER, Allison Park, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 10, 1925. Serial No. 61,691. 4 Claims. (Cl. 191—70.)



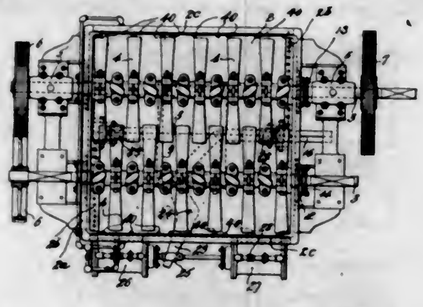
1. The combination, in a trolley base, of a foot for mounting the base on a vehicle roof, a swivel frame carried by said foot, a combination pole and spring bracket pivotary member, and an electric motor comprising a stator core ingly restraining angular movements of said bracket, said buffer comprising a trunnion member slidingly mounted in an opening in an extended portion of said frame, a spring member disposed in a second opening in said frame in engagement with said trunnion member, a tube disposed within said spring and means for securing said tube and spring in said frame.

1,687,658. SLEEVED PUMP MOTOR. DAVID J. CONANT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,723. 7 Claims. (Cl. 103—87.)

1. In a hydraulic pumping mechanism, the combination with a pump base at the top of a well, of a vertical pump shaft extending a substantially standard distance above the pump base, a sleeve of standard length sur-

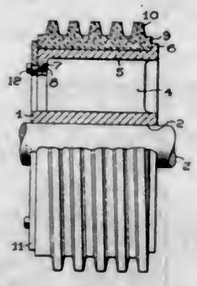
rounding the upper portion of said pump shaft, a driving connection between the upper ends of said shaft and said sleeve, a radial and thrust bearing for the upper portion of said sleeve, supporting means for supporting said bearing at a standard distance above said pump base, said supporting means and pump base constituting a station-

ary member, and an electric motor comprising a stator core and a rotor core supported by said stationary member and said sleeve, respectively, said supporting means, said sleeve and said pump shaft being each of a standard height sufficient to accommodate any one of a series of motors of different ratings.



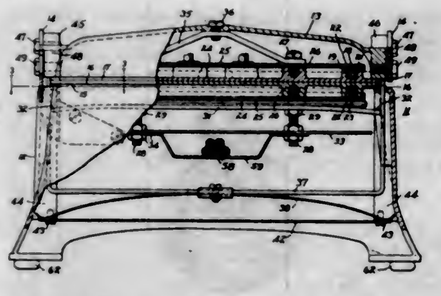
1,687,659. HAIR-WAVING APPARATUS. FÉLIX COUNÉ, Chicago, Ill. Filed Jan. 18, 1924. Serial No. 686,976. 29 Claims. (Cl. 132—34.)

1. In a device of the class described, in combination, a curler or bobbin adapted to be used for permanently waving hair by having the hair wound thereon and then placed within a tube for heating, said bobbin comprising a substantially elongated body portion for receiving the hair, and a clamp including means for positively gripping the hair to said bobbin at each end and fitting with said bobbin into said tube.



1,687,660. MIXER FOR ROAD MATERIALS. FREDERICK HENRY CUMMER, Los Angeles, Calif. Filed Nov. 19, 1925. Serial No. 70,104. 1 Claim. (Cl. 83—73.)

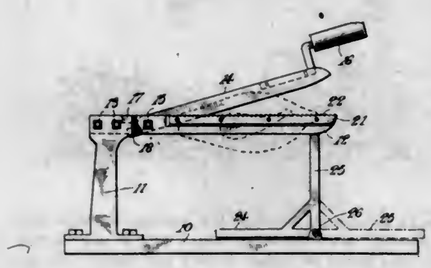
A mixer for road materials, including a receptacle having its bottom in the form of two cylindrical surfaces intersecting at a peak and provided with a central opening, and a movable valve for said opening, comprising a bar extending beneath said receptacle in the peak between said intersecting surfaces and provided with a recess, a saddle



like gate for said opening straddling said bar and removably seated in said recess, and means for operating said bar.

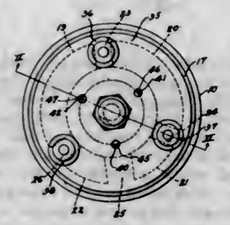
1,687,661. GEAR-GRINDING DEVICE. GEORGE M. EATON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 27, 1923. Serial No. 671,142. 6 Claims. (Cl. 51—206.)

1. An abrasive device comprising a cylinder having a helical groove, abrasive inserts contiguously mounted in said groove, metal liners for said inserts and means for securing said inserts therein.



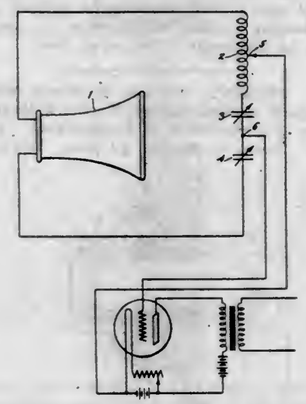
1,687,662. SANDWICH TOASTER. CARL J. FAY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1927. Serial No. 196,413. 7 Claims. (Cl. 53—5.)

1. In an electrical cooking appliance, in combination, a lower box-like casing, an upper casing movable toward and away from said lower casing, and a resiliently supported



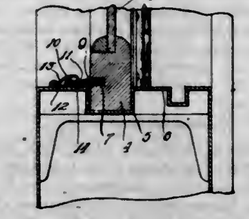
member of substantially U-shape in said lower casing for partially supporting said upper casing when it is located adjacent to the lower casing.

1,687,663. APPARATUS FOR CUTTING FOWLS. HYMAN GOLDFINGER, Astoria, N. Y., assignor of fifty one-hundredths to Gus Lipschutz, Irvington, N. J. Filed Mar. 28, 1928. Serial No. 265,350. 5 Claims. (Cl. 17—11.)



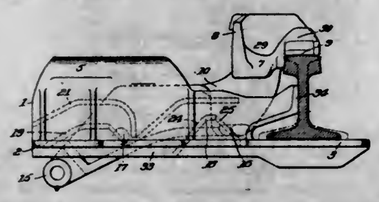
1. An apparatus for cutting a fowl or the like comprising a stationary knife rigidly held in horizontal position at one end, a cooperating knife pivotally attached to the first knife near its fixed end, and means providing a support for the free end of the stationary knife while permitting the fowl to be slid on said knife.

1,687,664. THERMOSTAT. LEWIS J. GREENAWALT, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1926. Serial No. 117,952. 7 Claims. (Cl. 200—138.)



1. In a thermostatic switch, in combination, a supporting plate, a thermostatic disc mounted on said supporting plate in spaced relation thereto and having a maximum-deflection zone and a minimum-deflection zone, a plurality of stationary contact members insulatedly mounted on said supporting plate adjacent contact members being separated by air gaps, a plurality of bridging contact members insulatedly mounted on said thermostatic disc within the maximum-deflection zone, each of said bridging contact members being in register with a gap and being adapted, upon response of said thermostatic disc to a predetermined thermal change, to bridge said gap and electrically connect the adjacent stationary contact members separated by said gap, and a guide member associated with said thermostatic disc at a point within the minimum-deflection zone for maintaining each of said bridging contact members in register with the corresponding gap.

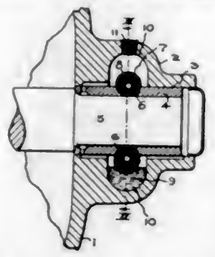
1,687,665. MICROPHONE CIRCUIT. CLINTON R. HANNA, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 2, 1924. Serial No. 717,244. 4 Claims. (Cl. 179—1.)



1. In a sound-translating device, a microphone having a resonance period, a circuit including said microphone and having the same resonance period, connections to said circuit at separated points, the portion of said circuit between said points also having the same resonance period.

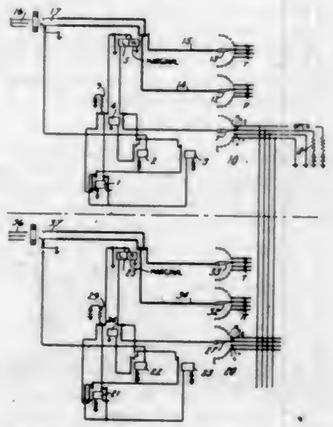
1,687,666. WEATHERPROOFING STRUCTURE. DAVID H. HARNLY, Chicago, Ill. Filed Sept. 23, 1926. Serial No. 137,200. 2 Claims. (Cl. 20—69.)

1. A weather strip comprising a flexible member, a metal sheath partially incasing the same, a base support for said incased member, and a metal plate secured at one edge to said base support and having a deformed part extending over said incased member, said deformed part terminating in a gripping edge for engaging said sheathed member and anchoring the same to said base support.



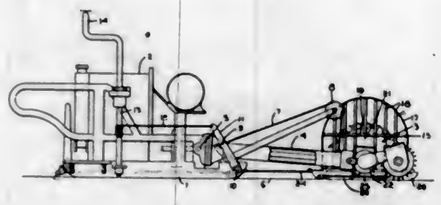
1,687,667. DERAIL. MAXIMILIAN JOSEPH HELMES, New York, N. Y., assignor to Q & C Company, New York, N. Y., a Corporation of Maine. Filed Apr. 8, 1927. Serial No. 181,922. 8 Claims. (Cl. 246—163.)

1. A derail comprising a standard provided with bearing surfaces and a derail member movably associated therewith and provided with co-acting bearing surfaces, said bearing



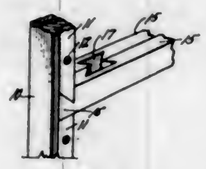
surfaces effective at the extreme forward position of the derail member comprising downwardly and forwardly inclined bearing surfaces on the standard angularly disposed with relation to the path of movement of the derail member and co-acting surfaces on the derail member angularly disposed to said path of movement to provide a shifting point of bearing contact and to impart a vertical component to the movement of the derail head.

1,687,668. BEARING. WALTER H. HIMES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1925. Serial No. 39,000. 2 Claims. (Cl. 308—132.)



1. A horizontal-shaft machine adapted to be mounted on either the floor, wall or ceiling, and having a bearing comprising a perforated bearing-bushing sleeve, a bearing housing providing an annular lubricant-storing chamber surrounding said bushing sleeve in the plane of said perforation the annular lubricant-storing chamber being so shaped that it will hold lubricant at a substantially constant height with respect to the periphery of said bushing sleeve regardless of the mounting of said machine, and a lubricant-feeding means for conveying lubricant from said annular chamber to said perforation regardless of the mounting of said machine, said lubricant-feeding means comprising a garter spring surrounding said bushing sleeve and entirely wrapped with wick material of sufficient thickness to dip down into the said lubricant, whereby said shaft is lubricated without the possibility of a contact between the spring and the shaft.

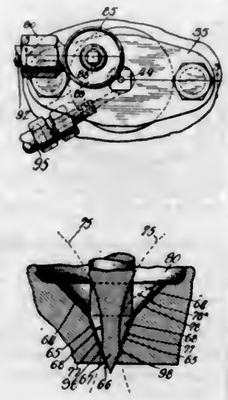
1,687,669. TRUNK-TESTING CIRCUITS FOR SELECTOR SWITCHES. EDWARD E. HINRICHSEN, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,787. 22 Claims. (Cl. 179—27.)



1. In a telephone exchange system, in combination, a plurality of switches, lines, a primary driving circuit for each switch, a primary test circuit to control said primary driving circuit for the selection of an idle line, a secondary driving circuit for each switch and a secondary test circuit to control said secondary driving circuit when more than one of said switches has selected the same idle line.

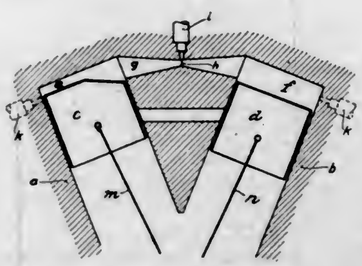
1,687,670. SAW GUARD. PLINY E. HUSSEY, Beverly, Mass. Filed Jan. 9, 1928. Serial No. 245,319. 9 Claims. (Cl. 262—20.)

1. In an ice-cutting machine, the combination with vertically-movable saw-supporting means and a saw carried thereby, of a guard enclosing the saw and capable of vertical movement relative thereto, said guard resting on the ice when the saw is operatively cutting the ice and being supported by the saw-supporting means when the saw is raised from the ice.



1,687,671. SHELVING CONSTRUCTION. WILLIAM E. JUNE, Denver, Colo., assignor to Perry E. June, Sacramento, Calif. Filed Nov. 9, 1927. Serial No. 232,034. 6 Claims. (Cl. 211—148.)

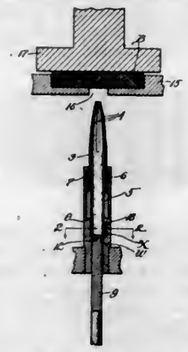
4. Shelving construction comprising vertical stiles; dovetailed recesses in the sides of said stiles; cleats having dovetailed extremities adapted to fit within said recesses; shelves arranged to be carried by said cleats; means for clamping a pair of cleats together, so that the extremities of the pair will engage in recesses on opposite sides of said stiles, said means adapted to also clamp adjoining shelves together; dove-tailed grooves extending transversely of one face of said cleats and a double dove-tailed plug adapted to fit into co-acting grooves so as to clamp two said cleats together into opposite sides of said stiles, said plugs arranged to extend into dove-tailed cuts in the extremities of said shelves so as to lock adjoining shelves together.



1,687,672. ATOMIZING DEVICE. FRANZ LANG, Munich, Germany, assignor, by mesne assignments, to Acro Aktiengesellschaft, Kussnacht am Rigi, Switzerland, a Corporation of Switzerland. Original application filed June 22, 1923, Serial No. 647,001, and in Germany Oct. 14, 1921. Divided and this application filed Jan. 12, 1925. Serial No. 1,940. 16 Claims. (Cl. 299—133.)

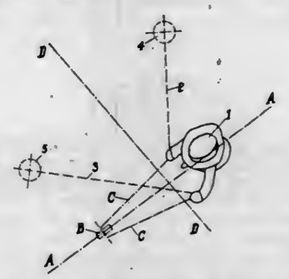
1. In a nozzle device for liquid atomization, the combination of means having a tapered recess terminating in a discharge orifice having a sharp edge, a valve member having a tapered part encompassed by said recess, means for limiting the lift of the valve whereby the surface of said recess and that of said tapered part are only minutely spaced apart at the time of atomization, and means for prediffusing the fuel a very slight distance from the discharge orifice, the end of said tapering part projecting

beyond said orifice at the time of atomization to cooperate with said sharp edge in producing abrasive effects upon the fuel.



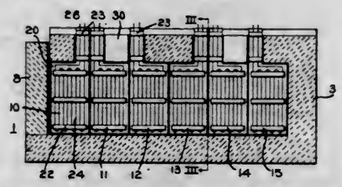
1,687,673. INTERNAL-COMBUSTION ENGINE. FRANZ LANG, Stuttgart, Germany, assignor to Acro Aktiengesellshaft, Kussnacht am Rigi, Switzerland. Filed Nov. 6, 1925, Serial No. 67,230, and in Germany Nov. 29, 1924. 2 Claims. (Cl. 123—53.)

1. A combustion engine, comprising, in combination a pair or plurality of pairs of cylinders, a main connection channel between each pair of cylinders, a further overflow channel betwen said pair of cylinders and a nozzle adapted to feed the fuel to said overflow channel, the latter being shaped in the form of a double nozzle, the narrowest parts of which are at or adjacent to the injection nozzle.



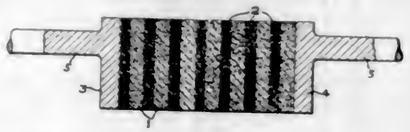
1,687,674. METHOD OF LOADING RUBBER HEEL BLANKS WITH WASHERS AND TOOL FOR USE IN SAME. VICTOR R. LAWSON, Boston, Mass., assignor to Lawson-Whitehead Company, Boston, Mass., a Corporation of Massachusetts. Filed May 7, 1924. Serial No. 711,694. 9 Claims. (Cl. 18—59.)

1. That improvement in the process of loading a rubber heel blank with washers which consists in making a hole in the blank, pressing back the stock forming the walls of the hole and restraining its tendency to return to its original condition, inserting a washer flatwise in said hole, and releasing the restrained stock and permitting it to



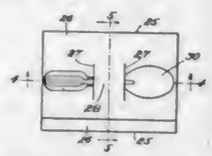
spread freely inward over the margin of the washer and lock it in the blank while holding the washer at the desired depth.

1,687,675. MECHANICAL TOY. ERNST PAUL LEHMANN, Brandenburg-on-the-Havel, Germany. Filed Dec. 22, 1926, Serial No. 156,470, and in Germany Feb. 26, 1926. 9 Claims. (Cl. 46—40.)



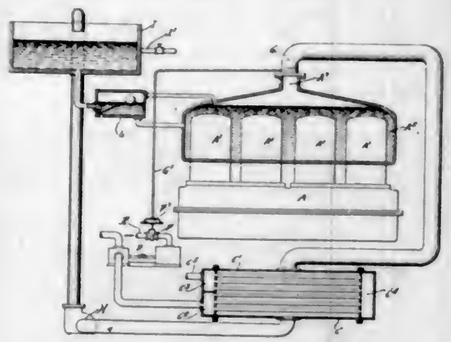
1. A walking toy figure, comprising clockwork mechanism for imparting walking movements to its legs, and supporting rods extending laterally at different angles to the same side of a vertical plane extending through the figure in the direction in which the mechanism tends to cause it to advance, said suporting rods each being rigidly attached to the figure at one end and touching the ground at the other end so as to deflect the line of movement of the figure from a rectilinear into a substantially circular path.

1,687,676. ELECTRIC FURNACE. ROLLO B. LINCOLN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 16, 1927. Serial No. 168,577. 6 Claims. Cl. 266—1.5.)



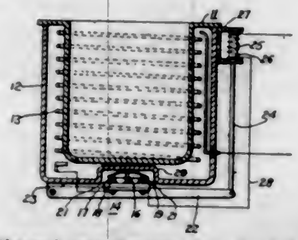
1. In an electric-resistance furnace, the combination with a plurality of walls defining a furnace chamber, of a plurality of heating units disposed along one of said walls and means permitting the successive removal of said units through a slot in an adjacent wall, the effective length of said slot being less than the combined widths of two of the units disposed thereunder.

1,687,677. RESISTOR AND METHOD OF MAKING THE SAME. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,753. 9 Claims. (Cl. 201—68.)



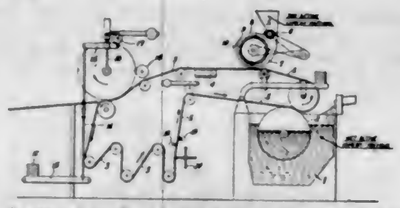
9. A resistor comprising adjacent contacting plates of resistor material of different degrees of hardness, alternate plates being composed of hard resistor material containing a substantial amount of carbon and the remaining plates being composed of soft resistor material containing a substantial amount of carbon.

1,687,678. CONTAINER OR WRAPPER. GEORGE P. MALLORY, Philadelphia, Pa., assignor to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed June 2, 1923. Serial No. 643,044. 5 Claims. (Cl. 229—1.5.)



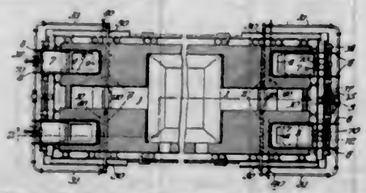
1. A container comprising portions having superposed straps which register with one another when said container is closed, in combination with a detachable utensil extending under the superposed straps of both of said portions and held in place thereby while holding said container closed.

1,687,679. ENGINE-COOLING SYSTEM. HARRY C. MALLORY, New York, N. Y.; Sue R. Mallory administratrix of said Harry C. Mallory, deceased. Filed Oct. 30, 1922. Serial No. 597,789. 2 Claims. (Cl. 123—178.)



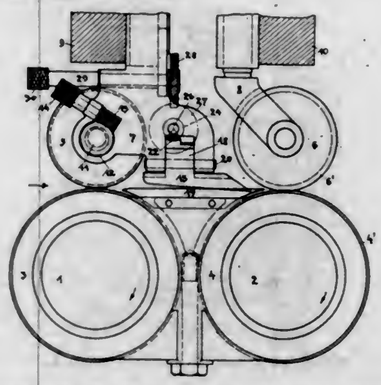
1. An engine cooling system of the boiling and condensing type comprising a cooling jacket surrounding the engines and having a vapor space at the top thereof, a condenser connected to said vapor space for condensing vapors formed by the absorption of heat by a cooling liquid contained in said jacket, means for supplying a cooling liquid to said condenser, and means for regulating the supply of said condenser cooling liquid in accordance with the temperature in said jacket.

1,687,680. CONTROL DEVICE. HOWARD D. MATTHEWS, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1925. Serial No. 55,907. 4 Claims. (Cl. 236—1.)



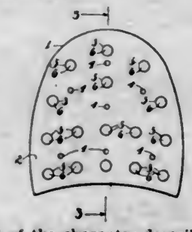
1. In a thermal control system for a heated device, the combination with an electric resistor for heating said device, and a thermostatic switch for controlling the energization of said resistor, said switch being responsive to the temperature of the heated device, of means controlled by the thermostatic switch for reducing the heat flow thereto from the heated device when the resistor is deenergized and for increasing said heat flow upon reenergization of the resistor.

1,687,681. CEMENT PRODUCT. RICHARD V. MATTISON, Ambler, Pa., assignor to Asbestos Shingle, Slate & Sheathing Company, a Corporation of Pennsylvania. Filed Oct. 1, 1924. Serial No. 740,971. 6 Claims. (Cl. 92—41.)



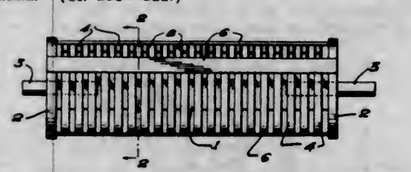
1. A cement product comprising a plurality of film-like layers of hydraulic cement-like material hydrated by mixing with an excess of water and a plurality of intermediate film-like layers of hydraulic cement material between said first named layers and hydrated by water received from said first named layers on each side of the cement material, the whole being pressed and permitted to set together so as to bind the entire series of layers into an integral, rigid mass.

1,687,682. OPERATION OF OPEN-HEARTH FURNACES. FRANK B. MCKUNE, Hamilton, Ontario, Canada, assignor, by mesne assignments, to Open-Hearth Combustion Company, Chicago, Ill., a Corporation of Delaware. Filed May 5, 1922. Serial No. 558,755. 6 Claims. (Cl. 263—15.)



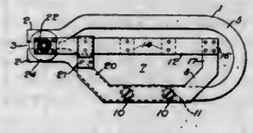
1. The method of metallurgical heating, which consists in mixing air with fuel, introducing said mixture into a furnace chamber through a relatively constructed inlet, introducing additional air through another inlet, burning the fuel in the furnace and conducting the products of combustion from said furnace chamber through said inlets and additional areas together forming an outlet of greater area than the combined areas of said inlets.

1,687,683. APPARATUS FOR THE GROOVING OF CARDBOARD. ERNST MÖGEL, Meissen-on-the-Elbe, Germany, assignor to the Firm Aktiengesellschaft für Cartonnagenindustrie, Dresden, Germany. Filed Nov. 2, 1927, Serial No. 230,611, and in Germany Nov. 4, 1926. 12 Claims. (Cl. 92—70.)



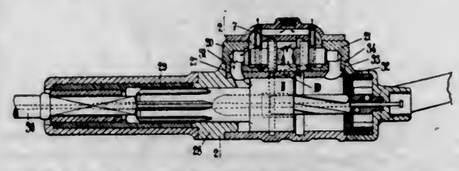
1. Apparatus for the grooving of cardboard, including corrugated cardboard, comprising three blades so placed as to form a gradually tapering channel-shaped passage, and rollers for drawing the cardboard through said passage so that two of the blades bear against it one one side and the other on the other side, at a position between the first two blades.

1,687,684. RUBBER HEEL. JOSEPH NUGENT, San Jose, Calif. Filed Oct. 13, 1927. Serial No. 226,010. 1 Claim. (Cl. 36—59.)



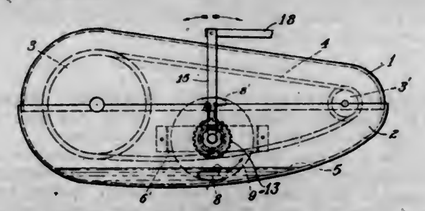
A rubber heel of the character described, having a wearing surface formed on one side thereof and a recess formed in the other surface thereof and having orifices formed therein communicating with said recess and wearing surface, a leather peg positioned in each orifice and provided with a head seated in said recess, and a covering for the heads of the several pegs.

1,687,685. PICK-UP DRUM. DAVID W. OLINGER, Milton, Oreg. Filed Aug. 23, 1927. Serial No. 214,919. 5 Claims. (Cl. 198—211.)



2. A pick up drum comprising a core, a plurality of series of fingers carried by the core and disposed in the same general direction, each series of fingers being spaced lengthwise of the core and projecting therebeyond, a pick up strip carried by the outer extremities of each series of fingers, and discs carried by the ends of the core, the pick up strips being secured to the peripheral edges of the discs.

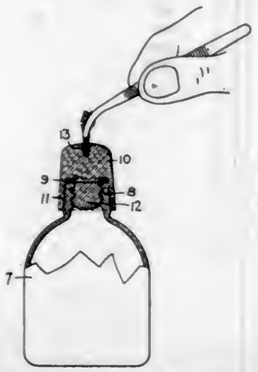
1,687,686. TEMPERATURE-COMPENSATING DEVICE. PAUL PASCHEN, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 23, 1925, Serial No. 45,560, and in Germany May 27, 1924. 4 Claims. (Cl. 171—34.)



1. In a meter, the combination with a movable element and a stationary damping magnet therefor, of an elongated temperature-responsive movable element extending substantially parallel to the median plane of the magnet, and a magnetizable member disposed on the temperature-responsive element and movable thereby adjacent to the poles of the magnet in a direction substantially normal to said plane, said magnetizable member being also adjustably movable in the direction of its movement relative to the temperature-responsive element.

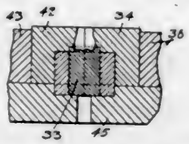
1,687,687. PERCUSSIVE ROCK DRILL. ERNEST PENBERTHY, Redruth, Cornwall, England, assignor to The Climax Rock Drill & Engineering Works Limited, London, England, a Company of Great Britain. Filed Mar. 24, 1927, Serial No. 178,022, and in Great Britain Apr. 21, 1926. 1 Claim. (Cl. 121—13.)

In a percussive rock drill a hammer cylinder, a valve chamber mounted on said hammer cylinder, two bushings fitted one into each end of said valve chamber, shoulders on said bushings, said shoulders having an engaging face extending in a plane at right angles to the longitudinal axis of the bushings and at an angle to the horizontal, an annular dividing ring at one end of said hammer cylinder, an annular end cover on the other end of said hammer cylinder, and projections, one on the said dividing ring and one on the said end cover, said projections extending laterally from said dividing ring and said end cover, said projections having engaging faces, which are complementary to the engaging faces of the shoulders and co-operate therewith for the purpose of retaining the bushings in position and preventing movement thereof.



1,687,688. MECHANICAL LUBRICATOR FOR CHAINS. DAVID B. PERRY, Ithaca, N. Y., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed May 20, 1927. Serial No. 192,958. 4 Claims. (Cl. 184—15.)

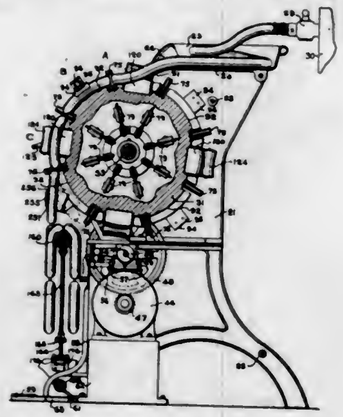
1. In a mechanical lubricator for chain drives, the combination of a case adapted to contain a chain drive, the lower portion of the case forming an oil reservoir below



the lower strand of the chain drive, an oil conducting means extending transversely across the case between the upper and lower strands of the chain drive, and arranged so that oil fed to the conducting means may drop upon the lower strand of the chain, a shaft passing thru a wall of the case above the level of the oil in the reservoir, means for rotating said shaft, and means rotated by said shaft for elevating oil from said reservoir up to a region above said conducting means from which the oil may flow down to said conducting means, said elevating means including a container which dips into the oil of the reservoir, the oil being retained in said container by gravity while being elevated.

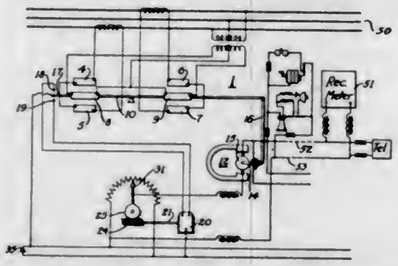
1,687,689. BOTTLE. JACOB PETRY, Pittsburgh, Pa. Filed Apr. 14, 1924. Serial No. 706,604. 1 Claim. (Cl. 215—47.)

The combination with a bottle for containing a medicinal preparation for dental work, of a stopper therefor having screw-threaded connection with the bottle neck and provided with a downwardly-tapering recess, the wall of the recess being defined by unbroken curved lines, and having a width not substantially greater than the diameter of the average tooth cavity, whereby fibrous material may be rolled therein to form a pellet for a tooth cavity.



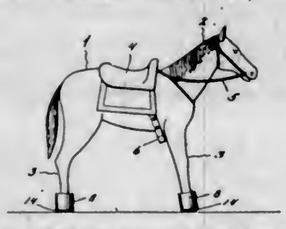
1,687,690. DENTAL CROWN. JACOB PETRY, Pittsburgh, Pa. Filed Dec. 8, 1925. Serial No. 74,203. 4 Claims. (Cl. 113—39.)

1. Die structure for forming cartridge-like members having their closed ends of greater diameter than their open ends, comprising a bottom die member, a lateral die member normally fixed relative to said bottom die member, and a second lateral die member movable with respect to the other members.



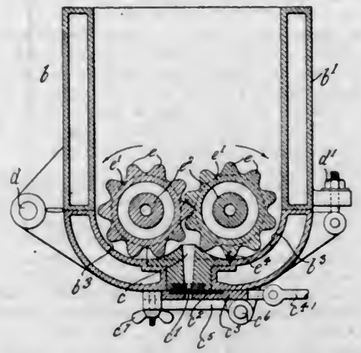
1,687,691. SAUSAGE-LINKING MACHINE. HERMANN E. PFEIFFER, Cincinnati, Ohio. Filed Apr. 16, 1924. Serial No. 706,995. 23 Claims. (Cl. 17—34.)

1. In a sausage linking machine, the combination of a rotary carrier, pinching means for the cased sausage arranged in pairs about said rotary carrier, holding means for holding the cased sausage upon said carrier arranged about said carrier between alternate adjacent pairs of said pinching means, and rotating means for rotating pinched sections of said cased sausage located between alternate adjacent pairs of said pinching means, said holding means and said rotating means alternating about said rotary carrier between adjacent pairs of pinching



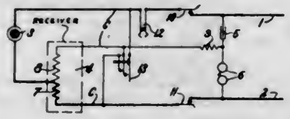
means, and means for rotating said carrier, said pinching means, said holding means and said rotating means in unison about the axis of rotation of said carrier.

1,687,692. ELECTRICAL METERING SYSTEM. RAYMOND T. PIERCE, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 2, 1924. Serial No. 684,063. 7 Claims. (Cl. 171—95.)



5. A transmitting instrument for a metering system comprising a Kelvin-balance element, a D'Arsonval ammeter coupled to said Kelvin-balance and means for controlling the current through said ammeter to maintain said Kelvin-balance in equilibrium.

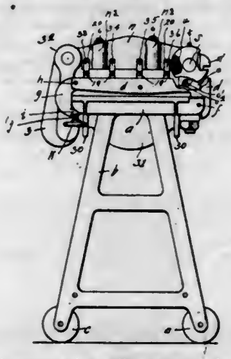
1,687,693. BUCKING TOY HORSE. LUCIUS S. PRATT, Roanoke, Va., assignor of one-half to Carl F. Strunck, Hendersonville, N. C. Filed Apr. 19, 1927. Serial No. 184,876. 7 Claims. (Cl. 272—53.)



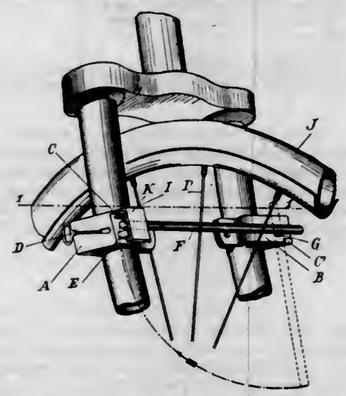
1. In a toy of the character described, a body having legs terminating in feet, the feet being formed of telescopic sections and containing cushioning means.

1,687,694. APPARATUS FOR MEASURING AND FEEDING PLASTIC SUBSTANCES. WILLIAM EDWARD PRESCOTT, London, England, assignor to Baker-Perkins Company, Inc., White Plains, N. Y. Filed Apr. 26, 1923, Serial No. 634,886, and in Great Britain May 3, 1922. 2 Claims. (Cl. 107—29.)

2. An apparatus for measuring and feeding plastic substances in divided streams comprising in combination a container, a pair of rotatable rollers in said container, said rollers having intermeshing teeth and a plurality of circumferential grooves intersecting said teeth, a base plate having a plurality of discharge nozzles and partitions between said nozzles extending transversely of the axes of the said rollers and engaging severally in the circumferential grooves of the said rollers and extending to said base plate whereby to divide the feed space into several compartments each having its separate discharge nozzle.



1,687,695. ANTI-SIDE-TONE SUBSTATION CIRCUITS. HAROLD C. PYE, Oak Park, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 3, 1926. Serial No. 91,876. 3 Claims. (Cl. 179—81.)



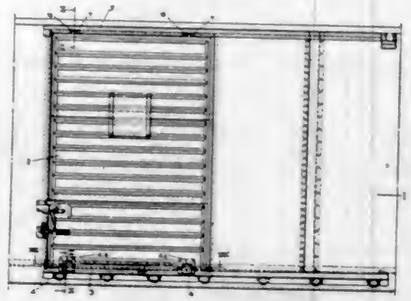
1. In an antiside-tone substation, a transmitter, a receiver having two windings, a resistance, a condenser, a ringer, a line circuit, means for connecting said instrumentalities across said line circuit to form an antiside-tone booster substation, a calling device having impulse springs in series with said line circuit and shunt springs for short circuiting said transmitter and receiver while said dial is being operated, said shunt springs also bridging said impulse springs with said condenser and resistance to eliminate sparking and connecting said resistance in multiple with said ringer to prevent its tapping during impulsing.

1,687,696. SAW-BRAZING CLAMP. JEROME B. RICKER and CHARLES A. PERSON, Enterprise, and EDWARD P. ARMSTRONG and HENRY W. ARMSTRONG, Portland, Oreg. Filed Mar. 7, 1927. Serial No. 173,546. 18 Claims. (Cl. 113—92.)

1. In a saw-brazing clamp comprising a brazing-table and means for securing on the table the saw ends to be brazed, means for applying pressure to the seam of the saw, comprising a frame-member, a series of independently adjustable pressure-blocks carried by said frame-member, a wedge element cooperating with each pressure-block, said wedge elements composed of wedges of graduated taper and companion gibs secured in said frame between which said wedges are inserted.

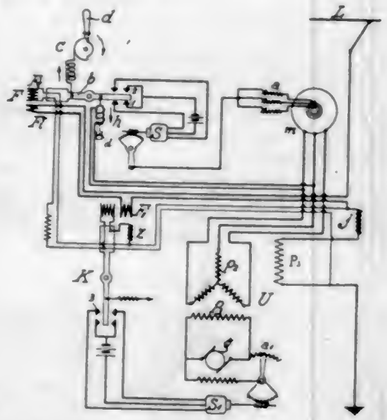
1,687,697. THEFT-PREVENTING ROCKING LOCK FOR BICYCLES. EDOUARD SOULLIÈRE, Salon, France. Filed Oct. 7, 1926, Serial No. 140,176, and in France Oct. 21, 1925. 1 Claim. (Cl. 70—90.)

In a theft preventing lock for bicycles, the combination of a locking rod, a first box fixed on one of the branches of a fork of the bicycle, said box containing a lock key operated to unlocking position, being closed at its top to protect said lock and open at its bottom to receive one end of said locking rod, a second box fixed on the other branch of said fork, an axle movably mounted in said second box and projecting from the front face thereof having its projecting end fixed to the other end of said locking rod, and a recalling device within said second box to retract said locking rod.



1,687,698. SELF-OILING SWING HOOK. AUGUST SPEIDEL, Omaha, Nebr. Filed July 6, 1926. Serial No. 120,737. 3 Claims. (Cl. 248—64.)

2. A two part hook for supporting a swing member, one of said parts having means for securing it to an

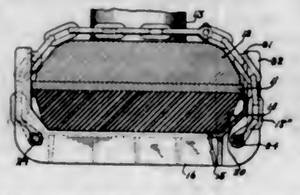


elevated stationary support and the other having means for securing it to a swing, a pivotal connection between said parts comprising a lubricant pan of pyramidal shape attached to one of said parts and whose sides extend upwardly from a central apex forming a bearing for the other part which is provided with a depending member engaging said apex so as to give the lower part room to automatically adjust itself laterally, in case the upper part should be out of line with the lower, this lateral adjustment taking place inside of the lubricant pan.

1,687,699. HOUSE CAR. KENNETH J. TOBIN, AXEL WASBERG, and GABRIEL MADLAND, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed May 26, 1927. Serial No. 194,266. 3 Claims. (Cl. 20—23.)

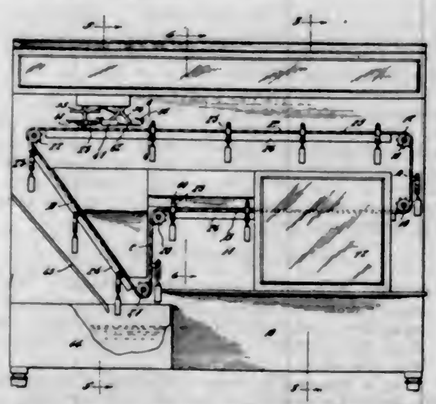
1. In a house car having a doorway, a sliding door for closing said doorway, upper and lower guides and sustaining means for said door, each guide having spaced indentures and said door having means adapted for entering said indentures when said door is closed, said means riding out of said indentures and moving the door outwardly when the same is opened.

1,687,700. PLANT WORKING WITH INDUCTION MOTOR FED FROM SYNCHRONOUS PHASE CONVERTER. KALMAN VON KANDÓ, Budapest, Hungary, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 22, 1925, Serial No. 25,063, and in Hungary May 28, 1924. 16 Claims. (Cl. 172—274.)



1. An electrical system comprising, in combination, an induction motor, a synchronous phase-converter feeding said motor, said converter having an exciting circuit, means for regulating the exciting effect of said exciting circuit to vary the terminal voltage on said motor in accordance with the load, a starting device for the motor, and means for automatically regulating the starting effect of said starting device in accordance with the terminal voltage on the motor and the load.

11. The combination of a variably excited synchronous machine, an electric motor adapted to be energized therefrom, a multi-position starting regulating device for said motor, mechanical actuating means for adjusting said starting regulating device, and electro-responsive controlling means for starting, stopping and reversing said actuating means, said controlling means being responsive to an equilibrium of forces and including means for developing a force in accordance with the effective excitation of said synchronous machine and means for developing an opposing force in accordance with the load.

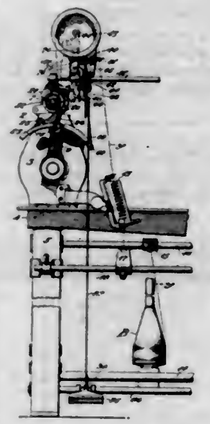


16. The combination with a variable-voltage electric motor, of a multi-position regulating device therefor, a servo-motor for adjusting said regulating device, a controlling wattmeter for developing a force in response to the load, yieldable means for developing an opposing force, means responsive to both of said forces for controlling said servo-motor, and a manually adjustable controller for causing an adjustment of the relative magnitudes of said forces.

1,687,701. MUD GRIP. JACOB J. WEIER, Chicago, Ill. Filed Nov. 8, 1926. Serial No. 146,886. 4 Claims. (Cl. 152—2.)

1. A mud grip for a wheel having a felloe and a rim and a solid tire, said grip comprising a body portion, end means on said body portion for closely engaging the sides of said solid tire and rim and having spaced flanges, said end means and flanges extending inwardly from said portion for the depth of said tire and rim and felloe, and chain means extending between said spaced end flanges and through spaces on said end means for closely engaging the felloe and firmly holding the grip in position.

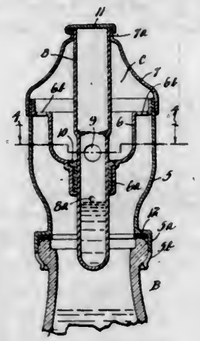
1,687,702. CONFECTION-MAKING MACHINE. MAX WOLFF, Coney Island, N. Y. Filed Dec. 9, 1927. Serial No. 238,922. 9 Claims. (Cl. 107—1.)



1. In a confection making machine, a conveyor, driving means therefor, article carriers swingingly mounted on said conveyor, means disposed in the path of movement of said carriers for successively swinging said carriers in opposite directions, a container adapted to contain a supply of substance to be applied to the confection adapted to be suspended from said article carriers, and dispensing means operable for releasing the substance in said container after said article carriers have swung to the limits of their swinging movements in opposite directions.

1,687,703. PROCESS FOR THE PRODUCTION OF CLEAR BRINE OR OTHER LIQUORS. ARTHUR W. ALLEN, Berkeley, Calif. Original application filed Nov. 24, 1925, Serial No. 71,236. Divided and this application filed Sept. 2, 1927. Serial No. 217,309. 5 Claims. (Cl. 23—41.)

1. A process for the clarification of a turbid liquor, comprising the addition of a sufficiency of small crystals of a watersoluble chemical compound that is insoluble in the liquor under the prevailing temperature-concentration conditions, and the filtration of the resultant pulp, such added crystals acting as a mechanical filter aid.

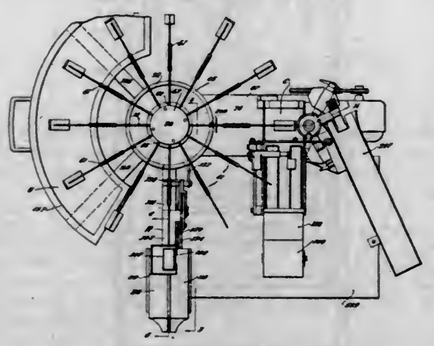


1,687,704. WINDING MACHINE. JOHAN A. ANDERSON, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 14, 1926. Serial No. 81,280. 16 Claims. (Cl. 33—136.)

1. In a winding machine, the combination with the rotating winding-spindle and means for traversing the yarn or other material on the spindle, of manually-operable means for starting the operation of the winding-spindle and traversing-means, a measuring-device associated with the winding machine and adapted to be operated by the draft of the strand feeding to the winding-spindle, means operated from the measuring-device to arrest the operation of the winding-spindle and traversing-means when a predetermined length of material has been wound, and means operated from the manually-controlled starting-means of the winding machine to release the measuring-device to adapt it to continue its operation when the winding machine is started to operate.

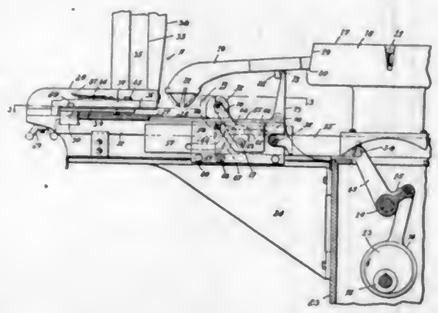
1,687,705. DISPENSING DEVICE. LAMBRO ANDROFF, Minneapolis, Minn. Filed Jan. 9, 1928. Serial No. 245,356. 6 Claims. (Cl. 221—98.)

1. A dispensing device comprising a receptacle, a charging chamber disposed adjacent the upper end of said receptacle and having communication with said receptacle when the latter is tilted or inverted, a dispensing well having an outlet passage adjacent the upper end thereof, means for causing said well to communicate with said charging chamber when said receptacle is disposed top upwards and



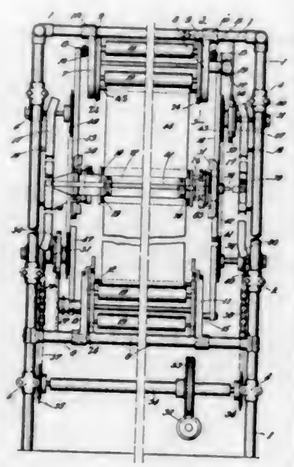
means for shutting off communication between said charging chamber and said well when said receptacle is tilted or inverted.

1,687,706. REENFORCED SCAFFOLD PLANK. MARTIN BAUER, Cleveland, Ohio. Filed May 11, 1927. Serial No. 190,455. 6 Claims. (Cl. 304—38.)



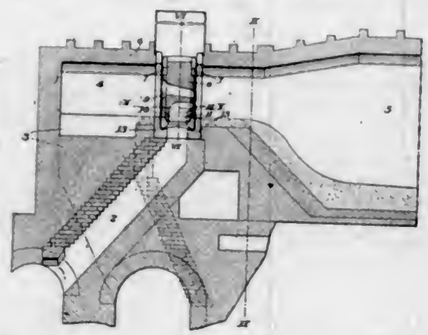
1. In combination with a scaffold plank, a cable element extending throughout the length of the plank at its under-side, a binding plate at each end of the plank, means for anchoring the ends of the cable on said plates, means to space an intermediate portion of the cable from the plank, and means to displace one of said plates longitudinally of the plank to tension said cable.

1,687,707. CONFECTION-MAKING MACHINE. FRED L. BORCHERT, Rockford, Ill. Filed Nov. 10, 1923. Serial No. 673,905. 29 Claims. (Cl. 91—14.)



1. The combination in a processing machine of means for sizing the material to be processed by slicing from a strip, means for engaging the individual sized units and carrying them in suspended spaced relationship with each other, means for coating the units by immersion, means for carrying same for a space of time after immersion, and means for removing same from the suspending and carrying means and depositing same, all for the purpose as specified and described.

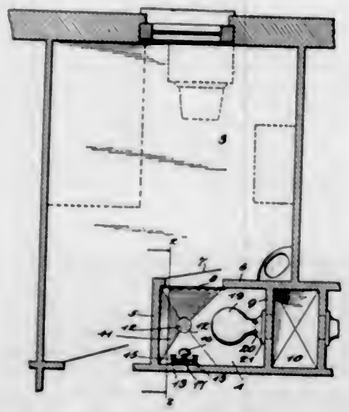
1,687,708. CUTTING AND FEEDING MECHANISM FOR CONFECTION-BAR-MAKING MACHINES. FRED L. BORCHERT, Rockford, Ill. Original application filed Nov. 10, 1923, Serial No. 673,905. Divided and this application filed June 13, 1927. Serial No. 198,617. 25 Claims. (Cl. 107—21.)



10. Mechanism of the character described for cutting bars in succession from a brick, means for feeding the cut-off bars in succession to a given station, and means for removing each bar from said station including fingers arranged to impale the bar to carry the same, and means for operating the cutting means and the bar feeding means in such timed relation that the bars are cut off one by one and immediately after the cutting operation and previous to the next cutting operation are impaled for removal.

1,687,709. PICTURE-DISPLAYING APPARATUS. ERNEST DIDCOTE, Woking, England, assignor to Advertising Machines Limited, London, England. Filed Dec. 23, 1924, Serial No. 757,599, and in Great Britain Jan. 8, 1924. 10 Claims. (Cl. 40—84.)

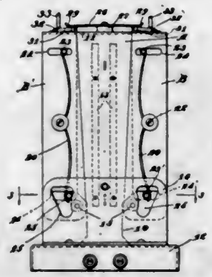
1. Picture display apparatus comprising stationary drums, curtain rollers mounted in annular grooves therein, removable sections in said drums, means operating intermittently, serving to bring the rollers in succession into the removable drum sections, and means for traversing said drum sections and the rollers therein back and forth across the apparatus.



1,687,710. REVERSING FURNACE AND METHOD OF OPERATING THE SAME. WALTER DE FRIES, Wilkinsburg, Pa., assignor to Blaw-Knox Company, Hoboken, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1920. Serial No. 427,520. 20 Claims. (Cl. 263—15.)

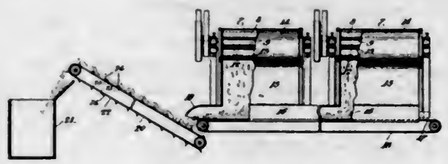
13. A reversing furnace having a combined inlet and outlet port, and a member movable at will across said port, said member having a plurality of air and gas ports therein, substantially as described.

15. The method of operating reversing furnaces, which comprises placing a mixing device in the path of incoming elements of combustion to break up the same into a series of small streams, removing said mixing device, and reversing the furnace, substantially as described.



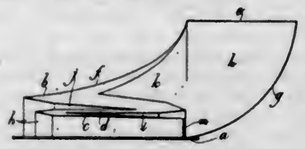
1,687,711. BATHING COMPARTMENT. ELDRIDGE R. BOYLE, Washington, D. C. Filed Mar. 26, 1923. Serial No. 627,824. 8 Claims. (Cl. 4—146.)

1. In a compartment, an apparatus therein delivering a bath shower over a portion of the area of the compartment, and a water closet fixture in the compartment having a flanged water-proof cover adapted to be used as a bather's seat.



1,687,712. TOASTER. DANIEL L. CHANDLER, Boston, Mass., assignor to Champ Electrical Company, Boston, Mass., a Corporation of Massachusetts. Filed May 27, 1927. Serial No. 194,795. 14 Claims. (Cl. 53—5.)

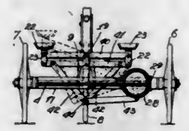
14. A toasting apparatus having a holder for a slice of bread to be toasted, said holder having a spring seat for the bread which is bodily yieldable for the entire slice, said spring having independently yieldable portions whereby one portion of the spring seat may yield in



greater degree than another portion to accommodate a slice in which one edge is thicker than the opposite edge.

1,687,713. COTTON-CONVEYING APPARATUS. CHARLES E. COLDWELL, Phoenix, Ariz. Filed Feb. 23, 1927. Serial No. 170,381. 4 Claims. (Cl. 19—39.)

1. The combination with ginning apparatus, of a conveyor alongside the same, means for delivering the cotton from the ginning apparatus to the conveyor, and an elevator conveyor that receives the cotton from the first conveyor, said elevator conveyor having fan blades that move beneath and past the discharge end of the first conveyor.



1,687,714. SOUND-AMPLIFYING HORN FOR GRAMOPHONES, LOUD SPEAKERS, AND OTHER LIKE SOUND-REPRODUCING APPARATUS. HENRY JOHN CULLUM, London, England. Filed Nov. 17, 1926, Serial No. 148,932, and in Great Britain May 31, 1926. 5 Claims. (Cl. 181—27.)

1. A sound amplifying horn constructed on uninterrupted side walls and edge walls, said edge walls being of gradually increased height from the entrant end of the horn, and division walls of gradually increased height projecting inwardly from opposite edge walls successively from the entrant to the exit end of the horn, the division walls being secured throughout their lengths to the side walls.

1,687,715. FOOT-POWER VEHICLE. CONRAD DAHL, Chicago, Ill., assignor, by mesne assignments, of one-half to said Conrad Dahl and one-half to Earl G. S. Tracy, Cokato, Minn. Filed July 12, 1926. Serial No. 121,703. 11 Claims. (Cl. 208—34.)

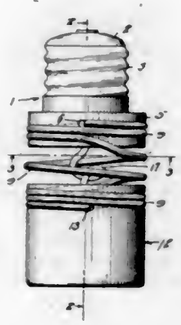
1. In a vehicle propelled by rider weight, a rocking lever fulcrumed between its ends, a pair of weight carrying platforms pivotally connected to the lever at opposite sides of its fulcrum respectively, guiding means for keeping each of said platforms substantially parallel to its

initial position throughout the rocking movement of the lever and means for converting said rocking movement into vehicle travel.

1,687,716. PAPER CUP. RAWSON P. DICKERSON, East Orange, N. J. Filed Oct. 2, 1924. Serial No. 741,106. 3 Claims. (Cl. 229—1.5.)

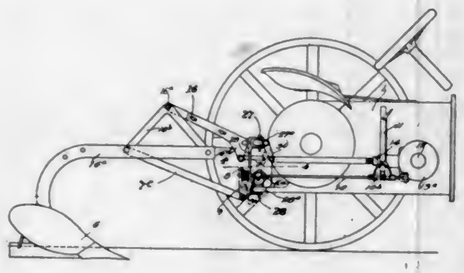
1. A one-piece cup comprising a paper receptacle of an open circular mouth with beaded rim and a downwardly-tapered, rounded body, whose shape is maintained by said beading, and having a wedge-shaped bottom.

1,687,717. SURGICAL APPLIANCE. KEILI EPSTEIN, Charlottenburg, Germany. Filed May 20, 1925, Serial No. 31,673, and in Germany May 21, 1924. 1 Claim. (Cl. 128—294.)



A sanitary bag of the class described comprising a cylindrical bag of substantially uniform diameter, a part-globular piece closing one end of said bag, a closure at the other end having a central opening, the wall of said bag being corrugated at right angles to its axis so as to be foldable, the depth of the corrugations being substantially the same throughout and the inner edges of said corrugations in the folded condition of said bag forming circles of larger diameter than said central opening, said end closure having the opening being provided around the opening with an adhesive.

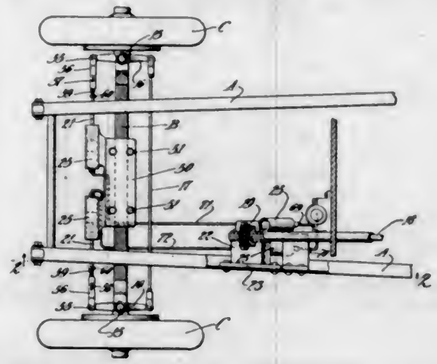
1,687,718. ELECTRIC-LAMP SOCKET. ERWIN E. FALBE and QUAY ROHRER, Cornell, Wis. Filed June 14, 1926. Serial No. 115,922. 2 Claims. (Cl. 173—344.)



1. A shock absorbing electric lamp socket, comprising a plug, a lamp receiving socket separate from the plug, a coiled spring connecting the plug to the lamp socket and also functioning as an electrical conductor, the plug and the lamp socket each having external spirally grooved portions in which one or two turns of the coiled spring are

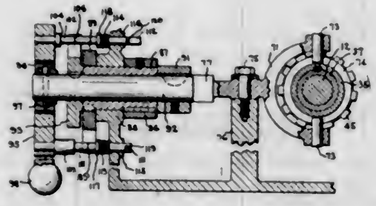
seated, and a relatively short insulated slack wire extending between electrical conductors in the central portion

of the plug and the central portion of the lamp socket to function as the other conductor.



1,687,719. TRACTOR AND TRACTOR-IMPLEMENT. HARRY FERGUSON, Belfast, Ireland. Filed Feb. 25, 1925. Serial No. 11,531. 17 Claims. (Cl. 97—47.)

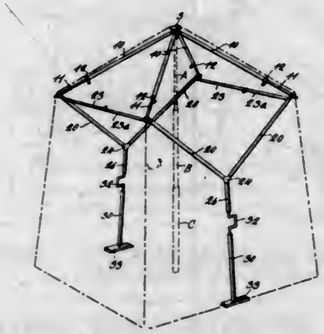
1. In combination, a tractor, an agricultural implement, a draft connection between said implement and said tractor, a power unit on the tractor adapted to control the working depth of the implement in the ground, and control means for the power unit connected with the implement and sensitive to variations in the draft of the implement from a predetermined normal magnitude and causing the power unit to function on the occurrence of such draft variations to correct same and consequently the variations in the working depth of the implement.



1,687,720. HYDRAULIC STEERING MECHANISM. FRANK GARNER, Chicago, Ill. Filed Jan. 31, 1927. Serial No. 164,783. 2 Claims. (Cl. 280—87.)

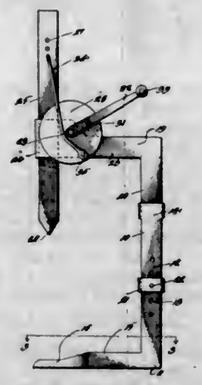
1. In combination with an automobile having a pair of dirigible wheels each provided with a steering arm, a tie rod connection between the two arms, two cylinder mechanisms, two slip connections extending between the cylinder mechanisms and steering arms, spring means associated with said connections for normally preventing slippage therein, the spring means in the one connection exerting a force opposite to that in the other whereby the two are balanced, and means for applying simultaneously to the two cylinder mechanisms opposite and equal forces

whereby the connections therefrom to the steering arms are actuated, substantially as described.



1,687,721. SPEED-CHANGING MECHANISM. FREDERICK P. GLOSH, Cincinnati, Ohio, assignor to The Triumph Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 3, 1925. Serial No. 54,375. 5 Claims. (Cl. 74—59.)

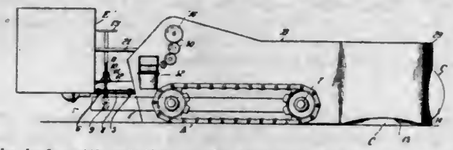
1. In speed changing mechanism, the combination of a pair of movable elements movable in opposite directions for effecting speed changes, a rock-shaft, a rock-sleeve thereabout, said rock-shaft and said rock-sleeve having operative connections with the respective elements of said pair of movable elements, a pair of operating parts for rocking said rock-shaft and said rock-sleeve, an operating lever pivoted on a pivot extending lengthwise of the axis on which said rock-shaft rocks and on a pivot extending at an angle to said axis, said lever located at one side of said operating parts, releasable connecting means between said operating lever and said respective operating parts arranged for operative connection of said lever with each of said operating parts and disconnected relation of said lever with the other of said operating parts upon swinging of said lever on said last-named axis, said operating parts provided with obstructing means with which said connecting means in disconnected relation conct during transverse pivotal movement of said lever, and locking means for said respective operating parts complemental to said respective connecting means.



1,687,722. POLELESS TENT. LOUIS B. GOLDBERG, NATHAN GOLDBERG, WILLIAM GOLDBERG, and JACOB M. GOLDBERG, Denver, Colo. Filed Aug. 27, 1927. Serial No. 215,922. 6 Claims. (Cl. 135—4.)

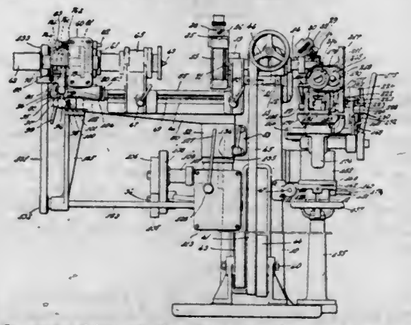
2. A support for a poleless tent comprising, in combination, two Y-shaped supports arranged opposite from each other and spaced apart and supporting bars extending from the upper ends of said Y-shaped supports to a central

point and rods extending from the upper ends of each support to the corresponding end of the other.



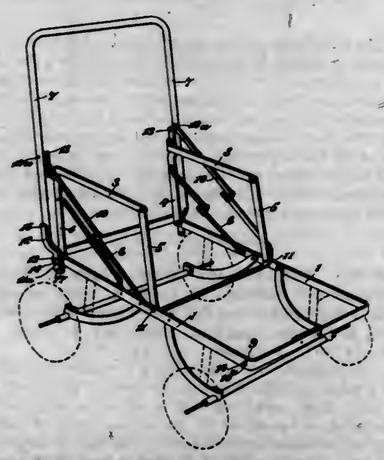
1,687,723. VALVE-SPRING COMPRESSION. IRA R. GOODSELL, Tulsa, Okla. Filed Jan. 25, 1927. Serial No. 163,365. 3 Claims. (Cl. 29—86.3.)

1. A valve spring lifting device comprising a U-shaped frame including a pair of longitudinally adjustable sections, a bifurcated bracket formed on the lower end of the frame engageable with the lower end of a valve spring, a guide member formed on the upper end of the frame formed with a vertical bore, a vertically movable lifting bar mounted in the bore of the guide member, a crank pin rotatably supported in a vertical position on the upper end of the frame, a disk body pivotally mounted on the frame, a crank arm secured to the disk and extending radially therefrom, and an offset connecting bar pivotally connected with the upper portion of the lifting bar and with the crank disk for vertical reciprocating movement of the frame with respect to the said bar.



1,687,724. APPARATUS FOR CLEANING BALLAST. PERRY H. HAMILTON, Baltimore, Md., assignor to Maintenance Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1925. Serial No. 40,463. 24 Claims. (Cl. 262—2.)

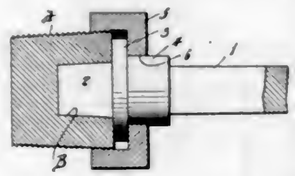
1. A portable ballast cleaning apparatus comprising a carriage, a body pivotally mounted on the carriage, rotating cutters carried at the front end of the body for digging substantially horizontally into the ballast, means for cleaning the ballast and returning the cleaned ballast to the roadbed also carried on the body, and means for tilting



the body with relation to the supporting carriage to vary the angle of engagement of the digging means with the roadbed.

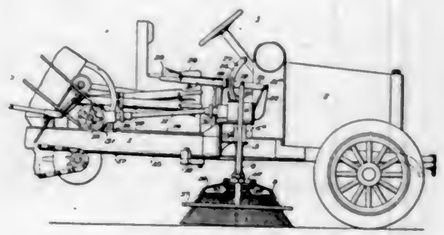
1,687,725. MACHINE FOR GRINDING FLUTED TOOLS. BENGT M. W. HANSON, deceased, Hartford, Conn., by Clarence E. Whitney and Einar A. Hanson, executors, Hartford, Conn., now, by resignation, Einar A. Hanson, sole executor. Filed Dec. 18, 1925. Serial No. 76,301. 13 Claims. (Cl. 51—95.)

1. In a machine of the character described, a frame having a bearing, a support having a stem mounted for turning and vertical movements in said bearing, a work holder on said support, a fixed post below said bearing, a screw supported for turning movement on said fixed post, means for turning said screw, a nut on said screw rotatably supporting said stem, and an index scale between said stem and bearing for indicating the angular position of adjustment of said support.



1,687,726. PERAMBULATOR AND THE LIKE. FREDERICK HAGGER HEADLEY, Northfield, near Birmingham, England. Filed May 28, 1923, Serial No. 642,000, and in Great Britain Aug. 17, 1922. 3 Claims. (Cl. 280—47.)

1. In a device of the class described embodying therein a frame, laterally extending studs on the ends of said

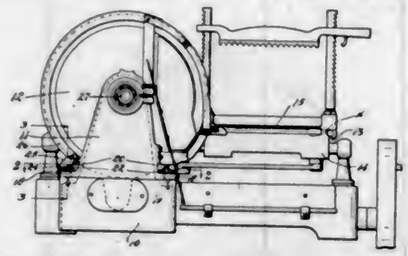


frame, a handle bar having side members with apertures in the bottom ends thereof adapted to be engaged over said studs which project beyond the same, and a lever pivoted to the end of each side member and adapted to be engaged with the projecting end of an associated stud to detachably lock said handle bar side member thereto.

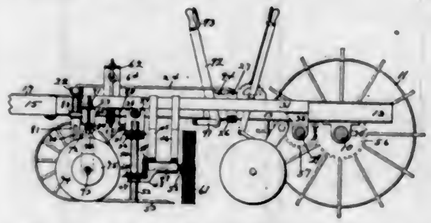
1,687,727. WASHOUT-PLUG WRENCH. ARTHUR W. JUDGE, Cleveland, Ohio. Filed June 2, 1925. Serial No. 34,423. 1 Claim. (Cl. 81—53.)

A wrench for removing and replacing wash out plugs, comprising a shank rectangular in cross section and adapted for engagement by a wrench, and an end correspondingly shaped, a circular flange intermediate of said shank and end, a circular shoulder extending from said flange, and a cap nut polygonal in cross section supported by said flange and revoluble relatively to the shoulder, said cap nut being adapted to embrace and be secured to the top of a wash out plug and the end of the shank to engage in a correspondingly shaped opening in the top thereof.

1,687,728. CUTTER-BROOM ATTACHMENT FOR SWEEPING MACHINES. MOSES VOLNEY LIDDELL, Mattituck, N. Y. Filed Nov. 19, 1923. Serial No. 675,440. 13 Claims. (Cl. 15—87.)



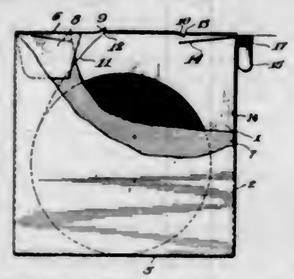
1. In a machine for sweeping surfaces adjacent to curbs, a frame, a rotary broom positioned with its axis of rotation approximately vertical but inclined in the vertical plane of travel, to limit its contact with the swept surface to a sector which in the rotation of the broom moves away from the curb, means rotating the broom and developing from said limited sector of contact an inherent feeding force in the broom which is toward the curb, and a broom-mounting connecting the broom with the frame with freedom of the broom to respond to said feeding force.



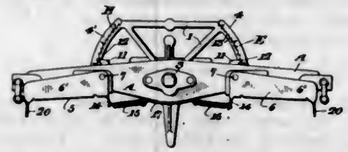
1,687,729. SLICING MACHINE. PATRICK J. LUCEY, Chicago, Ill., assignor to David A. Weir, receiver for Lucey Slicing Machine Co., South Bend, Ind., a Corporation of Indiana, bankrupt. Filed Oct. 15, 1924. Serial No. 743,671. 6 Claims. (Cl. 146—102.)

1. In a slicing machine having a rotary circular knife and a table movable one with respect to the other, means for adjustably mounting said knife with respect to said table to place the plane of the cutting edge of said knife at different angles with respect to the edge of said table.

2. In a slicing machine having a base with a circular knife and a support for said knife, a table movable past said knife, and means for adjusting and fastening said support on said base to reset said knife in a different vertical plane with respect to the table edge.

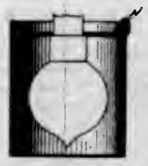


1,687,730. BEET-TOPPING MACHINE. JAMES MAZZOCCO, Gallup, N. Mex. Filed May 9, 1924. Serial No. 711,988. 5 Claims. (Cl. 55—107.)



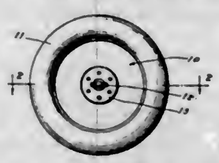
1. In a machine of the class described, a main frame, a floating frame hinged at its rear end to and yieldingly supported for actuation through a vertical arc at its forward end by said main frame, a rotary knife carried by said floating frame and operable through a substantially horizontal plane and an altitudinally adjusting device comprising a series of spaced rotary elements depending from and adjustably connected to the forward end of said floating frame and adapted to travel in advance of said knife and also adapted to comb through the tops of standing beets in a field and contact and ride on the crowns thereof, said knife extending beneath said rotary elements.

1,687,731. PACKAGE AND DISPENSER FOR GUMMED TAPE. THEODOR H. MITTENDORF, Chicago, Ill., assignor to Mid-States Gummed Paper Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 21, 1925. Serial No. 57,555. 5 Claims. (Cl. 242—55.5.)



1. A gummed tape dispensing device comprising a box-like container, a flap on said container adapted to close the bottom thereof and to extend upwardly within said container and a cover flap on said container adapted to close the top thereof and extend downwardly between the container wall and said first named flap, said latter flap being provided with a plurality of apertures through which a tape may be woven.

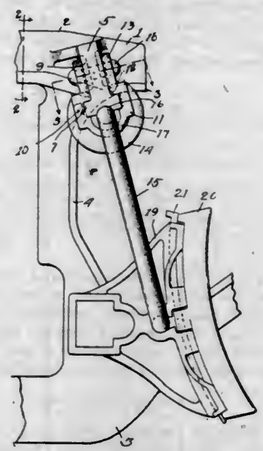
1,678,732. RUDDER-BAR RETAINER. ROBERT E. MITTON, Salt Lake City, Utah. Filed June 26, 1926. Serial No. 118,840. 2 Claims. (Cl. 244—29.)



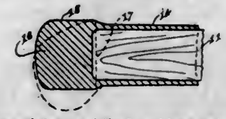
1. In a rudder bar retainer the combination of a rudder bar; a frame upon which said rudder bar is supported having an extended spider shaped framework formed thereon, on the outer and upper edge of which is provided an inwardly toothed rack segment on each side of the frame; bell crank foot operated levers pivoted on said rudder bar having dogs formed in the lower and inner side thereof adapted to engage with the toothed racks on said supporting frame; an extension on the back side of said levers to which one end of a spring is secured; and springs engaged with said extensions and with said rudder bar to normally hold said dogs in said toothed racks substantially as described.

1,687,733. LAMP SHADE. PASCAL B. MOORE, New York, N. Y. Filed Mar. 8, 1926. Serial No. 93,138. 1 Claim. (Cl. 240—108.)

A lamp shade including a foldable side wall, a cap fixedly secured to said side wall and about which said side wall is adapted to be folded, means adjacent the ends of said side wall for holding the ends thereof together when said wall is folded, and a plurality of bendable tongues on said cap engageable with said side wall when said wall is folded about said cap.



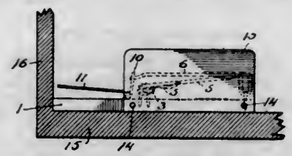
1,687,734. THEFT-PREVENTING DEVICE. JAMES F. RALEIGH, Chicago, Ill., assignor to Pines Winterfront Company, Chicago, Ill., a Corporation of Delaware. Original application filed Jan. 9, 1925, Serial No. 1,444. Divided and this application filed Apr. 27, 1927. Serial No. 186,932. 4 Claims. (Cl. 70—90.)



1. In a spare wheel carrier, the combination of a mounting bracket, means for securing a spare wheel on said mounting bracket, a resilient shield for covering said securing means, and means for locking said shield and wheel including a member passing through said wheel and shield, and a locking device carried by said member and flexing said shield against said wheel.

1,687,735. SIDE FRAME. WILLARD F. RICHARDS, Depew, N. Y. Filed Aug. 2, 1926. Serial No. 126,703. 14 Claims. (Cl. 118—209.)

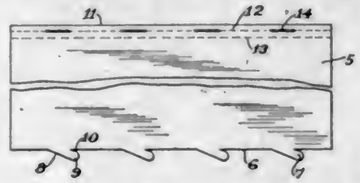
1. In combination, a truck side frame formed with a brake hanger lug extending from a side thereof, said lug having a web provided with a flange at the lower edge thereof, and a brake hanger connector formed with a pocket shaped to slip over the free end of the lug and support the upper end of brake head supporting means therebeneath.



1,687,736. HOCKEY-STICK-END BUFFER. WILLIAM ELMER ROOT, Palmerston, Ontario, Canada. Filed July 7, 1927. Serial No. 204,058. 1 Claim. (Cl. 273—67.)

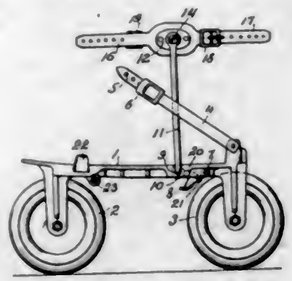
A buffer comprising a blind rubber tube adapted to be mounted on a stick and extending into a solid rubber cushion projecting beyond the hand and formed of a waggly knob rectangular in cross section.

1,687,737. ANIMAL TRAP. ANSEL E. RUDEEN, Axtel, Kans. Filed Jan. 12, 1927. Serial No. 160,623. 1 Claim. (Cl. 43—81.)



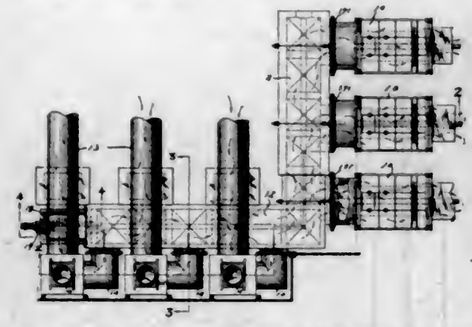
In an animal trap, the combination with a base, animal killing means mounted thereon including a controlling tread member adapted to be moved by an animal from a set to a released position and disposed wholly above said base and spaced from but adjacent to one end of said base, of two guard members fastened respectively to opposite side edges of and extending above said base and spaced from said end of said base, said tread member extending beyond said guard members toward said end of said base, and all of said killing means, excepting said tread member, when in the set position, being disposed wholly between said guard members and below the upper edges thereof.

1,687,738. INTERLOCKING STOVEPIPE BLANK. EDDIE O. SIMPSON, Tarrant, Ala., assignor of one-half to Felix I. Tarrant, Birmingham, Ala. Filed Jan. 28, 1927. Serial No. 164,168. 1 Claim. (Cl. 126—309.)



A sheet-metal pipe blank having projecting from one of its side edges a series of spaced tongues, and being

scored near its other side edge along a line parallel with said edge, and a series of slots in the line of said score, adapted to receive said tongues, and spaced in conformity with the spacing thereof, the said tongues being sharply inclined relative to the side edge from which they project, the space at the intersection of the shorter side

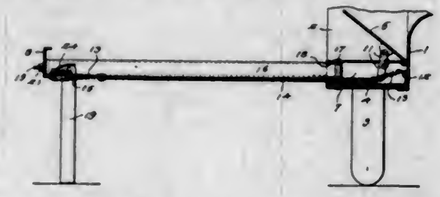


of each tongue with the side edge being sharply angular, and for a substantial length thereof of less width than the thickness of the blank whereby to provide a gripping action on the blank edge engaged thereby, the side of each tongue opposite to said shorter side closely engaging the adjacent slot edge when in operative position.

1,687,739. ROLLER SKATE. WALTER A. SLUSHER, Kansas City, Mo. Filed Mar. 19, 1927. Serial No. 176,701. 6 Claims. (Cl. 208—173.)

1. In a roller skate, a foot rest, a rotary carrying wheel under and supporting said foot rest, a braking device pivoted to said foot rest so as to swing into and out of braking engagement with the tread of said wheel, an operating member having means for attachment to the leg, and means engaged by said member adapted to engage and force said braking device to the braking position.

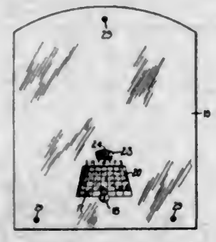
1,687,740. WASTE-HEAT BOILER SYSTEM. HERMAN B. SMITH, Plainfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 9, 1922. Serial No. 535,223. 1 Claim. (Cl. 122—7.)



In a system for utilizing the waste heat from industrial furnaces, a steam boiler, a separately-fired furnace adapted to burn finely divided fuel, a long flue connecting said furnace to said boiler and a plurality of industrial furnaces, each connected to said flue with the points of connection spaced along the flue, whereby the hot waste gases from all of the industrial furnaces are delivered to the flue between its connection to said boiler and its connection to said separately-fired furnace.

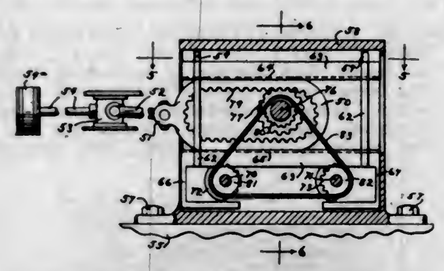
1,687,741. TOILET-PAPER FIXTURE. WILLARD E. SWIFT, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Dec. 24, 1923. Serial No. 682,431. 1 Claim. (Cl. 242—55.2.)

In combination, a toilet paper fixture comprising a pivotally mounted package carrier provided along one edge with a pair of wedge shaped projections of different length located on opposite sides of the pivotal axis of the carrier, said carrier projections being adapted to enter notches of different depths, provided at one end of a toilet paper package, having a designated front face, the correct registration of said projections with said notches being adapted to insure the positioning of a package on said carrier with the front face presented to the user.



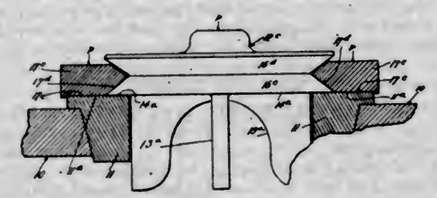
1,687,742. AUTOMOBILE BED. WILLIS L. THATCHER, Sacramento, Calif. Filed July 15, 1926. Serial No. 122,682. 1 Claim. (Cl. 5—119.)

In a bed attachment for automobiles, a running board of compartment construction, a pair of end bars, each hinged at one end to an end wall of the compartment, a supporting leg hinged to the free end of each end bar, a removable channel bar at the outer side of the compartment adapted to connect the outer ends of the end bars when extended and set up and to close the outer side of the compartment when the bed is folded, a flexible bed bottom extending between the rear wall of the compartment and the channel bar, detachable strap connections between the outer edge of the flexible bed bottom and the channel bar, a step cover for the running board compartment and link connections between the cover and walls of the compartment to hold the cover in an inclined open position, the said channel bar having flanges which embrace the step cover and bottom of the compartment when the compartment is closed.



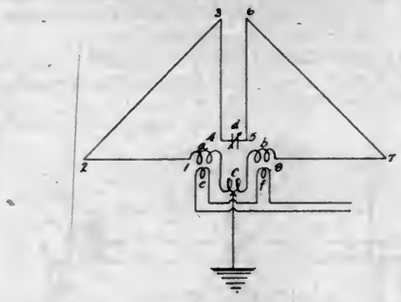
1,687,743. CALENDAR STRUCTURE. GALEN TILDEN, Ames, Iowa. Filed June 5, 1926. Serial No. 114,016. 2 Claims. (Cl. 40—113.)

1. In a device of the class described, a support, a pair of sight openings therein, a movable member having sets of characters thereon for being selectively exposed through one of said sight openings, a sight opening in said member for each set of characters, each one being positioned relative to its corresponding set of characters whereby it will be in alignment with the other sight opening in said support when its corresponding set of characters is ex-



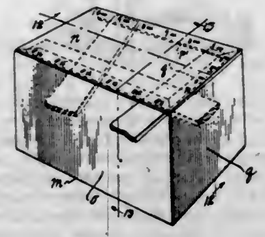
posed through the first sight opening and a second movable member having sets of indicating characters adapted to be selectively exposed through the aligned sight openings in said support independent of the first movable member.

1,687,744. RECIPROCATING ENGINE. FRED MAURICE WEBB, Fresno, Calif. Filed Dec. 23, 1925. Serial No. 77,190. 3 Claims. (Cl. 74—14.)



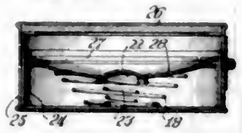
1. The combination with a reciprocating engine, of an elongated endless rack secured to the engine piston, a pinion on the power shaft in engagement with said rack, a stationary frame, a movable frame mounted in said stationary frame to move vertically, guideways carried by said movable frame for supporting said rack, said rack being slidable in said frame, a shaft mounted in said stationary frame at each end thereof beneath said movable frame, a cam mounted on each of said shafts adapted to bear against the underside of said movable frame to raise and lower the same, and operative connections between said last shafts and said power shaft adapted to rotate the same synchronously.

1,687,745. PUMP VALVE. WILLIAM WEBSTER WILSON, Los Angeles, GROVER C. DEAKINS, Anaheim, and ROBERT R. SHULL, Long Beach, Calif. Filed Aug. 18, 1925. Serial No. 50,910. 8 Claims. (Cl. 277—44.)



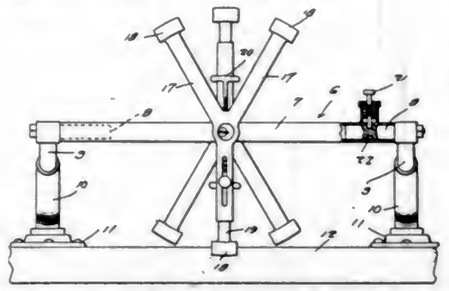
1. In a valve, a relatively stationary part including a seat member, a valve body adapted to seat on the stationary part and having an annular recess with a conical wall, a sealing member loosely carried in the recess and free to move bodily with relation to the body in the direction of movement of the body to and from the stationary part, said sealing member having a conical face adapted to seat on said conical wall of the recess and the sealing member also being adapted to seat on the stationary part.

1,687,746. DIRECTIONAL AERIAL. GEORGE MAURICE WRIGHT, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 19, 1921, Serial No. 462,625, and in Great Britain July 18, 1918. 6 Claims. (Cl. 250—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



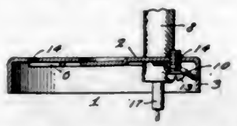
2. The combination of a loop aerial in a vertical plane, an adjustable condenser located near the base of the loop, symmetrical leads connecting said condenser in series with the upper conductor of the loop, and a coil in the lower conductor having an intermediate point connected to ground.

1,687,747. METHOD OF SEALING SHIPPING CASES. HERBERT R. BLISS, Niagara Falls, N. Y., assignor to H. R. Bliss Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Original application filed Jan. 9, 1924, Serial No. 685,097, and in Canada Sept. 22, 1924. Divided and this application filed Jan. 10, 1927. Serial No. 160,089. 7 Claims. (Cl. 93—42.)



1. The method of sealing a fibre board shipping case which has two opposite walls provided with sealing flaps, and two other opposite walls, one of which is provided with a relatively narrow cover flap, and the other of which is provided with a cover wing for covering substantially the entire case, which method comprises placing a blade anvil under the cover wing and cover flap, driving stitches through the wing and the flap to secure them together, placing the anvil under the cover wing and one of the sealing flaps, driving stitches into them to secure them together, placing the anvil under the cover wing and the other sealing flap and then driving stitches into them to complete the sealing of the case.

1,687,748. RECEPTACLE FOR FACE POWDER AND THE LIKE. PHILIP C. P. BOOTY, Chicago, Ill., assignor to Michael T. Daley, Chicago, Ill. Filed Oct. 13, 1926, Serial No. 141,288, and in Canada Jan. 27, 1926. 9 Claims. (Cl. 132—83.)

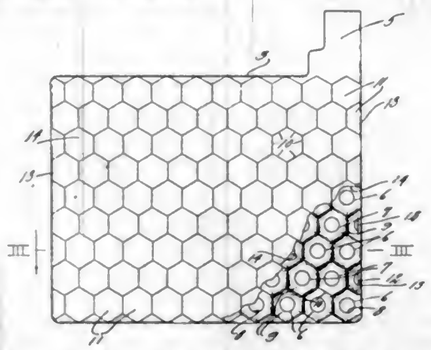


1. A receptacle for face powder and the like, comprising in combination a casing having an opening in its top face, an outwardly convex closure plate within the casing fitted to said opening, and yielding means for pressing said closure plate upwardly into position for closing said opening.

1,687,749. AUTOMOBILE TIRE CARRIER. DONALD BORROR, Garnett, Kans. Filed July 30, 1927. Serial No. 209,626. 1 Claim. (Cl. 224—29.)

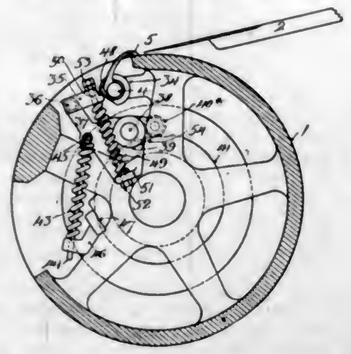
In a tire carrier structure of the class described, a pair of attachment and supporting tubes, rods slidably mounted in said tubes, journals carried by the outer ends of said rods, a tubular shaft mounted for rotation between said rods and upon said journals, and a plurality of individual tire carriers carried by said shaft.

1,687,750. CONDUIT CLAMP. JOHN C. BOYTON, Cleveland, Ohio. Filed Nov. 21, 1923. Serial No. 675,991. 3 Claims. (Cl. 247—25.)



1. In a device of the character set forth, the combination of a receptacle having a wall provided with an opening through which a conduit is adapted to be extended, and a second wall disposed at substantially right angles to the first wall, a rigid clamping member arranged obliquely within the angle between, and with its opposed edges engaging, said walls, and means for advancing the member toward the first wall thereby to cause it by sliding contact with the second wall to be slid along the former wall and into clamping engagement with the conduit.

1,687,751. DYEING COMPOSITION. ALBERT DAVID, New York, N. Y., assignor, by mesne assignments, to Dip-It Inc., New York, N. Y., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,800. 12 Claims. (Cl. 8—6.)

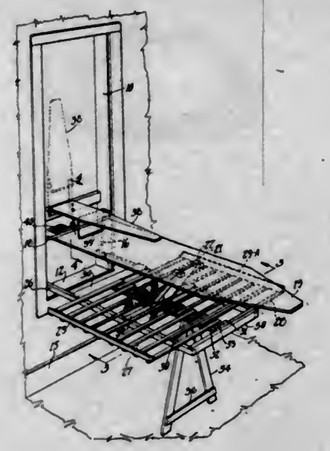


1. A dyeing composition in fluent form comprising, in combination, a neutral saponaceous body, a liquid carrier, a dye, and a hygroscopic substance in sufficient quantity to substantially prevent caking of the mixture on exposure to the air, said dye being partly in solution and in excess of the quantity held in true solution.

1,687,752. BATTERY PLATE. ROBERT L. ELLERY, Toledo, Ohio. Filed Nov. 1, 1926. Serial No. 145,460. 2 Claims. (Cl. 136—48.)

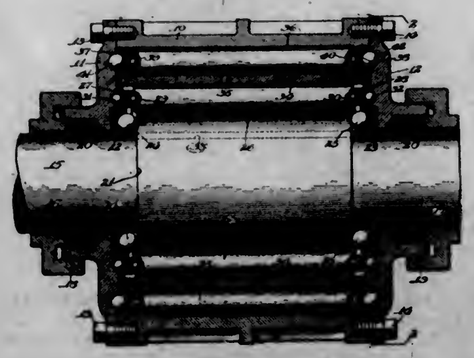
1. An electric battery plate embodying a grid having hexagonal pockets peripherally abutting, the grid portion as bounding the pockets having in cross section adjacent side portions approaching each other at an acute angle to form a fin in the plane of the plate, with the hexagonal portion of the pocket approximating the plane of an outer face of the grid.

1,687,753. GRIPPER-TENSIONING MECHANISM FOR PRESSES. FRED S. ENGLISH and THOMAS L. PERRY, New London, Conn., assignors to The Babcock Printing Press Manufacturing Company, a Corporation of Connecticut. Original application filed May 6, 1925, Serial No. 28,355. Divided and this application filed Sept. 2, 1926. Serial No. 133,214. 5 Claims. (Cl. 101—409.)



1. In a press the combination of a cylinder adapted to carry a sheet, grippers thereon for engaging and holding the sheet to move with the cylinder, said grippers being mounted on a shaft having means adapted to be engaged by a latch, a latch arranged to operate thereon to press the grippers upon the sheet, and means for automatically causing said latch to act on said grippers to press the sheet while in the initial gripping position and for automatically releasing said latch before the opening of said grippers.

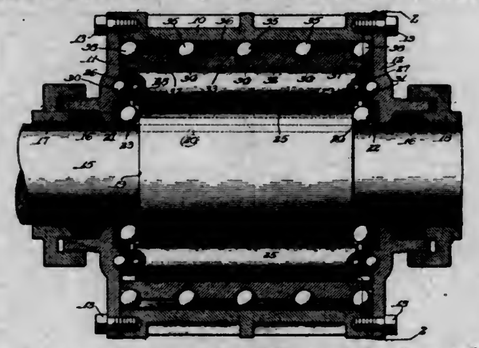
1,687,754. IRONING BOARD. JOHN N. FARIS, Portland, Oreg. Filed Feb. 25, 1925. Serial No. 11,441. 2 Claims. (Cl. 68—10.)



1. An ironing table having, in combination, a cabinet adapted to be built into a wall, a frame hinged within the lower portion of the cabinet adapted to be swung from a vertical to a horizontal position, the sides of said cabinet having upright slots formed therein, an ironing board mounted above said frame having laterally projecting pins

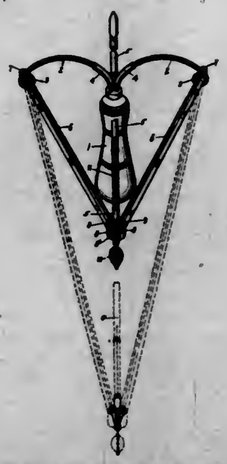
at its inner end projecting into said slots, a support for the outer end of said ironing board hinged at opposite ends to said ironing board and to said frame, and a pair

of side extendible trays mounted on said frame adapted to be projected beyond the lateral edges of said ironing board, said frame, trays and ironing board being foldable within said cabinet.



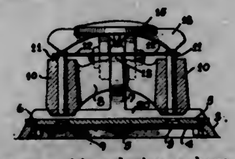
1,687,755. ROLLER BEARING. JOHN W. FOLEY, Chicago, Ill. Filed Mar. 14, 1927. Serial No. 175,030. 9 Claims. (Cl. 308—183.)

1. A roller bearing embodying a casing, a shaft extending thereinto, a bearing surface carried by the shaft within said casing, a sleeve within the casing encompassing the said surface out of contact therewith and with the casing, rollers between the said sleeve and said surface and contacting with both, rollers between the periphery of the said sleeve and the wall of the casing and contacting with both, and ball bearings between the ends of the first recited rollers and the adjacent walls of the casing and with which ball bearings the respective rollers have direct engagement.



1,687,756. ROLLER BEARING. JOHN W. FOLEY, Chicago, Ill. Filed Mar. 14, 1927. Serial No. 175,031. 5 Claims. (Cl. 308—183.)

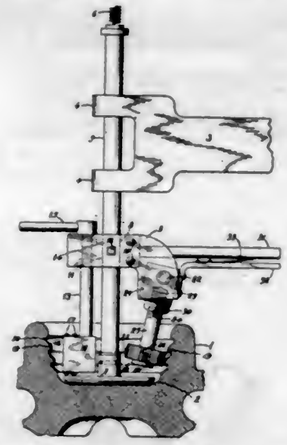
1. A roller bearing embodying a casing, a shaft projecting thereinto, a bearing surface carried by the shaft within the casing, rollers encompassing said surface and having a rolling contact therewith, a freely rotatable sleeve encompassing said rollers and with the inner face of which sleeves said rollers have a rolling contact, and a plurality of series



of balls extending circumferentially about the sleeve and having rolling contact with the outer periphery of the sleeve and the casing wall.

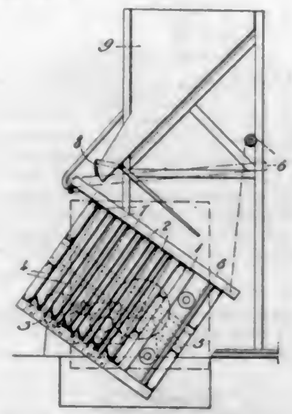
1,687,757. CATAPULT. BYRON G. FRY, Glendale, Calif., assignor of one-half to E. R. Williams, Glendale, Calif. Filed Sept. 13, 1926. Serial No. 135,163. 5 Claims. (Cl. 124—2.)

1. A catapult for shooting arrows including in combination a handle with two arms extending laterally therefrom and forming an arrow-supporting fork therebetween, two elastic elements connected to the outer ends of said arms, a hand piece connected to the opposite ends of said elastic elements, said hand piece having a special socket to receive the end of an arrow and a knob rearwardly of said pocket to be gripped between the thumb and finger in shooting an arrow, said arrow receiving socket being formed of parts adapted to close upon said arrow as said hand piece is pulled.



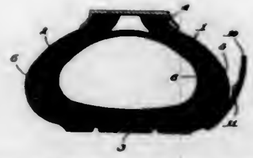
1,687,758. PAPER PUNCH. ADO GLAESER, Woodhaven, N. Y. Filed July 31, 1925. Serial No. 47,184. 15 Claims. (Cl. 164—91.)

1. In a paper punching device, a base, a die plate assembled therewith, a plurality of punches adapted to co-



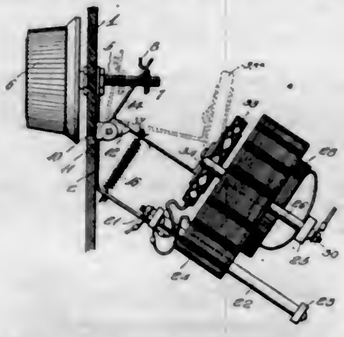
operate with said die plate to punch holes in paper, a standard associated with said base, said standard being constructed to guide said punches, and a single member for supporting said punches and for returning said punches to normal position after operation.

1,687,759. INSULATOR-KNURLING DEVICE. MINOR F. H. GOUVERNEUR, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Aug. 18, 1927. Serial No. 213,857. 11 Claims. (Cl. 25—3.)



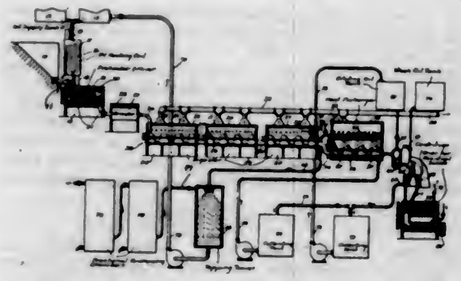
1. In a machine for working upon an insulator unit having a recess therein, the combination of means disposable within the recess and operable to cut alternating ridges and grooves in the wall thereof when the insulator is rotated, and means adjacent said means for knurling certain of the ridges.

1,687,760. METHOD AND APPARATUS FOR HANDLING BITUMINOUS MATERIALS. JOHAN GUSTAF GRÖNDAL, Djursholm, Sweden. Filed Nov. 5, 1925, Serial No. 67,006, and in Sweden Apr. 6, 1925. 7 Claims. (Cl. 214—41.)



1. Method of handling bituminous materials in connection with the dry distillation thereof, comprising feeding the material from a container to form a series of separate inclined layers spaced from each other, swinging the series of layers to substantially horizontal position, transporting the so spaced and superposed layers, and finally tilting and discharging such layers of material after treatment.

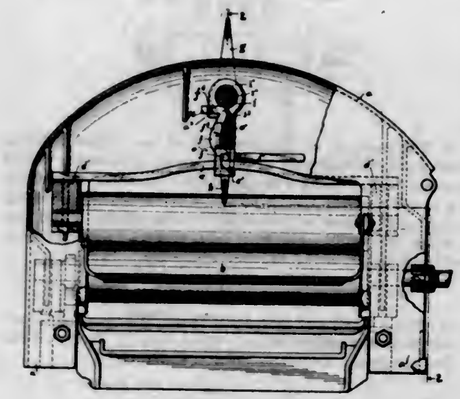
1,687,761. WARNING SIGNAL FOR PNEUMATIC TIRES. WALDO F. HAHN, Tampa, Fla. Filed Aug. 15, 1927. Serial No. 213,029. 5 Claims. (Cl. 116—34.)



3. The combination with a pneumatic tire; the outer face of said tire being colored for a portion thereof, means normally covering said colored portion and operable by the bending of the tire wall to disclose the color beneath it when the pressure in the tire falls below a predetermined point.

1,687,762. MICROCOUPLER. FREDERICK P. HALL, Newark, N. J., assignor to Simplex Radio Devices, Inc., New York, N. Y., a Corporation of New Jersey. Filed June 16, 1926. Serial No. 116,497. 9 Claims. (Cl. 171—119.)

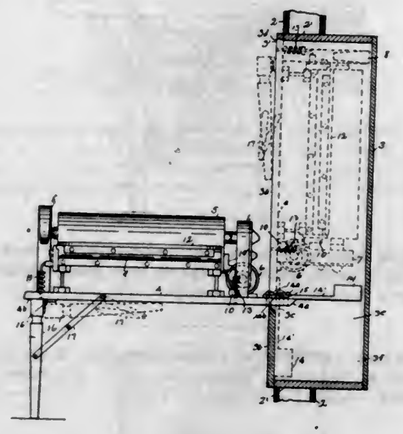
1. Tuning apparatus comprising in combination a bracket member, a pair of longitudinally extending rod members supported by said bracket member, an inductance coil adjustably positioned on said rod members, means adjustably carried by said inductance coil for supporting a cooperating inductance coil in spacial relation thereto and a separate inductance adjustably carried by said bracket member for movement with respect to said first mentioned inductance coils.



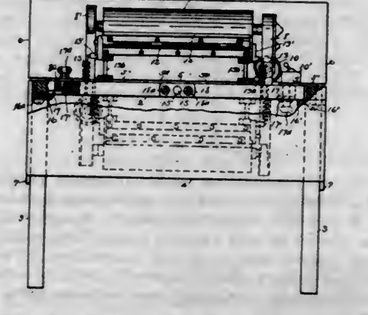
1,687,763. PROCESS OF AND APPARATUS FOR TREATING SHALE AND THE LIKE. WILLIAM HUNTLEY HAMPTON, New York, N. Y. Filed Dec. 11, 1919. Serial No. 344,016. 3 Claims. (Cl. 196—80.)

1. The process of obtaining valuable products from shale like bituminiferous solids which comprises digesting such a shale-like bituminiferous solid in finely divided condition with a heavy mineral oil at temperatures between 500° and 700° F., mixing steam with the evolved vapors and subjecting the mixture to cracking treatment at higher temperatures, fractionally condensing the products of cracking, diluting the residual digestion mixture with a lighter oil, separating solid matter from the diluted mixture, treating the residual oil to obtain a heavy fraction therefrom, and utilizing such heavy fraction and a heavy fraction obtained from the aforesaid cracking products for digestion of a further portion of shale or other bituminiferous solid.

3. Apparatus of the character described comprising the combination with a digestion chamber, of a heat exchanger, conduit means arranged to conduct unvaporized material from said digestion chamber to said heat exchanger, means for separating solids from liquids, conduit means arranged to conduct cooled material from said heat exchanger to such separating means, means for conducting separated liquid from such separating means to said heat exchanger, fractionating means, and means for conducting said separated liquid from the heat exchanger to said fractionating means.



1,687,764. CLOTHES-WRINGER MECHANISM. GEORGE L. HEDGES, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 18, 1923, Serial No. 669,264, and in Canada Aug. 31, 1923. 7 Claims. (Cl. 68—32.)

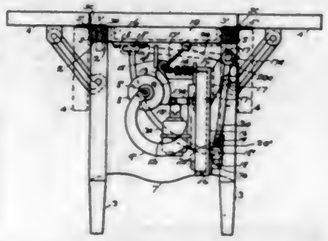


1. The combination with an element adapted to be placed under tension, of a tensioning spring operatively associated with said element, an overweighted pressure transmitting member pivotally mounted to coact with said spring, a detent for said member positioned to limit the pivotal motion of the pivoted member to position the same in pressure exerting position, and a rotatable cam acting on said pressure transmitting member and having a releasing position and a plurality of actuating positions, for relieving the pressure on said spring by the pressure transmitting member, and subjecting the spring to pressure.

1,687,765. WALL CABINET FOR IRONING MACHINES. MEAD HEDGLON, Syracuse, N. Y. Filed Apr. 30, 1927. Serial No. 188,015. 1 Claim. (Cl. 45—51.)

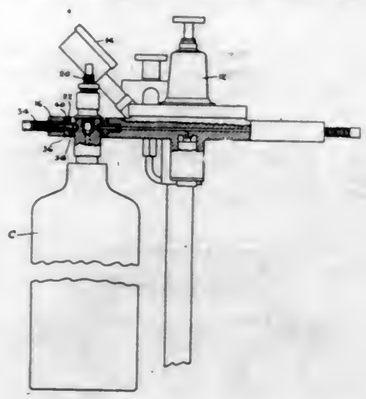
An ironing machine cabinet including a vertically disposed box formed for securement to a wall or the like and having an open front, a vertical member extending upwardly from the bottom of the box at the front thereof and terminating a short distance above the box bottom, a base member formed to close said open front and adapted to have an ironing machine secured thereto, a counterweight having a web projecting forwardly therefrom, bearings on the web, means to secure the front end of the web to the rear end of the base member, and a rod journaled in the bearings and having its ends supported by the side walls of the box, said vertical member in horizontal position of the base member being disposed intermediate the ends of the latter whereby the underface of the base member will seat on the upper end of the vertical member.

1,687,766. TABLE FOR IRONING MACHINES. MEAD HEDGLON, Syracuse, N. Y. Filed June 27, 1927. Serial No. 201,941. 6 Claims. (Cl. 312—22.)



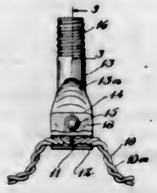
1. A table for supporting an ironing machine comprising a normally open horizontal frame, plates mounted beneath the opposite margins of the frame to form ledges that shorten one dimension of the sheer opening of the frame, a base adapted to have an ironing machine secured thereto disposed in the said opening, one end of the base adapted to rest upon one of said ledges, the other end of the base terminating short of the other ledge, means for pivotally mounting the base in the opening of the frame for enabling the base to be rotated in a vertical plane in the direction of the said dimension, and a latch carried by the shorter end portion of the base adapted to seat upon the upper face of the said other ledge thereby to prevent accidental tilting and inverting of the machine during the ironing periods.

1,687,767. FOLDING TABLE FOR IRONING MACHINES. MEAD HEDGLON, Syracuse, N. Y. Filed June 27, 1927. Serial No. 201,942. 7 Claims. (Cl. 312—27.)



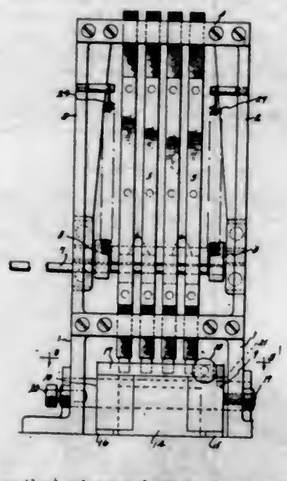
5. In an ironing machine table, a frame having an opening, an ironing machine carrying member receivable in the opening, means to support the member from the

frame for swinging movements, a shaft, means to slidably mount the shaft on the member, and means carried by the frame to engage the shaft in one position thereof so as



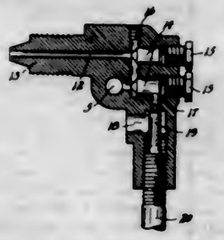
to hold same and thereby the member against swinging and in a second position of the shaft to permit same and thereby the member to be swung.

1,687,768. CLAMP FOR ANÆSTHETIZING MACHINES. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Mar. 11, 1927. Serial No. 174,471. 6 Claims. (Cl. 285—108.)



1. In an anæsthetizing machine having a yokelike member for receiving the neck of a gas container, the combination of a wedge member adapted to engage said neck, a screw carried by said yokelike member and adapted to be turned toward said neck, and connections between said screw and wedge member whereby the latter is forced firmly into engagement with said neck as said screw is thus turned.

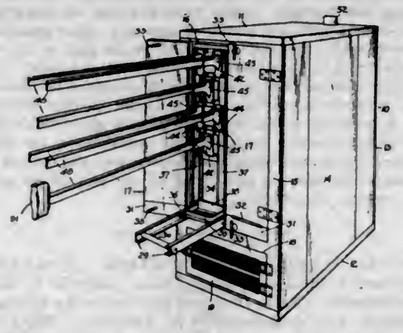
1,687,769. MOP HOLDER. WILLIAM HERTZBERG, Brooklyn, N. Y. Filed Aug. 13, 1925. Serial No. 50,051. 2 Claims. (Cl. 306—11.)



1. A mop holder consisting of a short length of normally open-ended seamless metal tubing flattened out for part of its length to provide a cylindrical socket to receive a mop handle and having one of its sides flattened against the adjacent side to provide a flat plate closing the end of the socket and having double the thickness of the socket wall, said socket having screw threads for engaging the mop handle, and a companion plate fastened to said flat plate, both of said plates having transverse grooves in juxtaposition to each other forming a cylindrical bearing for holding a mop frame rotatably supported therein.

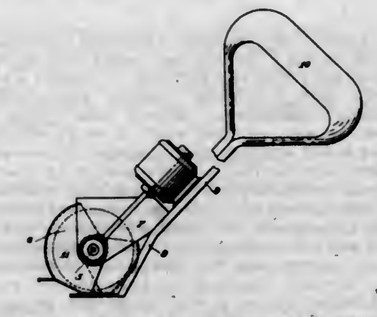
1,687,770. METHOD OF MANUFACTURE OF ABRASIVE DEVICES. MARSDEN C. HUTTO, Detroit, Mich. Filed June 18, 1926. Serial No. 116,835. 9 Claims. (Cl. 25—156.)

1. The method of manufacture of an abrasive device from granular material of the desired composition which consists in first filling a mold with the material, then tamping small areas of the material individually to a substantially equal degree of pressure, striking off the mold, submitting the molded material to a greater degree of pressure, and finally firing the molded article.



1,687,771. VACUUM OIL BURNER. WAYBURN E. JOHNSTON, Minneapolis, Minn. Filed July 2, 1923. Serial No. 648,948. 9 Claims. (Cl. 158—76.)

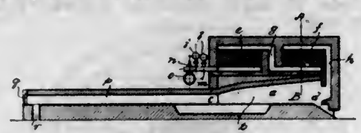
1. In a vacuum feed oil burner, a valve body comprising a nozzle having a discharge passage and an oil conduit, means for directing air at high velocity through said nozzle to produce a vacuum in a portion of said body in the rear of said discharge passage and in communication with said oil conduit, means for adjusting said first mentioned means, and an adjustable means for admitting air to said portion to control the degree of vacuum produced.



1,687,772. DRIER. LOUIS JUDELSON, New York, N. Y. Filed May 28, 1924, Serial No. 716,340. Renewed June 30, 1927. 10 Claims. (Cl. 34—40.)

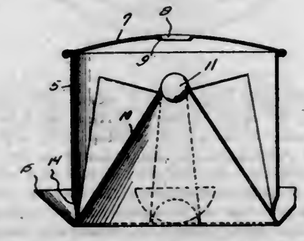
1. In a drier, a cabinet having an opening at one end thereof, a movable drier carriage therefor, having a plurality of projecting sockets, drier arms rigidly and detachably supported only at one end in said sockets, and guiding

and supporting means arranged in the cabinet to hold the carriage in upright position in its travel in and out of said cabinet.



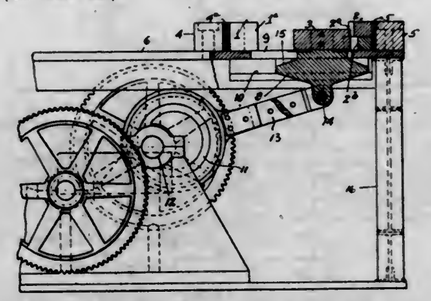
1,687,773. SURGEON'S SAFETY SAW FOR PLASTER CASTS. JOHANNES W. KAHLEN, Vancouver, British Columbia, Canada, assignor of one-half to Ursa Lee Rhodes, Bellingham, Wash. Filed May 4, 1927. Serial No. 188,726. 2 Claims. (Cl. 128—317.)

1. In a surgeon's saw for the removal of plaster casts the combination comprising, a circular saw, a spindle secured to said saw and a housing supporting bearings for said spindle, a main guide bar secured to said housing and terminating in a hand grip for controlling the device, a power driven shaft supported in said framework, a pair of bevel wheels connecting said shaft and said saw spindle, a toe piece forming an extension of said housing and being adapted to pilot the said saw and to intercept the bottom edge of said plaster cast from the wool padding surrounding the flesh of a patient requiring the operation of said saw, two shields of the nature of hoods each adapted to cover a section of said saw, one said shield being adapted to slide within the other and both being pivotal on the axis of said spindle, helical springs secured to said housing and adapted to retain the said shielding hoods in such a position as to cover the otherwise exposed portion of said saw.



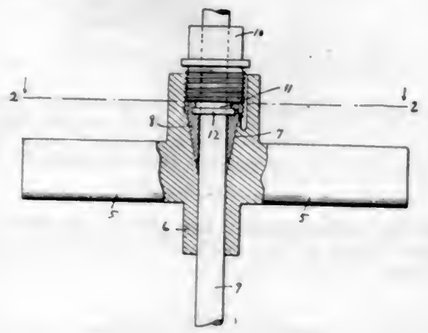
1,687,774. REGENERATIVE CHANNEL OVEN. HEINRICH KOPPERS, Essen-Ruhr, Germany, assignor to The Koppers Development Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 6, 1921, Serial No. 482,806, and in Germany Sept. 13, 1918. Renewed June 25, 1927. 10 Claims. (Cl. 263—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A channel oven embodying a regenerative heating system and a plurality of heating channels arranged parallel to each other, said channels being divided by a partition, said oven being arranged so that the pre-heated fuels enter one of the channels at the outlet end of said channel and flow counter-current to the direction of movement of the materials being heated in said channel, said burning fuel flow-



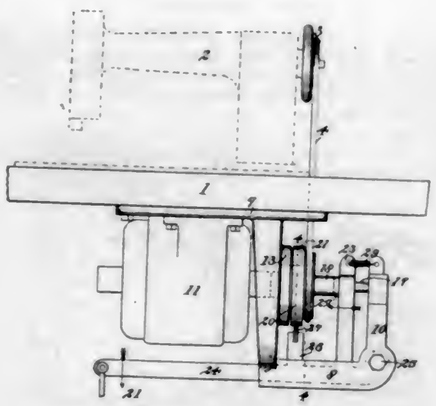
ing around said partition and into the other burning channel in the direction of movement of the material being heated therein, and from the outlet end of said other burning channel out through the outflowing regenerators.

1,687,775. GAME DEVICE. ELIE LESTAGE, New Bedford, Mass. Filed Oct. 18, 1927. Serial No. 226,929. 2 Claims. (Cl. 273—138.)



1. In a device of the character described, a container, having an opening centrally of its top wall, a cone arranged centrally within the container terminating at its upper end beneath the top wall of the container, a plurality of partitions arranged within the container around said cone for dividing the interior of the container into a plurality of compartments, and said container beng formed adjacent the lower ends of the compartments with discharge openings, all in a manner and for the purpose described, the upper end of the cone being open, and a bumper member arranged within the open end of said cone.

1,687,776. BAR-BENDING MACHINE. STANLEY MACOMBER, Massillon, Ohio, assignor to The Macomber Steel Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 21, 1925. Serial No. 57,611. 4 Claims. (Cl. 153—21.)

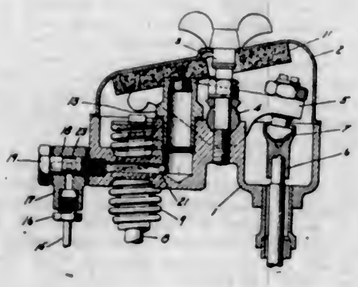


1. In mechanism for reversely bending bar-stock, the combination of a support on the order of a table top, two female swages secured to said top, the latter having a slot extending between said swages, a slide mounted on the under side of said top so as to be reciprocable longitudinally of such slot and wholly beneath said top and a unitary male swage mounted on said slide, the opposite ends of said male swage being formed to cooperate with said female swages, respectively.

1,687,777. POLISH-ROD GRIP. WILLIAM B. MCMURTRIE and WALTER B. GOVER, Shidler, Okla., assignors, by direct and mesne assignments, of one-half to William J. Donohue and one-half to Frank Wolfe, Tulsa, Okla. Filed Sept. 27, 1927. Serial No. 222,393. 1 Claim. (Cl. 24—263.)

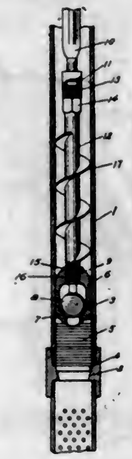
A polish rod grip comprising a sleeve, the bore of the sleeve having an upper threaded portion, an intermediate portion tapering from the threaded portion, and a relatively small portion at the smaller end of the tapered portion for slidably receiving with a close fit a polish rod, wedge shaped slips receivable in the tapered portion, a cap screw threaded in the threaded portion to engage the slips, said slips being arcuate in transverse section and provided with interior notches at their upper ends to form an annular groove, said cap screw having an extension at its inner end with an annular outwardly projecting flange engageable in said notches.

1,687,778. CLUTCH AND BRAKE ASSEMBLY FOR POWER-DRIVEN MACHINES. ALFRED A. MORRIS, Los Angeles, Calif. Filed Feb. 27, 1928. Serial No. 257,328. 1 Claim. (Cl. 192—17.)



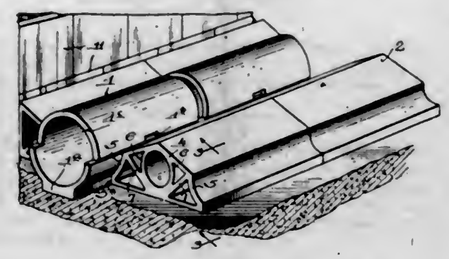
A clutch and brake assembly for power driven machines comprising, in combination with a supporting base, a yoke frame extending laterally from its face and terminating in parallel spaced arms united at their ends by a connecting bracket disposed in parallel spaced relation to the yoke forming members, a motor carried by the base and provided with an armature shaft in parallel alignment with said arms, a shaft fixed to said bracket and extending in parallel alignment with said armature shaft, a clutch member carried by the armature shaft, a clutch member carried by the fixed shaft, rotatable thereon and slidable horizontally thereof into and out of engagement with its cooperating clutch member, a lever extending between said arms and fulcrumed at its end to the base of said bracket, said lever provided with a lateral extension for engaging one of said clutch members to force the same into contact with the other, and further provided with a brake shoe for cooperating with the periphery of said clutch member to arrest its rotation on its disengagement from the other clutch member, and means for automatically holding said lever at the end of its movement in one direction.

1,687,779. LUBRICANT-EXPELLING APPARATUS. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 11, 1925. Serial No. 8,585. 7 Claims. (Cl. 221—47.4.)



4. A booster for a lubricant compressor comprising a body part having a cylinder-bore formed therein, means secured to one end of said body part for making a sealed connection with a lubricant receiving nipple and for establishing communication between said cylinder-bore and said lubricant receiving nipple, a sleeve secured to the other end of said body part, a member slidable within said sleeve and carrying a hollow plunger of relatively small cross-section, said hollow plunger being reciprocable within said cylinder-bore, a conduit connected with said member, a non-return valve positioned between said conduit and said hollow plunger, and a second sleeve swiveled upon said conduit, said first named and second sleeves having a threaded connection for advancing and retracting said hollow plunger in said cylinder-bore by rotation of said second sleeve relatively to said first sleeve.

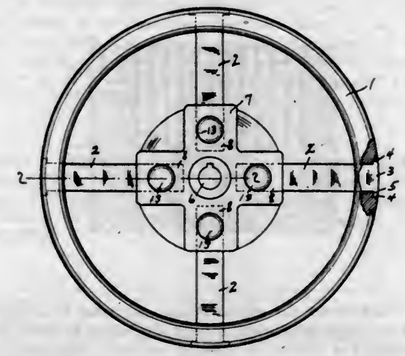
1,687,780. POROUS-METAL PLUG FOR VALVE LUBRICATION. FRED NEALE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 1, 1926. Serial No. 106,017. 3 Claims. (Cl. 184—7.)



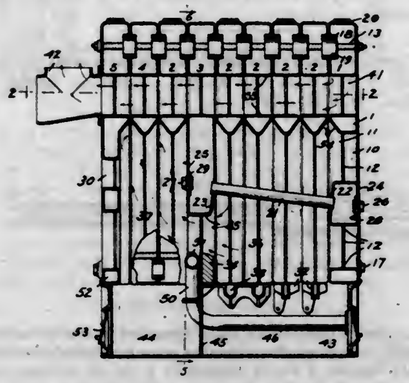
1. A fluid conduit, a terminal porous metal plug therein, having a degree of porosity commensurate with the desired discharge of fluid.

1,687,781. WORKING-BARREL-CLEANING DEVICE. DANIEL E. NORRIS, Robinson, Ill., assignor to Norris Brothers, Incorporated, Robinson, Ill., a Corporation of Illinois. Filed Mar. 1, 1927. Serial No. 171,848. 1 Claim. (Cl. 294—86.)

A barrel cleaning device comprising scrapers adapted to scrape the walls of the working barrel, said device having a screw-threaded lower end adapted to engage a standing valve, the scrapers extending to the upper end of the screw threads, and an upper end adapted to engage an operating rod.



1,687,782. FLOOR BLOCK FOR DISPOSAL TANKS. JOHN M. NORTON, Fort Dodge, Iowa, assignor to Plymouth Clay Products Company, Fort Dodge, Iowa, a Corporation of Iowa. Filed June 20, 1927. Serial No. 200,006. 4 Claims. (Cl. 210—148.)

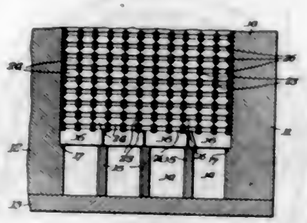


1. A disposal tank or the like having a floor of hollow tile members adapted to be laid end to end in abutting rows and comprising cylindric pipe sections forming parallel conduits and floor blocks having their top surfaces inclined downwardly on opposite sides toward and meeting said pipe sections substantially midway their height.

1,687,783. STEERING WHEEL FOR AUTOMOBILES. FRANK OUGHTON, Youngstown, Ohio. Filed Jan. 4, 1928. Serial No. 244,529. 2 Claims. (Cl. 74—33.)

1. In a device of the class described, a hub portion securely attached to a steering post of an automobile, a plurality of slotted recesses in said hub portion for the purpose of the insertion of spokes, a plurality of removable spokes functioning in said slotted recesses, a rim carried by said spokes, each spoke passing through said rim and securing said rim by means of an outer head, a plurality of keeper lugs for the purpose of securing inner ends of said spokes and means for manipulating the same positioned on the hub portion of said device, substantially as described for the purpose set forth.

1,687,784. SECTIONAL HEATING BOILER. HORACE H. PEEK, Chattanooga, Tenn. Filed May 18, 1925. Serial No. 30,990. 2 Claims. (Cl. 122—225.)



1. A heating boiler comprising, two water container portions, a grate comprising a plurality of independent side by side tubes connected to the near faces of said portions, a rear wall spaced from said portions, openings in the far faces of said portions and substantially in line with said tubes and normally closed by removable closure means, and one or more openings in said rear wall providing access to, and in line with, said tubes.

1,687,785. PROCESS FOR NEUTRALIZING CELLULOSE-BEARING MATERIAL FOR SUBSEQUENT SACCHARIFICATION. JOHN PERL, Los Angeles, Calif., assignor to M. M. Cory, San Diego, Calif. Filed June 15, 1925. Serial No. 37,349. 2 Claims. (Cl. 127—37.)

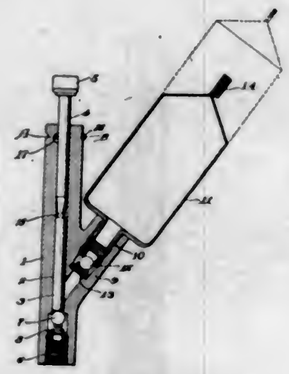
1. The herein described process of pretreatment of cellulose bearing material before saccharification by hydrolysis consisting in neutralizing the natural bases in said material with sulphuric acid.

1,687,786. CHECKERWORK AND BRICK THEREFOR. ALBERT E. PETERSON, Chicago, Ill. Filed Sept. 1, 1926. Serial No. 132,996. 12 Claims. (Cl. 73—15.5.)

1. Checkerwork for regenerators comprising in combination a plurality of courses of brick extending in horizontal directions and placed in rows in vertical directions, the bricks being held in spaced relation with each other in the horizontal courses and arranged in spaced relation with each other in respect to each adjacent course in a vertical direction.

1,687,787. SOFTENING COMPOUND. FREDERICK J. PILGRIM, Detroit, Mich. Filed Dec. 4, 1924, Serial No. 753,930. Renewed Aug. 23, 1928. 1 Claim. (Cl. 87—5.)

A softening compound adapted for attacking lacquered or like surfaces consisting 15% of water, 30% of mineral oil, 3% of soap, 1% of oil of mirbane, 1% of dye, and 50% of tripoli.



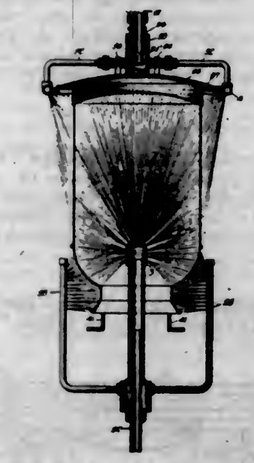
1,687,788. SCREW DRIVER. ABRAHAM S. PINKUS, New York, N. Y. Filed Nov. 3, 1925. Serial No. 66,656. 1 Claim. (Cl. 145—52.)

In a screwdriver of the class described, the combination, a handle, a tubular sleeve having one end slidably inserted in said handle, a shank formed in a bit at one end and spring fingers having inturned ends adjacent said bit slidably inserted with said shank in said sleeve, said spring fingers forming jaws controlled by said sleeve for holding a screw in alignment with said bit, a ferrule on said handle resisting the outward movement of said sleeve, a spring in said handle forcing said sleeve outwards and a sliding member secured to the end of said shank making a non-turning engagement with said handle whereby said bit is operated by the handle.

1,687,789. LUBRICANT COMPRESSOR. EMILE PIQUEREZ, Paris, France, assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 16, 1925, Serial No. 23,741, and in France June 20, 1924. 5 Claims. (Cl. 221—47.4.)

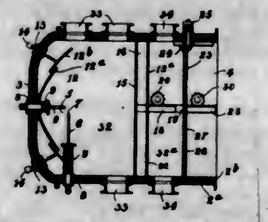
5. A pressure booster device comprising a member having a lubricant chamber, a connection for attachment to a bearing aligned with said chamber, a plunger reciprocable in said chamber, extending therefrom, and having a head at its protruding end, said head being adapted to receive a hammer blow, means to supply said chamber with lubricant under pressure, and a check valve between said last named means and said chamber, whereby said head may be

struck thereby to cause an explosive pressure upon the lubricant in said chamber.



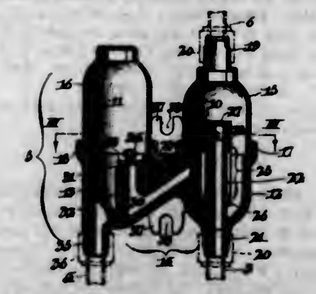
1,687,790. DISPLAY APPLIANCE. JAMES T. POWERS, Chicago Heights, Ill. Filed May 4, 1928. Serial No. 275,059. 2 Claims. (Cl. 40—146.)

1. In a display-appliance, the combination of a base, a standard supported by said base, a ring having an internal circumferential channel mounted on the top of said standard, means adjustably securing together the ends of said ring, a display-plate mounted in said ring with its edge accommodated in said channel, and means to prevent said plate from turning in said ring.



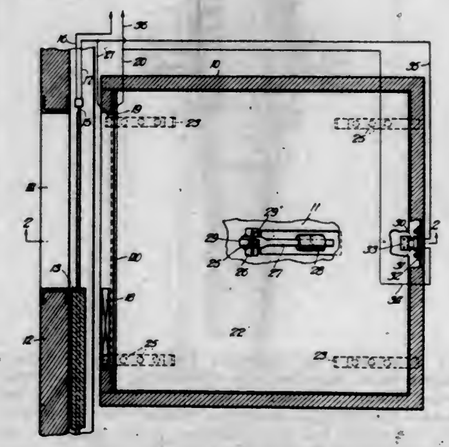
1,687,791. CAN-WASHING MACHINE. HARRY M. PRICE, Waukegan, Ill. Filed July 23, 1925. Serial No. 45,557. 9 Claims. (Cl. 141—7.)

1. A can washing machine of the class described, having means for intermittently feeding the cans from one position to another in said machine, spraying means movable downwardly from above the cans into effective position for spraying the exterior of the end of the cans in one of said positions, and a canopy movable downwardly with said



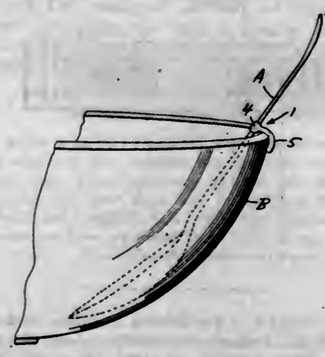
spraying means into position for preventing the spraying fluid from collecting in the cupped bottom ends of the cans.

1,687,792. RADIOCOMMUNICATION. ELMER M. RAVE, Brooklyn, N. Y., ass'gnor of one-third to Benton B. Hale, East Orange, N. J., and one-third to David H. Reid, Brooklyn, N. Y. Filed Oct. 28, 1922. Serial No. 597,508. 7 Claims. (Cl. 250—33.)



1. The hereindescribed method which consists in forming a beam of light, polarizing said beam, projecting it into space, and conducting electricity along said beam.

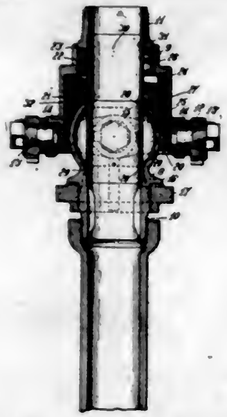
1,687,793. LIQUID-FUEL-FEED SYSTEM. JOSEPH PERCY REMINGTON, Philadelphia, Pa., assignor to Remington Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 17, 1921, Serial No. 508,076. Renewed Sept. 24, 1927. 16 Claims. (Cl. 158—36.4.)



1. A method of feeding liquid fuel under presure, in amounts adapted to varying demand, in a conduit unchecked as against return of excess fuel, but with check-valved delivery; which method comprises exerting sufficiently rapid alternations of suction and pressure on the liquid in said conduit to surge the same inward under the suction impulses with sufficient energy to enable delivery to be made under the pressure impulses, by virtue of the inertia of the incoming fuel, as required by the demand, even with the conduit substantially open at the supply side of the check-valve means; and permitting fuel in excess of the requirements that is drawn inward by the suction to return through the conduit under the pressure.

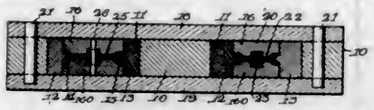
1,687,794. MOVABLE FLOOR FOR ELEVATOR CARS. JOSEPH RICE, Chicago, Ill., assignor to Elevator Company of America, Chicago, Ill., a Corporation of Illinois. Filed Mar. 4, 1927. Serial No. 172,717. 4 Claims. (Cl. 187—29.)

3. A car having a framework, a movable floor carried by said framework, car control mechanism responsive to the position of said floor, means for movably carrying said floor on said framework, said means including a plurality of inclined runways and means, comprising a stop on said floor and a lever pivoted to said framework having a roller at one end engaging said stop and a weight pressing said roller against said stop for urging said floor upwardly along said runways.



1,687,795. SPOON HOLDER. GEORGE T. RITTER, Burley, Idaho. Filed June 25, 1927. Serial No. 201,384. 1 Claim. (Cl. 65—65.)

A spoon holder of the class described formed from an elongated piece of wire bent back upon itself intermediate its ends, a free end of the wire being flattened and bent



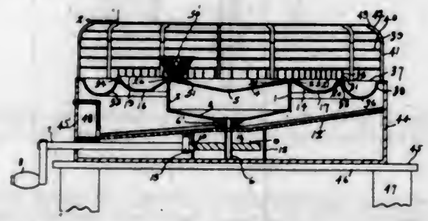
to form a pair of coacting gripping jaws for detachable engagement around the shank of the spoon, the intermediate portion of the wire being curved to provide a hook for engagement over the edge of a receptacle to maintain the spoon in an upright position against the inner face of the side of the receptacle.

1,687,796. FLEXIBLE PIPE JOINT. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Mar. 10, 1927. Serial No. 174,203. 3 Claims. (Cl. 285—93.)

1. A flexible joint comprising a pair of pipe sections of similar inner diameter, one terminating in an enlarged socket member, the other terminating in a hollow ball member, articulating means for holding the ball member centered within the socket member, means housed within the socket member and engaging the outer spherical surface of the ball member for sealing the joint between the members, a cylindrical sleeve of the same inner diameter as the pipe sections threaded within the first mentioned pipe section and extending into proximity with the open end of the ball, and a similar sleeve threaded within the other pipe section and extending through the ball to its open end, whereby when the sections are in alignment a continuous unbroken passage of constant diameter is formed through the joint.

1,687,797. MOLDING DEVICE. HERMAN PAUL SACHSE, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1926. Serial No. 132,966. 3 Claims. (Cl. 18—42.)

1. In a molding device, an upper platen, a lower platen, a mold plate, between said platens, and in contact therewith during the molding operation, said plate having a plurality of openings of the same size and contour, extending through said plate, and sectional matrices interchangeably mounted in said openings, said matrices being adaped to form articles of different sizes.



1,687,798. PULLEY COVERING. ANTON SCHWIEREN, Salisbury, Mo., assignor of one-half to Jesse Lee Frazier, Salisbury, Mo. Filed Mar. 7, 1927. Serial No. 173,602. 1 Claim. (Cl. 91—68.)

As a new product of manufacture, a covering for the surface of a pulley, said covering comprising a backing member of unbleached muslin, and a liquid coating for said muslin, possessing adhesive properties for causing the muslin to stick to the surface of the pulley when applied and for subsequently producing tenacious belt traction, said coating comprising gum arabic, four pounds; ground glue, fifteen pounds; alum, one pound; lampblack, one pound; isinglass, one pound; flour, twelve pounds; sugar, four pounds; and sal soda, one pound.

1,687,799. CASTING FERROUS METALS. PORTER W. SHIMER and EDWARD B. SHIMER, Easton, Pa. Filed Aug. 7, 1925. Serial No. 48,874. 8 Claims. (Cl. 22—184.)

1. A chaplet for use in ferrous metal founding, having a coating of a ferro-alloy which melts at or below the casting temperature.

1,687,800. BASEBALL GAME. GOLDWIN SMITH, Tampa, Fla. Filed May 9, 1927. Serial No. 189,948. 15 Claims. (Cl. 273—110.)

1. In a device of the class described a ball, a rotatable drum having a perforation in its center and having its top sloping upwardly from the center to its outer edge, a stationary circlet surrounding said drum and said circlet having a plurality of holes therein to receive said ball and manually operative means to rotate said drum, substantially as and for the purposes specified.

1,687,801. METHOD OF FABRICATING FELTS AND FELT MATERIALS. HYMAN STEIN and WILLIAM E. AUSTIN, New York, and IRVING LIEBOWITZ, Brooklyn, N. Y., assignors to Stein Fur Dyeing Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1925. Serial No. 8,306. 23 Claims. (Cl. 8—5.)

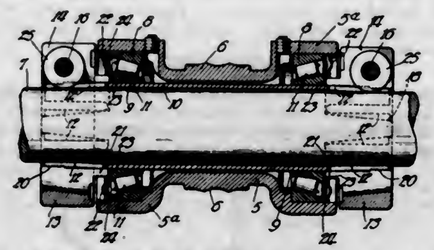
1. The method of treating animal fibres and the like to render the same more suitable for felting operations, which comprises treating such fibres with a metallic compound carroting agent and with a protective agent comprising a ferrous salt to protect such fibres against excess action thereon by a subsequent bleaching agent.

1,687,802. FELT AND FELT MATERIAL AND ARTICLES, SUCH AS HATS AND HAT BODIES MADE OF THE SAME. HYMAN STEIN and WILLIAM E. AUSTIN, New York, and IRVING LIEBOWITZ, Brooklyn, N. Y., assignors to Stein Fur Dyeing Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1925. Serial No. 8,307. 26 Claims. (Cl. 8—5.)

1. A feltable animal fibre impregnated with mercurial and iron compounds.

1,687,803. PROCESS OF AND COMPOSITION FOR BLEACHING. WILLIAM B. STODDARD, Stamford, Conn., and VAMAN R. KOKATNUR, New York, N. Y., assignors to Pilot Laboratory, Inc., Arlington, N. J., a Corporation of New Jersey. Filed Mar. 8, 1927. Serial No. 173,784. Renewed Dec. 29, 1927. 12 Claims. (Cl. 8—2.)

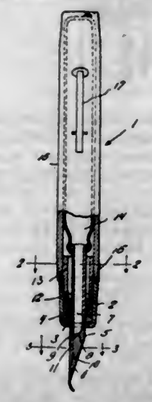
1. The process of bleaching comprising subjecting the food material to be bleached to the action of a peroxidized acid occurring in natural fats and oils.



1,687,804. PROCESS OF AND COMPOSITION FOR BLEACHING. WILLIAM B. STODDARD, Stamford, Conn., and VAMAN R. KOKATNUR, New York, N. Y., assignors to Pilot Laboratory, Inc., Arlington, N. J., a Corporation of New Jersey. Filed June 7, 1927, Serial No. 197,226. Renewed Dec. 19, 1927. 19 Claims. (Cl. 8—2.)

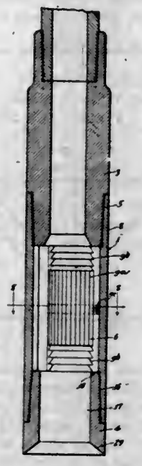
1. A process of bleaching comprising subjecting the material to be bleached to the action of an organic peroxid compound and an activating per-compound therefor, whereby the effectiveness of the bleaching action of the organic peroxid compound is increased.

1,687,805. PROCESS OF BLEACHING FOODSTUFFS. WILLIAM B. STODDARD, Stamford, Conn., and VAMAN R. KOKATNUR, Arlington, N. J., assignors to Pilot Laboratory, Inc., Arlington, N. J., a Corporation of New Jersey. Filed Sept. 2, 1927. Serial No. 217,296. 9 Claims. (Cl. 8—2.)



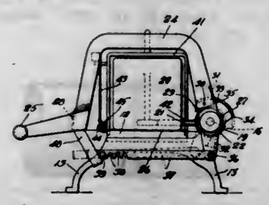
1. The process of bleaching comprising subjecting the material to be bleached to the action of a peroxidized compound constitutionally similar to the vehicle of the coloring matter in the material to be bleached.

1,687,806. BEARING FOR SHAFT SUPPORTS. ARTHUR P. STRONG, Mishawaka, Ind., assignor to Dodge Manufacturing Corporation, a Corporation of Delaware. Filed Apr. 24, 1925. Serial No. 25,462. 7 Claims. (Cl. 308—207.)



1. An anti-friction shaft bearing comprising, in combination, a housing; a tube extending therethrough; tapered roller bearings interposed between the tube and the housing; clamping collars at opposite ends of the housing; the tube being so constructed and arranged that it may be clamped to the shaft at each end by one of the collars; each collar split radially for contraction and having a series of fractional radial slots to facilitate contraction of the collar; and means bridging said split to contract the collar.

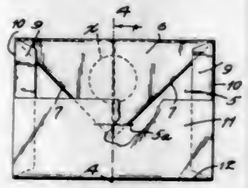
1,687,807. FOUNTAIN PEN. GEORGE T. SWASEY, Raymond, Wash. Filed Sept. 3, 1927. Serial No. 217,370. 2 Claims. (Cl. 120—51.)



1. In a fountain pen, a tubular casing open at its respective ends, an elastic plug supported in the lower end of the casing, a compressing sleeve having its lower end portion threaded in the upper end of the casing, a barrel having its open lower end supported on said sleeve, a feeder having its upper end portion extending through the elastic plug and the sleeve, a pen point disposed against the top side of the lower end portion of the feeder, the upper end portion of the pen point extending into the elastic plug, and an ink sack within the barrel and attached to the upper end of the feeder.

1,687,808. FISHING TOOL. IDRIS THOMAS, Whittier, and ERNEST I. TIBBET, Huntington Park, Calif. Filed May 2, 1927. Serial No. 188,273. 5 Claims. (Cl. 294—94.)

1. A fishing tool for fishing "lost" objects out of a well, having an elongated retaining member for carrying slips, said retaining member having curved faces eccentric to its longitudinal axis and slips of arcuate form carried by the retaining member, having curved faces on one side to cooperate with the curved faces of the retaining member, and having a plurality of teeth on their opposite sides extending longitudinally of the fishing tool, said teeth operating upon a sudden rotation of the retaining member on its longitudinal axis to hold the slips relatively fixed, thereby enabling the eccentric curved faces of the tool to move the slips against the "lost" part, said slips further having circumferentially disposed teeth for gripping the "lost part" to facilitate raising the same out of the well.

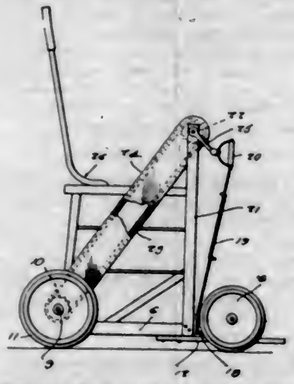


1,687,809. SLICING MACHINE. JOHN C. TROUVALIS, Portland, Me. Filed Feb. 15, 1928. Serial No. 254,378. 4 Claims. (Cl. 31—20.)

1. A slicer of the character stated, comprising in combination a base, a shaft including inner and outer journals rotatable in bearings on the base and an intermediate portion constituting a feed screw, a circular ratchet fixed to the outer journal and concentric therewith, a presser slidable on the base and provided with an arm including a nut engaged with the feed screw, slicing means including a

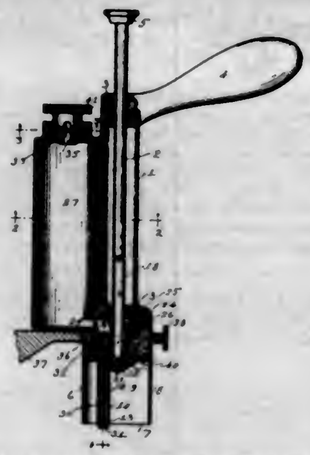
cutter-carrying lever pivoted at one end on the outer journal, and a cutter fixed to the lever, said lever and cutter being arranged to swing in a vertical plane across one end of the base, and cause the cutter to cut a slice from a projected portion of a body on the base, a pawl pivoted to the cutter-carrying lever and normally engaged with the ratchet to rotate the ratchet and feed screw, and feed a body on the base when the lever is moved in a cutting direction, a two-armed tripping lever oscillatable on the outer journal, and having on one arm a tripping shield cooperating with a tail piece on the pawl to disengage the pawl from the ratchet, and a manually operable latch bar pivoted to the other arm of the tripping lever and engageable in different positions with a fixed detent on the base, to vary the position of the shield relative to the path of the pawl, and thereby determine the thickness of a slice severed by the cutter.

1,687,810. COIN-CARRIER PRINT PROTECTOR. JASPER I. VAN VRANKEN, Winona, Minn. Filed Feb. 19, 1926. Serial No. 89,356. 1 Claim. (Cl. 229—87.5.)



A combined envelope and coin carrier constructed of sheet material comprising a substantially rectangular body portion, a substantially rectangular tongue extending from one edge of said body portion and being of the full length of said body portion, but of less width, said tongue being provided with scores so that its corners may be folded inwardly along diagonal lines intersecting the central point of the free edge of said tongue, said corners when so folded forming a triangular coin pocket, said coin pocket being scored and being folded inwardly against said body member, said body member having a slot therein extending substantially parallel to the free edge of said tongue to receive the tip of said coin pocket and lock the same with said body member, said coin pocket lying entirely within the area of said body member when so folded, relatively narrow flaps extending from the side edges of said body portion scored for folding inwardly to engage a flat article disposed over said body portion and said coin pocket and a closing flap portion extending from the lower edge of said body portion scored for folding inwardly against said side flaps to retain said side flaps and form in combination therewith and with said body portion a protective envelope.

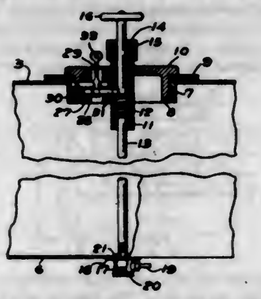
1,687,811. TUBE-SPLICING METHOD AND APPARATUS. NOAH L. WARNER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1928. Serial No. 245,712. 7 Claims. (Cl. 154—14.)



1. The method of splicing together two tube ends of adhesive stock which comprises cuffing back the tube ends and forcing annular zones of the stock at the folds of the cuffs into serrated form and interfitted relation to each other to form a seam and severing the excess of cuffed back stock from the seam on a zig-zag line of cut having relation to the serrated form of the said zones.

1,687,812. PORTABLE CHAIR CARRIER. CHRISTIAN WEBER, Stockton, Calif. Filed Aug. 15, 1927. Serial No. 213,098. 4 Claims. (Cl. 208—32.)

1. In a structure of the class described, a supporting base for a chair, bearing brackets carried by said base, a shaft mounted for rotation upon the bearing brackets, driving wheels on said shaft, a platform carried by said base, steering wheels mounted on said platform, an operating device for the driving wheels located at a point spaced above said base, and an adjustable control device for the steering wheels.



1,687,813. ICE-CREAM SCOOP. EARL W. WERNER, Muskegon Heights, Mich., assignor of one-half to Gail D. Maze, Muskegon, Mich. Filed June 29, 1927. Serial No. 202,205. 9 Claims. (Cl. 107—48.)

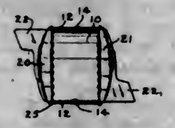
1. In a device of the character described: a body having an end adapted to be thrust into the material and provided with a chamber open at said end and extending in the longitudinal direction of the body, the body having also a rod extending in said direction in the chamber and spaced inwardly from the lateral wall of the chamber; a plunger slidable in the body in said direction and having a head in the chamber through which head the rod extends.

1,687,814. OUTLET LOCK FOR GASOLINE TANKS. ROBERT G. WESTBROOK and STEPHEN A. BROWN, Birmingham, Ala. Filed Sept. 27, 1926. Serial No. 138,086. 1 Claim. (Cl. 70—90.)

A container having opposed inlet and outlet openings, a removable closure member for the inlet opening, a rigid valve stem carried by the inlet opening closure member and extending into proximity to the outlet opening, a valve yieldingly supported by the stem for closing the outlet

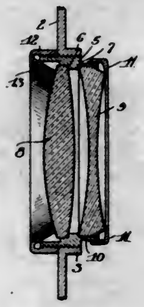
opening, and means for simultaneously locking the valve stem and inlet closure when the valve is seated.

1,687,815. METHOD OF TREATING AND FORMING ARTIFICIAL FUEL. HERBERT E. WETHERBEE, Cleveland, Ohio, assignor of one-third to Richard F. Grant and one-third to Howard M. Hanna, Cleveland, Ohio. Filed Apr. 13, 1926. Serial No. 101,639. 7 Claims. (Cl. 44—18.)



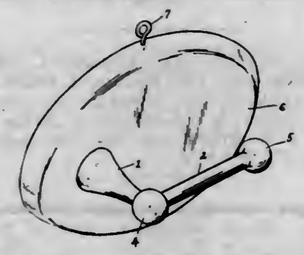
1. The herein described method of treating subdivided fuel materials preliminary to coalescing the same, which consists in subjecting a mass thereof in moistened condition to the action of a filming carrier and a binding material for the fuel, whereby the latter is evenly applied to the fuel particles, substantially as set forth.

1,687,816. GARTER BUCKLE. FRANK E. WILSON, Cleveland, Ohio, assignor to The Wilson Fastener Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 3, 1925. Serial No. 60,138. 7 Claims. (Cl. 24—74.)



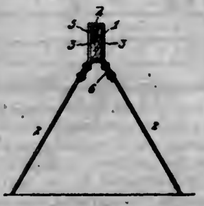
1. In a buckle, the combination of a body and a pair of clamping members each clamping member having a back flange from a portion of which adjacent one end only extends a lever arm overhanging the other clamping member, each back flange being indented at the place of the overlapping of the lever portions of the clamping members.

1,687,817. GARTER BUCKLE. FRANK E. WILSON, Cleveland, Ohio, assignor to The Wilson Fastener Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 7, 1926. Serial No. 153,067. 8 Claims. (Cl. 24—74.)



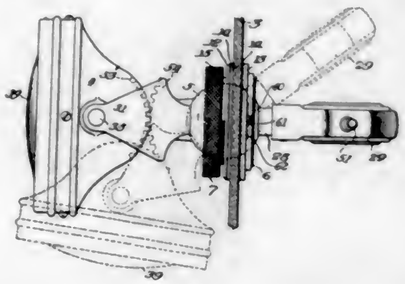
4. In a buckle, a buckle body having its surface concavely formed and a clamping member pivotally connected thereto which when in an open position is formed with a jaw surface to be concave in an opposite direction relative to the body concavity.

1,687,818. LENS MOUNT. ANDREW WOLLENSAK, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 20, 1923. Serial No. 613,899. 2 Claims. (Cl. 88—57.)



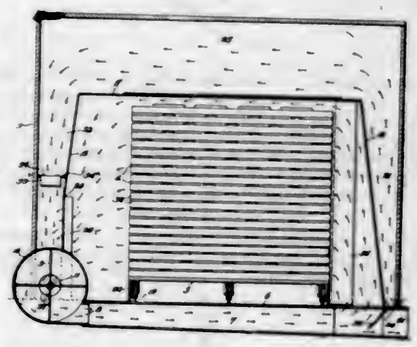
1. In a lens mount, the combination with a tube exteriorly threaded and having an interiorly arranged lens seat and a lens arranged in said seat, of an interiorly threaded ring on the tube having an interior reversed flange extending into the latter and bearing upon the lens to hold it to its seat so that the end of the tube rests in a doubled portion of the ring and a reversed flange bears edgewise against the lens along a line spaced inwardly of the tube.

1,687,819. ROLL HOLDER. JOHN R. WORTHINGTON, Penfield, N. Y. Filed May 13, 1927. Serial No. 191,062. 2 Claims. (Cl. 242—55.2.)



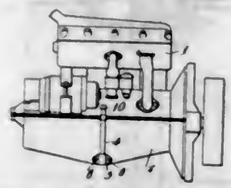
1. A fixed self centered supporting bracket for paper rolls comprising a supporting member, anchoring means at one end of said supporting member, an enlarged ball member of uniform diameter at the other end of said supporting member, a fixed shaft member supported in said enlarged ball member and a second enlarged ball member of uniform diameter at the free end of said pivot member.

1,687,820. BARRICADE. EMIL W. ACKER, Cleveland Heights, Ohio. Filed Feb. 1, 1928. Serial No. 251,088. 2 Claims. (Cl. 256—64.)



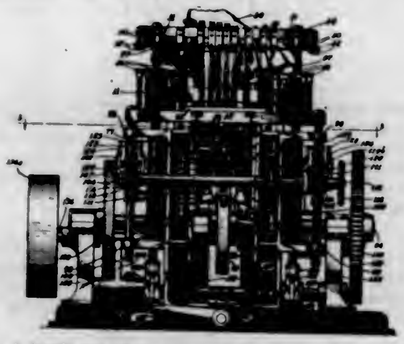
1. A barricade support comprising a metal body member formed into two upwardly converging legs whose upper ends are vertically extended into substantially parallel sections connected at the top by an integral horizontal section, and a strap securing together the upper ends of the converging portions to form an enclosure and support for a barricade end between said parallel sections, said horizontal section and said strap.

1,687,821. SPOTLIGHT. GEDOR W. ALDEEN, Rockford, Ill., assignor to Fyrac Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed Apr. 30, 1926. Serial No. 105,625. 15 Claims. (Cl. 240—61.)



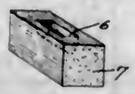
5. In a spotlight, a housing having an opening at one side thereof, a member mounted for substantially universal movement in said housing, a stem connected to and projecting from said member and through the opening on one side of said housing, a spotlight pivotally connected to said stem, means connected with said member for rotational movement with said member about the axis of said housing and secured against pivotal movement relative to said spotlight, means connecting said lamp and first said means whereby said lamp and first said means may be moved relatively and together, and a single handle non-rotatably secured to said member for moving said member.

1,687,822. PROCESS AND APPARATUS FOR REMOVING CHEMICALS AND MOISTURE FROM LUMBER, WOOD, AND OTHER SUBSTANCES. HENRY CLAY BABEL, Buffalo, N. Y., assignor to Myrtle L. Babel, Buffalo, N. Y. Filed Jan. 5, 1925. Serial No. 647. 21 Claims. (Cl. 34—19.)



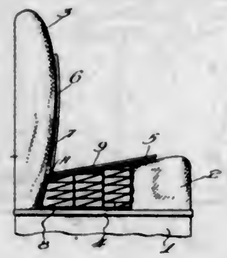
1. The herein described process of drying and treating material which consists in subjecting the material while in a retort to the action of a continuously forced circulating medium, causing the circulating medium to pass horizontally through the material from one side of the retort to the other and downward to the bottom of the retort and to return beneath the material, the medium making its complete circuit within the retort, and exhausting an entire lower stratum of the circulating medium at the bottom below the material while the circulating medium is returning to the latter to eliminate the moisture from the material at the lowest gravitational point at the level of said medium, and reheating the circulating medium after passage through the material and prior to the return of the circulating medium at the bottom of the retort.

1,687,823. FITTING FOR DRAINAGE OF LUBRICANTS FROM LUBRICANT-CONTAINING CASES. LELAND S. BESSONETT, San Francisco, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Jan. 27, 1925. Serial No. 5,178. 2 Claims. (Cl. 184—1.5.)



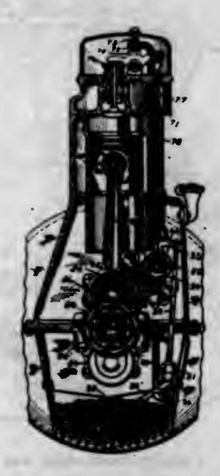
2. The combination of a lubricant containing case having a side drainage outlet near the lowest point of the said case, a fitting secured to the said case in fluid tight relation over the said outlet and having a chamber providing a sediment receiving sump below the said opening, and a vertically extending suction tube rigidly secured to the said fitting and extending into the said sump.

1,687,824. LASTING MACHINE. VIRGIL H. BODLE and FRED C. FRANCISCO, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 1, 1925. Serial No. 40,782. 14 Claims. (Cl. 12—10.)



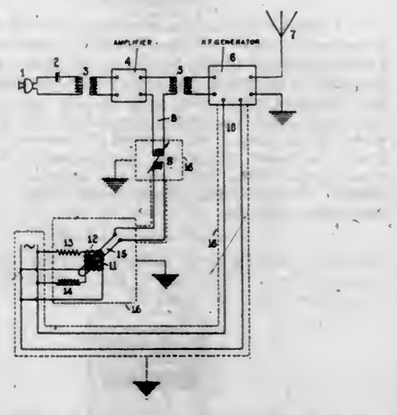
1. A lasting machine comprising a set of jaw carriers defining a lasting position, a pair of gripper jaws mounted on each of said carriers, stock-positioning means mounted on each of said carriers for drawing a piece of stock into the gripper jaws thereon, a jaw-closing member movably mounted upon each of said carriers and adapted in one part of its range of movement to actuate said stock-positioning means and by further movement to close the gripper jaws, means movable with relation to said jaw carriers for concurrently actuating said jaw-closing members, the latter being adapted to be similarly actuated by said actuating means notwithstanding their different positions of adjustment from or toward the lasting position, and means for concurrently adjusting some of said jaw carriers toward and others away from the lasting position to adapt them for right or left shoes alternatively.

1,687,825. DIE BLOCK AND METHOD OF TREATING STEEL FOR USE IN THE MANUFACTURE THEREOF. HERMAN A. BRASSERT, Kenilworth, Ill. Filed Oct. 14, 1926. Serial No. 141,679. 5 Claims. (Cl. 76—107.)



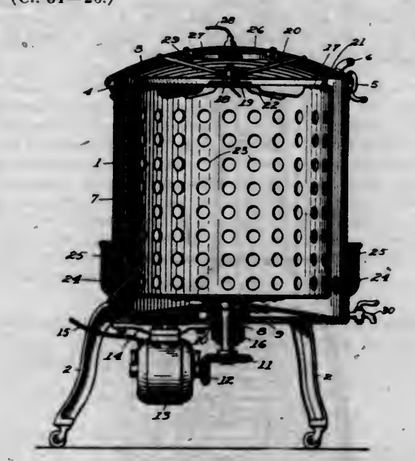
1. The method of making a die block and die from an elongated block having a longitudinal grain which consists in upsetting the block and foreshortening the same by forging in the direction of the grain to substantially the finished dimensions and simultaneously refining the grain structure throughout the block, forming a die impression within the peripheral confines of a face transverse to the orginal longitudinal axis, and by the repeated impact of use, under a forging hammer further refining the remainder of the block.

1,687,826. SUPPORT FOR REMOVABLE SEAT COVERS. HAROLD C. BURKHARD, Chicago, Ill. Filed Feb. 19, 1927. Serial No. 169,566. 2 Claims. (Cl. 155—182.)



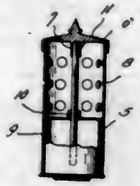
1. In combination with a seat and back therefor, a covering comprising sections of suitable material adapted to overlie respectively the seat and back, a support for said covering comprising an upright adapted to cooperatively engage the back covering and the back, and elements spaced relative to each other projecting from said upright and adapted to cooperatively engage the seat cover and seat, the element engaging the seat covering being slidably adjustable relative to the upright.

1,687,827. METHOD AND CONTROL DEVICE FOR LUBRICATING SYSTEMS. FRANCIS E. BUXTON, Indianapolis, Ind. Filed Jan. 17, 1921. Serial No. 437,961. 8 Claims. (Cl. 184—6.)



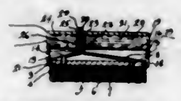
1. A mechanism of the class described comprising a fixed cradle, a bearing element located therein, a crank shaft passing thru and rotatably supported by the said bearing element, said bearing element comprising a rotatable bushing and being provided with a plurality of pockets on its periphery, means for rotating said bearing element, a source of pressure, an inlet opening in the cradle connected to the source and adapted to intermittently communicate with the pockets in their rotation and to deliver oil thereto, outlets from said pockets to the bore of the bushing to supply oil to the crank shaft bearing, and a discharge outlet at a point circumferentially spaced from the said inlet and adapted to intermittently register with said pockets in their rotation, whereby the supply of oil in said pockets will be discharged and renewed upon each rotation of the bearing element.

1,687,828. WIRELESS-TELEPHONE TUBE SENDING STATION. HENRI CHIREIX, Paris, France. Filed July 23, 1923, Serial No. 653,181, and in France Oct. 4, 1922. 10 Claims. (Cl. 250—6.)



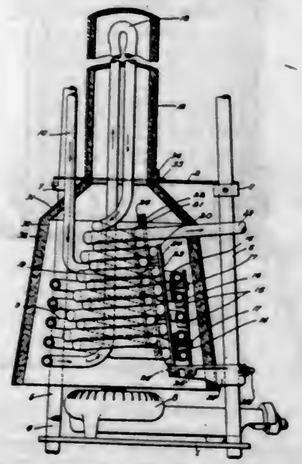
1. The method of eliminating feed frequency tones and harmonics thereof in modulating systems utilizing alternating or rectified currents which consists in deriving from such currents another current and supplying such current to the modulating current in a manner to neutralize the feed-frequency tones.

1,687,829. DRIER. HENRY W. CLARK, Danville, Ill. Filed May 18, 1927. Serial No. 192,400. 3 Claims. (Cl. 34—26.)



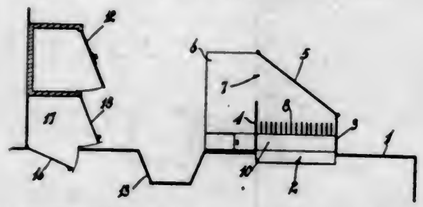
1. In a drier the combination of a rotatable perforated container, means for rotating the container, a heating element adjacent the container, and a cover for the container and comprising in part a fan for producing a flow of heated air from the heating element to the interior of the container.

1,687,830. AIR ODORIZER FOR ELECTRIC FANS. MERRITT A. CLEVENGER, Greenville, Mich. Filed Apr. 18, 1927. Serial No. 184,690. 1 Claim. (Cl. 299—20.)



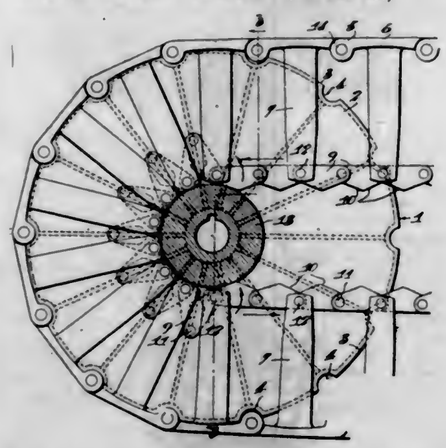
In a diffuser of the class described, a casing open at its upper end, a removable cover therefor, a depending sleeve formed centrally on the bottom of the cover, an odorant container of materially less height than said casing removably arranged within the casing for rest upon the bottom thereof, said container being closed and formed in its top with a filling neck, a wick secured at its upper end in said sleeve, the lower end of the wick extending downwardly through the filling neck into the container, the upper portion of the casing being formed with a series of spaced air openings.

1,687,831. SCRUBBING BRUSH. GUSSIE COHEN, Cincinnati, Ohio. Filed Apr. 2, 1927. Serial No. 180,578. 4 Claims. (Cl. 15—138.)



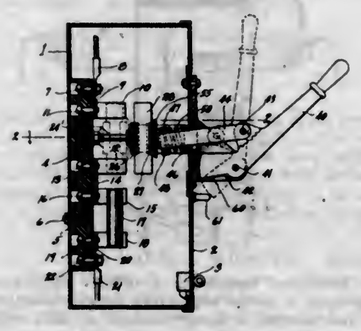
1. A scrubbing-brush comprising a casing having a soap containing compartment therein, a brush secured to said casing and positioned below said compartment, a resilient distributor in said casing and having grooves therein, means to convey the soap from said compartment to said grooves, means to convey said soap from said grooves to the bristles of said brush, and means connected with said distributor and adapted to automatically stop the flow of said soap from said compartment.

1,687,832. STEAM GENERATOR. BASIL POMEROY COOPER, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 608,990. 2 Claims. (Cl. 122—250.)



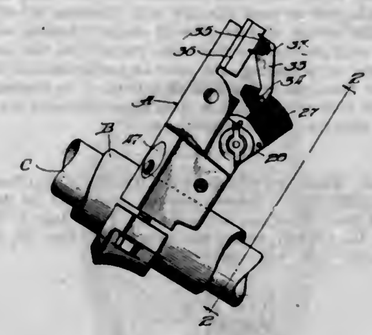
1. A steam generating device, having in combination, a fuel burner, a heat retaining housing surrounding the burner, a plurality of sets of connected, vertically arranged, coils of piping within the housing and heated by the burner, and a water reservoir open to atmospheric pressure and connected to the inlet end of the piping, one set of coils being arranged to be used for generating steam from water therein and another set being arranged to be used for superheating the steam generated in the first-mentioned set, the connection between said sets of coils comprising an inverted U-tube extending above the highest possible water-level of the reservoir, and located within the heat-retaining housing.

1,687,833. BURGLARPROOF BANK CONSTRUCTION. DAVID G. EARL, Long Beach, Calif. Filed Jan. 4, 1928 Serial No. 244,414. 6 Claims. (Cl. 20—1.01.)



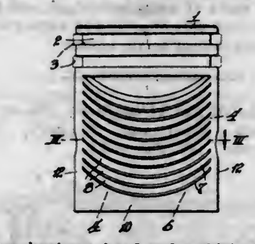
1. A burglar proof bank construction comprising a bullet proof wall, a window in said wall, an inclined mirror back of said window, the teller being adapted to stand to one side of said mirror thus being visible therein to patrons standing in front of the window and a plurality of vertical plates extending across said window to prevent a bandit from placing a gun therebetween and covering the teller a drawer extending transversely across the window and a plate covering the drawer, said drawer and plate being operable by the teller.

1,687,834. TRACTION WHEEL AND CHAIN. CLAYTON E. FREDERICKSON, Chicago, Ill. Filed Nov. 23, 1927. Serial No. 235,340. 2 Claims. (Cl. 305—8.)



1. In a tractor, a bridge truss chain and wheel cooperating therewith, said wheel comprising a hub of relatively small diameter and side members having rim portions of relatively large diameter around which the chain passes, said side members being spaced apart, said chain comprising traction links having arms extending inwardly at right angles to the tread face of the link, and a pair of triangular connecting links between and connecting adjacent arms, said connecting links having their apex projections side adapted to engage the hub of the wheel to "break" the links inwardly and retard opening of the traction links, substantially as shown and described.

1,687,835. SAFETY SWITCH. ANDREW E. GRISWOLD, Seattle, Wash. Filed Dec. 27, 1926. Serial No. 157,155. 3 Claims. (Cl. 200—154.)

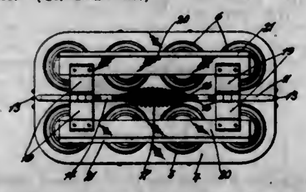


3. In a switch of the character described, a housing, a mounting panel within the housing, switch jaws mounted on the panel adapted for connection with line terminals, a pair of posts fixed on the panel, a switch bar slidably mounted on the posts, switch blades mounted by the bar and movable therewith into and from the jaws, a yoke fixed to the bar having a slot therein, a lever pivotally mounted on the housing, a link pivotally connected at one end with the lever and slidable at its other end through the yoke slot, a cross plate fixed to the latter end of the link and a coiled compression spring disposed about the link between the yoke and said end plate.

1,687,836. AUTOMOBILE LOCK. ORVILLE S. HERSHEY, Chicago, Ill., assignor to Hershey Manufacturing Company, Chicago, Ill., a Corporation of Colorado. Filed June 26, 1926. Serial No. 118,675. 8 Claims. (Cl. 70—127.)

1. In a lock, the combination with an operating member, of a bolt movable into engagement with said member to oppose operation thereof, a rotatable shaft connected with the bolt for advancing the same, a detent for normally preventing movement of the shaft, and release means for the detent extending through the shaft for operation at one end thereof, substantially as described.

1,687,837. PISTON FOR INTERNAL-COMBUSTION MOTORS. ALBERT C. HOECKER, St. Louis, Mo., assignor of one-third to Paul F. Krause, St. Louis, Mo. Filed Jan. 28, 1925. Serial No. 5,214. 6 Claims. (Cl. 74—108.)



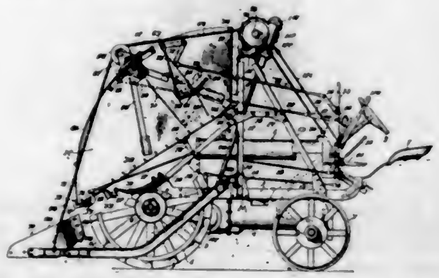
1. A piston having a head and a skirt, said skirt having a series of transverse slots formed therein extending at an angle to the vertical axis of the piston, thereby providing a series of separated portions in the entire skirt length.

1,687,838. MACHINE FOR DISPENSING OIL. ROBERT V. JONES, Chicago, Ill. Filed Jan. 17, 1925. Serial No. 3,034. 2 Claims. (Cl. 194—53.)

1. A coin controlled liquid dispensing apparatus comprising a vertically movable pump actuating member, rotatable actuating means therefor, a pair of oppositely acting ratchet wheels operatively connected with the actuating means, a double acting pawl constantly engaged with one of the ratchet wheels, coin controlled means for actuating the pawl to a position where the actuating means may be free to rotate in a clock-wise direction, a vertically movable rod supported above the pawl, and means operable upon the pump actuating member reaching its limit of travel in an upward direction for lowering the rod against the pawl to disengage one of its arms from one of the ratchet wheels and cause the other arm to engage the other ratchet wheel whereby to allow counter-clockwise rotation of the actuating means.

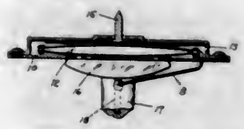
1,687,839. CARRYING FRAME. CHARLES M. KRUGER, St. Louis, Mo. Filed Mar. 23, 1927. Serial No. 177,507. 7 Claims. (Cl. 224—48.)

1. A frame comprising a bottom having depressed portions to contain oil and flat elevated portions to support



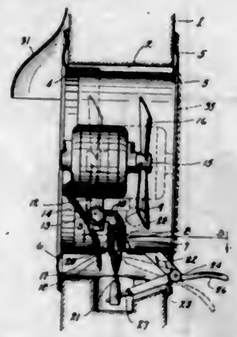
bottles, an upper frame part having openings in vertical alinement with the respective elevated portions of the bottom, a bar extending longitudinally above the frame and having its ends attached to said bottom and to said upper frame part, two parts of arms pivoted to said bar, and a plate attached to each pair of arms and arranged to engage against the beveled ends of bottle spouts.

1,687,840. RAIL-CONNECTING ROD. FRANK H. LAMB, Hoquiam, Wash. Filed Aug. 23, 1926. Serial No. 131,035. 4 Claims. (Cl. 238—53.)



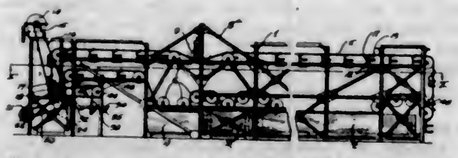
1. A rail tie of the character described, comprising a cross rod, wedge members threaded on the rod for engagement with the under surfaces of the base flanges of the rails, yokes adjustable on the rod and adapted for overlapping flanges of the rails in opposed clamping relation to said wedge members and clamping nuts threaded on the rod for tightening the yokes against the rail flanges and wedge members.

1,687,841. POWER-OPERATED PORTABLE LOADER. GEORGE MANIERRE, Milwaukee, Wis. Filed Dec. 19, 1924. Serial No. 756,943. 9 Claims. (Cl. 214—90.)



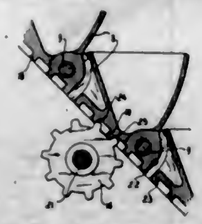
1. In a device of the character described, the combination of a tractor having an engine and a chassis, a hoisting device, an engine shaft, a secondary shaft permanently driven by said engine shaft, a worm gear transmission permanently driven by said secondary shaft, a transmission shaft operatively connected with the hoisting device, and operator controlled means for selectively connecting and disconnecting said worm gear transmission to and from said transmission shaft respectively.

1,687,842. EXPANSIBLE AND CONTRACTIBLE ELEMENT AND MOUNTING THEREFOR. IRA E. MCCABE, Chicago, Ill. Filed Oct. 24, 1927. Serial No. 228,258. 8 Claims. (Cl. 297—9.)



1. An expansible and contractible element comprising a section of flattened resilient metallic tubing with the ends thereof closed and sealed.

1,687,843. VENTILATOR. ALLEN O. MILLER, Seattle, Wash. Filed Mar. 30, 1927. Serial No. 179,586. 6 Claims. (Cl. 98—29.)

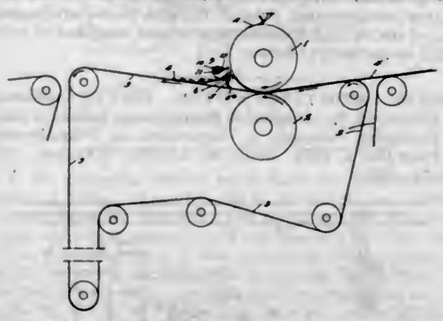


1. A ventilator comprising a thimble applicable to a wall opening, a motor supporting means rotatably fixed within the thimble, a motor mounted by said supporting means, a fan fixed to the motor shaft for driving an air current through the thimble and a lever connected with the supporting means operable from without the thimble for reversing the position of the motor support and motor as a means of reversing the direction of the air current.

1,687,844. PICKLING MACHINE. CONSTANTINE G. MILLER and CHARLES F. CLEVELAND, Chicago, Ill., assignors to The Meaker Company, a Corporation of Illinois. Filed Aug. 22, 1925. Serial No. 51,726. 6 Claims. (Cl. 266—7.)

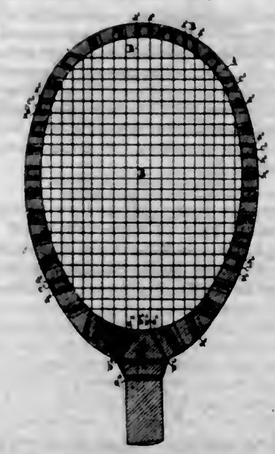
6. In an automatic pickling machine of the class described, the combination with a plurality of tanks, mechanism for carrying a plurality of different articles through said tanks in a certain definite sequence to pickle, rinse and neutralize said different articles, a stationary platform, a movable table positioned adjacent thereto, said mechanisms adapted to pass through said platform to deliver the pickled articles thereon, kick-off means rotatably acting through said platform to discharge the articles therefrom, and means for actuating said table at predetermined times to permit one class of the pickled articles to be discharged from said table while another class of said articles are discharged directly from said platform.

1,687,845. DRIVING GEAR FOR THE BUCKET CHAINS OF DREDGERS. HENRI ARNOLD JOHANNES DE BIJLL NACHENIUS, Haarlem, Netherlands. Filed Aug. 5, 1926, Serial No. 127,387, and in the Netherlands June 30, 1926. 4 Claims. (Cl. 198—203.)



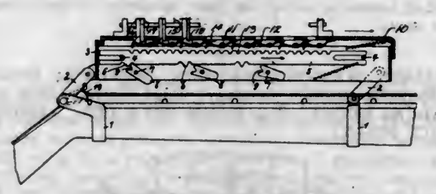
1. An endless bucket chain including links formed as racks, the pitch between the final tooth of one bucket rack and the initial tooth of the next bucket rack being normally less than the pitch of the remaining teeth of a bucket rack.

1,687,846. DEVICE USED IN PIE BAKING. LLOYD FRANK NELSON, Seattle, Wash. Filed Jan. 22, 1927. Serial No. 162,818. 1 Claim. (Cl. 53—6.)



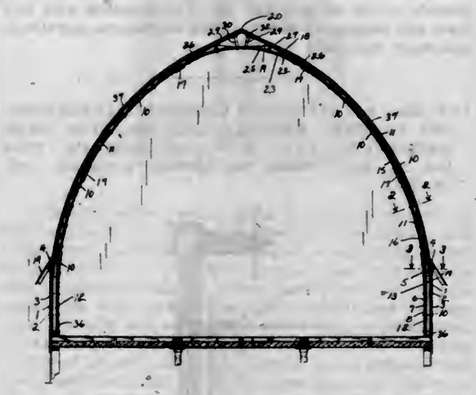
The combination of a pie pan having an upper peripheral flange, a reversible annular trough to catch the overflow from said pie pan, said trough having its outer wall higher than the depth of the pan and provided with perforations and serving to support the pan by the flange in an elevated position to permit the circulation of air below the pan.

1,687,847. PAPER-MAKING MACHINE. ROBERT E. READ, White Plains, N. Y., assignor to International Paper Company, a Corporation of New York. Filed Jan. 6, 1927. Serial No. 159,253. 6 Claims. (Cl. 92—38.)



1. In a paper making machine, the combination of a rotary roll, a traveling member in position to receive the paper web from said roll, a cutting device operable to sever a lead strip on the roll, and a fluid blast device associated with said cutting device and in position to blow on the severed end of the strip and operating to carry it toward the traveling member.

1,687,848. TENNIS AND LIKE RACKET. GEORGE ROBINSON and JAMES ROBINSON, London, England. Filed Mar. 22, 1928, Serial No. 263,882, and in Great Britain Apr. 2, 1927. 2 Claims. (Cl. 273—73.)

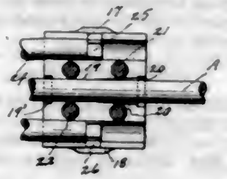


1. A tennis or like racket comprising a frame a plurality of separate strings forming the mesh, groups of holes in the frame through which each end of each string is threaded in and out, the end being ultimately passed under a portion of the string lying between two holes so that when the string is pulled taut it will be gripped and held by this portion without the use of wedges.

1,687,849. PLAYING DEVICE FOR GUITARS AND SIMILAR INSTRUMENTS. THEODOR SCHMIDT, Berlin, Germany. Filed Jan. 8, 1926, Serial No. 80,061, and in Germany Oct. 1, 1925. 3 Claims. (Cl. 84—317.)

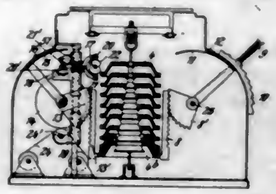
1. A playing device for guitars and similar instruments, comprising in combination string pressing levers, means for swinging said levers into vertical positions, a support holding the whole device vertically movable on the neck of the instrument, and means for pressing the device downward so as to touch the strings by the vertically positioned string pressing levers.

1,687,850. FRAME FOR BUILDINGS. JOHN G. SHODRON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis. Filed Feb. 1, 1926. Serial No. 83,164. 11 Claims. (Cl. 20—1.)



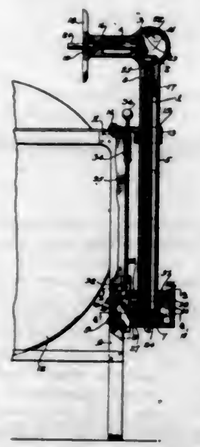
1. A building stud-rafter frame member comprising a set of opposed inwardly curving units, a trussed connecting unit having outer portions substantially tangential to the curving outer surfaces of the first mentioned units and leading to an intermediate peak, said connecting unit having an inner surface constituting a continuation of the inner surfaces of the first mentioned units, each of said units having spaced outer and inner walls with intervening spacing and reinforcing members, and the tension member of the connecting unit being arranged tangential to the inner portion and to extend across the space underneath the peak along the inner wall to junction points in the outer portion at each side of the peak.

1,687,851. COMBINATION CLAMP. OSCAR C. STAPLES, Tulsa, Okla. Filed Jan. 3, 1928. Serial No. 244,186. 6 Claims. (Cl. 24—123.)



1. A combination clamp comprising a pair of clamp members having sockets and rod grooves, a pull loop having

heads engaging in the sockets, bolts securing said members together and for clamping them about a pull rod, and an

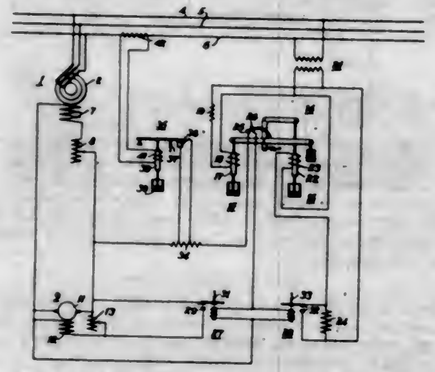


arched handle on one of the clamp members for supporting the clamp.

1,687,852. WEIGHING MACHINE. WILLY PÖLZ, Berlin-Niederschonhausen, Germany. Filed Sept. 28, 1923, Serial No. 665,362, and in Norway May 5, 1925. 9 Claims. (Cl. 265—5.)

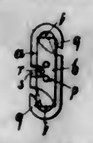
1. A weighing machine comprising a scale beam, a plurality of sets of superimposed weights capable of acting on different points of said beam, the weights in one set being equally heavy, the weights in the set acting on the point of the beam remotest from the fulcrum being heavier than those nearest the fulcrum, means for gradually bringing the weights of one set into and out of cooperation with said beam and registering and recording mechanism operatively associated with said latter means.

1,687,853. ROTATIVE AND LOCKING UNIT-SUPPORTING CLOTHES WRINGER AND INCASING GEAR MECHANISM. DAVID M. WENGER, Leola, Pa. Filed Dec. 28, 1927. Serial No. 243,132. 9 Claims. (Cl. 68—32.)



1. In a rotative unit of the character described, a continuous housing for vertical and horizontal shafts, the vertical shaft having a gear at one end for cooperating with a gear connected to the horizontal shaft, the continuous housing having an enlarged section of spherical formation for receiving the gearing in meshed relationship therein, an opening in the enlarged section of the housing for access to the gearing, and a detachable cover for the opening, bearings within the housing for properly aligning the shafts therein, means at the lower end of the housing for locking the unit at predetermined points in its rotation, and a protective covering for the locking means.

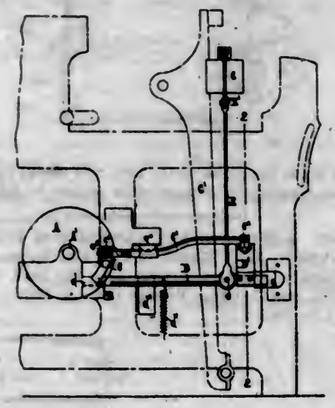
1,687,854. BALE TIE. BERT ANDERSON, Houston, Tex., assignor to Anderson, Clayton & Company, Houston, Tex. Filed Feb. 18, 1928. Serial No. 255,417. 2 Claims. (Cl. 24—20.)



1. A bale tie including overlapping and underlapping ends, the overlapping end having a struck out loop extending longitudinally thereof and providing a longitudinal slot, the said loop and slot having lateral extensions, the underlapping end of the tie having a struck out button provided with an intermediate rectangular head providing abrupt shoulders at opposite sides of the button, the said button being engaged through the slot in the overlapping end of the tie with the shoulders thereof presented in proximity to one end of the loop.

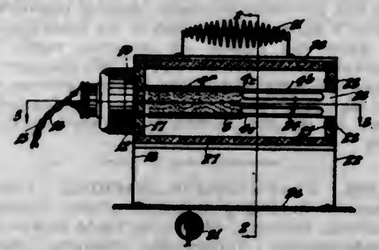
1,687,855. REGULATOR SYSTEM. JOHN H. ASHBAUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 4, 1924. Serial No. 753,867. 6 Claims. (Cl. 171—229.)

1. In a regulator system, the combination with a power circuit and a dynamo-electric machine connected thereto, of means for governing the excitation of said dynamo-electric machine comprising an exciter generator, a regulator and a plurality of relays connected to said exciter generator and actuated in accordance with the operation of said regulator, and means operative upon a predetermined load condition on said machine for extending the normal range of operation of said relays.



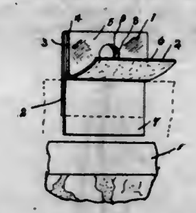
1,687,856. TIGHTENING AND GRIPPING DEVICE FOR STRING EMPLOYED IN THE TYING OF PARCELS. HUGO JOHN BUCHANAN-WOLLASTON, Lowestoft, England. Filed June 11, 1926, Serial No. 115,209, and in Great Britain June 20, 1925. 6 Claims. (Cl. 24—18.)

1. A device to facilitate tightening and automatically to grip string or cord comprising a body having an open-



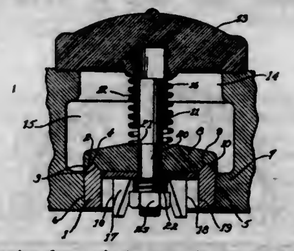
sided aperture therein and a tongue of resilient material having one end rigidly anchored to said body and its other free end partially covering said aperture.

1,687,857. PICKING MOTION FOR LOOMS FOR WEAVING. ALBERT CASS, Manchester, England, assignor of one-half to James Robinson and Alfred Ackroyd, Eccles, England. Filed July 9, 1927, Serial No. 204,626, and in Great Britain July 15, 1926. 4 Claims. (Cl. 139—142.)



1. An underpick motion for a loom for weaving comprising a picker sliding in a slot in the shuttle box bottom, a lever depending therefrom and pivoted to the picker by which the picker is operated, a rod to which the lower end of the depending lever is affixed, bearings in the frame in which the rod is carried and a projecting plate affixed to the rod, a rotary disc, a tappet shaft on which the disc is mounted, a cam on the face of the disc, a lever pivoted between its ends to the frame one end contacting with the cam, a roller on the other end of the lever to contact with the projecting plate on the aforesaid rod whereby an oscillating movement will be imparted to the latter at each revolution of the disc and the movement transmitted to the picker through the depending lever.

1,687,858. ELECTRICAL HEATER. FREDERICK CHARLES CURTIS, London, England. Filed June 6, 1927, Serial No. 196,968, and in Great Britain July 9, 1926. 6 Claims. (Cl. 219—34.)



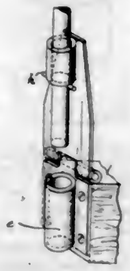
6. An electric heater comprising in combination, an outer cylindrical casing of thin metal supported in a standard, a smaller tube of insulating material having ends of insulating material, and a smaller central tube of thin metal perforated along one portion of its length and wound on the other section of its length with a single layer of a resistance coil insulated on its inner and outer surfaces, the central tube being supported on one end in a recess in a disc forming one insulated end of the insulated tube and carrying the terminals, the central tube being supported at its other end in an opening in the other insulated end of the insulated tube, concentric air spaces being formed between the three tubes.

1,687,859. SUSPENSION DEVICE FOR MAPS, ETC. JESSE W. FONTAINE, Salinas, Calif., assignor to Harry W. Hall, San Francisco, Calif. Filed Nov. 10, 1926. Serial No. 147,568. 7 Claims. (Cl. 24—67.)

1. A device adapted to be detachably secured to a support rod for suspending maps comprising a folded strip of material having the opposed surfaces of its fold flaps coated with an adhesive, means for detachably securing said strip to a support rod, a strip of reinforcing and stiffening material interposed between the said flaps and of less depth than the flaps whereby the free end portions of the flaps will extend below the lower edge of said reinforcing and stiffening strip, said free end portions constituting means for securing said strip to the edge of a map, and a line of stitching run through the said flaps beneath the lower edge of the said reinforcing and stiffening strip.

1,687,860. SLUSH-PUMP VALVE. GEORGE S. FOSNAUGH and BERNARD JOHNSON, Naples, Calif. Filed June 1, 1927. Serial No. 195,637. 3 Claims. (Cl. 251—144.)

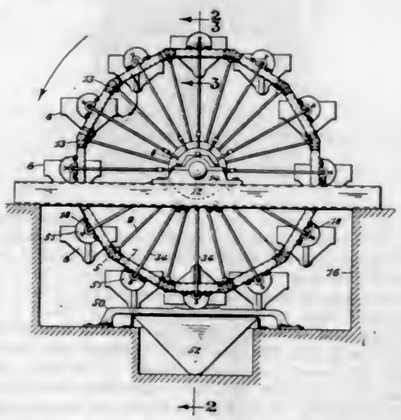
1. In a valve for a slush pump to pump water carrying mud, sand and pebbles, the combination of an annular seat of hardened material having only two substantially conical faces intersecting to form an elevated ridge, and a valve-disk of hardened material having an annular groove on its under side with two substantially conical faces to come upon the said seat, said valve-disk having a guide stem, means for guiding the valve stem to permit the valve-disk to rise off its seat and return thereto, by the action of the pump, said valve-disk and seat cooperating when the valve rises and returns to its seat to crush the sand or pebbles lodging on the seat.



1,687,861. VULCANIZATION OF RUBBER. CECIL JOHN TURRELL CRONSHAW and WILLIAM JOHNSON SMITH NAUNTON, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Jan. 4, 1926, Serial No. 79,260, and in Great Britain Mar. 12, 1925. 1 Claim. (Cl. 18—53.)

A process for accelerating the vulcanization of rubber which comprises combining rubber with dimeta-xylyl guanidine and vulcanizing the rubber.

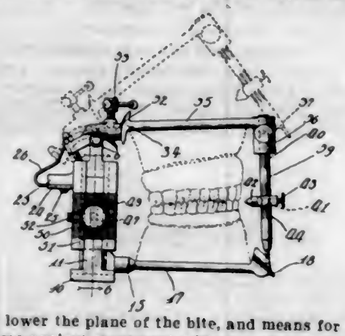
1,687,862. MOSQUITO BAR (OR NET) CARRIER. LUIS DE SENA Y FREIXAS, Habana, Cuba. Filed May 3, 1926, Serial No. 106,588, and in Cuba May 3, 1925. 3 Claims. (Cl. 135—5.)



3. A net carrier for beds comprising a fixed hinge leaf secured to each of the ends of the crosspieces located at

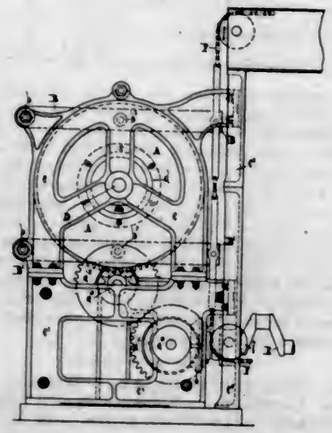
the head and foot of the bed respectively, a movable hinge-leaf pivoted to each fixed leaf, a socket carried by each leaf of each hinge, a rod adapted to slide in the sockets of each hinge and to swing between vertical and horizontal positions, a cross pin on each rod located between the two sockets on each hinge and limiting the movement of

the rod, and means for attaching the net to said rods, the two hinges located at the opposite ends of the head and foot cross-pieces respectively being offset with relation to each other so that the rods carried thereby can be folded down side by side transversely across the bed when the device is not in use.



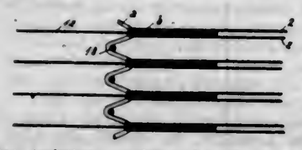
1,687,863. FILTER. WALTON C. GRAHAM, Denver, Colo. Filed July 26, 1924. Serial No. 728,454. 6 Claims. (Cl. 210—196.)

1. A filter comprising a moving carrier, a trunioned filter tray movably mounted thereon, a filtering medium dividing the tray into upper and lower compartments, conduits connecting the trunnions of the tray with the two compartments respectively, and valve means adapted to connect the trunnion connected with the lower compartment, with suction means and to connect the other trunnion consecutively with a feed supply and a source of water supply during determinate periods in the movement of the carrier.



1,687,864. ARTICULATOR FOR ARTIFICIAL DENTURES. D. STANLEY HILL, Effingham, Ill. Filed Oct. 3, 1923. Serial No. 666,217. 3 Claims. (Cl. 32—1.)

1. An articulator comprising a base, a mold supporting member secured thereto, a frame mounted for vertical adjustment on said base, a second mold supporting member pivoted to said frame, corresponding graduations carried by said base and frame, a post carried by said frame having graduations corresponding to those on said frame and base whereby said frame and post may be adjusted to

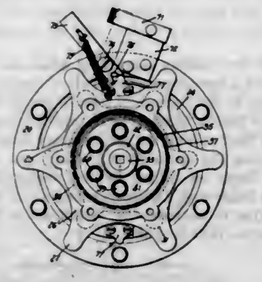


raise or lower the plane of the bite, and means for securing said frame against movement with respect to said base.

1,687,865. SHEDDING MECHANISM FOR LOOMS FOR WEAVING. JOHN HENRY HINDLE and THOMAS HINDLE, Haslingden, England. Filed Aug. 31, 1927, Serial No. 216,678. and in Great Britain Oct. 12, 1926. 2 Claims. (Cl. 139—81.)

1. A shedding motion for looms comprising tappets, having cam grooves on both sides, mounted transversely of the loom, a shaft at right angles to the longitudinal axis upon which the tappets are mounted, tappet levers mounted above and below the tappet shaft, the upper levers engaging and being operated by the cam grooves on one side of the tappets, and the lower levers engaging and being operated by the cam grooves on the other side of the tappets.

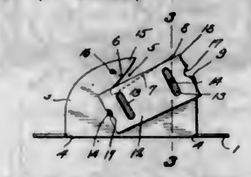
1,687,866. FLAT-KNITTING MACHINE. CHRISTIAN FRIEDRICH KAUFMANN, Heinrichsort, near Lichtenstein-Callnberg, Germany, assignor to David Richter A. G., Maschinenfabrik Tüllweberei, Chemnitz, Germany. Filed Feb. 3, 1927, Serial No. 165,677, and in Germany May 14, 1926. 4 Claims. (Cl. 66—96.)



1. A flat knitting machine for the manufacture of plated fabrics with any desired pattern, comprising a machine bed, a plurality of needles, a plurality of sinkers

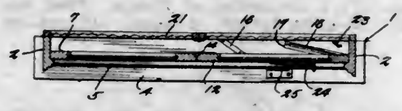
capable of coacting with the needles, an arm fixed to the machine bed, guides on the said bed, small bars in pairs slidable in the said guides, an offset on the small bars, a cylinder, jacquard cards capable of travelling round the cylinders, spring loaded pressure bars for engaging with the said offsets on the small bars and pressing them against the jacquard cards on the cylinder, means for approaching the cylinder towards the small bars, whereby, on the cylinder moving forward, a plurality of pairs of small bars are displaced, according to the perforations in the jacquard card, forwardly towards the needles, of the knitting machine, displacing the ground thread in such a manner that, after the formation of the loop, it lies on the right side of the fabric, as set forth.

1,687,867. STUFFING MATERIAL. HANS OVE LANGE, Copenhagen, Denmark. Filed Nov. 26, 1927, Serial No. 236,024, and in Denmark Oct. 14, 1927. 3 Claims. (Cl. 19—146.)



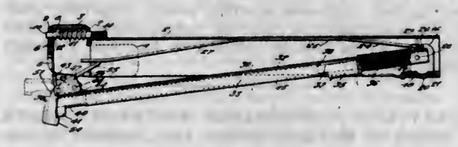
1. Stuffing material consisting of seed hair having feather barbs closely mixed therewith.

1,687,868. ELECTRICAL APPARATUS. RALPH H. LANGLEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed June 10, 1922, Serial No. 567,323. Divided and this application filed Dec. 1, 1926. Serial No. 152,029. 3 Claims. (Cl. 175—41.5.)



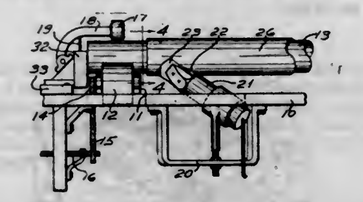
1. In an adjustable condenser, a stator element comprising a stator plate and a rotor element comprising a rotor plate and a switch having one of its elements connected to the stator plate and another one of its elements connected to the rotor plate, said switch being under the control of the rotor element and operable thereby whereby the rotor and stator plates may be connected and disconnected.

1,687,869. CUTTER. WILLIAM P. MARSTON, Jr., Lake Crystal, Minn. Filed Aug. 29, 1925. Serial No. 53,329. 3 Claims. (Cl. 30—14.)



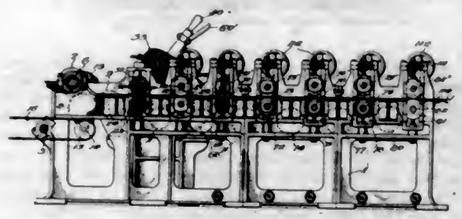
1. A cutter of the class described comprising a base plate having a clamping plate rising therefrom and provided in its upper edge with an inwardly inclined recess with an overhanging nose forming one wall thereof, a cooperating clamping plate correspondingly shaped to the first mentioned plate, said plates having registering apertures for fastening screws, and a reversible blade having transversely extending slots to register with the apertures in the clamping plate, said blade having notched ends to permit its reversibility.

1,687,870. WINDOW DEVICE. CARL E. MATSON, Chicago, Ill. Filed Oct. 22, 1925. Serial No. 64,214. 1 Claim. (Cl. 20—42.)



In a device of the class described, a frame, a first sash, means for mounting the first sash for right-line sliding movement on the frame, a second sash alined with the first sash, means for mounting the second sash on the frame for movement in a direction transverse to the direction in which the first sash slides, for movement in a direction parallel to the direction in which the first sash slides, and for swinging movement about at right angles to the first sash, and a latch-mechanism forming a releasable connection between the second sash and the frame, to limit all of the aforesaid movements of the second sash, the latch mechanism being interposed in the path of the first sash to stop the right-line sliding movement of the first sash when the first sash moves toward open position.

1,687,871. STAPLING MACHINE OR TACKER. ARTHUR H. MAYNARD, Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Me., a Corporation of Maine. Filed Dec. 4, 1926. Serial No. 152,698. 14 Claims. (Cl. 1—49.)

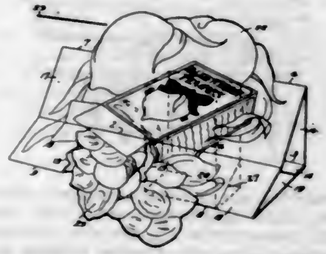


3. A stapling-machine or tacker comprising a channel-shaped sheet-metal handle, a hollow hammer-head also constructed of sheet-metal and having portions secured to the sides of the handle, a staple-core pivoted at the rearward end of the handle and extending forwardly beneath the hammer-head, a staple-driver carried by the hammer-head to be reciprocated across the end of the staple-core, and means for feeding the staples along the core to deliver them successively into position to be acted upon by the driver.

1,687,872. APPARATUS FOR TUBE MANUFACTURE. CHARLES EDGAR MAYNARD, Northampton, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Original application filed May 27, 1926, Serial No. 111,968. Divided and this application filed May 9, 1927. Serial No. 190,037. 4 Claims. (Cl. 164—36.)

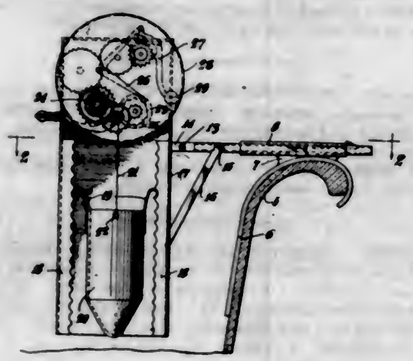
1. A beveling and trimming knife for a rubber tube on a mandrel which comprises a cutting edge curved to encircle the mandrel with a progressively diminishing distance between them, and extending helically of the mandrel, whereby when a tube on the mandrel is rotated in contact with the knife the tube will be trimmed off on a circumferential line and the end of the tube simultaneously skived.

1,687,873. MACHINE FOR PRODUCING FLEXIBLE ROOFING ELEMENTS. OWEN D. MCFARLAND, Chicago, Ill., assignor to Guyton & Cumfer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1926. Serial No. 127,679. 6 Claims. (Cl. 164—28.)



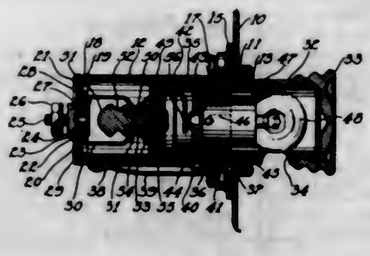
3. Apparatus for producing individual roofing strips from a continuous sheet of flexible roofing material comprising in combination means for feeding said continuous sheet of flexible roofing material, transverse severing means comprising a knife carried by a shaft mounted for rotation, sets of design-forming means, each set differing in design and comprising upper and lower shafts carrying said design-forming means, means individual to each set for throwing said set into and out of operation, means for rotating the transverse severing means and sets of design forming means in timed relation, means for varying the relative speed of rotation of the sheet-feeding and transverse severing means comprising gears of different diameters receiving rotation from the source of power which imparts rotation to said sets of design-forming means.

1,687,874. ADJUSTABLE FASTENING MEANS. JOSEPH C. MCNALLY, Denver, Colo., assignor of one-half to Robert B. Eldredge, Denver, Colo. Filed May 10, 1927. Serial No. 190,247. 6 Claims. (Cl. 156—15.)



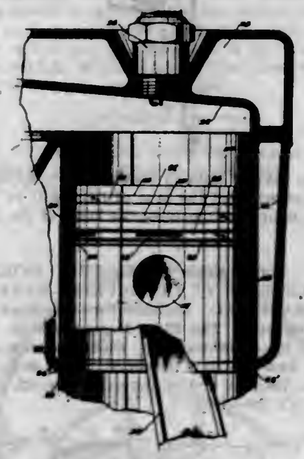
1. A device of the character described comprising a member having an open end, a knurled member adapted to enter said open end, and a washer on the last-mentioned member adapted to engage a knurl thereof when engaged by the open-ended member.

1,687,875. DISPLAY STAND. REGINALD B. MELLER, Alameda, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Jan. 8, 1924. Serial No. 684,965. 6 Claims. (Cl. 40—149.)



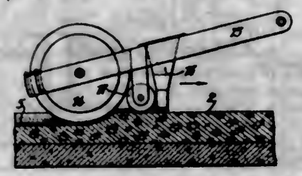
1. A single sheet folded to form a display stand having a base and sides, display designs on one of said sides, a portion of said sheet severed from said base to pivot at one of the folds and forming a perspective surface extending from and at an angle to said design carrying side, said perspective surface correlated with said designs in making a unitary display.

1,687,876. ALARM DEVICE. HUGO MOESER, New York, N. Y. Filed May 2, 1928. Serial No. 274,386. 1 Claim. (Cl. 116—111.)



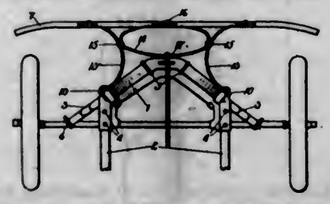
A device for audibly signalling when water in a bath tub has reached a predetermined level comprising a cylindrical casing open at the bottom, a pair of racks fixed to the inner wall of the casing diametrically opposite each other, a hollow metal float, a pair of spring arms attached to the float and engaging the racks with a force just sufficient to support the float, an alarm device mounted on the casing above the float, and a cord connected to the float and the alarm device to actuate the latter when the float is filled with water so that it sinks.

1,687,877. MOTOR-VEHICLE LAMP. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 27, 1926. Serial No. 137,992. 12 Claims. (Cl. 240—8.16.)



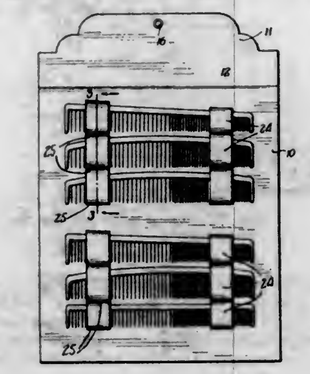
1. A lamp structure comprising a socket member, a plug member mounted to rotate and to move longitudinally in the socket member, interlocking means comprising a tongue extending through the socket member and engaging the plug member permitting rotary and longitudinal movement of the plug member, a lamp in the plug member, a terminal for the lamp and a contact means for the lamp actuated by the longitudinal movement of the plug and permitting rotation thereof.

1,687,878. INTERNAL-COMBUSTION ENGINE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 28, 1924. Serial No. 702,481. 1 Claim. (Cl. 74—109.)



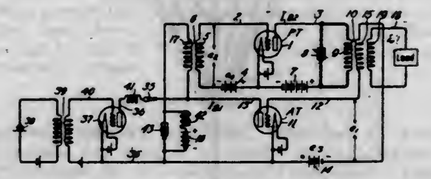
In an internal combustion engine, the combination of a cylinder and a piston therein, said piston having the end of its skirt exteriorly rounded off more on the side receiving the greatest pressure on the working stroke than on the other side.

1,687,879. FORMING WAYS OR DUCTS IN PLASTIC MATERIAL. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Aug. 19, 1925. Serial No. 51,249. 4 Claims. (Cl. 25—128.)



1. In the making of a floor containing a layer of comparatively poor plastic material, the method of forming grooves in said material which consists in applying a comparatively rich plastic material to the top of said layer and passing over the same a roller having a periphery of the desired cross-section of the groove and pressed down sufficiently to force the comparatively rich material down into the comparatively poor material and to form a groove lined with such comparatively rich material.

1,687,880. AUTOMOBILE BUMPER. DON D. MYERS, Toledo, Ohio. Filed Sept. 13, 1920. Serial No. 409,968. 15 Claims. (Cl. 293—55.)

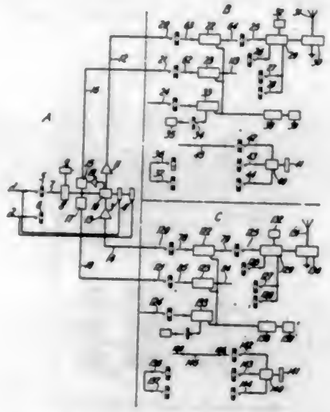


15. An automobile bumper comprising an impact member; an interconnected member forming a unit for absorbing shock on said impact member, said unit being adapted to contact with said automobile substantially at its center line.

1,687,881. DISPLAY DEVICE. HAROLD L. MYERS, Morristown, N. J. Filed Feb. 2, 1927. Serial No. 165,268. 2 Claims. (Cl. 206—80.)

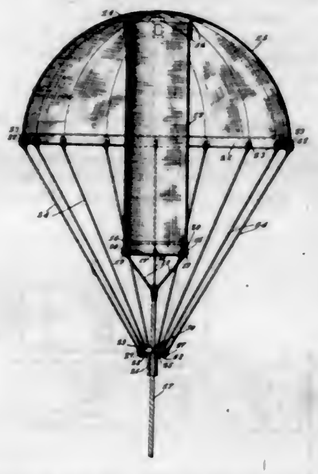
1. In a display device, a panel having a pair of openings therethrough, and means to hold an article of merchandise against the front surface of said panel, said holding means consisting of a keeper having end loops or straps projectable forward through said openings and an integral shank connecting the strap members and lying flat against the rear surface of said panel, the keeper structure including two similar mating shank members secured together and having at the ends of the shank members a pair of straps forming loops to receive and hold the article to be displayed.

1,687,882. OSCILLATION GENERATOR AND MODULATOR. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1923. Serial No. 629,033. 14 Claims. (Cl. 179—171.)



8. An amplifier of the space current type having an input and an output circuit, means for normally blocking the transmission of space current to said output circuit, and means associated with said output circuit for translating a sinusoidal wave into a complex wave, and means for supplying said complex wave to said input circuit.

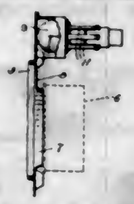
1,687,883. TRANSMISSION SYSTEM. HENRY W. O'NEILL, Elmhurst, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,587. 15 Claims. (Cl. 250—6.)



2. In a radio-wire telephone system, a transmission circuit formed of a land line section and a radio section, means for communicating over said circuit, a monitoring line

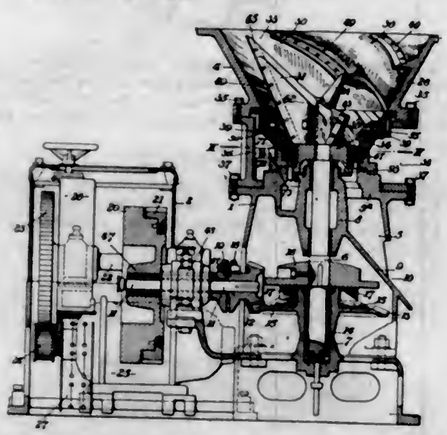
and a plurality of telephone sets therefor, a derived path to join said transmission circuit to said monitoring line, and

means to render said derived path conductive only in the direction from said transmission circuit to said monitoring line.



1,687,884. PARACHUTE. FRANK R. OWENS, Beaver Crossing, Nebr. Filed Aug. 10, 1927. Serial No. 212,055. 3 Claims. (Cl. 244—21.)

1. A parachute having a dome of flexible material, a tube secured therein by one end, said end being in spaced relation to the dome of the parachute, a rigid ring secured in the lower end of the tube, a rope secured to said ring, ropes secured to the lower edge of the dome of the parachute and having a slidable connection with the first mentioned rope.

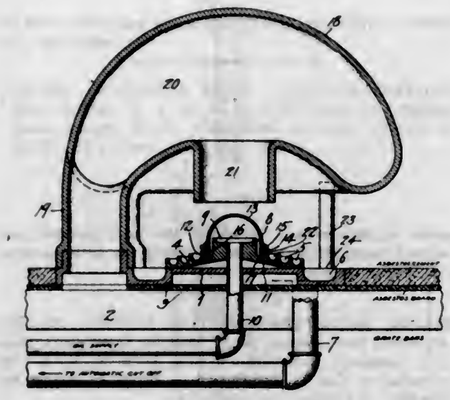


1,687,885. INSTRUMENT PANEL. JOHN R. PADESKY, La Crosse, Wis., assignor, by mesne assignments, to National Gauge & Equipment Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 17, 1926. Serial No. 88,831. 4 Claims. (Cl. 240—8.16.)

1. In a panel assembly, an electric light placed rearwardly of the panel and concealed from the operator at the front thereof, dials for instruments placed on said panel and substantially parallel thereto and having their faces exposed at the front thereof, flanges surrounding said dial faces at the rear of the panel having cut away portions for light openings, a reflector for said electric light formed to

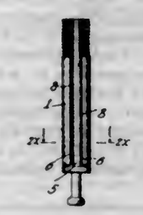
converge the rays of light in radial lines towards the cut away portions whereby the rays of light will be projected through the light openings upon the faces of the dials.

1,687,886. APPARATUS FOR THE UTILIZATION AND TREATMENT OF DIFFICULTLY-MANAGEABLE WASTE MATERIAL. RICHARD PHILIPP, Eisenach, Germany, assignor to The Firm Magnetwerk G. m. b. H. Eisenach Spezialfabrik für Elektromagnet-Apparate, Eisenach, Saxe-Weimar, Germany. Filed Sept. 5, 1924, Serial No. 736,089, and in Germany Feb. 12, 1924. 28 Claims. (Cl. 29—4.5.)



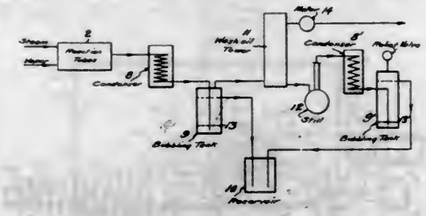
8. Apparatus of the kind described, comprising: a casing, stationary knives helically disposed on the inner wall of said casing, a shaft revoluble and axially shiftable within said casing, a knife head mounted upon said shaft and adapted to cooperate with said stationary knives, knives disposed on said knife head in such angular relation to said stationary knives that a lifting of the knife head is produce on an excessively strong piece of material being engaged by said knives.

1,687,887. SCREW FRICTION LOCK FOR CANS. EUGENE M. PLETCHER, New York, N. Y. Filed Aug. 11, 1926. Serial No. 128,535. 1 Claim. (Cl. 220—40.)



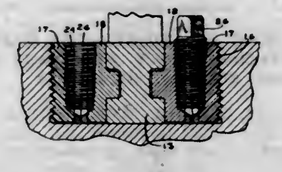
A closure structure comprising a container, provided with a mouth opening having a cylindrical wall, spaced lips depending from the edge of said wall, said lips having lower edges disposed parallel with the peripheral edge of said wall, the junction between the wall and the lips being convexly curved, and a cover having an annular flange contacting with the outer wall of the container, said cover having projecting beads provided with helically-disposed surfaces adapted to engage under the parallel edges of the lips, said surfaces being disposed substantially at or above the lower edge of the annular flange of the cover and contacting wedgingly with the lips of the container to insure a tight seal when the cover is in place.

1,687,888. LIQUID-FUEL BURNER. JAMES OTIS POST, Morristown, N. J. Filed July 16, 1926. Serial No. 122,899. 7 Claims. (Cl. 158—91.)



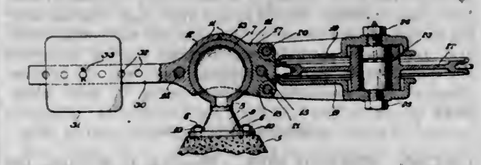
1. A hydrocarbon-burner comprising a base member provided with a centrally disposed basin for liquid fuel, a fuel supply pipe leading to said basin, said base-member having a series of outwardly-stepped concentric grooves, and a cap-member seated in one of said grooves to form a preheating chamber at the top, said cap-member being provided with orifices arranged below the plane of the outer edges of said groove within which the cap-member is seated.

1,687,889. MEANS FOR SECURING INDICATOR FACINGS TO INDICATOR BODIES. PHILIP E. PULVERMAN, New York, N. Y. Filed July 31, 1926. Serial No. 126,267. 2 Claims. (Cl. 73—111.)



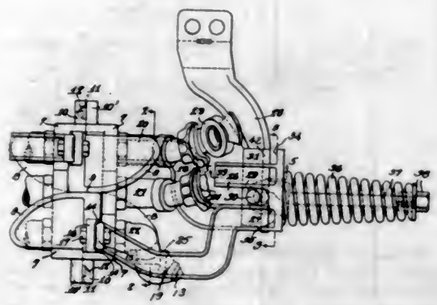
1. In an instrument of the character described, a body member having a pair of channels into which the opposed edges of an indicator facing are adapted to be inserted, one wall of each channel being adapted to be pressed against the edge inserted in said channel to secure the edge therein.

1,687,890. PRODUCTION OF HIGHER-BOILING-POINT HYDROCARBONS FROM LOW-BOILING HYDROCARBONS AND HYDROCARBON GASES. ALEXANDER S. RAMAGE, Detroit, Mich., assignor, by mesne assignments, to Gyro Process Corporation, a Corporation of Michigan. Filed May 13, 1925. Serial No. 30,027. 1 Claim. (Cl. 196—10.)



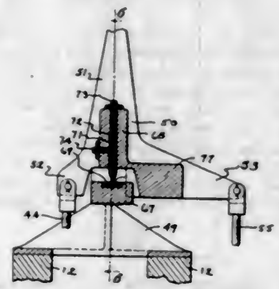
Process of converting low boiling point hydrocarbons into higher boiling hydrocarbons which comprises mixing a hydrocarbon vapor similar to the lighter fractions of casing head gasoline with steam and contacting the resulting mixture with ferrous oxid at a temperature of at least 600° C.

1,687,891. BLADE FASTENING. JAMES L. RAY, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1924. Serial No. 736,652. 7 Claims. (Cl. 253—77.)



1. In a turbine, the combination of a rotor provided with an undercut groove, said groove having a widened portion for the insertion of blades in the groove, blades mounted in the groove, a blade mounted in the widened portion and having a root portion complemental to the undercut groove, a locking piece fitting the root portion of the blade, a filling piece fitting the widened portion of the groove, and wedge means between the locking piece and the filling piece for holding the locking piece, the filling piece and the blade in position.

1,687,892. SHEAVE SUPPORT. PERCIVAL K. REED, Llanerch, Pa., assignor to Atlas Conveyor Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1927. Serial No. 229,601. 5 Claims. (Cl. 254—190.)



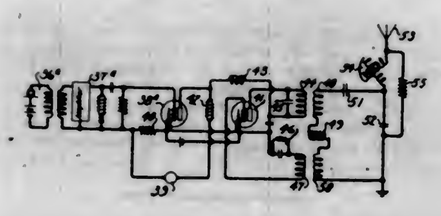
1. A sheave support comprising a spherical member, means for supporting the same, a bracket member having a portion complemental to and movably engaging the spherical member, a sheave supported by said bracket member, a rearwardly extending arm carried by said bracket member, and a counterbalance weight carried by said arm.

1,687,893. AUTOMATIC TRAIN-PIPE CONNECTER. EDWARD A. ROBINSON, Montreal, Quebec, Canada, assignor of one-half to himself and one-half to Ellison E. Workman, Montreal, Canada. Filed May 17, 1922. Serial No. 561,707. 6 Claims. (Cl. 285—24.)

1. In an automatic train pipe connecter, a bracket, a yoke supported by said bracket and having staggered legs extending therefrom, a head provided with staggered engaging prongs, terminals upon the legs having rib contact with the head back of the prongs and fastenings for holding the leg terminals to the head.

1,687,894. HOISTING AND WEIGHING MEANS. HORACE F. RUGGLES, Brooklyn, N. Y. Filed Feb. 15, 1923. Serial No. 619,164. 21 Claims. (Cl. 308—2.)

1. In a weighing device or scale, in combination a weight transmitting lever having a substantially horizontal arm and a substantially vertical arm, a knife-edge fulcrum bearing to receive downward strain upon the horizontal lever-arm, and a separate knife-edge fulcrum bearing to receive horizontal strain upon the vertical lever-arm, the fulcrum edges of said knife-edge bearings being in axial alignment.

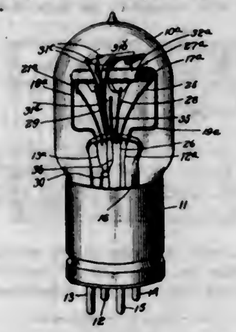


1,687,895. WELDED PIPE. WILLIAM E. RUPLEY, Los Angeles, Calif., assignor to Western Pipe and Steel Company of California, San Francisco, Calif., a Corporation of California. Original application filed Sept. 26, 1925, Serial No. 58,952. Divided and this application filed Aug. 5, 1926. Serial No. 127,353. 5 Claims. (Cl. 137—75.)

1. A stove pipe casing comprising an elongated inner tubular member and an elongated outer tubular member, the said inner member being concentrically positioned within the said outer member so that the end of the inner

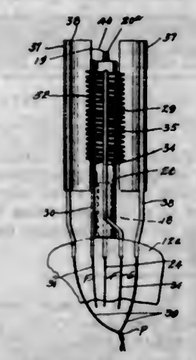
member extends beyond the end of the outer member, and a welded longitudinal seam for securing the outer member to the inner member.

1,687,896. RADIO TRANSMITTING SYSTEM. FRANCIS M. RYAN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1924. Serial No. 704,332. 2 Claims. (Cl. 250—17.)



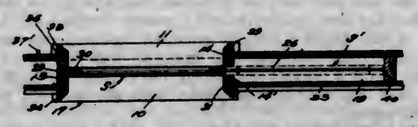
1. In combination, an antenna circuit tuned to the frequency of the wave to be radiated, a closed oscillatory circuit tuned to the frequency of the oscillations to be radiated by said antenna, said circuit including two series capacity elements of widely differing magnitudes the larger capacity element being common to said oscillatory circuit and said antenna circuit, and means for producing and transferring to said oscillatory circuit continuous oscillations of the frequency to be radiated comprising a space discharge device having a cathode, an anode and a grid, input and output circuits therefor coupled by said oscillatory circuit, whereby oscillations of the frequency to be radiated are readily transferred to said antenna circuit to the substantial exclusion of oscillations of higher frequencies.

1,687,897. RADIOTUBE. CONRAD SCHICKERLING, East Orange, N. J., assignor of one-half to Lillie E. Schickerling and Hortense Schickerling, East Orange, N. J. Filed Feb. 6, 1925. Serial No. 7,225. 3 Claims. (Cl. 250—27.5



1. In a radio tube, the combination with filament, grid, and plate elements, of a fourth stabilising element to

eliminate objectionable tube noises, the stabilizing element being a plate disposed centrally and at right angles to

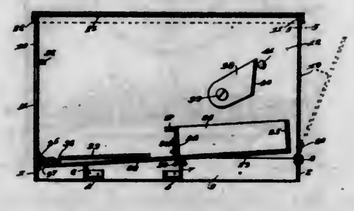


the first mentioned plate, and having electrical connection with the filament.

1,687,898. RECTIFIER TUBE. CONRAD SCHICKERLING, East Orange, N. J., assignor to Hortense Schickerling, East Orange, N. J. Filed June 3, 1925. Serial No. 34,530. 2 Claims. (Cl. 250—27.5.)

1. A rectifier tube comprising a plate element, a porous refractory tube impregnated with a metal of high chemical activity adjacent to the plate element, and a conductor within said refractory tube and spaced from the wall thereof, said plate and said conductor constituting respectively the cathode and anode.

1,687,899. SLIDING WINDOW. HARRY A. SCOPPETTONE, Seattle, Wash. Filed Oct. 7, 1926. Serial No. 139,993. 2 Claims. (Cl. 20—52.1.)



1. A window frame comprising stiles, and sill and head members secured to the lower and upper ends respectively of said stiles, said sill and head members each extending as a tongue element beyond the stile at one side of the frame for a distance approximating the distance between the stiles, said stiles and head members being formed to provide rabbets to receive boarding at the outer side of the frame.

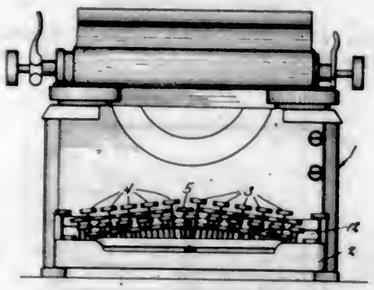
1,687,900. METHOD OF SEASONING WOOD. FORREST STEBATOR SHINN, Galesburg, Ill. Filed Mar. 22, 1927. Serial No. 177,478. 6 Claims. (Cl. 34—24.)

1. A method of seasoning wood characterized by the facts that the wood is first subjected to steam and vacuum treatments, is then subjected to air pressure considerably higher than atmospheric pressure followed by quick release to atmospheric pressure, and is then again subjected to steam and vacuum treatments.

1,687,901. NEST STRUCTURE. CHARLES M. SHILLIAM, Spokane, Wash. Filed June 4, 1927. Serial No. 196,609. 3 Claims. (Cl. 119—50.)

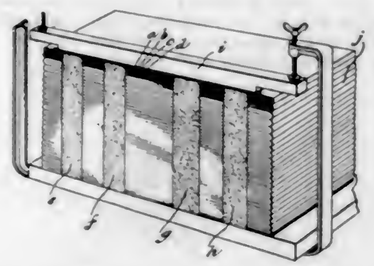
1. In a nest structure, a housing having a door opening in the front wall thereof for ingress and egress of the bird, said housing being normally otherwise closed to ingress or egress of a bird, a nest box rearwardly from said opening and provided on its forward end with a perch and having a forwardly extending door operating bar, means fulcrumly supporting said nest box sufficiently rearwardly of said perch to cause the weight of the bird thereon to elevate said box and lower said bar and the weight of the bird causing said box to descend when sitting on said box, and a door for said opening hinged to swing inwardly and downwardly by gravity onto said bar to form a runway for the bird to walk from said opening toward said perch and box and from said box and perch outwardly through said opening.

1,687,902. CIRCUIT ALARM. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Shoenberg. Filed Mar. 10, 1924. Serial No. 698,014. 1 Claim. (Cl. 177—311.)



As an article of manufacture, a circuit alarm comprising a conductive casing adapted to form one leg of a circuit and having a socket on one side and a plug on the other side, an insulated connection in the plug and another insulated connection in the socket, an electromagnet in said casing connected between said connections, a fixed contact, an armature, for said magnet, a contact on said armature, means normally urging said contacts together, said contacts being connected between said casing and the insulated connection in the socket.

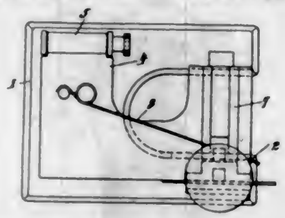
1,687,903. METHOD FOR THE PRODUCTION OF STYROL FROM CHLOR ETHYL BENZOL. OMAR H. SMITH, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Oct. 4, 1927. Serial No. 224,024. 7 Claims. (Cl. 260—168.)



1. A method of producing styrol which comprises subjecting halogen containing alkyl benzols to decomposition temperatures, thereby splitting off hydrogen and halogen, collecting the liquid reaction products, and recovering styrol therefrom.

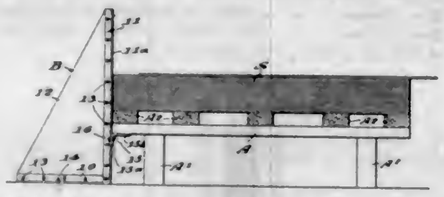
1,687,904. TYPEWRITER KEYBOARD. EMIL S. LARSON, Stanton, and FRANK L. DINSMORE, Prescott, Iowa. Filed Jan. 27, 1927. Serial No. 164,066. 4 Claims. (Cl. 197—98.)

1. A typewriter key-board having the keys of each transverse row of gradually increasing height from each end to the central portion of the row and having those keys upon each side of the transverse center of the board inclined toward the adjacent side of the board, and means to guide said keys upon actuation in planes perpendicular to the planes of the inclination of the rows.



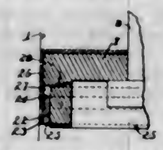
1,687,905. METHOD OF MAKING CONTINUOUS MANIFOLD FORMS. RALPH C. STEVENSON, Brooklyn, N. Y., assignor, by mesne assignments, to Gilman Fanfold Corporation, Limited, Niagara Falls, N. Y., a Corporation of Ontario, Canada. Filed Apr. 25, 1924. Serial No. 708,840. 2 Claims. (Cl. 281—5.)

1. The herein described method of making continuous manifold forms consisting in longitudinally folding a plurality of superimposed, unconnected, previously printed strips having printed matter thereon with the blank spaces on different strips in registering relation one with the other, in a stack, with an edge of different portions thereof in alinement, compacting the stack thus formed, applying padding adhesive to said edge, and thereafter separating each fold of the strips or webs forming the parts of a manifold form from the adjacent folds of the strips.



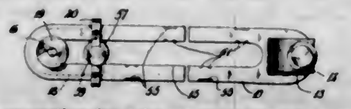
1,687,906. MACHINE FOR FIXING CLASPS. PAUL SWITZENY, Vienna, Austria. Filed May 26, 1927, Serial No. 194,435, and in Austria June 1, 1926. 2 Claims. (Cl. 1—3.)

1. A machine for fixing U-shaped clasps on a package, comprising in combination a bed-plate having a recess therein providing two spaced arms, a top-plate hinged to the bed-plate at one corner thereof, a clasps-guide arranged on the top-plate and disposed at a right angle with respect to the axis of rotation of the said top-plate, a head provided with a driver secured to the top-plate and disposed laterally with respect to the axis of rotation of the



said top-plate above that arm of the bed-plate which is most remote from the said axis of rotation, and a die secured to the bed-plate arm last mentioned.

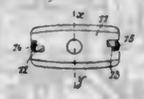
1,687,907. STACKING BRACE. ERNEST W. SYSTROM and JAY F. WARREN, Detroit, Mich., assignors to Robert T. Romine, Mount Clemens, Mich. Filed June 16, 1927. Serial No. 199,356. 10 Claims. (Cl. 214—6.)



1. A stacking brace for aligning metal sheets when stacked on a table or platform, comprising an upright member adapted to abut against a side edge of the table, and an angle secured to said member and having a horizontal flange adapted to extend beneath the floor of the table in engagement therewith.

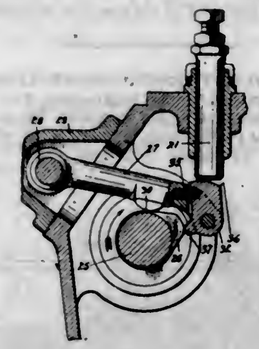
1,687,908. PISTON. GUY B. TIBBOT, Santa Cruz, and FREDERICK R. COOK, San Jose, Calif. Filed Oct. 19, 1926. Serial No. 142,647. 1 Claim. (Cl. 74—109.)

A piston comprising a piston head having an annular shoulder formed in its outer and lower edge, a cup leather mounted on the head and extending downwardly to overlap the said shoulder, an unbroken ring having its outer surface bevelled upwardly and inwardly toward the bottom of the shoulder slidably mounted on the piston head and extending beneath the adjacent edge of the cup leather, and a conduit connecting the chamber formed by the ring, cup leather and piston with the working face of the piston.



1,687,909. JOINT FOR COAL-MINING DRILLS. TONY TUBBIS, New Kensington, Pa. Filed Oct. 22, 1924, Serial No. 745,139. Renewed July 20, 1927. 2 Claims. (Cl. 287—103.)

1. A connection for a brace, comprising an arm having a longitudinal slot therein and spaced apart notches communicating therewith, a yoke-piece mounted on said



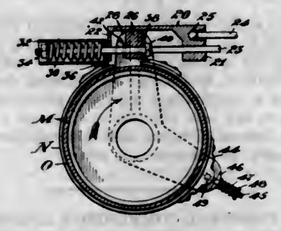
arm comprising a bracket for connecting a bit therewith, an eccentric disc disposed in the longitudinal slot of said arm and suspended from said yoke piece, projections on said disc, and a spring carried by said yoke-piece and urging said disc downwardly to cause the projections thereof to engage in the notches of said arm for retaining said bracket and the bit thereon in a fixed position relative to said arm.

1,687,910. SAFETY RAZOR. RENÉ-MAX VALABRÈGUE, Paris, France, assignor to Le Rasoir Apollo, Paris, France. Filed Jan. 7, 1925, Serial No. 1,006, and in France Dec. 2, 1924. 5 Claims. (Cl. 30—12.)

1. In a safety razor, the combination with a holder having two axes of symmetry at right angle to each other and positioning studs asymmetrically arranged with regard to said axes, of a blade having corresponding asymmetrical cut-out portions cooperating with said studs and also symmetrical cut-out portions.

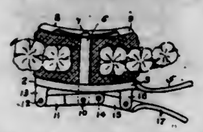
1,687,911. INTERNAL-COMBUSTION ENGINE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1924. Serial No. 742,372. 13 Claims. (Cl. 123—90.)

12. In an internal combustion engine, in combination, a poppet valve, a valve tappet therefor, pivoted means for operating the valve, and means associated with said operating means and adapted to be moved into and out of engagement with the tappet for operating the tappet and valve and for taking up the clearance when the valve is seated.



1,687,912. INSULATED CONDUCTOR. EDMUND B. WHEELER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1924. Serial No. 702,176. 1 Claim. (Cl. 173—264.)

An insulated electric conductor comprising a conductor, a thin inner coating of baked enamel and a thin outer coating of vulcanized rubber, said enamel being too thin to alone serve as a sufficient insulating coating but sufficient to protect the conductor from the deleterious action of the ingredients of said rubber and the said rubber alone being too thin to afford sufficient resistance to moisture

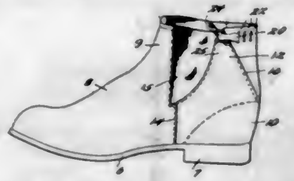


but thick enough in combination with said enamel to produce a satisfactory insulation of great thinness and flexibility.

1,687,913. AUTOMATIC BRAKING DEVICE FOR AUTOMOBILES. ALFRED N. WHITE, Los Angeles, Calif. Filed May 19, 1925. Serial No. 31,301. 4 Claims. (Cl. 188—167.)

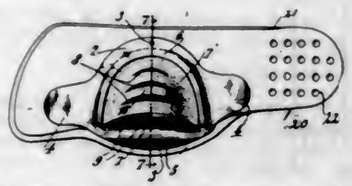
3. An automatic braking device comprising a brake drum, a brake band, a guide bar, a fixed support for said bar, means for securing one end of the brake band to said guide bar, a spring coiled upon said bar and adapted for action on the other end of the brake band, and means for moving the last mentioned end of the brake band in opposition to said spring.

1,687,914. DENTAL IMPRESSION DEVICE. JOEL O. WILDER, Jr., Berkeley, Calif. Filed Oct. 30, 1926. Serial No. 145,108. 2 Claims. (Cl. 32—6.)



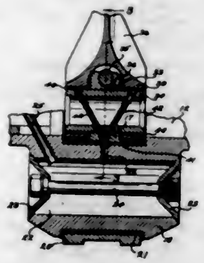
1. A dental device comprising a base plate; a stem passing through said base plate; a compression plate fixed upon said stem; a toggle mounted upon said base plate and engaging said stem.

1,687,915. SHOE. JAMES E. WILLIAMS, Spring City, Pa. Filed Sept. 17, 1927. Serial No. 220,205. 2 Claims. (Cl. 36—50.)



1. In a shoe, an upper, a seamless heel portion and an ankle portion formed integral with each other, said heel portion extending to and being secured to the upper at the sides of the shoe, side portions of elastic material secured between the said ankle portion and the corresponding portion of the upper, the said ankle portion being provided with a slit extending downwardly from its top edge and dividing it into separable parts, a flap arranged

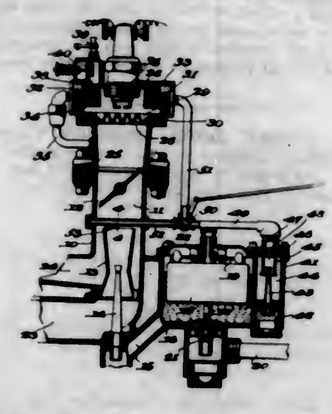
inside the shoe and secured to the ankle portion on one side of the slit and overlapping the slit, and a fastening



which operates to contract the ankle portion of the shoe upon the ankle of the wearer without pulling upon the flap.

1,687,916. ARCH SUPPORT. FRANK WOLF, New York, N. Y. Filed July 7, 1923. Serial No. 649,906. 3 Claims. (Cl. 36—71.)

1. An arch support comprising a support plate provided with yielding ends, a rigid flange projecting downwardly from the central portion of said plate and curved substantially semi-circular, said flange maintaining the plate from flexing about a longitudinal axis and permitting the ends of the plate to flex on a transverse axis, and a pad having edges fitted into said flange and lying against the under side and central portion of said plate.

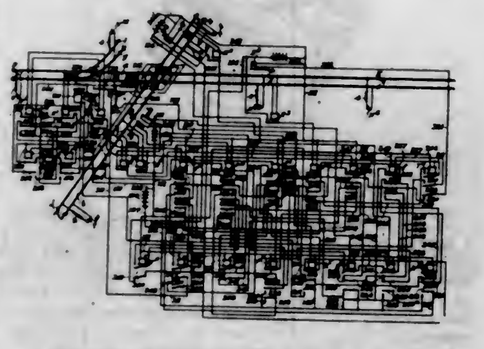


1,687,917. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1925. Serial No. 40,982. 4 Claims. (Cl. 74—17.)

1. In an internal combustion engine, the combination of a crank shaft having a crank pin, a connecting rod having an end adapted to bear on said crank pin, a bearing cap for said end of the connecting rod, studs threaded into said end of the connecting rod and riveted in place, said studs forming dowels for said cap, and nuts for said studs for retaining the cap in place on the connecting rod end.

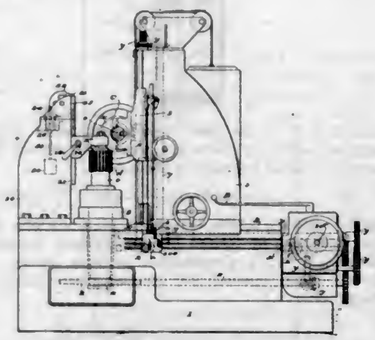
1,687,918. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 18, 1919. Serial No. 331,691. 21 Claims. (Cl. 123—122.)

1. In a hydrocarbon motor, the combination with a motor intake pipe having an opening therein, of a combustion heater secured to said pipe and having an opening registering with the opening in said pipe, and a cor-



rugated plate forming a wall separating the combustion chamber from the interior of the intake pipe.

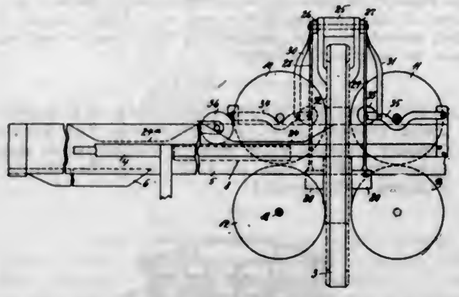
1,687,919. PROCESS OF MAKING SILICA GEL. MAX YABLICK, Newark, N. J. Filed Mar. 10, 1922. Serial No. 542,744. 5 Claims. (Cl. 23—182.)



1. In a process of preparing silica gel, setting free silicic acid and forming a colloidal solution thereof by adding to a solution of a soluble silicate a sufficient quantity of an ammonium salt which will react therewith, free the silicic acid therefrom and yield an alkaline liquor, allowing the silicic acid to gel in the presence of the alkaline liquor resulting in the reaction, washing and then drying the gel.

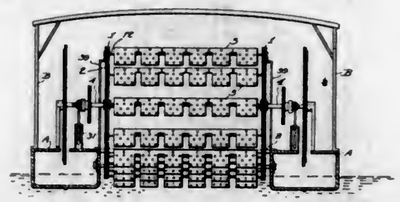
1,687,920. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 18, 1924. Serial No. 687,030. 19 Claims. (Cl. 246—114.)

1. In combination, two intersecting railway tracks, traffic governing apparatus for at least one of said tracks controlled by traffic conditions on said one track and capable of assuming a more and a less restrictive condition, and means for changing such apparatus to or holding it in the more restrictive condition when a train moving in one direction and approaching the crossing on the other track is at a comparatively long distance therefrom and for releasing said apparatus when a train moving in the opposite direction and receding from the crossing on such other track is at a comparatively short distance therefrom.



1,687,921. HOBBER WITH QUICKLY-DEMOUNTABLE ARBOR SUPPORT. WILLIAM F. ZIMMERMANN, Maplewood, N. J. Filed June 16, 1925. Serial No. 37,447. 12 Claims. (Cl. 90—1.)

1. In combination, a supporting member, a supplemental member movably supported thereon; a bearing member slidingly fitted to said members and adapted to be shifted from said supporting member to said supplemental member; means to lock said supplemental and supporting members; and means rendered effective simultaneously with the shifting of said bearing member to render said locking means ineffective.

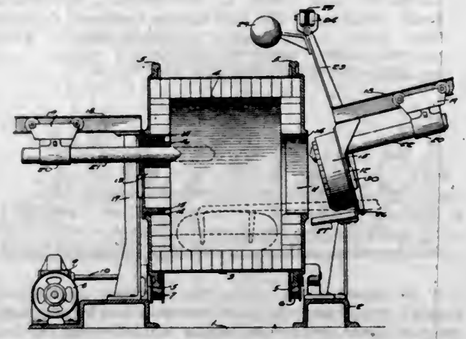


10. A machine-tool combining a support, a supplemental member movably mounted on said support; a bearing member slidingly fitted to said support and to said supplemental member and adapted to be shifted from said support to said supplemental member; means to clamp said bearing member to said support; a single lever for controlling the action of said clamp, said lever also affording means to manually shift said bearing member to said supplemental member and means so to adjust said clamping means that the locking position of said lever is maintained constant.

1,687,922. APPARATUS FOR FILLETING FISH. RUDOLPH BAADER, Lubeck, Germany. Filed Nov. 30, 1927, Serial No. 236,816, and in Germany Sept. 28, 1927. 17 Claims. (Cl. 17—3.)

1. In a filleting machine, primary and secondary pairs of rotary cutters for action respectively on opposite sides of the line of the backbone of the fish, a fish supporting carriage movable relatively to the cutters to present the fish successively to the action of the respective pairs of cutters, and means for controlling the cutters of each pair so as to cause one cutter of each pair to cut vertically from above downward to a certain depth for a portion of its cut and then to cut to a lesser depth for the remainder of its cut and simultaneously causing the other cutter of the same pair to first cut vertically upward for a portion of its cut in the plane of the coacting cutter and to then cut at an upward and inward oblique angle to the vertical during the remainder of its cut.

1,687,923. CURRENT MOTOR. CARL J. BAER, St. Louis, Mo. Filed Mar. 12, 1924. Serial No. 698,691. 8 Claims. (Cl. 170—84.)

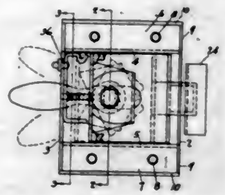


1. A paddle for current motors, comprising a member adapted for contact by the current and provided with a plurality of elongated water-passages extending inwardly from one of its marginal edges, and a plurality of apertures extending through said member, on each side of said passages.

1,687,924. BEARING ALLOY. CHRISTOPHER H. BIERBAUM, Buffalo, N. Y., assignor to Lumen Bearing Company, Buffalo, N. Y., a Corporation of New York. Filed June 4, 1926. Serial No. 113,829. 1 Claim. (Cl. 75—1.)

A bearing consisting of an alloy containing 84.5 percent copper, 10.5 percent of tin, and 5 percent of nickel; said alloy being cast in the absence of zinc against a chill so that the alpha crystal is not hardened but left soft and a large amount of hard delta crystal is formed upon the chilled surfaces, and a wide range of hardness being present between the hardest delta crystal and the softest alpha crystal.

1,687,925. METALLURGICAL FURNACE. ARTHUR J. BRIGGS, Syracuse, N. Y., assignor to Onondaga Steel Company, Inc., a Corporation of New York. Filed Oct. 16, 1926. Serial No. 141,912. 10 Claims. (Cl. 266—1.5.)

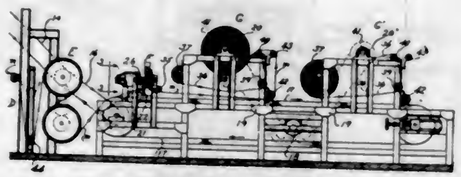


1. A metallurgical furnace comprising a rotatably mounted cylindrical working chamber, having an end opening, a relatively stationary door adapted to substantially close said opening, said door having an opening through which heating means may be advanced into or withdrawn from said chamber, means for permitting the rotation of said chamber about said door as an axis and means for withdrawing said door from said end opening and swinging it laterally away from said opening.

1,687,926. LATCH AND DOGGING MEANS THEREFOR. HARLEY BROOMHALL, Shelby, Ohio, assignor to The Shelby Metal Products Company, Shelby, Ohio, a Corporation of Ohio. Filed Apr. 23, 1926. Serial No. 104,134. 6 Claims. (Cl. 292—169.)

1. In a latch, a body, a latch member slidable in the body, means for securing the latch member in projected or re-

tracted position relative to the body, and spring means co-operating with said latch member and with said securing



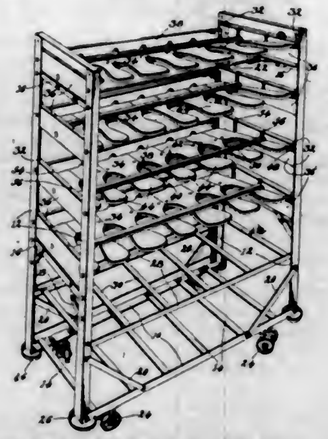
means and serving to normally project the latch member relative to the body and to hold the securing means against casual displacement.

1,687,927. MEANS FOR APPLYING TO USEFUL PURPOSES THE ENERGY DEVELOPED THROUGH THE MOMENTUM OF MOVING TRAINS. BENJAMIN B. BRYAN, Jr., New York, N. Y. Filed July 9, 1926. Serial No. 121,300. 2 Claims. (Cl. 246—245.)

1. The combination with a railway and a train movable thereon, of an electrical generator located adjacent a section of said railway, transmission means extended along said section and movable with the train, means actuable by an approaching train to set said transmission means in motion, and co-acting means between said train and transmission means for the operation of said generator by the train momentum.

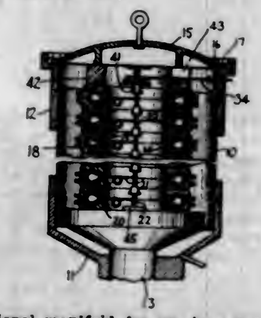
1,687,928. AUTOMATIC CUTTING DEVICE. MARTIN CASTRICUM and PERCY L. BUTTERFIELD, Springfield, Mass., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 13, 1925. Serial No. 68,839. 4 Claims. (Cl. 242—56.)

1. An apparatus for cutting into lengths a continuously supplied web of material being furnished at a substantially constant speed, comprising means for delivering the material from the cutting point, a floating roll constructed to take up slack between the supply and the delivery of the material and normally to control by its position the speed of the delivery, means for temporarily accelerating the delivery, means controlled by the approach of the floating roll to its upper limit for arresting the delivery, means similarly controlled for cutting the material while its motion is thus arrested, and means controlled by the approach of the floating roll to its limit for restarting the delivery in normal operation.



1,687,929. TORPEDO CASING. CLEMENT CIMOROSI, Elkton, Md., assignor to Alberto Cimorosi, Elkton, Md. Filed Apr. 8, 1927. Serial No. 181,939. 1 Claim. (Cl. 229—5.6.)

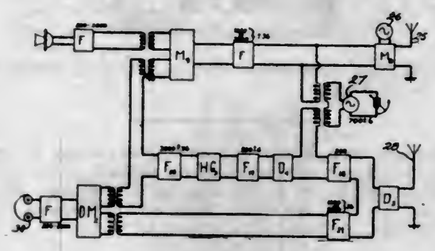
A torpedo casing consisting of a tube of substantially greater length than the torpedo for which it is designed, the free ends of the tube being bent inwardly at a right angle to the axis of the tube then outwardly with the edge of the outwardly bent portion engaging the interior



cylindrical wall of the tube thereby providing a flat top covering substantially the entire area of the end of the tube but leaving a small opening in the center.

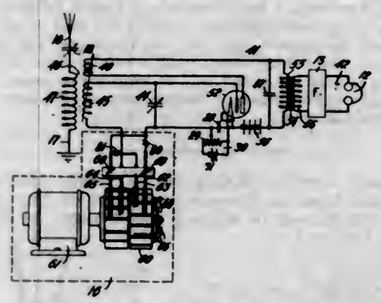
1,687,930. SHOE RACK. WARREN E. COOMBES, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 19, 1926. Serial No. 123,386. 10 Claims. (Cl. 211—36.)

1. A shoe rack comprising a plurality of shoe-supporting members, a shoe-positioning member, and means for locating the positioning member relatively to the shoe-supporting members in positions for contacting with different portions of shoes carried in the rack at different stages of their manufacture for maintaining the shoes in position upon the supporting members.



1,687,931. HEATER CONNECTION. WILLIAM E. EDGETT, Indian Orchard, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1922. Serial No. 601,217. 3 Claims. (Cl. 18—17.)

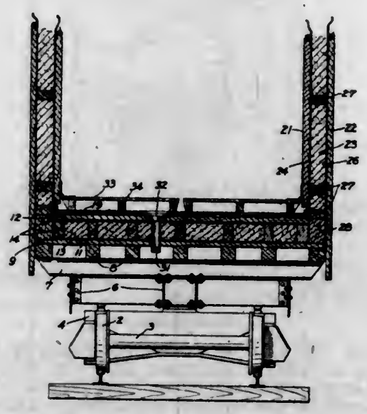
1. A sectional manifold for use in a vulcanizing press comprising a series of loosely assembled sections adapted to rest on one member of the press, the uppermost section



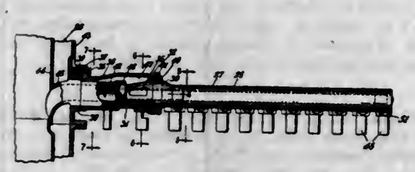
being connected to a source of fluid pressure and provided with a yielding member positioned to engage the other press member upon closing of the press to force the sections into fluid tight relation.

1,687,932. SECRET SIGNALING. JOHN F. FARRINGTON, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 2, 1923. Serial No. 648,887. 16 Claims. (Cl. 178—44.)

1. The method of secret signaling comprising modulating a carrier wave by the signal to be transmitted to produce side bands of signaling-frequency width, and causing the side band frequencies to vary cyclically in frequency with respect to the carrier frequency.



1,687,933. ELECTRICAL SIGNALING SYSTEM. JOHN F. FARRINGTON, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1923. Serial No. 670,694. 5 Claims. (Cl. 250—20.)



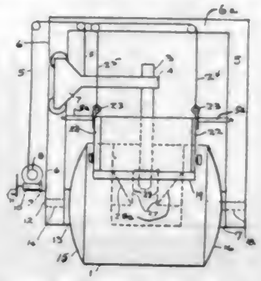
1. In a signal receiving system, an electric discharge device, circuit connections therefor, for rendering said device capable of building up oscillators, means for impressing received signal waves on said device, a substantially non-inductive resistance element, and a mechanical interrupter for controlling the connection of said resistance in the circuit of said device whereby the amplitude of the built up oscillations is controlled in accordance with said received signal waves.

1,687,934. REFRIGERATOR-CAR CONSTRUCTION. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed May 17, 1926. Serial No. 109,541. 5 Claims. (Cl. 105—423.)

1. In a car construction, a floor comprising an upper and a lower sheathing, an insulated filling interposed between said upper and lower sheathing, a sheet saturated with semi-solid material and secured to said upper sheathing, and a bitumen coated fibrous sheet secured to said first mentioned sheet and forming the wearing surface of the floor.

1,687,935. FURNACE RABBLE ARM. EDWARD J. FOWLER, Redwood City, Calif., assignor to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1927. Serial No. 176,592. 13 Claims. (Cl. 263—26.)

1. A rabble arm comprising a plurality of sections each having individually demountable rabble teeth mounted in fixed position along the sections, and quick-detachable connecting means for the sections.



1,687,936. ELECTRIC FURNACE AND METHOD OF OPERATION. ALBERT E. GREENE, Medina, Wash. Filed May 18, 1925. Serial No. 31,214. 3 Claims. (Cl. 75—22.5.)

1. The method of making and finishing a heat of steel in an electric arc furnace, said method consisting in producing a bath of molten steel in the furnace and a covering of slag, and after the steel is all melted and ready for the finishing deoxidising treatment, adding a shovel of silica sand under an electrode on top of the slag and adding a carbonaceous reducing agent on top of the sand thus added and subjecting the mixture to the heat of the arc until silica is reduced and the steel underneath is deoxidized and finished.

1,687,937. ELECTRIC FURNACE AND ELECTRODE CRANE. ALBERT E. GREENE, Medina, Wash. Filed Nov. 20, 1920, Serial No. 425,470. Renewed May 12, 1923. 14 Claims. (Cl. 266—1.5.)

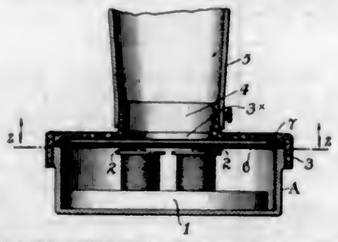
1. In combination a movable electric heating furnace, a carrier therefor, electric conductors along the line of said

carrier, movable electric current contacting members attached to said furnace said contact members maintaining

electrical connection between the furnace members and the source of supply of current.

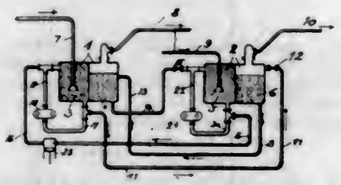
1,687,938. METHOD OF PRODUCING COILS OF FLEXIBLE MATERIAL AND COILS AND CORE MEMBERS RELATING TO SAME. ROBERT MCC. JOHNSTONE, Roselle Park, N. J., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 22, 1926. Serial No. 150,124. 4 Claims. (Cl. 242—68.)

3. As a new article of manufacture a core member having unreduced portions and partly severed portions, the latter at points in spaced relation corresponding to the width of sections of flexible material to be wound on the unreduced portions of the core member.



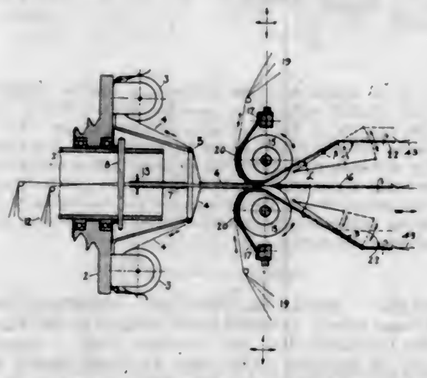
1,687,939. TYPEWRITING MACHINE. ROBERT MCKEAN JONES, Stony Point, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 19, 1927. Serial No. 192,656. 9 Claims. (Cl. 197—100.)

1. In a typewriting machine for writing the Japanese katakana alphabet, a keyboard and type bar system wherein the characters employing the same vowel sound are arranged substantially vertically or up and down in the keyboard.



1,687,940. SOUND TRANSMITTING AND RECEIVING APPARATUS. AUBREY M. KENNEDY, New York, N. Y. Filed Mar. 6, 1926. Serial No. 92,084. 3 Claims. (Cl. 179—124.)

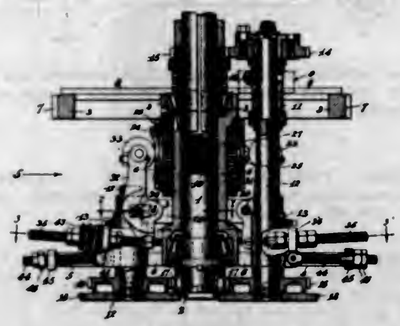
1. In sound transmitting and receiving apparatus, a casing having a sound discharge aperture, a metallic diaphragm within the casing and a thin leather material under tension and held in said casing adjacent the metallic diaphragm and co-extensive with its exposed area so as to com-



pletely shield the discharge outlet from the direct vibrations of the diaphragm.

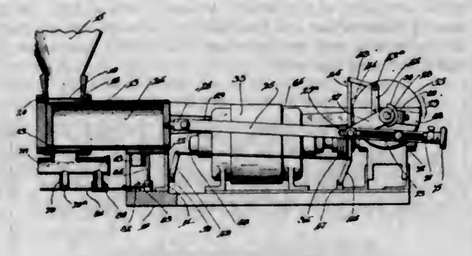
1,687,941. STEAM AND OTHER VAPOR POWER PLANT UTILIZING CAUSTIC SODA OR OTHER AUXILIARY FLUIDS. ERNST KOENEMANN, Berlin, Germany. Filed Nov. 10, 1925, Serial No. 68,241, and in Germany Nov. 12, 1924. 2 Claims. (Cl. 122—21.)

1. An apparatus of the character described, comprising in combination, a mixing vessel and an evaporator disposed in contiguous relation to each other, said mixing vessel being adapted to contain an auxiliary fluid, means for introducing a vapor under pressure into said mixing vessel, means in communication with said evaporator for discharging steam therefrom, a main circulatory system between said mixing vessel and evaporator whereby the fluid in the mixing vessel is caused to flow into the evaporator and thence back into the mixing vessel, and a subsidiary circuit for causing circulation of the fluid in said mixing vessel, said subsidiary circuit being in communication with said main circulatory system.



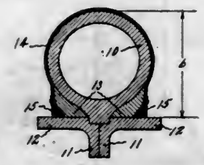
1,687,942. CHENILLE-MAKING MACHINE. EMMERICH KRIEGL, Glauchau, Germany. Filed Mar. 28, 1927, Serial No. 179,142, and in Germany May 7, 1926. 19 Claims. (Cl. 117—14.)

11. In a winding and twisting machine for simultaneously making numerous chenille strands, comprising means for winding a pile-forming thread; means for laying a series



of opposed inner and outer warp threads for said windings and jointly feeding the same; a series of cutting devices for said windings in the feed path between each pair of warps; and a separate twisting device for each pair of warps; a receiving form for said windings having inner warp guiding projections extending between said cutting devices, and outer warp guides having similar projections co-extending with said first named projections and in spaced relation to the latter, the opposed surfaces of said projections being reversely curved.

1,687,943. SEAMING MACHINE. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Oct. 14, 1926. Serial No. 141,492. 6 Claims. (Cl. 113—24.)



1. The combination with a tiltable seaming tool shaft pivotally supported at one end and slidingly supported at the other, of pivotally supported levers, cams to actuate said levers, connections extending from said levers to the slidably mounted end of the shaft, and spring means to normally urge the levers and thereby the slidable end of the shaft in one direction, and spring means admitting of movement of the slidable end of the shaft in the same direction independently of the movement of the levers.

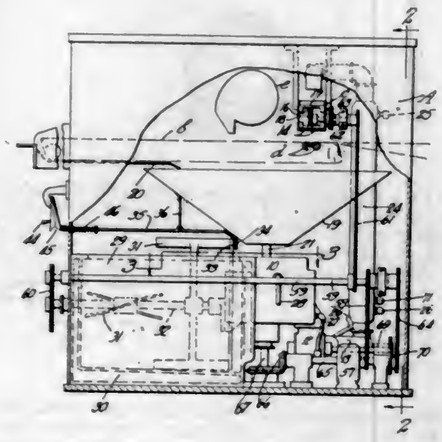
1,687,944. FILLING MACHINE. JOHN R. LITTY and TRUED B. LUNDIN, Philadelphia, Pa. Filed Mar. 19, 1927. Serial No. 176,671. 13 Claims. (Cl. 107—29.)

1. A measuring machine including a frame; a measuring cylinder mounnted thereon; a piston movable in the cylinder; a shaft rotatable in the frame and mechanically connected to the piston; means for actuating the shaft; a member rotatable upon the shaft and having notches; means for imparting rotation thereto; an arm fixed to the shaft, a dog mounted on the arm and adapted to engage the notches, a trip adapted to engage the dog and move it out of engaging position, and means for actuating the trip.

1,687,945. TIRE BUILDING. MELVON ANDREW MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 8, 1925. Serial No. 28,759. 3 Claims. (Cl. 154—14.)

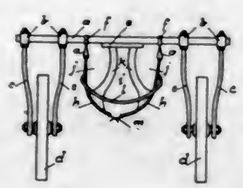
1. A method of making tires which comprises stretching successive layers of material in band form over a yieldable former, carrying the successive layers down the sides of the former in a plane substantially tangent to the widest part of the former, anchoring the sides of each layer to the bead diameter and in said plane before applying the next layer, and expanding the tire during vulcanization to tension the material, whereby a lesser tension is imparted to the inner layers of material than to the outer layers.

1,687,946. APPARATUS FOR CHECKING THE PROFILES OF GEAR WHEELS, THE PITCH OF SCREWS, AND SIMILAR ARTICLES. GEORGES MASSIOT, Paris, France. Filed Feb. 13, 1925, Serial No. 9,044, and in France Feb. 20, 1924. 1 Claim. (Cl. 88—24.)



An apparatus for checking the profiles of gear-wheels, pitches of screws and similar articles, comprising in combination with the opaque metal element to be examined, a source of light, a device for condensing the light-rays, an objective, a lens for concentrating the light rays towards said objective, a concave mirror having a hole at the centre and arranged close to said objective opposite to said source of light, and means for reflecting the direct light-rays sent out by said source of light by said mirror and then by said opaque metal-body which is examined and which reflects the entire bushel of light-rays towards said objective.

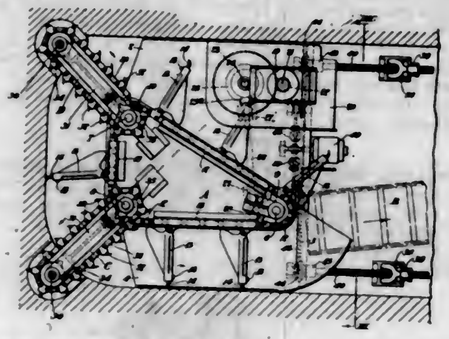
1,687,947. CONFECTION-COATING MACHINE. WILLIAM A. MOIR, Halifax, Nova Scotia, Canada. Filed Aug. 9, 1926. Serial No. 128,193. 7 Claims. (Cl. 91—3.)



1. Apparatus for conditioning chocolate and the like, comprising, containing means for a body of chocolate to be maintained at a predetermined degree of viscosity, a container for chocolate of a different viscosity, and means

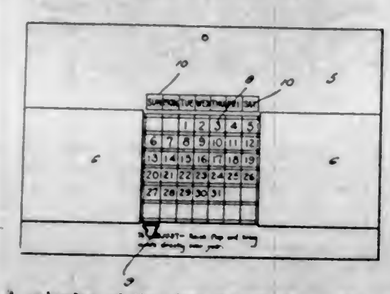
responsive to variations in viscosity of the chocolate in said containing means to transfer chocolate from said container to said containing means.

7. Apparatus for conditioning chocolate and the like, comprising, a container for a body of chocolate to be maintained at a given degree of viscosity, a container for a supply of chocolate of a different degree of viscosity, and means responsive to variations in viscosity of the chocolate in the first container to convey chocolate thereto from the second container.



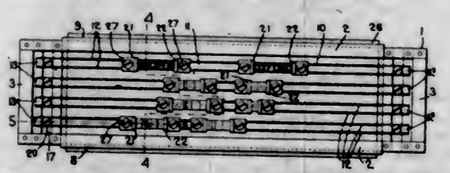
1,687,948. PORTABLE WEEDING DEVICE. ANTON JOHANNES OLSEN, Sollsted, Lolland, Denmark. Filed June 2, 1926, Serial No. 113,310, and in Denmark June 25, 1925. 1 Claim. (Cl. 97—1.)

A portable device for facilitating weeding, comprising, in combination, an oblong frame extending at right angles with respect to the direction of movement of the device, wheels supporting said frame at its short sides, and a two-parted body carrier suspended from the mid-portion of said frame and adapted to receive the front-portion of the upper body of the respective farm-hand, each body carrier portion having a forwardly and upwardly directed extension connected with the said frame at its free end, substantially and for the purpose set forth.



1,687,949. HEADING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Aug. 21, 1926. Serial No. 130,712. 8 Claims. (Cl. 262—9.)

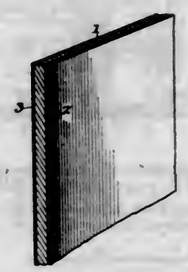
8. A mine heading machine comprising a main frame, sprocket-wheels mounted thereon, a cutter chain trained about said sprockets for undercutting the face to form a kerf, side wall cutters journaled in supporting arms projecting from the opposite sides of the main frame, and



means including at least some of said sprockets and said cutter chain for operating said side wall cutters simultaneously with said cutter chain.

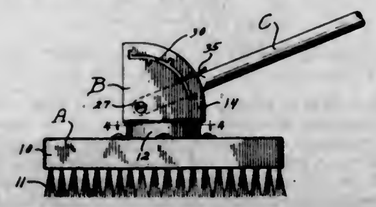
1,687,950. PERPETUAL CALENDAR. CLARENCE E. PALMER, Fayetteville, Ark. Filed July 26, 1927. Serial No. 208,602. 3 Claims. (Cl. 40—109.)

2. A calendar of the class described including a base card, a pair of cards including folds and hingedly engaged in spaced relation with the base card, a slidable card mounted to slide in the folds of said pair of cards, a tab extending from one edge of the slidable card to abut said pair of cards to limit the movement of the slidable card and to provide means for manually shifting said slidable cards, said base card having indicia thereon indicative of the days of the week and columns having therein indicia indicative of a plurality of years, said slidable cards having mounted on one face indicia indicative of the days of the month and on the other face indicia indicative of the months of the year.



1,687,951. TYPE CHASE. CARL E. PUTNAM and FRED A. PUTNAM, Keene, N. H., assignors to Markem Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 13, 1924, Serial No. 698,869. Renewed Apr. 10, 1928. 3 Claims. (Cl. 101—368.)

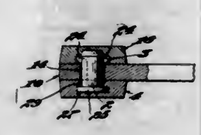
1. In a type chase, the combination with a skeleton frame, of a plurality of separately-adjustable type-carrying bars carried thereby, each bar comprising two rigidly



connected parallel strips forming between them a type-receiving slot open at both the top and bottom of the bar, type elements adapted to be inserted in said slots, each type element having positioning shoulders to rest on the upper edges of the strips and being of a length to project through the slot and below the bar, and word gauges adjustably carried by the bars for determining the position of the type for printing any word.

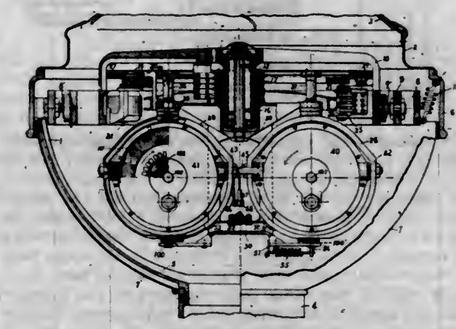
1,687,952. METHOD OF MAKING COMPOSITE PANELS FOR METAL FURNITURE. JACOB STANDER, Brooklyn, N. Y. Filed June 28, 1928. Serial No. 289,067. 4 Claims. (Cl. 154—2.)

1. A method of making a composite panel comprising a member of cellulosic material and a metal facing, which consists in first treating the cellulosic member to harden the same, then treating one face of said facing and said cellulosic member when dry with a phenol resin varnish, applying under pressure said facing to the member while wet and baking the same at a high temperature.



1,687,953. HANDLE MOUNTING FOR BRUSHES. OBIE W. STARKS, Clearfield, Pa. Filed Dec. 16, 1926. Serial No. 155,253. 4 Claims. (Cl. 306—12.)

1. In a handle mounting for brushes, an attaching cap for connection with the brush head and provided with an arcuate shaped slot and notches opening into the slot, a quadrant, means mounting said quadrant upon the attaching cap so that it may be rotated and tilted with respect to said cap, a key rigidly carried by said quadrant having a portion extending into said arcuate slot and provided with an ear for engaging in any one of said notches upon tilting, rotating and returning said quadrant to said cap for locking the quadrant at various degrees of rotation upon the attaching cap, and a handle connected to said quadrant.



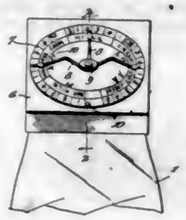
1,687,954. OPHTHALMIC MOUNTING. FREDERICK ARTHUR STEVENS, Providence, R. I., assignor to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed May 8, 1920, Serial No. 379,788. Divided and this application filed Apr. 24, 1924. Serial No. 708,695. 10 Claims. (Cl. 88—53.)

1. A temple end piece having a dowel adapted to be received in the opening of a temple ear when the ear is positioned over the dowel with one face thereof in contact with the end piece, and a yielding shoulder projecting from the dowel adapted to be engaged by the ear to maintain the temple in position upon the dowel, the shoulder being adapted to yield to permit removal of the temple from the dowel.

6. An ophthalmic mounting having, in combination, two end pieces each provided with an opening extending from a face thereof part way into the end piece, a post secured in one of the openings and extending into the other opening, and a temple mounted over the post.

1,687,955. GYROSCOPIC COMPASS. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed June 28, 1916. Serial No. 106,360. 16 Claims. (Cl. 33—226.)

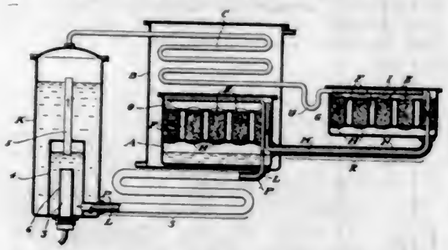
1. The combination with a frame mounted for rotation about a vertical axis, a plurality of interconnected gyroscopes mounted thereon for rotation about vertical axes within the frame, and means responsive to relative movement about their individual vertical axes for exerting a torque about the axis of said frame.



11. In gyroscopic apparatus, a main support, a pair of rings mounted thereon for movement about parallel axes, a rotor and rotor bearing frame mounted within each ring for oscillation about an axis at an angle to said parallel axes, and resilient damping means connected to a bearing frame which applies a torque about the said parallel axes of the gyroscopes upon tilting of said frame about said second mentioned axis.

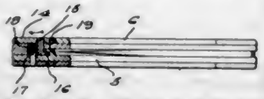
14. A gyro-compass comprising in combination two gyroscopes, one in stable and one in unstable equilibrium, and viscous damping means acting about the vertical axes of the gyroscopes.

1,687,956. MILK-BOTTLE INDICATOR AND COIN HOLDER. GLENN W. TRASK, Green Bay, Wis. Filed Apr. 5, 1928. Serial No. 267,678. 6 Claims. (Cl. 116—121.)



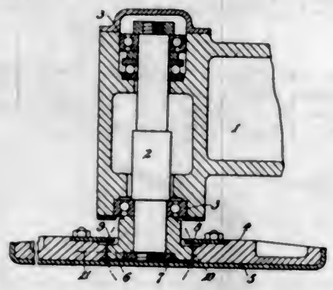
1. A device of the character specified comprising a bottle engaging portion including a top and sides, the latter being

downwardly converged from the top and having an intemediate portion pressed outwardly to engage the



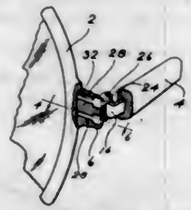
mouth portion of a milk bottle at diametrically opposite points.

1,687,957. REFRIGERATION. BALTZAR CARL VON PLATEN and CARL GEORG MUNTERS, Stockholm, Sweden, assignors to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Aug. 4, 1923, Serial No. 655,768, and in Sweden Aug. 18, 1922. Divided and this application filed Mar. 4, 1927. Serial No. 172,672. 7 Claims. (Cl. 62—119.)



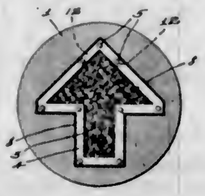
1. Refrigerating apparatus of the absorption type comprising a main generator, an absorber, an auxiliary generator, a conduit extending from within said auxiliary generator upwardly to said main generator and opening within said auxiliary generator below the top thereof, means to heat the main and auxiliary generators, the parts being so arranged that a gas space is formed in the upper part of said auxiliary generator upon application of heat thereto, a conduit connecting the lower part of the absorber with the auxiliary generator, and a conduit connecting the lower part of the main generator with the upper part of the absorber.

1,687,958. PENKNIFE. FRANK WAIWAT, Westfield, Mass. Filed Aug. 23, 1926. Serial No. 130,965. 1 Claim. (Cl. 30—10.)



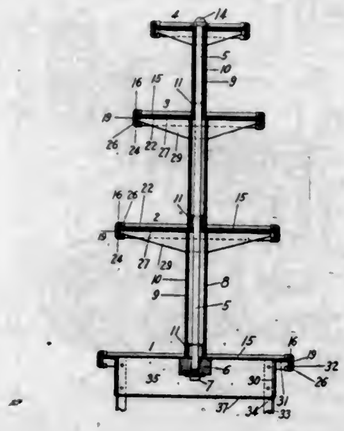
A knife of the class described including a pair of handle sections, a blade, means for pivoting the handle sections and blades together, said blade being located between said sections, one handle section being provided with an arcuate groove of approximately 180° concentric with the pivot, said blade being provided with a lug extending into the groove, a back between the handle sections, a shoulder formed on the blade abuttable with one end of the back to limit the blade to swing approximately 180° with the other handle section, and means for holding the handle sections together consisting of a recess in the back remote from the pivot pin, a movable portion at one end of one handle section provided with a lateral lug on which is an offset end movable in said recess in the back, a keeper on the other handle section and adapted to be engaged by said lateral lug, and a spring bearing against said lug and adapted to normally hold it in said engaged position.

1,687,959. APPARATUS FOR POLISHING PLATES OF GLASS, MARBLE, OR OTHER MATERIAL. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, Liverpool, England, a British Company. Filed Sept. 5, 1924, Serial No. 735,985, and in Great Britain Sept. 26, 1923. 2 Claims. (Cl. 51—109.)



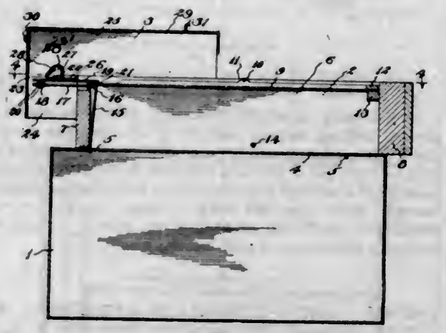
1. Abrading apparatus of the type described, comprising abrading blocks free to rotate and tilt, characterized by an abrading block being held against centrifugal force in a plane which is not above the centre of gravity of the block.

1,687,960. METHOD OF MAKING OPHTHALMIC MOUNTINGS. JAMES W. WELSH, Providence, R. I., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 29, 1926. Serial No. 105,466. 6 Claims. (Cl. 18—59.)



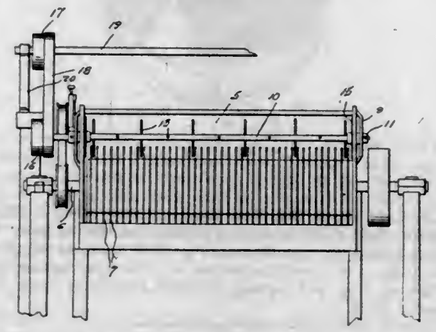
1. A method of making an article of the class described that comprises deforming a member so as to expose an inner previously unexposed portion thereof along the direction of the thickness of the member, inserting a second member in the exposed portion of the deformed member, and restoring the deformed member to its original form.

1,687,961. SIGNAL-ELEMENT CONSTRUCTION. JOHN B. WEST, Syracuse, N. Y. Filed July 24, 1925. Serial No. 45,846. 7 Claims. (Cl. 116—47.)



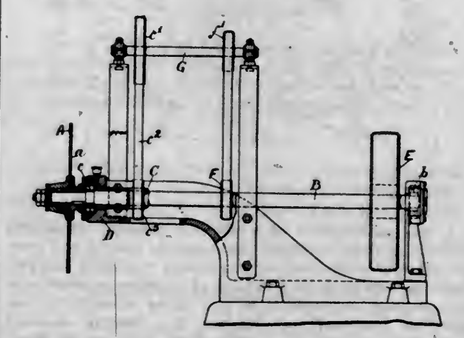
1. A signal element, comprising a transparent background disk movable about an axis, and a transparent pointer of a different color from the disk, the pointer being movable about an axis with the disk, and a frame for the signal element, the frame being of the same outline as the pointer, the disk and pointer being secured to the frame, and arranged to form a border therefor.

1,687,962. DISPLAY STAND. BENEDICT E. WILLETT, Dayton, Ohio, assignor to John T. Dietz, Dayton, Ohio. Filed May 4, 1926. Serial No. 106,761. 12 Claims. (Cl. 211—135.)



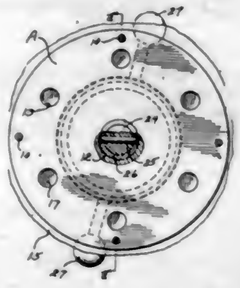
1. In a display stand, a base, a standard secured to and extending upwardly from said base, a tubular spacing element supported by said base and extending upwardly about said standard, a tray supported by said spacing element and having an opening through which said standard extends, said tray comprising a body portion, a channel shaped reinforcing member extending transversely to said body portion beneath the same, and a second channel shaped reinforcing member fitting within the first mentioned reinforcing member and adapted to receive the upper end of said spacing element, and means connected with the upper end of said standard to retain the several parts in their assembled positions.

1,687,963. TRAP. GROVER L. WINGFIELD, Sandstone, W. Va. Filed Nov. 30, 1927. Serial No. 236,790. 5 Claims. (Cl. 43—70.)



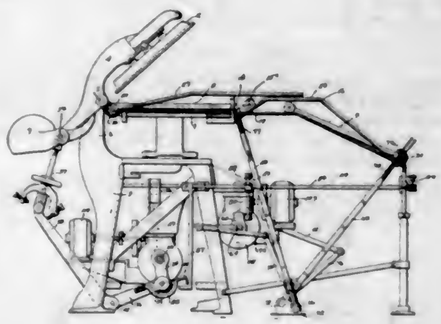
1. A trap comprising a confining chamber having an opening in its top, a body resting upon the top of said chamber in enclosing relation to the opening therein and open at its bottom, a platform in said body pivoted intermediate its length and normally remaining in a horizontal position and adapted to swing downwardly through the opening, a bait housing carried by an end portion of said body and disposed in overhanging relation to an end portion of said platform, a latch carried by said body and normally engaging said platform to releasably retain the platform horizontal, a trigger plate pivoted intermediate its length in said housing and extending horizontally therein with its inner end adjacent said platform, a bait pan carried by said trigger plate, an arm of pliable material extending upwardly from said bait pan and bent downwardly in overhanging relation to the pivot mounting for said trigger and constituting a counter-weight, and an operative connection between the latch and trigger.

1,687,964. ANTICHOKE ROLL AGITATOR. MARTIN ANDREW WINSTEAD, JOHN DUNHAM REID, and WILLIAM CASSIUS MOODY, Lundell, Ark. Filed Apr. 19, 1927. Serial No. 185,012. 2 Claims. (Cl. 19—55.)



1. In a cotton gin, a roll box, a shaft journalled in the roll box, gin saws on the shaft, the sides of said roll box being provided with openings and formed with exterior spiders crossing the openings, a second shaft journalled in the spiders to extend in parallelism with the first shaft, heads on the second shaft to close the openings, said second shaft provided with a plurality of transverse openings arranged in alternate right angular relation, rods extending through the openings, means for fixing the centers of the rods in the openings, said rods being sufficiently long to swing between the gin saws.

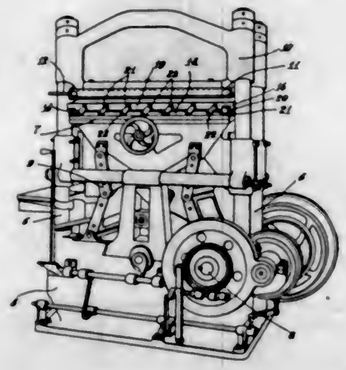
1,687,965. APPARATUS FOR CUTTING STONE AND LIKE MATERIAL. ERIC AINLEY and HAROLD AINLEY, Stocks Moor, near Huddersfield, England. Filed Nov. 1, 1926, Serial No. 145,607, and in Great Britain Nov. 9, 1925. 5 Claims. (Cl. 125—13.)



1. In apparatus for cutting stone and the like, the combination of a rotary shaft, a sawing wheel rigidly fixed thereon for cutting the material when moved in the plane of said wheel past said shaft, an eccentric sleeve rotatably mounted on said shaft, a bearing for said sleeve, and means for causing the wheel and sleeve to rotate at relatively different speeds.

1,687,966. LOCKING CARRIER FOR DISK WHEELS. ARTHUR M. BAYER, Danube, Minn. Filed Feb. 19, 1927. Serial No. 169,559. 10 Claims. (Cl. 70—90.)

1. A device of the class described comprising a fixed carrier plate, a retaining ring slidably interfitting with the carrier plate for clamping a wheel disk between the plate and ring, and a locking means revolubly carried by the retaining ring and having threaded connection with the carrier plate.



1,687,967. COMBINED LAUNDRY PRESSING MACHINE AND WORK CONVEYER. PHILIP N. BRAUN, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,842. 15 Claims. (Cl. 68—9.)

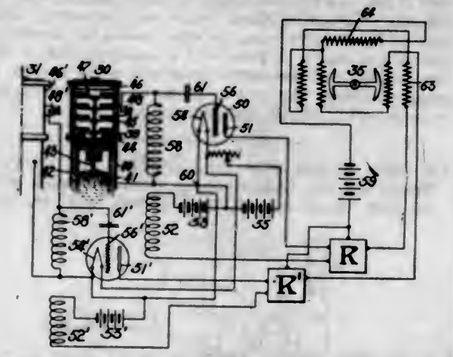
1. The combination of a pressing machine comprising coacting pressing elements, one movable toward and from the other, a work conveyer comprising oppositely movable trays movable from the front side of the machine to between the pressing elements, one tray being movable in one direction rearwardly to between the pressing elements while the other is moving forwardly in the opposite direction from between the pressing elements, guides for the trays, power means for actuating the movable element of the machine and for actuating the trays along their guides and manual means for controlling the actuation of the movable element and the trays by the power means.

15. A work holding device for pressing machines, comprising a tray having spaced blocks of carding thereon.

1,687,968. PRESS. ALFRED BREDENBERG, Champlain, N. Y., assignor of one-half to T. W. & C. B. Sheridan Company, a Corporation of New York, and one-half to The Sheridan Iron Works, a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,646. 15 Claims. (Cl. 149—23.)

1. An ironing or wiping attachment for platen presses, comprising a base attachable to one of the press members of the press, a platen normally spaced from the base, and means causing lateral movement of the platen as the pressure causes it to approach the base.

1,687,969. LOCKING MANHOLE COVER. CHALMERS SIMMS BROWN, Lima, Ohio, assignor to Brown and Brown, Inc., Lima, Ohio, a Corporation of Ohio. Filed Sept. 26, 1927. Serial No. 222,148. 9 Claims. (Cl. 220—55.)

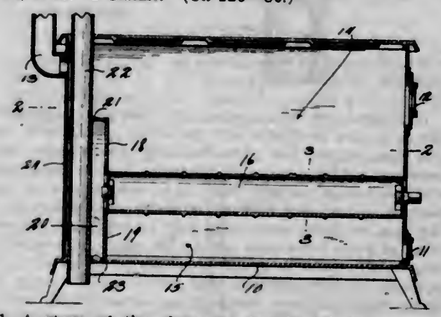


1. A locking device for manhole covers comprising a pivoted locking member carried by the manhole cover, a pivot pin carried by said cover, an actuating member carried by said pivot pin and adapted to move said locking member to operative and inoperative positions, said locking member being provided with a cutout portion through which said pivot pin is adapted to extend to limit the swinging movement of said locking member.

1,687,970. LIQUID-CONTROLLED GYROSCOPIC COMPASS. LOUIS F. CORLISS, South Tamworth, N. H., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 27, 1923. Serial No. 682,861. 21 Claims. (Cl. 33—226.)

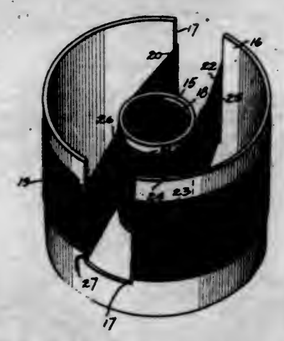
1. In a gyroscopic compass, a gyroscope mounted with three degrees of freedom, means responsive to deviation of the gyro axis from the meridian, means for applying a torque to said gyroscope, and means including an oscillatory electric circuit whereby said first means controls said second means.

17. In a gyro-compass, means for mounting the same for freedom about a plurality of axes, power means for performing a function with respect thereto, and means controlled by the position of the gyroscope about one of said



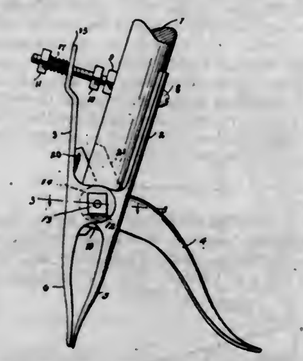
axes for governing said power means comprising an oscillatory circuit including a variable condenser and an audion tube.

1,687,971. DRYING-ROOM TUMBLER. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 12, 1927. Serial No. 183,195. 6 Claims. (Cl. 34—5.)



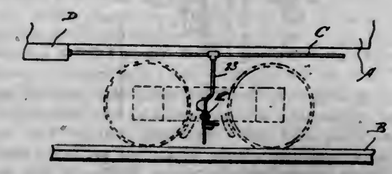
1. A drying room tumbler comprising a horizontal drum, a clothes support mounted in the drum to rock about the axis of the drum and means for rocking the support including mechanism for imparting a sudden movement to the support to flip the same at the end of the oscillation of the support.

1,687,972. STOVE. HENRY B. DE CAN, St. Maries, Idaho. Filed June 30, 1927. Serial No. 202,641. Renewed May 29, 1928. 4 Claims. (Cl. 126—80.)



1. A stove of the character described having an air chamber adjacent its rear end and an air pipe extending upward through the bottom of the stove and through said air chamber and through the top of the stove, the air chamber terminating short of the top of the stove to permit products of combustion to pass around the upper portion of the air pipe.

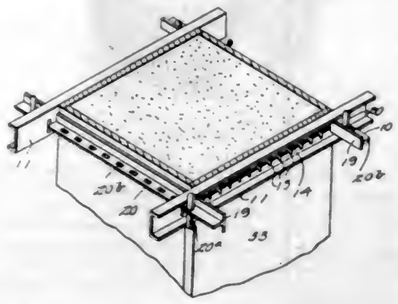
1,687,973. TRANSFORMER. FRANCIS DE WILLY, Los Angeles, Calif. Filed Apr. 20, 1926. Serial No. 103,378. 4 Claims. (Cl. 175—359.)



1. A transformer comprising an inner tubular frame a primary in the frame, an outer tubular frame concentric of the inner frame and formed at diametrically opposed points with slots, and a secondary continuously wound to form a main coil on the inner frame encircling the primary and extending through the slots and to the outer side of the outer frame to form other coils exteriorly of the outer frame.

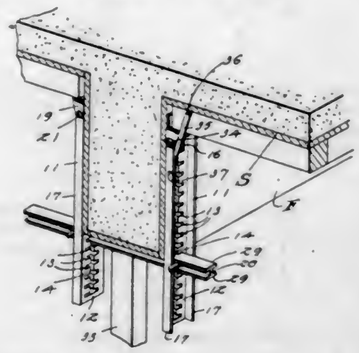
1,687,974. WEED PULLER. DAVID S. DICKIE, Seattle, Wash. Filed Nov. 9, 1926. Serial No. 147,332. 3 Claims. (Cl. 55—148.)

2. A weed puller comprising a handle, fixed and pivoted jaws mounted upon the handle, and a fulcrum member pivoted to the handle and having a cross head at its pivotal end engaging the pivoted jaw upon opposite sides of its pivot.



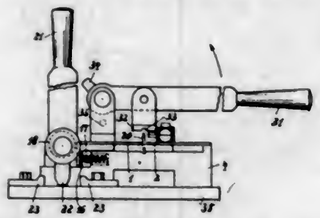
1,687,975. AUTOMATIC BLEEDING MECHANISM FOR AIR LINES OF TRAIN AIR-BRAKE MECHANISM. WILLIS F. DISHON, Stanford, Ky. Filed May 2, 1927. Serial No. 188,215. 4 Claims. (Cl. 246—171.)

1. In an automatic bleeding device for the air brake system of a train of cars, a housing constructed of a pair of elongated plates, one of said plates adapted for attachment to a car, said plates being formed with inlet and



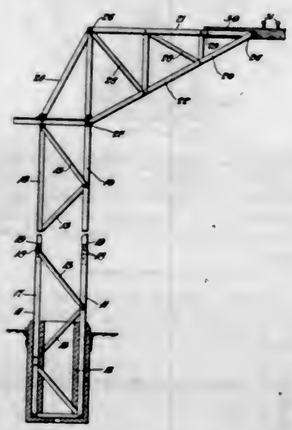
outlet openings in communication with the air brake system, a valve member operable within said housing for closing said inlet and outlet opening, a plunger slidable between the said plates, the upper end portion of said plunger being associated with the valve in a manner whereby the same will actuate the valve when moved inwardly within the housing.

1,687,976. CONCRETE-FORM CLAMP. HORACE FORD, Baltimore, Md., assignor of one-half to Charles L. Stockhausen, Baltimore, Md. Filed Jan. 21, 1928. Serial No. 248,475. 14 Claims. (Cl. 25—131.5.)



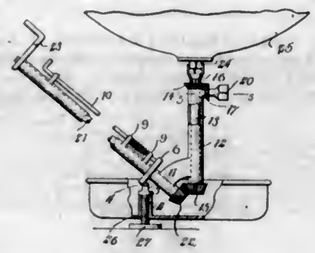
11. A concrete form clamp including an end member H-shaped in cross section and channel iron side members, the webs of the channel iron side members having longitudinally spaced transversely extending slots for the passage of the flanges of the H, a longitudinally extending slot connecting pairs of adjacent transverse slots for the reception of the web of the H the longitudinal slots of each side member being continuous and communicating with all of said transverse slots, the webs of said channel bars being continued beyond the flanges thereof and angle iron seats secured to the continuations of the webs and each having an angle thereof projecting outwardly from the web at the same side thereof as the flanges.

1,687,977. CONCRETE-FORM CLAMP. HORACE FORD, Baltimore, Md., assignor of one-half to Charles L. Stockhausen, Baltimore, Md. Filed June 12, 1928. Serial No. 284,737. 11 Claims. (Cl. 25—131.5.)



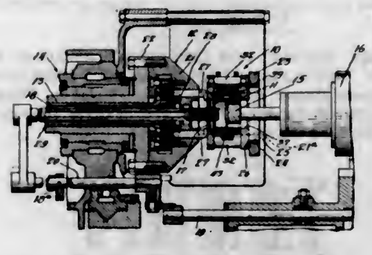
8. A concrete form clamp including side and end members for engagement with sides and at least one end of a concrete form, said clamp including end and side members, the end members being of a cross section including a web and a perpendicularly related flange, the side members comprising bars each having a plurality of longitudinally spaced transversely extending slots for the selective passage of the flange of an associated end member, a longitudinally extending slot communicating with all of said transverse slots adapted for the reception of the web of the end member, means at corresponding ends of the side members affording transversely extending seats projecting outwardly from the side member for the reception of the end of a beam and a brace pivoted to the side member and swingable about the pivot thereof to engage the outer edge of the associated seat and adapted to be secured to a beam disposed upon said seat.

1,687,978. APPARATUS FOR ASSEMBLING KNIVES. ERNST GERLING, Ohligs-Solingen, Germany. Filed Sept. 21, 1926. Serial No. 136,872. 3 Claims. (Cl. 29—84.)



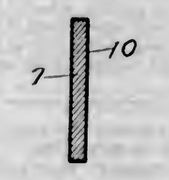
1. An apparatus for assembling knives, comprising a pair of integral clamping plates adapted to hold the rivets of the knife between the same, means for throwing the plates into clamping engagement with each other and means for pressing the assembled parts of the knife together.

1,687,979. ELECTRIFICATION POLE. CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed Feb. 7, 1925, Serial No. 7,582, and in Canada Dec. 9, 1924. 1 Claim. (Cl. 189—22.)



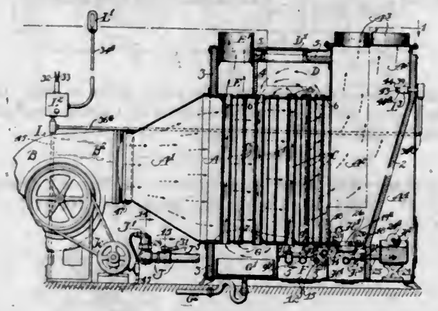
In a device of the character described and in combination, a pole, a cantilever arm supported on said pole, said arm comprising a pair of horizontally spaced upper chord members rigidly secured to the pole at their inner ends and converging towards their outer ends, a pair of horizontally spaced lower chord members rigidly secured to the pole at their inner ends and converging towards a point at their outer ends beyond the point towards which said upper chord members converge, a series of lacing members extending between and connecting said upper and lower chord members forming two substantially vertical trusses, a block rigidly secured between said substantially vertical trusses at the outer end and at least one panel point of said trusses, so that loads and torsions delivered to said block in any direction and in any plane will be carried by said arm to said pole as axial streases in the members composing said arm.

1,687,980. CRANK-CASE DRAINER. HARLIN HIGGINS, ALBERT L. FISH, and JAMES L. O'HARE, Faith, S. Dak. Filed Oct. 3, 1927. Serial No. 223,702. 4 Claims. (Cl. 184—1.5.)



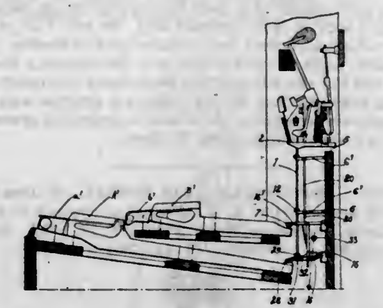
1. A device for removing and replacing drain plugs of crank cases, the combination of a pan, a tubular handle pivotally and rotatably associated with the pan, a driven shaft, a driving shaft rotatable in the handle, and means for operating the driving shaft, and thus the driven shaft.

1,687,981. METHOD OF AND APPARATUS FOR LOADING MACHINE TOOLS. HERBERT E. KEMPTON and KEITH F. GALLIMORE, Fond du Lac, Wis., assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 15, 1923. Serial No. 680,826. 16 Claims. (Cl. 51—278.)



1. A work holding device comprising, in combination, a frame having a pair of substantially alined openings, said frame being adapted to receive a plurality of work blanks, and a floating clamping means loosely mounted in said frame for clamping a work blank in position against each of said openings.

1,687,982. SHADE. EDWIN ROBERT KIMBALL, Waukesha, Wis., assignor to The Aeroshade Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Sept. 11, 1925. Serial No. 55,070. 6 Claims. (Cl. 156—16.)

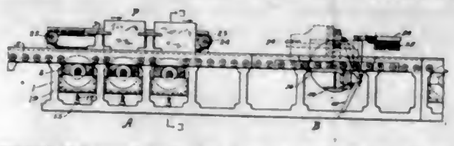


3. A shade composed of a plurality of thin flat splints having a coating of aluminum bronze applied to the sides and edges thereof, said splints being hingedly connected together in spaced edge to edge relation.

1,687,983. HOT-AIR FURNACE. ALBERT L. KLEES, New York, BENJAMIN GREENFIELD, Jackson Heights, N. Y., and GEORGE B. ACKERMANN, Chicago, Ill., assignors to Cribben & Sexton Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1927. Serial No. 197,697. 15 Claims. (Cl. 126—113.)

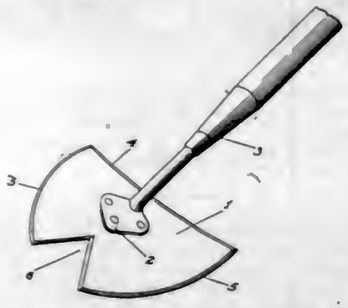
1. In a furnace, an air-heating chamber, combustion-flues, return-flues, and exit-flues extending through said chamber, and means whereby air may circulate through said chamber transversely across said flues, the incoming air coming first into contact with said exit-flues.

1,687,984. MECHANICAL CONSTRUCTION OF PIANOS. GUSTAVE LYON, Paris, France, assignor to Société Anonyme Pleyel, Paris, France, a Corporation of France. Filed Jan. 27, 1927, Serial No. 164,067, and in France Mar. 26, 1926. 2 Claims. (Cl. 84—235.)



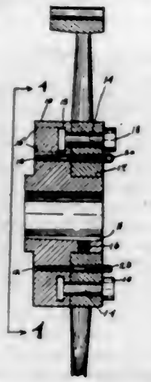
1. In a coupling device, for pianos provided with a lower keyboard the keys of which act directly upon the striker mechanism of the note situated in the same plane and an upper keyboard the keys of which act upon the striker mechanism of the note situated an octave higher than the note controlled by the keys of the lower keyboard, providing for the simultaneous operation of the striker mechanism actuated by any of the keys of the lower keyboard and of the striker mechanism of the note situated an octave higher than the note controlled by the key of the lower keyboard without affecting the corresponding key of the upper keyboard, a coupling piece between the lever actuated by the keys of the lower keyboard and the lever actuated by the keys of the upper keyboard, a pivot for the coupling piece on the lever actuated by the keys of the upper keyboard, a mortise formed in the lever actuated by the keys of the lower keyboard, a bar normally holding the coupling piece in coincidence with the mortise, and an external pedal controlling the bar.

1,687,985. GLASS-GRINDING MACHINE. STEPHAN P. MERMER, Toledo, Ohio. Filed Feb. 26, 1927. Serial No. 171,145. 13 Claims. (Cl. 51—76.)



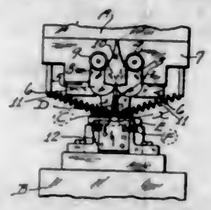
1. A machine for grinding edges of glass plates comprising a line of support upon which the glass may be stood

on edge in substantially vertical position, means for guidingly maintaining said plate in such position, grinding means rotated substantially on the level with said line of



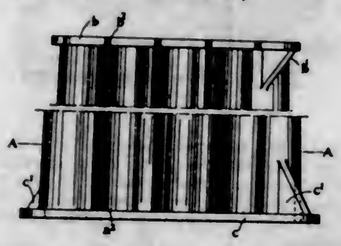
support and onto which the glass plate moves so that the edge thereof may be ground, and means for turning the glass in order that another edge thereof may be ground.

1,687,986. WEEDING HOE. GEORGE H. MILLER, Chico, Calif. Filed May 18, 1926. Serial No. 109,827. 2 Claims. (Cl. 97—68.)



1. A hoe comprising a blade having a centrally disposed V shaped incision in its forward edge, the rear edge of the blade being wider than said incision and extending in a transverse plane at right angles to a line bisecting the incision and the side edges of the blade being sharpened and curving inwardly from the rear edge to a junction with the side edges of the incision, and a handle projecting upwardly and at a rearward angle from the blade.

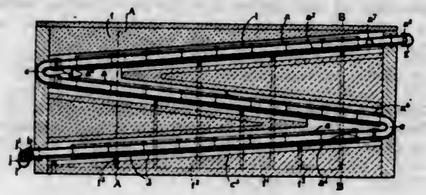
1,687,987. ADJUSTABLE GEAR WHEEL. CLADORN F. MOON, Franklinville, N. C., assignor of one-half to Arlin R. Lewis, Greensboro, N. C. Filed Feb. 17, 1927. Serial No. 168,977. 3 Claims. (Cl. 74—28.)



1. In an adjustable gear, a hub member, a gear member, holes penetrating one of the members, a circular T-shaped slot in the other member, bolts having their heads mounted for adjustment in the T-shaped slot and having their shanks positioned in the said holes, and nuts on the smaller ends of the bolts for securing the gear member and hub member together in any desired adjusted relation to each other, a plurality of tapered holes penetrating both the gear member and hub member at points equidistant from the center of the gear and hub members, a plurality of tapered pins adapted to be driven in the tapered holes to insure the parts retaining their adjusted relation to each other.

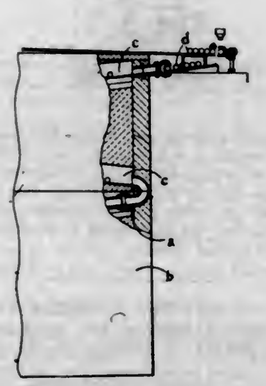
1,687,988. METAL-BENDING MACHINE. JAMES J. MULLEN and FRANCIS M. STAMBAUGH, St. Louis, Mo.; said Stambaugh assignor to said Mullen. Filed Jan. 7, 1927. Serial No. 159,589. 15 Claims. (Cl. 153—12.)

1. A metal bending machine for progressively bending a plate to form hollow ribs or corrugations thereon, said machine comprising a work support that is adapted to sustain a flat plate, a male die member that is adapted to engage the side of the plate that contacts with said work support, cooperating rockable female die members adapted to engage the opposite side of said plate, means for bodily moving the female die members towards the male die member and the work support, thereby causing said female die members to hold the plate firmly against the work support, and means for moving said female die members after they have engaged the plate, so as to bend the plate over the male die member while portions of the plate are frictionally engaged by the work support and the female die members.



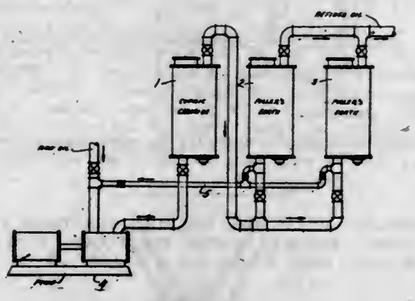
1,687,989. RETORT FOR THE DISTILLATION OF COAL AND SIMILAR CARBONACEOUS SUBSTANCES. CHARLES HENRY PARKER, Codsall, England. Filed Jan. 27, 1928, Serial No. 249,963, and in Great Britain Sept. 25, 1926. 1 Claim. (Cl. 202—9.)

A battery of vertical retorts for the distillation of coal and similar carbonaceous material, comprising a unitary casting having a single row of retort chambers therein, each of said chambers being of oblong cross section and increasing in dimension from the upper end to the lower end thereof, the major axis of each chamber being disposed at an angle of substantially 45 degrees to the center line of the battery casting as a whole, whereby substantially one-half of the wall of each intermediate chamber is an outer wall of the casting, said casting having reinforcing means integral with the flat portion of the outer walls of the end chambers.



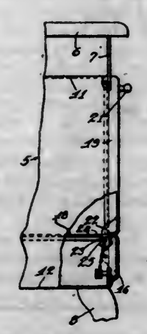
1,687,990. DISTILLATION OF COAL AND SIMILAR CARBONACEOUS SUBSTANCES. CHARLES HENRY PARKER, Codsall, England. Filed Jan. 27, 1928, Serial No. 249,966, and in Great Britain Sept. 25, 1926. 2 Claims. (Cl. 202—14.)

1. Apparatus for the distillation of coal and similar carbonaceous material, comprising a retort formed in connected tubular sections defining a continuous descending path, a setting in which certain of said sections are fixedly supported and the other sections are slidably supported, said setting having passages therein for the distribution of heating gases about said retort, the fixed sections of said retort being telescopically connected to said other sections



to permit relative endwise movement under expansion substantially cylindrical receptacles in which the carbonaceous material is charged adapted to roll in said retort sections, means in said retort sections for guiding said receptacles, and means for sealing the ends of said retort.

1,687,991. DISTILLATION OF COAL AND SIMILAR CARBONACEOUS SUBSTANCES. CHARLES HENRY PARKER, Codsall, England. Filed Jan. 27, 1928, Serial No. 249,967, and in Great Britain Sept. 25, 1926. 1 Claim. (Cl. 202—14.)

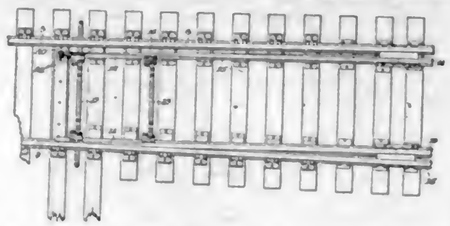


Apparatus for the distillation of coal and similar carbonaceous material, comprising an inclined tubular retort, a tubular preheating casing of considerably greater cross section than said retort and arranged above said retort with its lower end connected to the upper end of the retort, said preheating casing and said retort being arranged to define a continuous descending passageway of zig-zag formation, a setting in which said retort and said preheating casings are supported and having passages therein about said retort but not about said preheating casing for the distribution of heating gases, substantially cylindrical receptacles in which the carbonaceous material is charged adapted to roll in and be guided by said preheating casing and said retort, said receptacles having perforated ends, and means for sealing the upper end of said preheating casing and the lower end of said retort, said receptacles being of such dimension as to substantially fill said retort, whereby said receptacles are subjected to the heating action of a large quantity of accumulated products of distillation during their passage through said preheating casing.

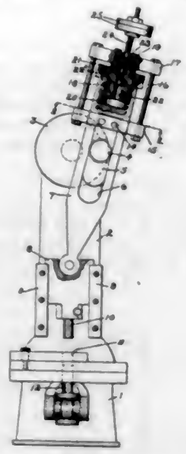
1,687,992. REFINING OF HYDROCARBON OILS. ERNEST B. PHILLIPS, East Chicago, and JAMES G. STAFFORD, Hammond, Ind., assignors, by mesne assignments, to The Gray Processes Corporation, Newark, N. J., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,638. 4 Claims. (Cl. 196—44.)

3. An improved method of removing sour constituents from petroleum distillates, comprising continuously flowing in a liquid stream of the oil substantially free from water first through a body of finely divided solid cupric chloride and then through a body of finely divided fuller's earth.

1,687,993. COOKING STOVE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed Dec. 9, 1926. Serial No. 153,496. 8 Claims. (Cl. 126—191.)



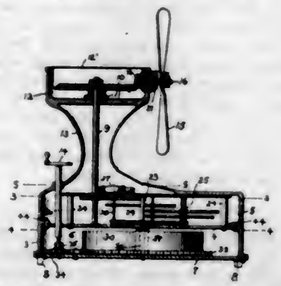
8. A stove having an oven section with sheet metal side and top walls with inturned flanges on the side walls, a separately formed front plate secured at its opposite ends to said side walls, and coacting with the side flanges to form a door frame, a door having hinge members rigid therewith and projecting inwardly and downwardly from its lower edge, there being slots formed in said frame to receive said hinge members, said slots having their upper ends in said side flanges and their lower ends in said front plate, and means for holding said hinge members in operative relation to the door frame.



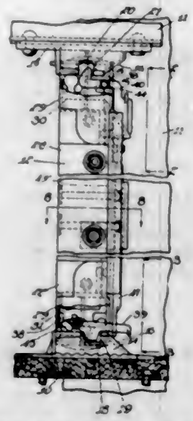
1,687,994. SWITCH DEVICE. EDWARD W. POWELL, Chicago, Ill., assignor to Pettibone-Mulliken Company, a Corporation of New York. Filed Jan. 23, 1928. Serial No. 248,777. 3 Claims. (Cl. 246—437.)

1. A point rail of a railway switch formed of a main section and a terminal point section secured to said main

section and completing its point portion, said terminal point section having a laterally extending wheel-flange-engaging projection for deflecting the wheel flange laterally in a direction away from the side of said point rail.

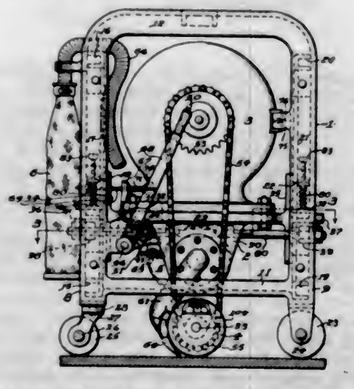


1,687,995. PRESS FOR MOLDING GRANULAR POWDERS. RALPH L. SEABURY, Toledo, Ohio. Filed July 8, 1926. Serial No. 121,112. 7 Claims. (Cl. 25—45.)



1. A press comprising a reciprocatory plunger, a connecting rod pivoted to said plunger having a longitudinally elongated guide, a power crank, a slide operatively connected to said crank and movable in said guide, and a fluid pressure device connecting said connecting rod and slide for compensating for a counteracting force on said plunger in excess of a predetermined maximum.

1,687,996. SPRING-DRIVEN FAN. FRANK J. SIEL, Lakewood, Ohio. Filed June 15, 1926. Serial No. 116,090. 3 Claims. (Cl. 230—258.)

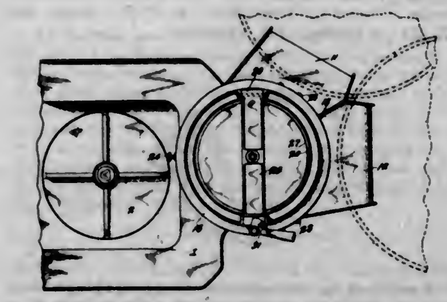


1. A spring driven fan, comprising a casing having a hollow base subdivided by a horizontal partition and formed with a hollow head and hollow relatively long neck surmounting said base, a rotary fan supported upon said head, drive gearing in said head for said fan, an operating shaft for said gearing extending a substantial distance downwardly through said hollow neck into the upper subdivision of said base, power transmitting gearing mounted upon said partition and forming a removable gearing unit therewith, a spring motor within the lower subdivision of said hollow base having operating connection with said shaft by means of said gearing unit, and means for winding said spring motor.

1,687,997. SIDE-DOOR CONSTRUCTION. KENNETH J. TOBIN and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed July 23, 1927. Serial No. 207,877. 9 Claims. (Cl. 20—22.)

1. In a railway house car, in combination, a movable door jamb comprising a Z-bar, castings secured to the two extremities of said Z-bar, latching members carried by said castings, an operating member for causing said latches to move in unison with one another, said operating member being disposed in position to be protected by one of the flanges of said Z-bar.

1,687,998. MACHINE FOR FINISHING FLOORS. EDWARD F. WENDIG, Richboro, Pa. Filed Jan. 31, 1928. Serial No. 250,773. 9 Claims. (Cl. 51—176.)



1. In a floor surfacing machine, the combination with an outer carriage-frame and supporting wheels therefor, of an inner frame mounted to slide freely vertically within said carriage, an abrasive roller mounted to rotate on a horizontal axis and motor for driving the same, both mounted and supporting upon said inner frame, said abrasive roller projecting laterally beyond the sides of said carriage to a point beyond anything projecting from said frame and carriage, whereby the outer end of said abrasive roller may be brought close to the baseboard of the wall surrounding the floor.

1,687,999. CONTROLLER CONSTRUCTION. ERNST WIRZ, ARNOLD HALLER, and KARL KUNTZE, Baden, Switzerland, assignors to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed May 5, 1927, Serial No. 189,069, and in Germany Apr. 3, 1926. 1 Claim. (Cl. 200—166.)

In a controller construction of the character described, a bushing provided with a bore for receiving an operating shaft, and material molded about a portion of said bushing and shaped to provide a cam-element, the outer surface of said bushing portion providing with the set material a direct interlocking connection between said bushing and said cam-element holding the same against both rotational and axial movements with respect to each other, another portion of said bushing extending axially beyond said cam-element and being operable to accommodate retaining means for holding such assemblage in fixed position with respect to the operating shaft therefor.

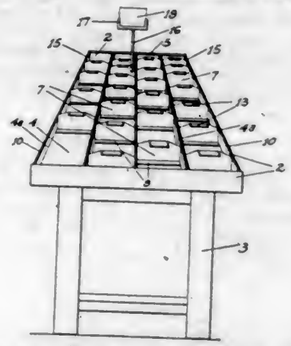
1,688,000. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed May 4, 1927. Serial No. 188,687. 5 Claims. (Cl. 210—75.)

1. In a centrifugal extractor, in combination, a rotatable receptacle arranged to discharge liquid from its upper end, a drain board having a fixed radial position with respect to said receptacle and below its discharge, a supporting means surrounding said receptacle having discharge outlets, one of which is coincident with said drain board, and a water receiving and conducting member overlying said support and manually and circumferentially adjustable of said receptacle adapted to receive water expelled by said receptacle and having a discharge outlet adapted to be moved into registering position with the outlets of said supporting means, whereby to selectively discharge water through said outlets.

1,688,001. AGITATOR FOR WASHING MACHINES. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed June 15, 1927. Serial No. 198,907. 3 Claims. (Cl. 259—101.)

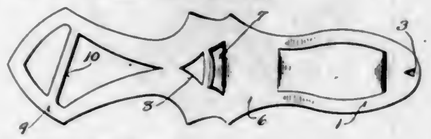
1. An agitator for washing machines comprising a disc-like member, cast in one piece and formed with a central hub, and a plurality of hollow radially arranged wings cone-like in vertical cross-section throughout their length upstanding from the base of said member; the upper end of said hub terminating at a point slightly above the plane of the highest point of the wing with the greater portion of said hub well within the agitator and terminating immediately above the base thereof; the upper surfaces of said wings being arcuate in shape inclined downwardly and inwardly and upwardly into the upper end of said hub, the inner underlying portions of said wings forming a cone whereby to produce a downwardly and outwardly sloping outer surface from the hub between said wings.

1,688,002. STORAGE-CELL CONNECTER. THEODORE S. COLE, New Haven, Conn. Filed July 20, 1923. Serial No. 652,704. 3 Claims. (Cl. 173—324.)



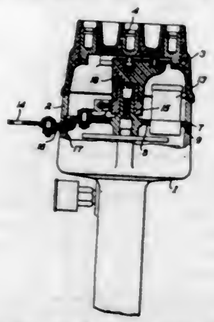
3. In a storage battery system, a plurality of cells each thereof having negative and positive plates therein, comprising lead frames and active material, and a lead connecter bridge between adjacent cells, connected to positive plates in one cell and negative plates in another cell as by fusion thereto, and having a layer of lead-mercury amalgam on the surface thereof.

1,688,003. ADJUSTABLE MERCHANDISE SALES TABLE. WILLIAM J. DARBY, Modesto, Calif. Filed Dec. 20, 1926. Serial No. 155,861. 3 Claims. (Cl. 45—140.)



1. A sales device including a tray, a transverse and longitudinally adjustable partition in the tray, longitudi-

nally extending wings on the partition at the side edges thereof, and inturned flanges depending downwardly from

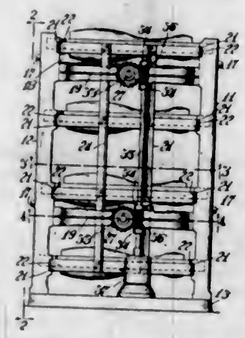


the sides of the tray at the top to form longitudinal channels in which the upper ends of the wings ride.

1,688,004. DISPLAY RACK. ELMER A. DE KARSKE, Milwaukee, Wis. Filed Dec. 12, 1924. Serial No. 755,459. 1 Claim. (Cl. 211—35.)

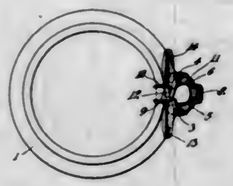
A display rack formed of sheet metal and integral throughout and comprising a downwardly and forwardly extending portion, an approximately horizontal top member having a prong struck downwardly and forwardly therefrom and adapted to project into a horizontal portion of a support having approximately horizontal and vertical faces, a brace extending rearwardly from the body portion below the top portion and approximately paralleling the top portion of the device and having a terminal portion adapted to bear against the vertical face of the support, said terminal portion acting as a fulcrum during attachment of the device, and a heel engaging tongue struck upwardly from the body portion.

1,688,005. IGNITION DEVICE. CEDRIC B. DICKSEE, Wilkinsburg, Pa., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed June 6, 1924. Serial No. 718,256. 7 Claims. (Cl. 200—19.)



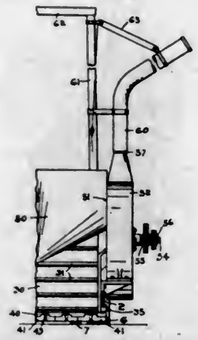
2. In an ignition device, the combination with a base member having an upwardly extending annular wall member, of a second annular wall member detachably mounted on said first named wall member, a plate member rotatably mounted between said wall members, and means for securing said wall members together.

1,688,006. FLASH-LIGHT SWITCH GUARD. CHARLES EDWARD DUISENBERG, San Francisco, Calif. Filed Feb. 14, 1927. Serial No. 168,080. 1 Claim. (Cl. 240—10.5.)



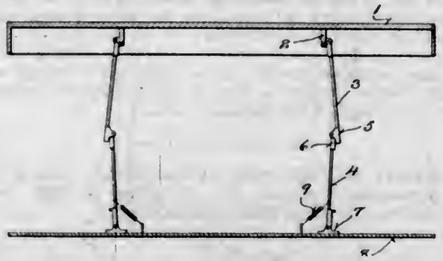
The combination with a flash light and switch therefor, of a guard arranged to normally shield the switch and prevent the inadvertent operation thereof; a split ring detachably engaging the flash light adjacent the switch, said ring having one end hingedly connected to the guard and forming a hinge mounting therefor, and the opposite end of the ring being arranged to releasably latch the guard in closed position.

1,688,007. FOOT GEAR-FORMING MACHINE. ARTHUR EICHBERG and HANS DIETZ, Chicago, Ill. Filed Sept. 17, 1926. Serial No. 136,102. 11 Claims. (Cl. 12—116.)



1. In a machine of the class described, a pair of side frames having aligned grooves in their inner sides, aligned elements slidably mounted therein, stretching elements operatively associated with said sliding elements, a form carried by said stretching elements and means for operating said sliding elements whereby said form is expanded.

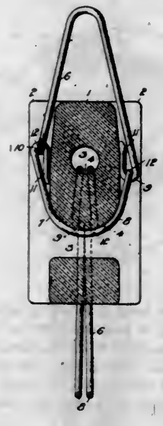
1,688,008. HOLDING DEVICE. JOSEF ENGL, Grunewald, Berlin, Germany. Filed Mar. 3, 1927. Serial No. 172,278. 8 Claims. (Cl. 131—51.)



1. A device of the character described comprising a base, a pair of adjustable arms provided with holding jaws and being pivotally mounted on said base and oscillatable with respect thereto, jaw adjustment means in the path of movement of said arms cooperatively positioned therwith to open and close said jaws upon and in a direction transverse to the oscillation of said arms about their pivot.

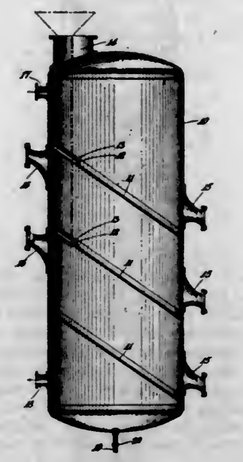
1,688,009. SNOWPLOW. SIDNEY B. GILLIS, Enumclaw, Wash. Filed Nov. 1, 1926. Serial No. 145,630. 2 Claims. (Cl. 37—45.)

1. A plow for clearing streets of snow, comprising a wheeled frame, a reel, carrying a plurality of transversely extending and projecting blades, rotatably mounted in one end of the frame, an endless conveyor having its lower portion disposed rearwardly of the reel, a housing mounted on each side of the conveyor, each having an inlet adapted to receive snow from the conveyor, a snow deflector approximately in the form of a double share plow operatively disposed between the inlets, a vertically extending fan rotatably mounted in each housing, a flexible discharge pipe for snow communicating with each fan, means for actuating the reel and conveyor, and means for imparting a reverse movement to the fans.



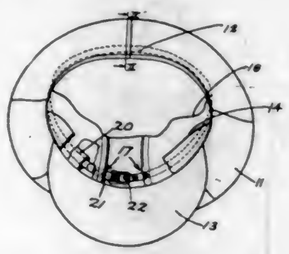
1,688,010. AWNING CONSTRUCTION. CARLYLE E. GODSKE, Racine, Wis. Filed Oct. 11, 1926. Serial No. 140,879. 1 Claim. (Cl. 156—15.)

An awning arm construction comprising an inner and an outer arm having enlarged heads pivotally joined, said heads contacting when the arm is extended and preventing said arms from becoming aligned or parallel, an outer member pivoted to the outer end of said outer arm and adapted for connection to a front bar, a rear member pivoted to the rear end of the rear arm and adapted for connection to a support, and a spring having one end attached to said outer arm and having its other end adapted for attachment to said front bar.



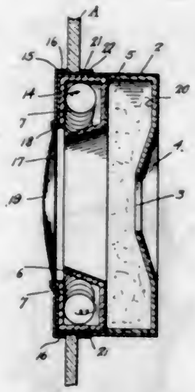
1,688,011. INSULATOR. MINOR F. H. GOUVERNEUR, Victor, N. Y., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Sept. 8, 1921. Serial No. 499,172. 4 Claims. (Cl. 173—366.)

1. The combination with an insulator element having an opening therein, of a metallic connector passing through said opening, said connector having a hook and eye engagement between parts thereof, the bill of said hook being interposed between the insulator and a portion of said connector to prevent the accidental disengagement thereof.



4. In combination, an insulator having a passage therethrough and a link comprising two hingedly connected members, one of said members having an end portion adapted to be removably positioned in said passage and project therethrough for detachable and immovable engagement with the end of the other member.

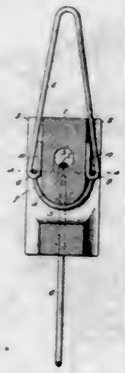
1,688,012. APPARATUS FOR CONTACTING FLUIDS WITH SOLIDS. PHILANDER R. GRAY, Newark, N. J., assignor to Gray Processes Corporation, Newark, N. J., a Corporation of Delaware. Filed Nov. 10, 1926. Serial No. 147,601. 5 Claims. (Cl. 210—62.)



1. An apparatus for contacting solids and fluids comprising a tower, a plurality of shelves in said tower forming superposed chambers, each shelf being pervious to fluid and impervious to solids, means for causing fluid to pass successively through said chambers, and means provided in the shelves and the top of the tower for permitting the introduction of solids into each of said chambers.

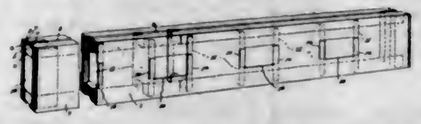
1,688,013. ADJUSTABLE HEADGEAR. ABRAHAM GREENSTEIN, Brooklyn, N. Y. Filed May 2, 1928. Serial No. 274,450. 2 Claims. (Cl. 2—197.)

1. In a head gear, a body portion, a head engaging portion, a lining, a strap, a casing enclosing said strap, said casing being secured in said head engaging portion within said lining, slits in said lining, the free end of said strap projecting beyond said casing and through the slits in said lining, and having means for adjustably securing the strap ends together.



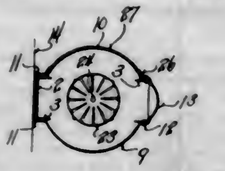
1,688,014. FROST-PREVENTION DEVICE FOR WINDOWS. SIMON A. HAMILONOFF, Hartford, Conn., assignor of two-thirds to William Zachs and Joseph Safran, Hartford, Conn. Filed Feb. 1, 1928. Serial No. 251,164. 2 Claims. (Cl. 20—40.5.)

1. In a device of the class described, the combination with a window pane having an opening formed therein, a casing arranged in said opening, the same being open at its front side the rear side of the casing being provided with a sight opening, a flanged ring secured on the open front side of the casing, a transparent member mounted on the ring to provide a closure for the open center of the ring, and a heating chamber arranged in the forward portion of the casing for heating said transparent member, and preventing the accumulation of frost thereon.



1,688,015. INSULATOR. KENT ALLEN HAWLEY, New York, N. Y., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Sept. 8, 1921. Serial No. 499,295. 3 Claims. (Cl. 173—366.)

1. The combination with an insulator of the strain type provided with a plurality of curved passages therein, of means for connecting said insulator to an adjacent member, said means comprising a pair of coacting members, one of said last named members conforming to and being adapted to extend through one of the said passages in said insulator, the other coacting member having integral hooks

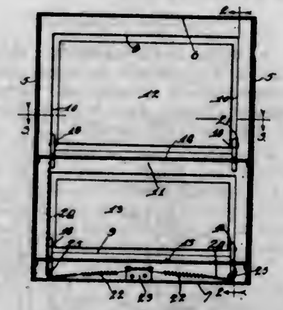


for connecting the said members, the ends of the hooks engaging against the sides of the insulator and being held closed thereby for preventing the disengagement of said coacting members.

1,688,016. HOLLOW METAL JOIST. BENJAMIN J. KLAASEN, Highland Park, Mich. Filed June 23, 1927. Serial No. 200,838. 2 Claims. (Cl. 189—37.)

1. A hollow metal joist comprising flanged side members and a channel connecting member inserted between said side members and joining the flanges of opposed side members, said flanges extending over the open side of said channel member, said connecting member holding said flanges in spaced relation, and a nailing piece inserted in said channel connecting member and accessible through the space between the flanges.

1,688,017. ILLUMINATED BARBER POLE. JULIUS L. MICHALSKI, Milwaukee, Wis. Filed May 21, 1926. Serial No. 110,673. 1 Claim. (Cl. 40—132.)



A display device comprising front and rear upright channel members arranged in spaced relation and joined by a transverse member, a pair of outwardly bowed doors hinged to one of said uprights and having their free ends adjacent the other upright, whereby a cylindrical pole-like structure is produced, means for detachably attaching the free ends of said bowed doors to the other upright, means for attaching one of said uprights to a wall to produce the effect of a pole adjacent a wall, one of said doors having apertures therethrough and forming insignia, the other of said doors having channels formed adjacent its margin for the reception of a display panel, and light producing means carried within said device.

1,688,018. REFLECTOR-SIGNAL HEAD. VICTOR L. OESTNAES, Westfield, N. J., assignor to American Gas Accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 11, 1926. Serial No. 147,663. 2 Claims. (Cl. 88—1.)

1. A light reflector signal head comprising a container within which light reflectors are located, and a frame secured to the outer edge of said head and operating to retain the reflectors within the said container, the said frame comprising a relatively narrow portion which extends inwardly of the container and also having a rearwardly extending outer flange which encircles the outer edge of said container, and the said frame being provided with a portion projecting therefrom and in the plane thereof upon which is adapted to be placed information giving means.

1,688,019. COOK STOVE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed Dec. 9, 1926. Serial No. 153,497. 1 Claim. (Cl. 126—191.)

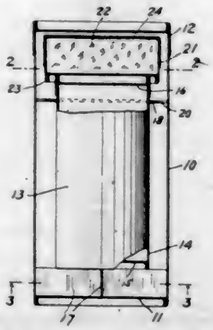
A cook stove comprising, in combination, an oven section having top, side and rear walls and having partitions therein providing upper and lower oven compartments, said partitions forming the bottom of the respective compartments and the lower partition being spaced substantially above the lower edges of the side and rear walls, a front frame providing openings for said compartments, doors for said openings having lever arms rigid therewith and fulcrumed on said frame, said partitions having slots therein to receive said lever arms, a plate secured within the lower edge of said front frame beneath the lower partition, and spring means for said doors acting to counterbalance them and to hold them in operative relation to the frame, said spring means comprising two springs both anchored to said plate, flexible connections between the respective springs and hinge members of the upper and lower doors at opposite sides thereof, and guide sheaves for said connections mounted on said frame at opposite ends thereof beneath said lower partition.

1,688,020. PNEUMATIC TOOL. JOHN R. L. SANTOS, Baltimore, Md., assignor, by mesne assignments, to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 15, 1922. Serial No. 607,183. 3 Claims. (Cl. 121—24.)

1. In a percussive tool, a cylinder, a plunger, a valve to control the admission of motive fluid to opposite sides of the plunger said valve having an area subject to a substantially constant pressure and a larger opposed area subject to a continuous variable pressure, a casing around the cylinder and forming an annular pressure supply chamber around one portion of the cylinder and said casing forming an annular exhaust chamber around another portion of the cylinder, exhaust connections to and from said latter chamber, supply connections to the first-named chamber, and means for moving the cylinder longitudinally of the casing.

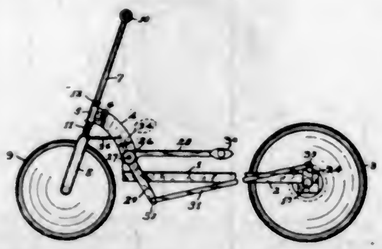
1,688,021. PNEUMATIC TOOL. JOHN R. L. SANTOS, Baltimore, Md., assignor, by mesne assignments, to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 15, 1922. Serial No. 607,184. 3 Claims. (Cl. 121—24.)

1. In a percussive tool, a cylinder, a plunger, a valve-box having an upper annular chamber, an exhaust passage, a passage that extends through the box and opens into the upper end of the cylinder and another passage that is continually supplied with live motive fluid and



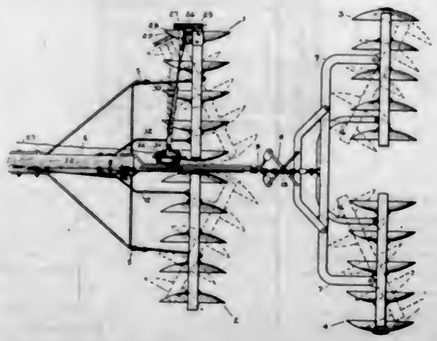
which extends from the upper side of the box and opens at the center thereof near the bottom of the box, a valve having two pressure areas one greater than the other the lesser pressure area being subject to a substantially constant pressure and the greater pressure area of the valve being subject to a continuous pressure from the box-passage which is continuously supplied with live motive fluid which it delivers near the bottom of the box, means controlled by the plunger for confining the continuously supplied motive fluid until the valve is shifted, and means comprising a passage extending from the lower end of the cylinder up to and through the valve-box, said passage at its upper end being provided with a lateral and inwardly extending opening, adapted when the valve is lifted to register with an annular channel formed about the valve, which latter is in communication with a longitudinally extending passage formed in the valve body and in communication with the supply of live motive fluid.

1,688,022. TYPEWRITING MACHINE. GEORGE H. SARGENT, Toronto, Ontario, Canada, assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1926. Serial No. 105,086. 12 Claims. (Cl. 197—126.)



1. The combination with a typewriting machine having a platen and means for feeding one of a set of two work-web packs around said platen, and a carbon-carrier including carbon-carrying blades having carbons interleaved with the work-webs of both packs, the other pack being tucked back between the blades in a reverse idle loop, of a separator attached to the carrier and positioned between the packs to direct the active webs away from the idle webs so as to prevent friction between the active and idle packs when the carrier is moved rearwardly to strip the carbons of the active webs, and means mounted rearwardly of the carrier for separating the packs to prevent contact of the same as one moves relatively to the other during the carbon-stripping operation, said separator including a plate extending beyond the forward edges of the immediately adjacent carbon-blades to shield said idle loop from contact with the active pack.

1,688,023. REFRIGERATING UNIT. GEORGE B. SCARLETT, Kennett Square, Pa., assignor to Glacifer Company, Kennett Square, Pa., a Corporation of Delaware. Filed Apr. 24, 1926. Serial No. 104,394. 3 Claims. (Cl. 62—92.)



1. A refrigerating merchandising unit comprising a portable receptacle, a carton containing a frozen product within said receptacle, means to support said carton spaced from the bottom of said receptacle, an annular spacer provided with openings therethrough interposed between said carton and said receptacle, a box enclosing a refrigerant and arranged within said receptacle in close proximity to the top of said carton, and a closure for sealing said receptacle.

1,688,024. TOY VEHICLE. AUGUST SCHOLER, Pittsburgh, Pa. Filed Feb. 21, 1927. Serial No. 169,771. 2 Claims. (Cl. 208—35.)

1. In combination, a toy vehicle, comprising a flat elongated body portion having a bifurcated rear end, a shaft rotatably journaled in said rear end, a rear wheel rotatably mounted on said shaft, a crank arm fixed to one end of said shaft, a fly wheel fixed to the other end of said shaft, a supporting bracket fixed to the forward end of said body portion, a treadle shaft rotatably journaled in said bracket, a steering stem, a wheel rotatably mounted in the lower end of said stem, said bracket having a resilient and rotatable connection with said stem, a treadle member fixed to said treadle shaft, a connecting bar pivotally connected with said member and with said crank arm, and a resilient member connecting said treadle shaft with said steering stem, said shaft having a ratchet engagement with said rear wheel, substantially as described and for the purpose set forth.

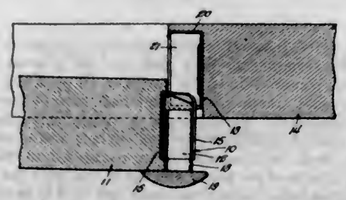
1,688,025. TANDEM DISK HARROW. HARRY S. DICKINSON, Moline, Ill., assignor, by mesne assignments, to Emerson-Brantingham Corporation, Rockford, Ill., a Corporation of Illinois. Filed Nov. 12, 1920. Serial No. 423,705. 9 Claims. (Cl. 55—83.)

1. In a harrow, the combination of a plurality of sets of pivoted harrow sections arranged in alignment with each other, means for setting said harrow sections, said means cooperating to move one end of said pivoted sections, and automatic means for moving said ends relatively to each other and restoring said ends to their original position, the adjustment of the setting means being maintained during said movement.

4. A disk harrow having a draft frame, a pair of gangs, a clutch mechanism mounted on the draft frame, said mechanism having a driving and a driven member, means for rotating said driving member from one or more of the disks of one of the gangs, and means connecting said driven member to the gangs for moving them between working and transport positions.

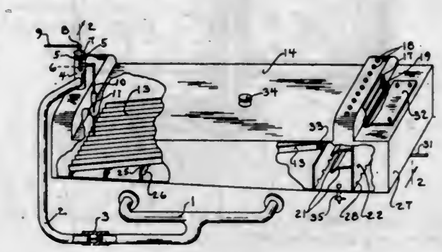
9. A disk harrow having a draft frame, a pair of gangs, clutch mechanism mounted on the draft frame and connected with the gangs for angling them with respect to the line of draft, and a driving connection between the clutch mechanism and one of the gangs comprising an endless chain driven by rotation of the disks of said gang, and a flexible and telescopic shaft connection between said chain and the clutch mechanism.

1,688,026. BUMPER FOR MOTOR VEHICLES. CHARLES B. SMITH, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 24, 1925, Serial No. 45,733. Renewed Oct. 1, 1927. 8 Claims. (Cl. 293—55.)



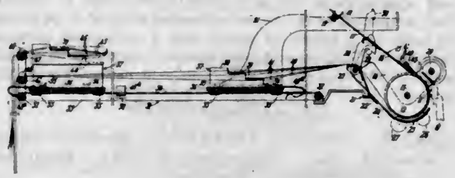
8. In a bumper for motor vehicles, an impact member comprising a flat spring bar mounted edgewise and having its opposite end portions looped by being flexed outwardly and then toward each other and lapped against the impact side of the bar with clamping means applied at the lap of the loop ends on the bar for closing the loops.

1,688,027. DISCHARGE-VALVE STRUCTURE FOR COMPRESSORS. EDWIN H. STEEDMAN, St. Louis, Mo. Filed June 2, 1927. Serial No. 196,045. 5 Claims. (Cl. 251—119.)



1. In a compressor, a discharge valve, an abutment member for limiting the movement of said valve away from its seat, arranged so that it is capable of moving laterally relatively to the valve and a resilient means that normally maintains said abutment member at rest or in fixed relation with the valve seat, and which co-operates with a portion on the abutment member to constitute the sole means for holding said abutment member centered with relation to the valve.

1,688,028. COMBINATION DOOR RETAINER AND BUMPER. WILLIS STUTSON, Winnetka, Ill. Filed Nov. 27, 1925. Serial No. 71,616. 4 Claims. (Cl. 16—86.)

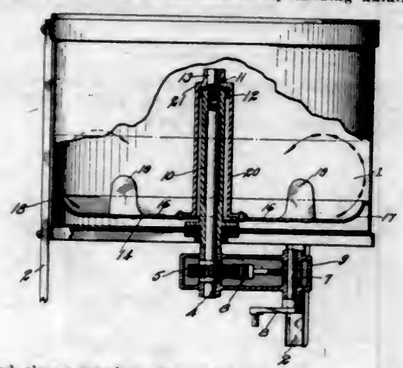


1. The combination with the hinged side door of an automobile, said door being provided with a flange at its edge, of a yielding dovetail construction comprising a receiving device, a projecting spring device which snugly engages said receiving device, said projecting device having a recess therein and a bumper member having a securing portion held in said recess and a cushioning portion backed up by the flange on said door.

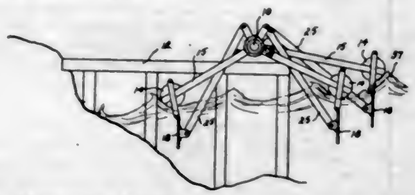
1,688,029. CARBURETOR. RUBIN MILLARD SWEARENGIN, Birmingham, Ala. Filed Aug. 19, 1925. Serial No. 51,182. 8 Claims. (Cl. 261—120.)

1. In a carburetor, a liquid fuel tank having spaced air inlet and outlet ports, a movable baffle interposed between said ports and disposed to overlie the fuel at an acute angle so as to force the air in traversing the tank to flow between the opposed surfaces of the baffle and the fuel, and a remote control means to move the baffle and regulate the air passage from beneath the baffle to vary the richness of the carbureted mixture.

1,688,030. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 3, 1924. Serial No. 684,127. 12 Claims. (Cl. 197—126.)



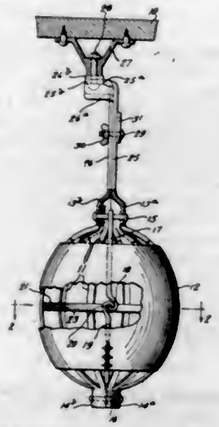
1. In a continuous billing typewriting machine, the combination with a platen around which may be fed two packs of web-plies and interleaved carbon-sheets, of means for presenting separate work-packs to the platen, including a platen-carriage having a rearward extension, two carbon-carriers, one for each set of carbon-sheets interleaved between the plies of said packs, mounted one behind the other for reciprocation on said extension, each carbon-carrier with its carbon-sheets and pack forming a separate unit, means for detaining said rearward carbon-carrier unit idly in its rearmost position when the forward carbon-carrier unit is to be used, the rear carrier mounted at a sufficient elevation above the forward carrier to leave a clearance gap for the idly-folded-back web of the forward carrier, an upper web-guide in rear of the rear carrier, and a lower-web-guiding in the ear of the front carrier.



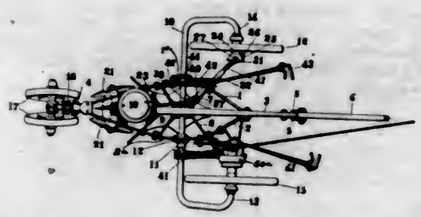
1,688,031. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill. Filed June 4, 1925. Serial No. 34,994. 2 Claims. (Cl. 259—101.)

1. A dolly for a washing machine comprising a substantially flat perforate base member provided with an upwardly

and outwardly flared peripheral portion, baffles extending upwardly from said base, and an upstanding axially disposed sleeve member arranged at its upper end for connection with a driving part.

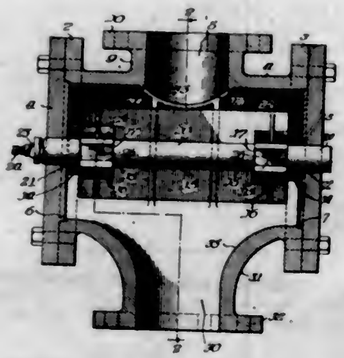


1,688,032. WAVE MOTOR. ROBERT S. BLAIR, Stamford, Conn. Filed Mar. 29, 1922. Serial No. 547,869. 21 Claims. (Cl. 253—11.)



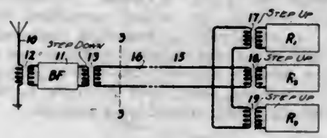
1. In apparatus for the generation of power from water waves, in combination, a float resting upon the water, a member carried by said float and movable relative thereto and adapted to be moved relative to said float by the lateral component of the waves, a member adapted to be driven to serve as a source of power, and a connection between said driven member and said member carried by said float adapted to drive the former from said movements of the latter.

1,688,033. ATHLETIC APPARATUS. ROBERT S. BLAIR, Stamford, Conn. Filed Mar. 22, 1924. Serial No. 701,001. 17 Claims. (Cl. 272—77.)



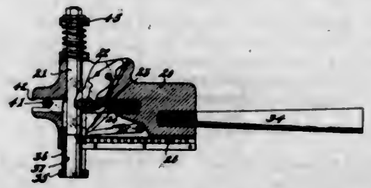
1. In athletic apparatus, in combination, a bag comprising a plurality of resilient ribs connected together adjacent their ends and shaped and connected to permit them to be distended outwardly intermediate said ends to form a collapsible frame-work, releasable means formed and connected to hold said frame-work in distended form with said ribs outwardly bowed, and pivoted means reinforcing the distended portions of said ribs and adapted to permit the collapse of said frame-work.

1,688,034. LISTER PLOW AND PLANTER. THEOPHILUS BROWN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 13, 1918, Serial No. 262,343. Renewed Jan. 28, 1922. Serial No. 532,503. 14 Claims. (Cl. 111—56.)



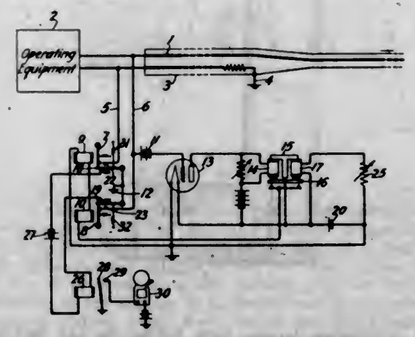
1. An agricultural machine having in combination, a frame, an axle rockably journaled on the frame and having both end portions projecting downwardly and provided at their terminations with inwardly extending spindles, supporting wheels mounted on said spindles, a seeding mechanism carried on the frame, means to operate the seeding mechanism by the traction power of one of said wheels, and means operable at will to rock said axle and raise the frame by the traction power of the opposite wheel.

1,688,035. VALVE. FRANK L. BRYANT, Joliet, Ill. Filed Dec. 31, 1925. Serial No. 78,505. 9 Claims. (Cl. 251—91.)



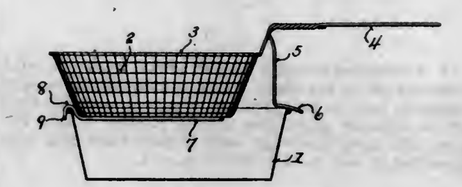
1. In a valve, a barrel having a straight cylindrical inlet passageway terminating in a port and an aligned outlet passageway terminating in the barrel in an inwardly flared port, a straight transverse rocking shaft in said barrel extending completely therethrough, a single valve member having a curved cylindrical bearing surface and a substantially flat back, said member being connected to the said shaft at the ends of the barrel and out of line with the ports, said barrel having a raised rim about one of said ports, said rim being faced off to form a valve seat to contact with said plug member to form a tight joint, said valve being adapted to be moved wholly to one side of said inlet and outlet when open to provide a minimum obstructon for the passage of material through the barrel.

1,688,036. RADIANT-ENERGY-TRANSMISSION SYSTEM. LEWIS M. CLEMENT, Mountain Lakes, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1924. Serial No. 730,159. 7 Claims. (Cl. 250—9.)



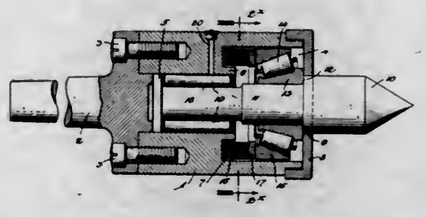
1. An electric wave transmission system comprising an antenna, a radio apparatus at a distance from said antenna, a line having normally high attenuation connected between said antenna and said radio apparatus and means including a step-down transformer connected to said line for enabling the transmission of high frequency waves without substantial attenuation.

1,688,037. MAGAZINE HAMMER. JOHN B. CROFOOT, Arlington Heights, Ill. Filed Aug. 26, 1926. Serial No. 131,580. 2 Claims. (Cl. 1—48.)



2. A magazine hammer comprising a hammer head including a reciprocating spring-held plunger; means in said head operable by reciprocation of said plunger for applying and driving a fastening element; a handle rigidly secured to said head; a striking member projecting from said head in alinement with said plunger, said striking member being provided with a sleeve slidable in said head and slidable over said plunger, said plunger operating through said striking member; and a toggle joint arrangement at each side of said head operatively connected with said striking member and said plunger for reciprocating the latter upon striking a blow, substantially as described.

1,688,038. PROTECTIVE DEVICE. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1926. Serial No. 105,731. 5 Claims. (Cl. 175—294.)

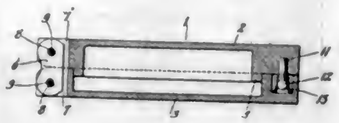


4. In a submarine signaling circuit, including a signaling conductor and a sea-earth conductor, means for dissipating any excess potential applied to said conductors, said means comprising a space discharge device, a marginal relay actuated by the output current of said discharge device whenever the potential of said discharge device exceeds a predetermined maximum, and a circuit completed by the actuation of said relay to reduce the potential of said conductors, and an alarm controlled by said circuit.

1,688,039. COOKING UTENSIL. ELMER E. DRUMM, Manitowoc, Wis., assignor to Aluminum Goods Manufacturing Company, Manitowoc, Wis. Filed Feb. 5, 1926. Serial No. 86,245. 3 Claims. (Cl. 53—7.)

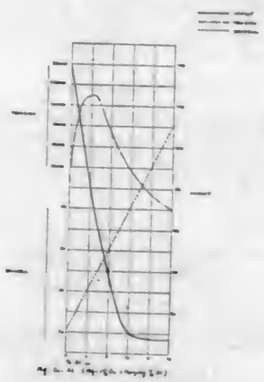
1. A cooking apparatus comprising an open top vessel, a basket having a handle extending from the top edge of the side walls, an arm extending downwardly from said handle and spaced from said side walls and terminating in a foot, a ring secured to the bottom of the basket and having its ends formed into hooks projecting outwardly from the bottom and located closely adjacent the bottom, the outer ends of the hooks being joined, whereby said basket may be placed within said vessel with the hooks located inside the vessel and the foot located outside, and said hooks and foot may be rested upon the rim of the vessel.

1,668,040. LATHE CENTER. WILLIAM H. FLINN, Detroit, Mich., assignor, by mesne assignments, to Precision Gauge & Tool Company, Detroit, Mich. Filed Apr. 20, 1925. Serial No. 24,478. 4 Claims. (Cl. 82—33.)



1. In a device of the class described, a housing, a center having limited longitudinal slidable movement in said housing, a longitudinally slidable tapered roller bearing including an external race, said center being mounted in said bearing, and resilient means exerting forward pressure against said external race and yieldably resisting the rearward movement thereof, said means effecting the automatic centering of said center through the medium of said external race.

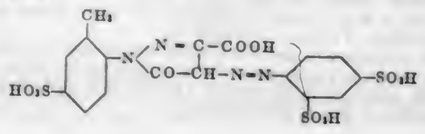
1,688,041. BITUMINOUS MASTIC. CHARLES N. FORREST and JOHN STROTHER MILLER, Jr., Rahway, N. J., and CHARLES S. BABB, Chicago, Ill., assignors to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed July 12, 1922. Serial No. 574,546. 8 Claims. (Cl. 106—31.)



8. A bituminous mastic including 84% to 85% of a mineral aggregate the grains of which are between the limits of eight and sixty mesh screens, 14% to 16% of bitumen, and .6% to .7% of fibrous flock.

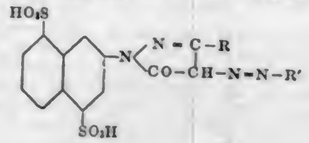
1,688,042. COMPACT BOX. HELMUTH JOHN GAESS, Palisade, N. J. Filed July 29, 1926. Serial No. 125,633. 5 Claims. (Cl. 220—31.)

1. A container having a top and bottom section, parallel channels cut in the edges of said sections, plates in said channels, holes in said plates in alignment with the holes of the adjacent plate, pins secured to each of said sections and passing through said aligned holes, said pins journaled in said holes to rotate therein.



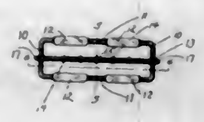
1,688,043. ALLOY. JOHN A. GANN, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Oct. 27, 1921. Serial No. 510,797. 4 Claims. (Cl. 75—1.)

1. As a new product, an alloy containing approximately ninety per cent of magnesium, nine per cent of aluminum, and less than one and one-half per cent of copper.



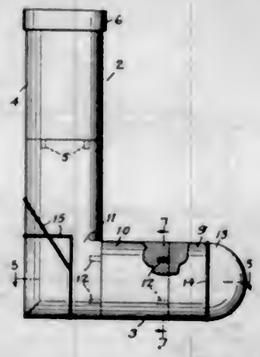
1,688,044. MONAZO DYES FROM PYRAZOLONES AND AMINOBENZENE-POLYSULPHONIC ACIDS. LEON W. GELLER, Hamburg, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1925. Serial No. 77,375. 10 Claims. (Cl. 260—87.)

5. As a new product, the monazo pyrazolone dyestuff which in the free state corresponds with the probable formula:

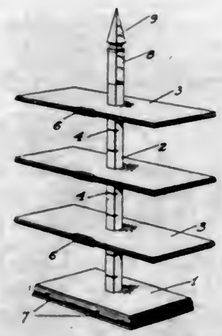


1,688,045. MONAZO DYES FROM DISULPHONAPHTHYL PYRAZOLONES AND O-AMINOHYDROXYBENZENES. LEON W. GELLER, Hamburg, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1925. Serial No. 77,377. 6 Claims. (Cl. 260—87.)

1. As new products, the monazo pyrazolone dyestuffs obtainable by combining a diazatized ortho-aminohydroxyaryl body of the benzene series which carries an acid group in the benzene nucleus with a 1-(4'.8'-disulfo-2'-naphthyl)-5-pyrazolone body; said dyestuffs in the free state corresponding with the probable formula:

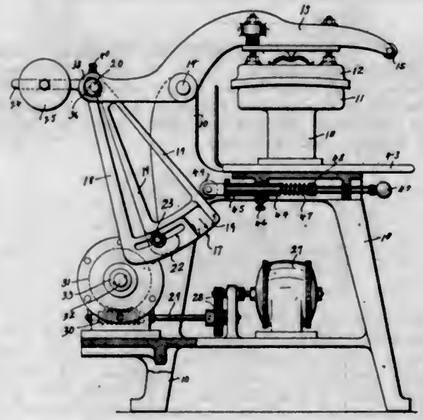


1,688,046. SLIDE BUCKLE. ROBERT J. HODGE, West Haven, Conn., assignor to The American Buckle Co., West Haven, Conn., a Corporation. Filed Apr. 28, 1927. Serial No. 187,286. 3 Claims. (Cl. 24—196.)



2. A slide-buckle, comprising a substantially-rectangular wire frame having two parallel side-bars and two parallel end-bars, both of the said side-bars being symmetrically-flattened on opposite sides of their centers to form strap-grips projecting into the frame in the plane thereof; and a slide-bar slidably mounted upon the end-bars of the frame and bent to form two lateral high-points substantially registering with the central portions of the said strap-grips.

1,688,047. STOCKING-DARNING FORM. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed Dec. 16, 1926. Serial No. 155,193. 5 Claims. (Cl. 223—14.)

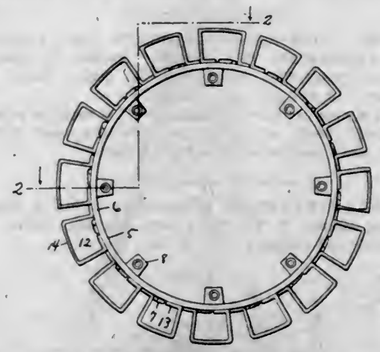


1. A stocking darning form having leg and foot portions at an angle to each other and provided with a guide at the base of the toe region to facilitate the sewing on of toe patches.

1,688,048. DISPLAY STAND. RICHARD K. IRVINE, Visalia, Calif. Filed July 23, 1927. Serial No. 208,026. 2 Claims. (Cl. 211—147.)

1. A display stand including a post, shelves slidable on the post, and flat plates wider than the post arranged under the shelves and separate therefrom; one face of the post having vertically spaced transverse slits to removably receive the adjacent ends of the plates.

1,688,049. POWER PRESS. JAMES CAMROD LEDBETTER, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,150. 14 Claims. (Cl. 68—9.)

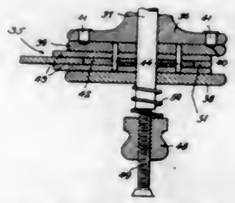


1. A pressing machine comprising in combination, motor means, a drive member connected with the motor means, a cam made with a working surface adapted to traverse the drive member which forces the cam to one side of the drive member, means forming part of the cam structure which enables it to travel back to its original position without being acted on by the drive member, pressing jaws adapted to be acted on by the cam and means forming part of the cam structure enabling it to be adjusted and regulated as to the time it will require to pass the roller.

1,688,050. EDGE-FOG PREVENTIVE FOR PHOTOGRAPHIC-FILM STRIPS. GUNNE LOWKRANTZ, Binghamton, N. Y., assignor to Ansco Photo-Products, Inc., Binghamton, N. Y. Filed Feb. 18, 1927. Serial No. 169,377. 6 Claims. (Cl. 95—9.)

1. In combination with a strip of photographic film, a protective strip therefor, the edges of said protective strip at points intersecting the edges of said film strip.

1,688,051. TRACTION RIM FOR AUTOMOBILES, TRUCKS, AND THE LIKE. RUSSELL LUDOWICI, Schenectady, N. Y. Filed May 19, 1927. Serial No. 192,053. 1 Claim. (Cl. 301—40.)



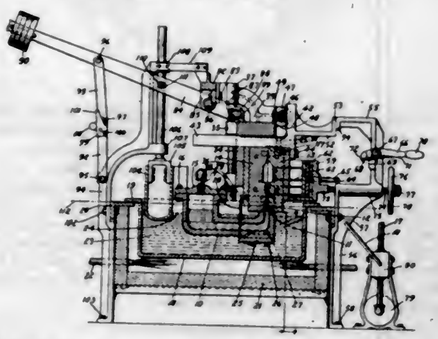
A device of the class described comprising a rim body formed with continuous side beads and a continuous central bead, and cleats disposed on the periphery of the rim body, each cleat comprising a base flange and a to the rim body diagonally thereof, a continuous reinforcing means disposed about the edges of the radial flange and across the ends of the base flange, said base flange being provided with a central bead to accommodate the central bead on the rim body and the ends of the base flange being curved outwardly from the rim body to fit over the continuous side beads.

1,688,052. ELECTRIC HEATER FAN. JOHN E. MARSDEN, Philadelphia, Pa. Original application filed Mar. 15, 1926, Serial No. 94,654. Divided and this application filed Oct. 10, 1927. Serial No. 225,189. 4 Claims. (Cl. 230—256.)

1. In a device of the class set forth, the combination with a pedestal, a turn table mounted thereon for

oscillation around a vertical axis, and a casing supported upon the turn table, of means to oscillate the casing with respect to the pedestal comprising a shaft, a disk fixed to the shaft, a stud extending from the face of the disk, a pair of disks mounted upon the shaft, one in contact with the first mentioned disk and having one or more pits into which the stud is adapted to project, the disks

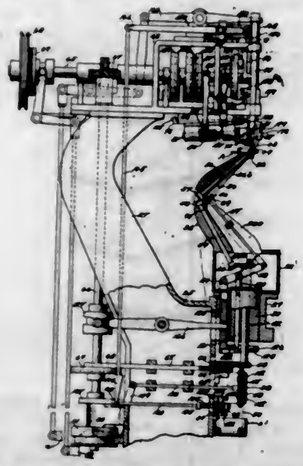
of the pair being spaced from each other, an eccentric surrounding the shaft between said disks, means to hold the eccentric to one of the disks to prevent relative rotation thereof, an eccentric strap surrounding the eccentric, a connecting rod leading from the strap to the upper portion of the pedestal as an abutment, and means from the casing to rotate the shaft and the first mentioned disk.



1,688,053. AGAR MEDICAL COMPOUND. GROVER C. MILLER, South Pasadena, and JOSEPH F. KURKA and LEWIS B. CHASE, Los Angeles, Calif., assignors to Kelp-OI Laboratories, Incorporated, Los Angeles, Calif., a Corporation of California. Filed May 14, 1927. Serial No. 191,545. 2 Claims. (Cl. 167—7.)

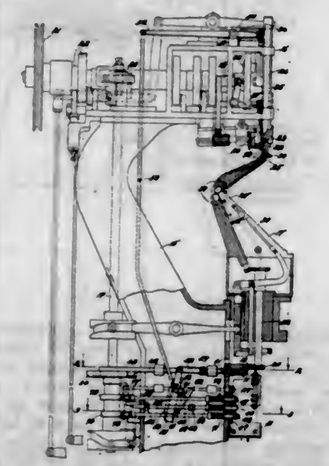
1. A medical compound including mineral oil, agar and lactic acid in an amount sufficient to be carried into the intestines to exert an inhibitive action on any toxic intestinal flora, and not less than 25/100 per cent.

1,688,054. TRIBARIUM ALUMINATE AND PROCESS OF PREPARING THE SAME. GEORGE W. MOREY, Chevy Chase, Md. Filed Nov. 23, 1925. Serial No. 71,024. 16 Claims. (Cl. 23—52.)



1. As a new product of manufacture, a furnace product consisting chiefly of tribarium aluminate and having present small amounts of free barium oxide.

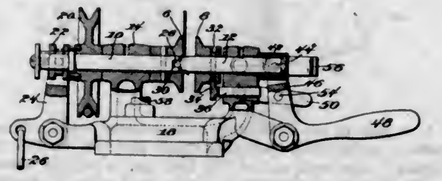
1,688,055. DIE-CASTING MACHINE. LEWIS A. PALEY, Grand Island, N. Y. Filed Oct. 2, 1922. Serial No. 591,844. 18 Claims. (Cl. 2—69.)



1. In a die-casting machine, a melting pot, a rigidly supported pressure vessel having a nozzle in the melting pot, a die having a gate opening adapted to register with said nozzle for the reception of a charge of metal from said vessel, and operating means adapted to remove the die from the nozzle and refill the vessel with metal by raising the metal level above the nozzle.

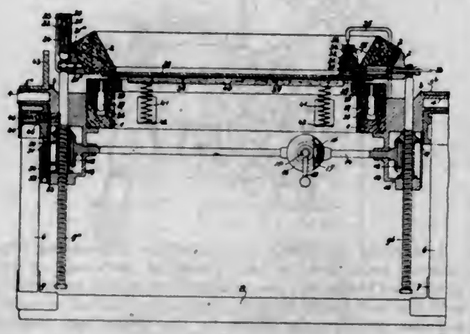
1,688,056. SHOE-SEWING MACHINE. JAMES H. REED, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 10, 1922, Serial No. 542,666. Renewed Apr. 12, 1927. 27 Claims. (Cl. 112—26.)

1. A lock stitch shoe sewing machine including, in combination, a straight hook needle and a shuttle having provision for suplying a shuttle thread, both located on one side of the work, and on the other side of the work a rotatable horn pierced at its end for the passage of the needle, a rotatable looper carried by the tip of said horn and adapted to form a loop about the hooked end of said needle, a cam actuated takeup and a cam actuated stitch setter adapted respectively for drawing the needle loop over the shuttle and setting the stitch, and a thread clamp cooperating with said takeup and stitch setter.



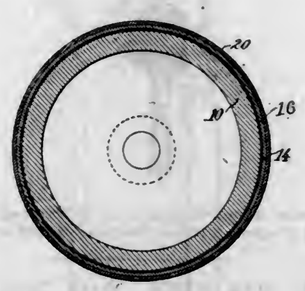
1,688,057. THREAD-MEASURING MECHANISM FOR SEWING MACHINES. JAMES H. REED, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 19, 1922. Serial No. 595,580. 7 Claims. (Cl. 112—58.)

1. In a sewing machine, in combination, thread guiding means, a pull-off member cooperating therewith, a lever, means for actuating the same, a slide guided on



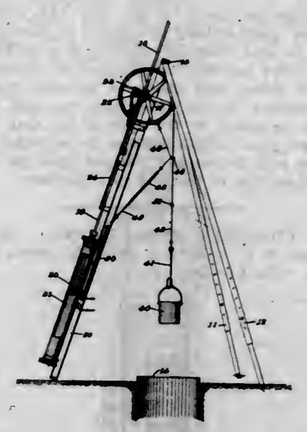
said lever and arranged to actuate said pull-off member, a presser foot, a lever connected with said presser foot, and a link connecting said lever and slide whereby the movement imparted to the pull-off member by the slide is varied in accordance with the thickness of the work.

1,688,058. COP-WINDING MACHINE. JAMES H. REED, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 19, 1925. Serial No. 76,480. 8 Claims. (Cl. 242—23.)



1. A cop winding machine having, in combination, two winding flanges between which the cop is wound, a driving shaft concentric with the flanges, a winding shaft upon which the cop is wound arranged in axial alignment with the driving shaft, bearings in which said shafts are mounted and in one of which the winding shaft is longitudinally movable from winding position between the flanges to a position permitting discharge of the cop, means for clamping the end of the thread to the winding shaft when in winding position, and coperating clutch faces on adjacent ends of the shafts to drive the winding shaft from the driving shaft.

1,688,059. PHOTO COPYING APPARATUS. WERNER SACK, Dusseldorf-Rath, Germany. Filed June 30, 1925, Serial No. 40,632, and in Germany June 26, 1924. 12 Claims. (Cl. 95—76.)

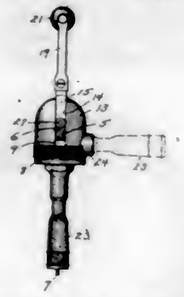


1. Photo copying apparatus comprising a supporting structure, a frame mounted in said supporting structure, a rubber cover supported in said frame, a second frame mounted in said supporting structure, a transparent plate fitted in said second frame, said transparent plate having an opening therein means for moving said frames towards and away from one another, said means serving to hold said frames when together and when separate, the edges of the rubber sheet being adapted to be pressed into close contact with the transparent plate so as to form an air tight joint between said rubber cover and said transparent plate, a valve casing with a valve seating fitted over said opening, said valve casing normally bearing on the transparent plate around said hole whilst the valve seating is opposite said opening but slightly removed therefrom, a valve body co-operating with said seat and slidably mounted therein said valve body being adapted to close and expose said opening, and a suction tube connected to said valve casing, said valve casing being adapted to form an air-tight joint with said transparent plate when the valve body exposes said opening.

1,688,060. MANUFACTURE OF ARTICLES OF CELLULOSE ESTERS AND OF THEIR COMPOSITIONS. KEVIE W. SCHWARTZ, New York, N. Y., assignor, by mesne assignments, to United Chromium, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Nov. 23, 1926. Serial No. 150,364. 4 Claims. (Cl. 18—47.)

1. The method of finishing cellulose derivative products and the like, comprising subjecting the same to contact between tools or implements having a chromuim surface.

1,688,061. HOISTING APPARATUS. HERMAN R. SMITH, Brooklyn, and PAUL D. CASE, Pelham Manor, N. Y., assignors to Charles R. Gow Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1923. Serial No. 675,563. 5 Claims. (Cl. 254—145.)

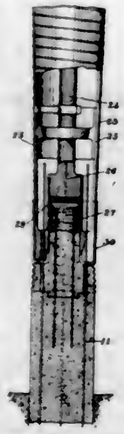


1. In a hoisting apparatus, in combination, a supporting structure, a hoisting drum carried thereby, a pinion to rotate the drum, a rack meshing with the pinion to rotate the same, fluid pressure mechanism to reciprocate the rack, fluid pressure brake mechanism associated with the hoisting drum, and manually operable valve mechanism common to said fluid pressure mechanisms to control the same.

1,688,062. DENTAL AMALGAM MIXER. GIUSEPPE E. TERRANOVA, New Haven, Conn. Filed June 29, 1927. Serial No. 202,257. 4 Claims. (Cl. 259—75.)

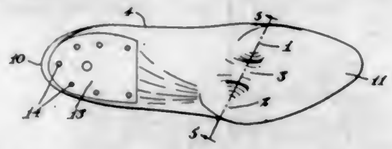
1. A dental amalgam mixer, comprising a frame, a head mounted on a spindle extending through said frame, said head formed with an annular cam-groove, a slotted cap connected with said frame and enclosing said head, a

rocker entering the slot in the cap and provided at its ends with rollers traveling in the cam-groove in the head,



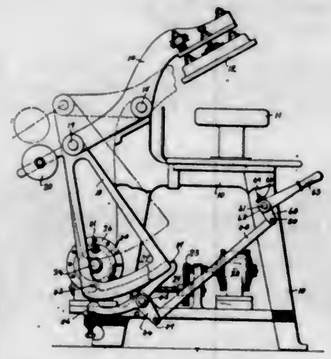
spring arms connected with said rocker, and means for mounting a capsule between the ends of said arms.

1,688,063. SPAR SPLICE. FRANK TRAINOR, Seattle, Wash. Filed Oct. 19, 1926. Serial No. 142,535. 1 Claim. (Cl. 20—99.)



In a splice for spars or the like, two substantially semi-circular comparatively thin pieces of material having flanged edges and openings therein of a sufficient size to permit spurs entering and holding in the spar within the said splice, said pieces of material also having smaller openings therein to permit the said pieces of material to be spiked to the ends of the spar, and said pieces of material being adaptable to be bolted together through the said flanges and clamped upon the said spar to join two sections of the said spar together.

1,688,064. CONCRETE PILE. MAXWELL M. UPSON, Englewood, N. J. Filed Jan. 29, 1925. Serial No. 5,436. 2 Claims. (Cl. 61—56.)

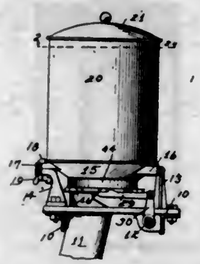


1. The method of making a concrete pile which comprises precasting a lower section of the pile with a driving head portion, driving the said lower section after the driving head portion has attained safe driving strength and while the portion thereof below the driving head is comparatively green, and casting a pile section in place on the driving head portion of the precast section.

1,688,065. LAST. PAUL C. WOLFER, Wellesley, Mass. Filed July 8, 1927. Serial No. 204,231. 5 Claims. (Cl. 12—136.)

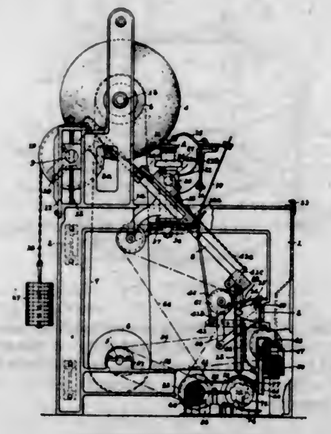
1. A last of the kind described provided with a longitudinal instep arch extending from the ball of the toe portion to the rear end of the heel, and a pair of apexes on the bottom of said last to cause pockets to be formed in the shoe made on said last to accommodate the inner and outer balls of the foot.

1,688,066. POWER PRESS. BASIL J. YANCHENKO, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,173. 9 Claims. (Cl. 68—9.)



1. A press comprising in combination, cooperating wide opening press jaws, a cam connected with one of the press jaws to produce jaw compression, means cooperating with the cam urging it to an inoperative position, a motor, a roller continuously driven by the motor and adapted to engage the cam, power closing means operated by the motor to close the press jaws, means to permit the cam to pass by the roller without being engaged by said roller, operator actuated means to cause the cam to be brought into position to be engaged by the power closing means and subsequently engaged by the roller aforesaid to produce compression between the jaws.

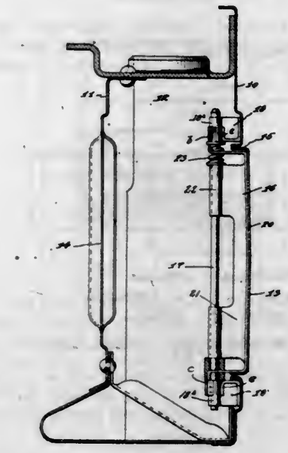
1,688,067. SEED DROPPER. RICHARD V. BARRY, Ottumwa, Iowa. Filed Feb. 16, 1927. Serial No. 168,645. 2 Claims. (Cl. 221—122.)



1. In combination, a planter runner frame having a dropping spout, a pair of upwardly projecting brackets carried by said frame, a seed box having a bottom plate pivotally mounted to one of said brackets, means for detachably securing the seed box to the other one of said brackets, said bottom plate being provided with a pair of annular grooves and having its central portion provided with a downwardly extending cylindrical lug, the lower end of said lug terminating in a contracted portion of

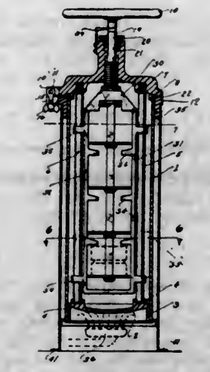
angular formation, a seed plate rotatively mounted on the cylindrical portion of said lug, a bearing plate supported on the angular portion of said lug to support said seed plate, said bearing plate having an opening in communication with said spout, a bolt projected through the downwardly extending lug of said bottom plate to de-

tachably support said bearing plate and said seed plate, a toothed ring rotatively mounted on the periphery of said bearing plate, means for detachably connecting said toothed ring and said seed plate, and means for engaging the teeth of said ring for intermittently rotating said seed plate.



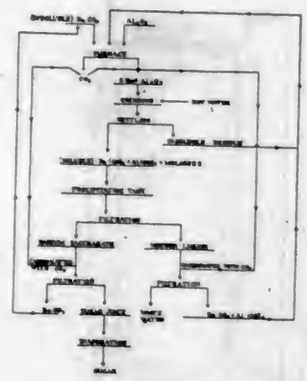
1,688,068. GLASS-BEVELING MACHINE. BERTRAND E. BEYER, Paterson, N. J., assignor to American Bevel Glass Company, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 19, 1925. Serial No. 51,194. 13 Claims. (Cl. 51—105.)

9. In combination, a rotated operating wheel having a peripheral working surface, means to support the work including a work-holder, a guideway for said means extending transversely of the axis of the wheel and along which said means is movable to bring the work against said surface and with reference to which the work-holder is adjustable to different inclinations, and supporting means for the guideway adjustable to support the same in different planes angularly related to each other and coinciding with chords of a circle whose center coincides with said axis.



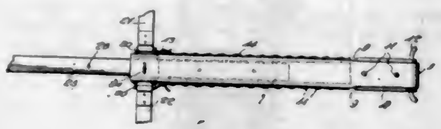
1,688,069. VENTILATOR. JAMES H. CLARK, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 14, 1926. Serial No. 115,982. 11 Claims. (Cl. 98—4.)

1. In a motor bus, a wall provided with an opening, a pintle journaled in bearings in said wall, a ventilator shutter carried by said pintle for controlling the passage of air through the bus, a bracket carried by said shutter, lugs mounted on the bracket, lugs carried by the said wall



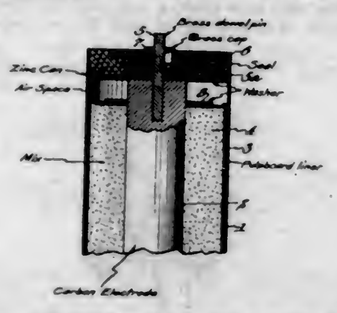
and cooperating with the lugs aforesaid, to limit the movement of the shutter between predetermined points.

1,688,070. DENTURE PRESS. LEONARD A. CREMER, Portland, Oreg., assignor of one-half to Harry Semler, Portland, Oreg. Filed Dec. 28, 1926. Serial No. 157,490. 3 Claims. (Cl. 18—7.)



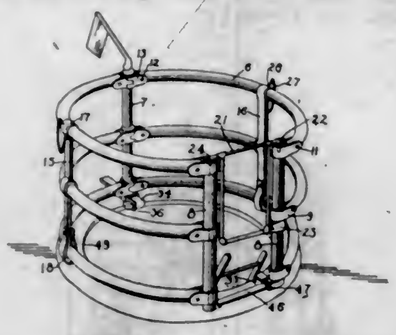
1. A device of the character described embodying a heat resisting vessel including a cover removably secured thereto, removable flask supports pendant from said cover normally residing within said vessel, plates carried by said supports and one below the other, side members vertically shiftable relative to said plates, including relatively stationary rods forming guides for said side members, said side members being each provided with individual means projecting above individual plates adapted for bearing upon flasks resting thereupon when said side members are lowered, and screw means extending through said cover for raising and lowering said side members.

1,688,071. CYCLIC PROCESS OF USING BARIUM COMPOUNDS IN THE MANUFACTURE OF SUGAR. HENRY W. DAHLBERG, Denver, Colo. Filed Dec. 16, 1925. Serial No. 75,770. 8 Claims. (Cl. 127—47.)



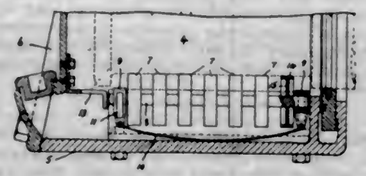
1. The cyclic process of manufacturing sugar and using barium as an extractive agent, which process consists in converting barytic materials which are insoluble in water into water soluble barytic materials by heating insoluble barytic material with alumina and thereby producing a barium aluminate compound containing water soluble barytic material, utilizing the water soluble content of said barium aluminate compound to treat molasses and thereby producing a barium saccharate, separating the barytic content from the sugar content as a water insoluble material, and reusing said water insoluble material in producing a water soluble barium aluminate compound.

1,688,072. HAME TUG. JAMES DWYER, Cleghorn, Iowa. Filed Mar. 8, 1928. Serial No. 260,058. 3 Claims. (Cl. 54—33.)



1. A hame tug of substantially flat tubular form to receive a trace, said tug having its upper and lower sides longitudinally split at their rear ends to permit separation of the two halves of the tug at the tug at the rear end of the latter, two opposed metal plates lying agninst the inner surfaces of the vertical sides of said tug at the rear end thereof, said plates having lateral flanges at their upper and lower edges lying against the inner surfaces of said upper and lower sides of the tug and extending to the splits of the latter, back strap and belly band attaching means having rivet portions passed through said upper and lower sides of the tug at the inner sides of said splits and through the flanges of the innermost of said plates, means securing the flanges of the outermost of said plates to said upper and lower sides of the tug at the outer sides of said splits, said plates and the outer vertical side of the tug being formed with alined screw-receiving openings, and a trace-anchoring screw passing through said openings and threaded into the opening of said inner plate.

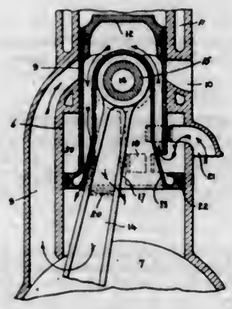
1,688,073. PRIMARY CELL. CHARLES A. GILLINGHAM, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 21, 1926. Serial No. 82,780. 4 Claims. (Cl. 136—133.)



1. A dry cell comprising a zinc cup, a carbon rod electrode therein terminating below the top of the zinc cup, seal supporting means resting on the top of said carbon electrode and sealing means above said seal supporting means and joined to said carbon electrode.

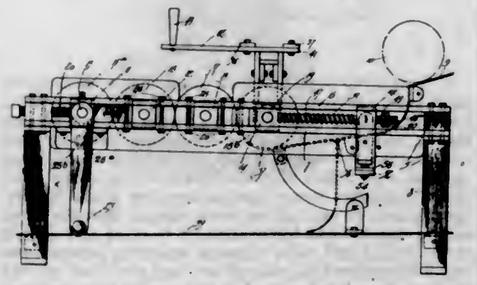
1,688,074. MANHOLE SAFETY CAGE. JESS GOFF, Los Angeles, Calif., assignor of one-third to O. R. Bartram, Los Angeles, Calif. Filed Mar. 21, 1928. Serial No. 263,263. 16 Claims. (Cl. 94—38.)

1. A safety cage for a manhole, comprising spaced front and rear vertical bars and a plurality of bars pivotally connected at each end to one of said vertical bars for movement about horizontal axes to optionally fold or extend the cage to operative position.



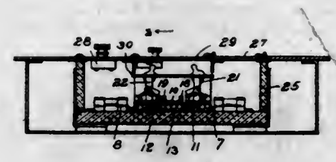
1,688,075. LUBRICATING APPARATUS. PERCIVAL GEORGE GRAHAM, Enfield, near Sydney, New South Wales, Australia. Filed Dec. 3, 1925, Serial No. 73,011, and in Australia Nov. 2, 1925. 1 Claim (Cl. 308—91.)

A device of the character described including in combination, a journal, a box arranged thereabout, a pair of spaced parallel longitudinally extending and vertically



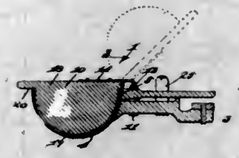
arranged guides on the floor of the box, a spindle, a series of rollers thereon, a pair of bearings for accommodating the ends of the spindle, opposed distance pieces projecting from each of the bearings and contacting with the inner surface of the guides, spaced arms depending from each of the bearings, a bowed spring having its medial portion engaging the floor of the bearing with its respective ends pivotally connected between the arms of the bearings for normally holding the rollers in yielding engagement with the journal, and a device secured to the inner surface of the outer wall of the box and engaging the outer end of the spindle for preventing longitudinal movement thereof, substantially as and for the purposes set forth.

1,688,076. PISTON. GEORGE WENTWORTH GRAYSON, Sydney, New South Wales, Australia, assignor to Grayson Engine Company Limited, Sydney, New South Wales, Australia, a Company of New South Wales, Australia. Filed Aug. 3, 1926, Serial No. 126,829, and in Australia Aug. 28, 1925. 3 Claims. (Cl. 123—171.)



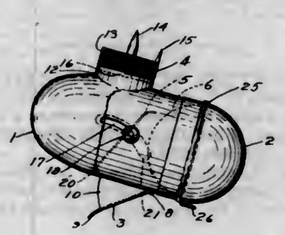
1. In an internal combustion engine, a stepped cylinder, a hollow stepped piston therein, a centrally situated dividing wall in said piston, air inlet ports in the piston walls on one side of said dividing wall, outlet valves in the base of the piston on the other side of said wall and air inlet ports in the enlarged part of said stepped cylinder.

1,688,077. MEANS FOR LABELING CANNED AND BOTTLED GOODS. WILLIAM CLIFTON HART, Adelaide, South Australia, Australia. Filed Apr. 21, 1926, Serial No. 103,623, and in Australia July 22, 1925. 8 Claims. (Cl. 101—38.)



1. Apparatus for the purposes specified, comprising the combination of a printing roller for imparting colors or multicolors directly to a cam body or bottle, a primary roller, a distributing roller, said distributing roller receiving the color from the primary roller and delivering it to the printing roller, and the said printing roller carrying colour wells and the label pattern, the colour wells feeding the pattern of the label and being of the same area as the said label patterns.

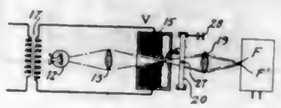
1,688,078. SWITCH PANEL. WILLIAM E. HAWLEY, Pittsburgh, Pa. Filed July 25, 1923. Serial No. 653,736. 1 Claim. (Cl. 175—371.)



A switch panel unit including a block of insulating material provided with channels in one face thereof, spaced flanges forming a channel in the opposite face, switches mounted on said opposite face adjacent said flanges and adapted to be electrically connected to bus bars received within said channels and slots formed in said block adjacent said switches for receiving fuse connections.

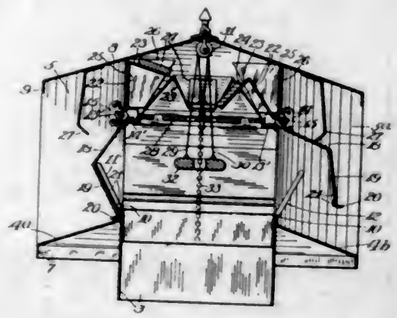
1,688,079. MULTIPLE ICE-CREAM DISHER. OTTO HINZ and RUSSELL MERRELL, Los Angeles, Calif. Filed Apr. 27, 1927. Serial No. 186,919. 7 Claims. (Cl. 107—48.)

6. A device of the character described, comprising an open scoop and a partition pivotally mounted on the rim of said scoop for movement optionally out of or into the scoop to present either a single open compartment or a plurality of open compartments.



1,688,080. MEASURING DEVICE. TOM HOSETH, Seattle, Wash. Filed Jan. 17, 1923, Serial No. 613,156. Renewed Aug. 22, 1928. 1 Claim. (Cl. 221—95.)

In a measuring device of the class described, a casing, a threaded tubular extension at one side of the casing and opening into the interior thereof, a point in the center of the said extension for locating the same in the side of a can or the like, a knife edge projecting from the edge of the said extension for cutting a circular opening in the side of a can or the like as the device is rotated, a spout on

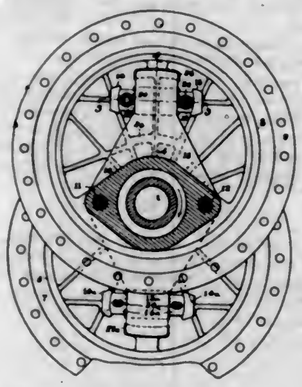


the opposite side of the said casing, said spout being adjustable to open or close, an adjustable baffle plate within the said casing and substantially in front of the said tubular extension and variable means in one end of the said casing for regulating the amount of a substance that may pass therethrough.

1,688,081. TRANSMISSION OF PICTURES BY ELECTRICITY. HERBERT E. IVES, Montclair, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,693. 10 Claims. (Cl. 178—7.)

5. In an optical system for picture transmission apparatus, means for forming an image on a recording element, and a piece of Iceland spar for doubling said image.

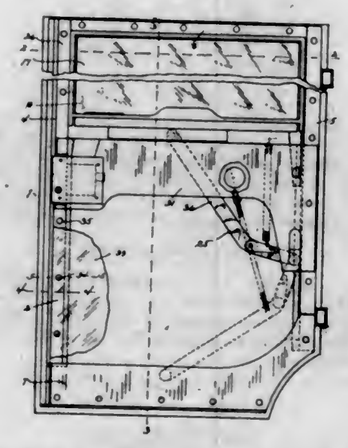
1,688,082. EXHAUST VENTILATOR. PAUL R. JORDAN, Indianapolis, Ind. Filed Feb. 15, 1926. Serial No. 88,403. 3 Claims. (Cl. 98—85.)



1. An exhaust ventilator including a pyramidal bottom having a quadrangular opening therein, the upper portion of the bottom having outward-facing valve seats thereon, a neck connected to the upper portion of said bottom, four partitions secured radially upon said bottom, a roof secured to the tops of the partitions, and four valves pivotally supported above the valve seats respectively, by the partitions and movable by external air-pressure to the seats.

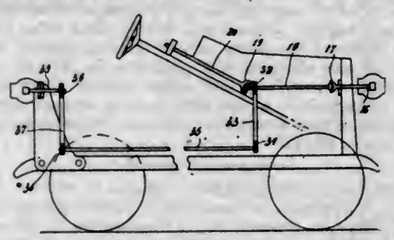
1,688,083. PROCESS OF MAKING OLEFINE ALCOHOLS. FRED W. LOMMEN, Pittsburgh, Pa., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed June 7, 1926. Serial No. 114,316. 7 Claims. (Cl. 260—156.)

1. Process of making an olefine alcohol which comprises bringing the corresponding aldehyde into contact with a paraffin alcohol in the presence of aluminum butoxide as a catalyst.



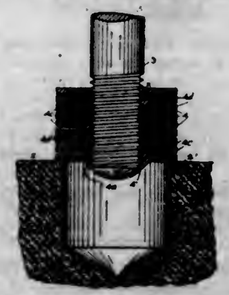
1,688,084. DRIVING MEANS FOR ROTARY DEVICES. JOSEPH R. MAHAN and JOHN B. PICARD, Toledo, Ohio, assignors to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 18, 1927. Serial No. 184,577. 6 Claims. (Cl. 74—1.)

1. A rotary driving element, a rotary driven element, an arm projecting from one element, a pair of lugs carried by the other element and having the arm between them, and wedging means seated against the lugs, and clamping the



arm to the element not bearing the arm and preventing the arm from moving toward one of the lugs.

1,688,085. ALL-METAL DOOR CONSTRUCTION. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 10, 1924. Serial No. 749,017. 2 Claims. (Cl. 296—44.)



1. A door for vehicle bodies comprising a sheet metal panel having an area substantially equal to the area of the door and having a window opening therein at the upper end thereof, and a reinforcing and supporting frame for said panel including two spaced pillars and three spaced cross members, said pillars extending longitudinally of the panel at the side edges thereof and at the sides of the window opening, one of said pillars being shorter than the other and having one end terminating short of an end of said panel, two of said cross members extending between and terminally secured to said pillars, and the other of said cross members being secured to and serving as a continuation of the shorter of the two pillars and having portions secured to said panel and to the other of said pillars at points beyond an end of said short pillars whereby a portion of said last mentioned cross member constitutes an extension or continuation of said short pillar for the longitudinal reinforcement of said panel and door.

1,688,086. DIRECTION INDICATOR FOR VEHICLES. SIDNEY WILLIAM MATHEW, Waiuta, New Zealand. Filed June 5, 1926, Serial No. 113,943, and in New Zealand June 8, 1925. 1 Claim. (Cl. 116—43.)

A direction indicator for vehicles comprising a polysided drum having an opening in each of said sides closed by translucent members bearing signals, a casing for enclosing said drum and permitting the same to rotate therein, said casing having a longitudinal opening in its side wall with which the openings in the drum may register, a transparent plate covering the opening in said casing, a tubular member extending through an opening in an end wall of the casing and rigid with the casing and extending through an opening in the adjacent end wall of said drum and having said extended end lying within said drum, whereby said end of the drum is journalled, an outwardly extending trunnion rigid with the other end wall of the drum and extending through an opening in said casing, whereby the other end of said drum is journalled, a drum actuating device comprising a rotary shaft operatively connected with said trunnion, a dial through which one end of said shaft extends and is rotatably journalled, resilient crank handle mounted on the end of said shaft and adjacent one face of said dial, said dial having a circumferential series of spaced openings therein covered by translucent plates bearing signal indicators corresponding to signal indicators on said drum, an opening in an arm of said crank handle to align with openings in said dial to indicate the position of said drum with respect to the opening in said casing, notches on the periphery of said dial, and a projection on said crank handle for co-operating with said notches to lock the crank handle in adjusted positions, and a light mounted behind said dial.

1,688,087. MEANS FOR ANCHORING BOLTS. RICHARD A. MIRZAN, Syracuse, N. Y. Filed July 12, 1927. Serial No. 205,199. 4 Claims. (Cl. 72—105.)

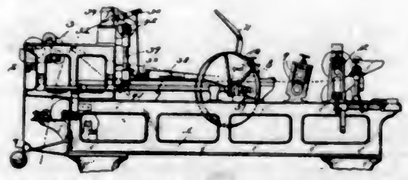
3. An anchor for bolts and the like including a bolt-like member, a disk having a central opening to receive said member and disposed at substantially right angles to the longitudinal axis of the member, means to rigidly secure the disk to the member, said disk being formed of bendable material and adapted to engage the face of a body having a hole of less diameter than that of the disk, whereby upon driving of the member into the hole, the outer portion of the disk will be bent to be at substantially an acute angle to the longitudinal axis of the member, and means to facilitate bending the disk upon driving of the member.

1,688,088. PROCESS FOR STRAIGHTENING RUGS. JACOB S. NAKASHIAN, Watertown, Mass. Filed Aug. 16, 1926. Serial No. 129,636. 1 Claim. (Cl. 68—11.)

The process of straightening a rug having oppositely disposed edges of different lengths, which consists in suspending the rug and taking up the slack thereof in the direction of the shorter edge, then dampening the rug along the portion adjacent the shorter of said edges, then lightly beating the dampened portion of the rug to stretch said portion longitudinally of said edge, then taking up the slack of said dampened portion, then causing the rug to dry while suspended under tension.

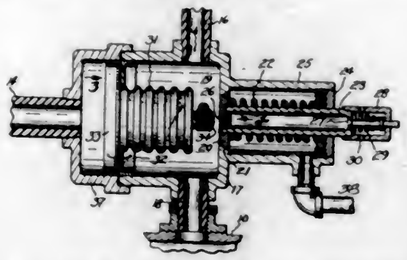
1,688,089. PUMPING EQUIPMENT. JOHN PENROD and ROBERT D. THOMPSON, Okmulgee, Okla. Filed Mar. 20, 1925. Serial No. 17,019. 3 Claims. (Cl. 103—179.)

1. In a pump having a working barrel, a shell and a standing valve cage, a body having a plurality of stepped surfaces, externally threaded for engagement by the shell, the working barrel and the standing valve gage of a pump.



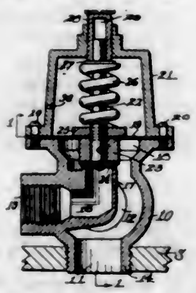
1,688,090. EXTENDIBLE BRACELET LINK. EUGEN PRESTINARI, Irvington, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed Nov. 10, 1927. Serial No. 232,428. 2 Claims. (Cl. 24—71.)

2. An extension for a bracelet strap having a pair of strap sections, comprising two link members hinged together to fold one upon the other, one of the strap sections being connected to one of the said link members, the other



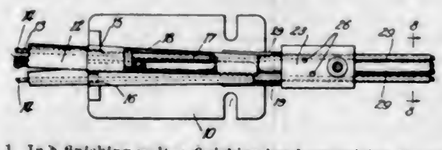
link member having opposite side walls each provided with spaced openings, said openings having a shape other than round, and the other strap section having a cross bar with extending opposite ends shaped to enter the said wall openings when the strap end is in other than working position and to prevent withdrawal therefrom when the strap is in working position.

1,688,091. SLITTING DEVICE FOR BAG-MAKING MACHINES. WILLIAM M. SEITZINGER, Chicago, Ill., assignor, by mesne assignments, to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1925. Serial No. 67,042. 12 Claims. (Cl. 93—33.)



1. In combination with a bag making machine having a former for forming a tube from which the bags are to be produced, a slitting device for slitting the tube longitudinally comprising moving knives positioned inside said tubes.

1,688,092. COMBINATION RELIEF VALVE. CHETWOOD SMITH, Worcester, Mass. Filed Mar. 20, 1922. Serial No. 545,097. 5 Claims. (Cl. 236—20.)



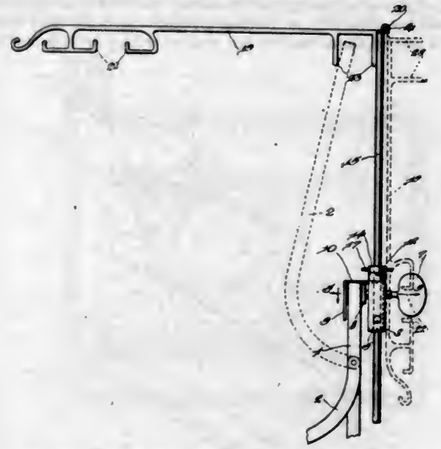
1. In a heating system, a relief valve constructed to open said system for an increase in either pressure or temperature in said system; and means to convey waste liquid from the heating system, said valve including a loosely fitted member past which liquid may be forced to relieve the system if the waste connection is clogged.

1,688,093. DIAPHRAGM-TYPE RELIEF VALVE. CHETWOOD SMITH, Worcester, Mass. Filed July 25, 1923. Serial No. 653,675. 1 Claim. (Cl. 137—53.)

A diaphragm relief valve comprising a casing having a water space and having inlet, outlet and waste openings, said casing having a portion projecting inwardly into the water space thereof and having an angular passage therein connected with said waste opening, a relief valve normally closing said angular waste passage, a diaphragm on which said relief valve is mounted, and spring means to seat said valve yieldingly on said projection to normally close said angular passage, said inlet opening being positioned to direct the inflow of fluid directly against said projection and alongside said projection at the end and both sides thereof, and said outlet opening being positioned perpendicular to said inlet opening, whereby active circulation of fluid within said water space and about said projection is effected.

1,688,094. FINISHING WELT. LESTER B. STROUT, Chicago, Ill., assignor to Woodward & Cochey Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1924. Serial No. 738,954. 4 Claims. (Cl. 155—184.)

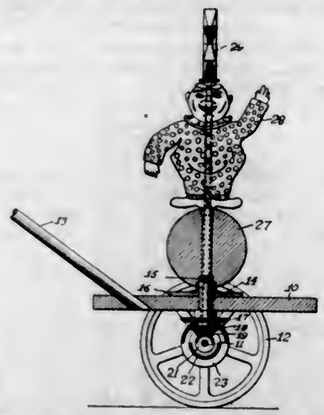
1. In a finishing welt, a finishing bead comprising in combination a core consisting of a strand of loosely twisted fiber and covering material surrounding said core and constructed and arranged to hold said core in firmly compressed condition and in a shape to give the bead the desired contour.



1,688,095. DOOR RETAINER. WILLIS STUTSON, Winnetka, Ill. Filed Oct. 15, 1925. Serial No. 62,497. 10 Claims. (Cl. 16—86.)

1. The combination with the hinged door of an automobile mounted to swing about a substantially vertical axis and its frame, of a yielding dovetail construction comprising a receiving device and a projecting device which engages the receiving device when the door is closed, one of said devices comprising a spring tongue yieldable vertically about an axis transverse to the general plane of the door, said spring tongue having a greater extent transversely of said plane than its horizontal extent longitudinally of said plane.

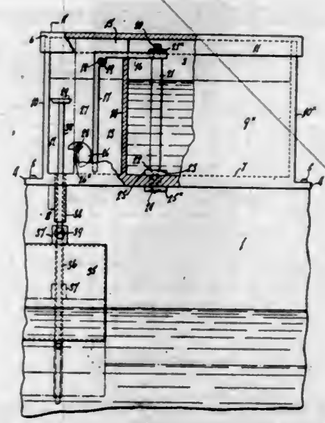
1,688,096. BRACKET. JOHN A. TESK, Chicago, Ill. Filed Nov. 10, 1924. Serial No. 748,969. 1 Claim. (Cl. 155—188.)



In combination with a chair having a pivoted tray member thereon, a clamp removably secured to the back of said chair, a standard adjustably supported by said clamp, a bracket arm having one end thereof pivotally connected to the upper end of said standard and adapted to lie in parallel relation with said standard when in inoperative position, and spaced fingers carried by said bracket arm adjacent the pivoted end thereof, one of said fingers contacting with said standard when said bracket arm is moved to a right angular position relative to said standard, said finger engaging said standard to hold said arm in said

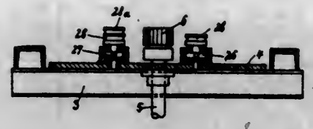
right angular position, said fingers being adapted to receive between them a portion of said pivoted tray mem-

ber whereby said pivoted member may be retained in substantially parallel relation to said standard.



1,688,097. MECHANICAL TOY. JOHN W. THOMPSON, Oak Park, Ill., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1926. Serial No. 128,941. 1 Claim. (Cl. 46—45.)

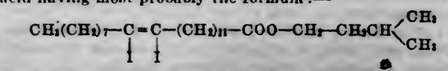
In a mechanical toy, a platform, wheels and axle supporting said platform, a plurality of objects attractive to the eye separately mounted on said platform and each adapted to move independently of the other periodically in reverse directions so as to give a combined visual effect, mutilated gears on said axle, other gears connected to said objects and each adapted to be driven by two of the mutilated gears alternately to effect a reversal in movement of said objects, adjacent objects moving in opposite directions.



1,688,098. MEANS OR APPARATUS FOR SUPPLYING LIQUID DISINFECTANTS TO THE WATER CONTAINED IN TANKS USED FOR WATER-CLOSETS AND OTHER LIKE FLUSHING PURPOSES. GEORGE ARTHUR TURNER, Leeds, England, assignor to H. & M. Patents Limited, Leeds, England, a Company of Great Britain and Northern Ireland. Filed May 12, 1928, Serial No. 277,279, and in Great Britain May 20, 1927. 3 Claims. (Cl. 4—227.)

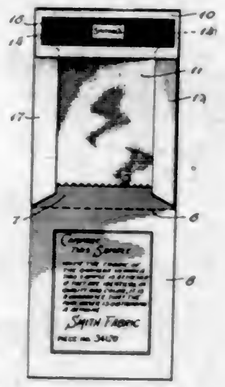
1. Apparatus for supplying disinfectants to water contained in a flushing cistern having in combination a receptacle for the disinfectant provided with a discharge opening communicating with the said cistern, a discharge valve for opening and closing the opening, said valve forming part of a vertical rod, means arranged within the receptacle for intermittently raising the valve rod, a cam

mounted loosely upon a spindle, an independent float working within the cistern, a rod upon which the float is adjustably fixed having a disc secured to its upper end for intermittently actuating the cam for raising the discharge valve.



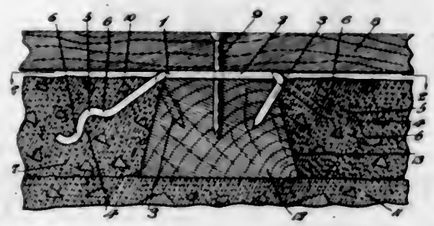
1,688,099. DEVICE FOR BENDING IRON RODS. ANTON WAGENBACH, Elberfeld, Germany. Filed Apr. 30, 1926, Serial No. 105,840, and in Germany Nov. 18, 1924. 4 Claims. (Cl. 153—54.)

1. A device for bending iron rods, comprising in combination a substantially horizontal bearing plate, a substantially vertical bending shaft extending through said bearing plate, a cramping roll fastened to said shaft above said plate, and adjustable rolls adapted to be fastened to said plate, one of said adjustable rolls being provided with means for holding the iron rod at different heights, as for instance with more than one guiding groove in its circumference.



1,688,100. ISOAMYL ESTER OF THE DI-IODIDE OF BEHENOLIC ACID AND PROCESS OF PRODUCING SAME. AUGUST WINGLER, Elberfeld, near Cologne-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed May 11, 1926, Serial No. 108,412, and in Germany May 12, 1925. 2 Claims. (Cl. 260—106.)

1. The new isoamyl ester of the di-iodide of behenolic acid having most probably the formula:—



which is a limpid oil solidifying at 6° C. containing iodin and being a useful iodin preparation in medicine.

1,688,101. IDENTIFICATION DEVICE. FRANCIS E. ACKERMAN, New Canaan, Conn., assignor to Julius Forstmann & Co., Inc., Passaic, N. J., a Corporation of Delaware. Filed Dec. 18, 1925. Serial No. 76,156. 4 Claims. (Cl. 206—82.)
